No. 433. *View on the Wye; Welch Bicknor Church in the distance*. F. W. Watts.—From the bold and agitated torrent we pass to the gentle and placid stream, reflecting as in a mirror the various objects by which its banks are fringed. The truth and simplicity of this fine study from nature, as well as the same qualities in No. 463. *Scene from Wood Mill, near Southampton*, also by Mr. Watts, claim our highest admiration.

No. 412. *Morning*. J. V. Barber.—It is impossible not to be struck with the freshness and beauty of this very able and original composition. Perhaps a little toning down of some of the green hues might be serviceable to it.

No. 397. *Distant View of Winchester; a Shower passing off*. C. Fielding.—It is seldom that we find an artist equally successful in two distinct branches of his profession. We have frequently expressed our high opinion of Mr. Fielding's talents in water-colours; and we have now the pleasure to speak as favourably of him in oil. The effect of this picture is singularly true, and nearly approaches to the sublime. If St. Swithin himself had presided at its execution, the humidity which pervades it could not have been more complete.

No. 445. *The Page*. T. M. von Holst.—What! Fuseli revived! or, is the doctrine of transmigration no fable; and has the spirit of the departed professor passed into the frame of M. von Holst?

No. 459. *Portrait of a young Lady*. J. Simpson.—We select this from other works by the same able artist, because it appears to unite in an eminent degree the several qualities which distinguish his very skillful pencil. It is at once deep, clear, solid, powerful, and brill-

tant. Mr. Simpson is rapidly attaining to high rank as a portrait painter.

[To be continued.]

Artists' General Benevolent Institution.

On Saturday the announced anniversary of this excellent charity took place at Freemasons' Hall—Lord Goderich, President. His lordship was supported on his right by his brother, Lord Grantham; and the table was surrounded by Royal Academicians and other distinguished persons. About 150 sat down to dinner; and Gaff, as usual, took care that they should be amply provided with good things.

We have hardly ever been present at a public entertainment where so much was done by the chair towards promoting the pleasures of the company and the interests of the benevolent object for which they had assembled. The earnestness and animation with which Lord Goderich discharged the functions of his office produced a great effect; and he was loudly cheered on several occasions. He not only kept the party convivially alive, but pleaded most successfully (witness a subscription of nearly £900!) the cause of decayed and unfortunate artists, and, generally, the cause of the fine arts themselves. In this task, too, he was very ably supported by Lord Grantham (the chairman of last year), who frequently addressed the meeting in energetic and amusing terms. Sir Thomas Lawrence, Mr. Wilkins, and other gentlemen, also spoke; and it was eleven o'clock before a separation was thought of—so agreeably was the business, or rather the gratification, of the day kept up.

Among the most interesting statements which we heard, was an allusion from Lord Goderich to the erection of a grand National Gallery, which his lordship intimated his hope of seeing accomplished; when he was sure a gallery would soon be formed superior to that of any country in the world. This opinion was loudly cheered, and strongly manifested the feeling of the public on the subject. We cordially join in the hope expressed; but trust that no boteh of architecture will be suffered to disgrace the design, and disfigure the metropolis.

TURNER'S DRAWINGS.

A BEAUTIFUL and gratuitous exhibition of Mr. Turner's drawings has been opened by Mr. Charles Heath for public inspection at the Egyptian Hall. They consist of forty subjects, chiefly for the engravings in the "Views in England and Wales," repeatedly noticed with high eulogy in the *Literary Gazette*; though there are a few for a projected work of a similar kind on Italy. With all his fondness for certain yellow tints, these drawings are splendid monuments of the artist's talents; and many of them are peculiarly striking and interesting: among the latter we might mention Richmond, Alnwick Castle, and Stonehenge. As in Messrs. Harding's Exhibition of the originals of Lodge's Portraits, we have no doubt but this display will contribute greatly to promote the success of the work which it illustrates, and effect a wider call for the productions of Mr. Heath's admired burin.

GALLERY OF ARTS, REGENT STREET.

We are glad to find this establishment gradually winning its way to public notice. We recommend a visit for two reasons—first, the view is gratuitous; secondly, there is no where else, saving at the Exhibition in Pall Mall East, so fine a collection of drawings in water-colours. Nor may it be amiss to hint to our

fair countrywomen, who are so assiduous in the manufacture of albums and scrap-books, that the critical eye of taste would frequently be less offended, and art somewhat encouraged, if these elegancies now and then enshrined specimens from some master in this truly British art. We looked over a portfolio of gems admirably fitted for such purposes. In an adjoining room are several fine pictures; especially a magnificent Giorgione.

NEW PUBLICATIONS.

Hanoverian and Saxon Scenery. From Drawings by Captain Batty. Part X. Jennings.

"TRENDELBURG"—"Rocks near the Bastei, Saxony"—"Bridge over the Weser, at Bremen"—"The Gammel Torv, Copenhagen"—and "the Palace of Fredericksborg, Denmark," are the plates which illustrate this No. of Captain Batty's work; and we have no doubt they "hold the mirror up to nature" very faithfully. Several of the wood-cut vignettes are highly picturesque.

The Right Hon. Jane-Elizabeth, Lady Ellenborough. Engraved by Thomas Wright, from a Miniature by Colleen. Colnaghi.

A BEWITCHING little head; although we own that we do not exactly admire this style of depicting an English wife, however youthful and lovely.

ORIGINAL POETRY.

THE NAMELESS BROOK.

Yon little brook that murmurs on its way
O'er shining pebbles and through clustered flowers,

Hath been to me the source of many a lay,
Warbled at times amid its fairy bowers;
Appealing to my spirit with a tone
Half like the tone of Joy, and half like Sor-
row's own!

How sweetly droops yon willow on its side,
Watching its moveless branches in the glass!
How bright, how beautifully, the waters glide,
Winning my heart to bless them as they pass!
And I will bless you, oh ye waters clear!
Of many a smile the source, and many a sweeter
tear.

Oh! not unlike the current of your tide,
In this green valley slips my life away;
To lofty name and glory unallied,
Shunn'd by the rich, and slighted by the gay.
Yet, by some faithful and unchanging friend,
Watch'd with an eye of love,—advancing to its
end! R. F. H.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. VII.

In pursuing our extracts from this (to us) very singular, amusing, and instructive Journal, we trust our readers go along with us in thinking, that for communicating curious information to the European reader, the editor of the *Canton Register* deserves warm thanks. It was a mere chance which placed his Journal in our hands—but we were much struck by its judicious illustrations of the celestial empire; and though we may never be known even as his follower to our Canton contemporary, we thank him most cordially, and intimate a just compliment to his labours when we state, that though we have omitted much interesting matter, we have yet only got through *twelve* Numbers of his first year's publication—of which we have (to the 13th December last) twenty-nine remaining; and out of which we can promise our readers a fund of such entertaining and

popular extracts as has never yet exhibited Chinese society in its domestic and true light to the European world.

"On the 9th instant the Tartar general ordered all his officers to assemble in the great hall, that he might examine them in person, as is the official duty of the general, when he has to report on their health and fitness for service. However, that was only the pretext; the real object was to ascertain the highest bidders for places at all the custom-houses, which, as a perquisite for the poor army, usage allows him to fill. For the Macao inner harbour custom-house he is said to receive ten or twelve hundred dollars annually. The Pria Grandé custom-house is also farmed or sold in a similar manner. Fellows pay sometimes more than they can get fairly, and hence extortions and rows are the consequence."

"Executions.—On the 4th inst. a nailed express was received from Peking. This nailing consists of two paper threads, passed through the envelope from side to side and sealed, which operation makes it more difficult for any inferior officer or other person to open it, till it arrives at the chief officer to whom it is sent. This tengfungmānshu, as the Chinese call it, contained an order to execute immediately two pirates who had given passes to trading boats. They were forthwith bound, and led out to be decapitated. One of them, Uhing, was unable to walk; the other, Chingyayyun, talked and laughed as if nothing were the matter. He turned round his head to Uhing, and called out, 'Don't distress yourself—we shall only be separated a short time—in sixteen years we shall come back again.'—There are more executions take place in Canton than in any other province of the empire. About twenty years ago the attention of government was called to the fact. They consulted the Chinese geomancers to ascertain the cause. These impostors said, that the earth where the executions took place, whether fertile or sterile, had an effect on the increase or diminution of crime. It was now in too fertile and prosperous a spot. It was then at the outside of the south gate of Canton; and in consequence of the sage advice of the geomancers, Tyburn was removed to the outside of the north gate for a time. The executions, however, increased; and after a trial, government reverted to the original place of execution, where it still is. It is a small spot at which there is a pottery for making clay furnaces. It is a place of blood, and a potter's field. A little lime is sprinkled on the ground before the execution, and the bodies are thrown up at the foot of a dead wall, with a mat cast loosely over them; while the heads which have to be exhibited in *terrorem*, are hung up in little cages against the wall."

"Peking.—The Censor Shingszepoon has reported that two of the common people—one the plaintiff, and the other the defendant—being confined together previous to trial, the accuser fell upon the defendant, and murdered him in the prison. The emperor has examined into it and finds that the matter in dispute was a trivial one. He complains of the officer for carelessness in confining the two together, and for delaying the adjustment of the affair several days, as well as for not placing a guard over these persons. Sungpooyatow, the officer in question, is therefore ordered to appear before the supreme criminal board called Yingpow, and be subjected to interrogation by grinding torture, to ascertain whether or not the case be really as is represented, or whether there be not some circumstances concealed."

"Canton.—Yesterday his excellency the

Foodne received from his imperial majesty the bestowment of the word *happiness*, with a haunch of venison (deer) from Peking. The usage is, on such an occasion, to throw open the gates of the public hall, admit the venison, and perform the thrice three knock-head ceremony towards the throne of the monarch, and thank him for his condescension.

"Spring Sacrifices."—The court circular from the governor-general's office announces daily the act of putting an official stamp on forms of prayer, paper scrolls, as substitutes for silk, &c., to be presented with sacrifices in behalf of government, not by priests but by civilians, to the temples of various gods—the god of literature, the god of the wind, the celestial and the terrestrial gods, and to Confucius. These prayers and sham silks are, after the necessary prostrations, burnt and passed into the invisible state, to compliment and clothe the personages to whom they are offered. On the eighth of the moon, being Sunday, the Foodne, and all the civil and military officers of the city, assembled before the altar of the gods in heaven, and the gods on earth, sacrificed and worshipped. Certain inferior scribes of the local magistrates' offices did homage to the god of the wind. After the service they all returned to their public offices to issue and receive despatches. And in the mean time the Nam-hoyune was engaged in questioning a bankrupt merchant how he had got rid of so much cotton in so short a time without any return, as is alleged he did."

The following are samples of Chinese popular news, hawked about the streets like our ballads or dying speeches:—

"In the Poonu district dwelt a young woman of the name of Ling, (which means cold and cruel). She was married to a cantonman of the name of Kwan, to be his wife. Cruelty to her became natural. I lived in her neighbourhood seven years, and calculate that she beat to death four slave girls. One day I happened to meet with two of her uncles, and talked about this business. They gnashed their teeth with indignation, and said that I had underrated her murders; and, counting with their crooked fingers, made out that she had beaten to death fifteen slave girls. I then secretly thought, 'Shall such a cruel person meet with no retribution?'—During the 12th moon of the last year it fell out that this woman became ill, of I know not what disease. Her whole body became putrid and broken. The stench was intolerable. Her cries of pain were heard outside the door. She continued alive till yesterday, at the 2d watch, when, the skin and flesh having entirely fallen from her bones, she died. This was the miserable retribution of cruelty!"

"Suicides."—In Tungwang Street, on the south side of the city of Canton, there reside upwards of fifty families. Since the new year, in less than one month, seven women and girls have hanged themselves. What demons or imps possessed them it is impossible to tell. On the west side of the city, in the suburbs, dwelt an aged widow who had attained her 70th year. She was poor, and worked with her needle, or washed, for a subsistence. She owed five or six months' rent. Her landlord unroofed her house to drive her out; and next he took away other people's clothes which she had received to wash. This entirely overpowered her, and she hung herself up to a beam. She had a poor son, who carried things for sale about the streets. He came home and found his mother dead. With what the natives consider prudence and wisdom, he let her hang, to see whether he could make a good

bargain with the landlord or not. Four days elapsed in fruitless efforts; and the dead body of his aged mother remained hanging by the neck till the local magistrate came and sat as coroner. He ordered the landlord to provide a coffin, and be at the expense of the interment. He had a right, it was granted, to ask for his rent; but he had no right to carry off other people's clothes. Whether he will be farther prosecuted remains undecided."

SIGHTS OF LONDON.

M. VICTOR, the author of *Harald, ou les Scandinaves*, a tragedy which obtained the highest literary and dramatic fame in Paris a few years ago, has now visited London; and though we have not had the good fortune to meet him, and ascertain his course precisely, we are glad to understand that a gentleman of his distinguished talents purposes to read the French dramatic classics as a public entertainment. *Zaire*, *Cinna*, &c., will thus be heard in the best style of French declamation—at the same time a pleasure and a lesson. The Duke of Orleans patronises these evenings, which, we believe, are opened by subscription, next week.

VAUXHALL.—*Fine* weather, Master Noah; and the Vauxhall Gardens opened with *éclat* on Monday. There were good comic et-cetera singing; transparencies worthy of being seen through; fire-works superior to former blazes; an Italian opera so-so; and a considerable quantity of low life, to invite the march of improvement and the police-officers. It is difficult to conduct an entertainment of this sort; and till a week or two has passed away, we will not say whether Vauxhall is a well-regulated hit, or a vicious miss. At first sight it is evident that the proprietors are anxious to please, and spare no expense.

MUSIC.

ARGYLL ROOMS.

THE announcement of such a galaxy of talent as Sontag, Velluti, Malibran, and Blasis, attracted on Saturday last the most fashionably crowded audience we have witnessed for many a day. The orchestra was literally crammed; and at least half a dozen bonnets for every bow were to be seen intermixed with the gentlemen of the band. The duet of "Questo cor," between Sontag and Velluti, was beautifully effective: the former has lost nothing by singing with the latter; in some of her most touching graces we thought we recognised the delicate style of that incomparable master. The duet of "Lasciami, non t'ascolto," in Tancredi, was given by Sontag and Malibran in a style surpassing anything we ever before heard. A German gentleman—with a long Christian name, too long for any Christian to pronounce with impunity—made his *début* on this occasion, and performed on the piano a piece termed on the card a "concert-stuck." The pianist, however, never once *stuck* in his performance; but, on the contrary, appeared to get through his work with not less satisfaction to his audience than to himself. We are sorry we cannot say the same of Mr. Rosner, his countryman:—his singing may be liked in Germany, but he is too much of a *mouther*,—moreover, his voice (we meant not to perpetrate a *double*) comes from the wrong place,—it issues from his head instead of his chest, and there is truly neither heart nor soul in his style. In fact, the German school of singing is, if possible, worse than our own; nor does this altogether proceed from the guttural

harshness of the language, but from the erroneous estimate formed by the generality of German musicians, that excellence in the vocal art consists in instrumental imitations,—forgetting that no instrument can possibly compete with the human voice, either for delicacy of tone or pathos.

We perceive, by the bills, that Velluti takes his benefit on Tuesday next, and on which occasion "he will sing an English air, written and expressly composed for him." We anticipate a bumper. We take leave, however, to suggest to this unequalled artist the propriety of getting up one or two concerted pieces. What a treat it would be to hear Velluti, Sontag, Curioni, Malibran, and Pellegrini, in some of the beautiful *morceaux* with which the opera of *Il Crociato* abounds! We trust that the signor, for his own sake, will take a friendly hint. We had nearly omitted to express our approbation of Blasis's pleasing performance. This artist is really a rising performer; and we only regret that she is not where she already has shone—on the boards of the King's Theatre.

Madame de Vigo, (for rank, talent, and merit, as a lady and a musician, one of the most interesting persons whom the misfortunes of Spain have thrown upon their own resources as exiles in this country,) has announced a benefit concert for Wednesday evening—which we warmly recommend to the favour of the patrons of the deserving and the unfortunate.

DRAMA.

ON Monday the king of British song, Braham, takes his benefit, and plays *Tom Tug*, in the *Waterman*, for the first time. A rich musical treat, including *some* fine English ballads—a ballet by the principal dancers from the King's Theatre—and *Love in Wrinkles*, and the *Paddock*, with Farren as *Mungo*, conclude this highly attractive concatenation of entertainments.

On Monday last the estimable and esteemed tragedian, Mr. Young, performed *Oroonoko*, for his own benefit, to the *Imoinda* of Miss Phillips. This play, so seldom seen, never fails to excite much sympathy: on this occasion it was eminently affecting.

VARIETIES.

State of Education in the South of France.—The number of young men at Lyons who were twenty years of age in 1827 was 835, of whom 285 could write and read, 329 read only, and 221 neither write nor read. In the rest of the department, of 1,919 young men of twenty who were examined, 787 could write and read, 139 could read only, and 993 could neither write nor read.

Orseille.—A French chemist has discovered the colouring principle of orseille, a soft paste, used in dyeing, and made from a peculiar kind of moss.

Medicine.—A discovery in medicine, which may prove to be of importance, was made a short time ago in Paris, in the case of a patient who had, with the intention of committing suicide, swallowed twenty-four grains of the acetate of morphine. To counteract the effects of this dreadful poison, the medical men administered, more by chance than otherwise, (for the report from which we borrow the account states that the result proved *au grand étonnement de ces messieurs*,) ten hours after the poison had been taken, a quantity of very strong coffee, and a mixture of vinegar and

water: this, with one bleeding at the arm, restored the patient entirely.

Mozart's Enchanted Flute by the German company, created a grand sensation at Paris; the tenor, Heitzinger, distinguished himself in it as much as in the *Freyshütz*; and Mdlle. Greigs made a very favourable *début*. The receipts at the theatre had risen to from 7000 to 8000 francs nightly.

Extensive remains of a Roman villa, and other highly interesting Roman antiquities, have been recently discovered (says the *Cambridge Chronicle*) at Litlington, in this county.

Parisian Budget.—The budget of the city of Paris has just been published by the prefect of the department of the Seine. The revenue of 1828 is stated to have been 40,921,196 fr., and the expenditure 35,215,687 fr.; which leaves a balance of 5,705,508 fr. The principal branches of revenue and expenditure are as follows:—*Revenue*: Octroi (entrance duties at the barriers) 28,500,000 fr.; duties, &c. of markets, 1,450,000 fr.; weights and measures, 410,000 fr.; grande et petite voirie, 120,000 fr.; water, 660,000 fr.; caisse de poissy, 1,350,000 fr.; abattoirs, 1,103,000 fr.; entrepôts, 470,000 fr.; markets, 179,227 fr.; rents of communal property, 101,690 fr.; farming of gaming-houses, 7,100,000 fr.; city of credits, 157,542 fr.; tax of interments, 200,000 fr.; grounds in the cemeteries, 450,000 fr.

Expenditure.—Central administration, 307,100 fr.; mayors, 349,666 fr.; administration of public works, 99,200 fr.; collection of taxes, 2,690,260 fr.; worship at charge of municipal council, 221,950 fr.; public instruction, 275,800 fr.; succour of hospitals, 5,200,000 fr.; military service at charge of municipal council, 161,500 fr.; ordinary service of water, 386,000 fr.; reserve supplies, 600,000 fr.; works for keeping up communal establishments, 206,140 fr.; pavement of Paris, 480,000 fr.; inscription of names of streets, 14,500 fr.; police (*personnel et matériel*), 3,700,000 fr.; firemen, 445,522 fr.; gendarmerie, 2,150,800 fr.; lighting of Paris, 803,042 fr.; sweeping, &c. of streets, 120,000 fr. The two latter sums are included in the expenses of the police.

Museum of the Royal Naval Hospital, Haslar, Gosport.—In the left wing of this noble edifice, the Commissioners of his Majesty's Victualling Department have recently erected two elegant rooms; the lower superbly fitted up with mahogany cases, commodious seats, &c., as a library and lecture-room for the delivery of lectures to the medical pupils; the upper finished in the most costly style of Grecian design, for the reception of a museum; the table and upright cases being of solid mahogany, with brass ornaments, and the whole arrangement strikingly tasteful. It already contains many curious specimens in morbid anatomy, and a considerable number of foreign birds, insects, shells, minerals, plants, &c., principally presented by the medical officers of his Majesty's navy. From the peculiar advantages possessed by this museum, and the professional acquirements of its directors and supporters, it may be expected to become particularly rich and valuable in morbid and comparative anatomy, as well as highly interesting as a general collection. We understand, likewise, that a lecture is delivered every Saturday at eleven o'clock by Dr. Scott, the conservator of the museum, on subjects of medical interest, and to which the medical officers of the navy are gratuitously admitted. — *Provincial Medical Gazette*.

Anodyne Paste for stopping Carious Teeth.—A cement, composed of powdered sulphate of

lime, made into a paste with water and a small portion of the acetate of morphine, is now used by some dentists for stopping painful carious teeth, in lieu of gold leaf or silver. After cleaning out the tooth with lint and warm water, the cavity is again washed with a weak solution of acetate of morphine, by means of a camel's hair pencil; the anodyne powder is then mixed with a little water, and instantly introduced, so as to fill the cavity about half full; after which it is filled up with powdered sulphate of lime, immediately on its being formed into a thick paste with water, which rapidly becomes solid. This practice, where the cavity of the tooth will admit of the cement being retained, has proved very successful. — *Ibid*.

Lessing.—On the 22d of January last the hundredth anniversary of the birth of Lessing was celebrated at Dresden. The day was spent in festivity, and in the evening the tragedy of "Emilia Galotti," which is considered to be Lessing's master-piece, was represented at the theatre.

Monti.—Several friends of the author of the *Barvigliana* have determined to raise a monument to a man of whom Italy has so much reason to be proud. A subscription has been opened for the purpose, at Milan, Genoa, Florence, Venice, Turin, &c.

Archæology.—Three silver Polish coins, of the reign of Sigismund III., have been found in a garden on the banks of the Don. One of them, struck in 1617, bears the arms of the free town of Dantzic; the other two are of the dates of 1622 and 1623.

The *Malacca Observer* announces the discovery of a rich gold mine in the vicinity of Mount Ophir, which is said to be within the Company's limits. — *Canton Register*.

Anecdotes.—When Frederick the Great's ambassador complained of want of means, Frederick replied, that he had forgotten that 300,000 men marched at his back.

A friend of ours (not a very polite one, we are sorry to say) was, with another dandy, blocking the gateway into the Park of Brussels, when a person in a plain blue coat passed between them, interrupting their conversation. Our friend observed, pretty loudly, "D—n that fellow, he's no gentleman!" Upon which the stranger turned round, took off his hat, made a bow, and said very courteously, "Gentlemen, I am the King!"

LITERARY NOVELTIES.

Chinese Manuscripts.—The Archimandrite Hyacinth, who has resided for fourteen years at Pekin, and who has successfully applied himself to the study of the Chinese language, has collected several Chinese manuscripts, highly important to the history of China. The following list of them cannot fail to be interesting to the lovers of Asiatic literature: 1. Tsil-Tsun-Tsan-Gang-Mou; Annals of the Chinese Empire, in 8 volumes, already known by the translations of the Jesuits. 2. History of the dynasty Ming; 1 volume, known, but very interesting. 3. Geography of the Chinese Empire; 2 volumes, with a large map; this important manuscript is in the Russian language. 4. History of the first four Khans of the family "Ching"; 1 volume. 5. Si-Schou, or the Four Books, with long explanations; 2 volumes. 6. Description of Thibet in its present state; 1 volume. 7. History of Thibet and Tangout; 1 volume. 8. Description of the Mongolian people two centuries before the birth of Christ. 9. Description of Söngary and little Boukhary, a hundred and fifty years before Christ; 1 volume. 10. Description of the same countries in their present state; 1 volume. 11. Description of Pekin, and a plan of the city. 12. Description of the Mongolian people until the birth of Christ. 13. Treatise on inoculation for the small-pox. 14. The legal medicine of the Chinese; 1 volume. 15. System of the universe; 1 volume. 16. On the fortifications of the river Jaune; 1 volume. 17. Mongolian Code; 1 volume. And 18. Chinese Dictionary, translated into Russian; 6 volumes.

French Coast.—The second part of "the French Pilot," a work proceeding under the direction of the Minister of Marine, has been completed. It comprehends the western

coast of France, from the Point of Penmarck to the Isle of Yeu.

Oriental MSS.—Some very curious oriental manuscripts have been brought to St. Petersburg by M. Berggren, a Swedish traveller, who collected them in Turkey, Syria, Mesopotamia, Palestine, and Egypt, during the years 1820, 1821, and 1822. Among them is the Secret Law of the Druids, one of the most important oriental manuscripts ever discovered, and which M. Berggren, assisted by Professor Senkovsky, intends to publish at St. Petersburg, with a French translation. He is also about to publish a French and Arabic Dictionary, which will be exceedingly useful to all Europeans travelling in the East.

Literary Curiosities.—Rochevoucauld's Maxims have been translated into modern Greek, and published with an English translation. The first Polish work ever published in Paris has appeared there under the title of "Poesye Adama Mickiewicza," or "the Poems of Adam Mickiewicz."

A Lexicon of Aristophanes is preparing for publication by J. A. Barnes, Esq., M.A., Fellow of Trinity College, Cambridge.

In the (Dublin) Press.—A New Edition of Dean Graves' Lectures on the Pentateuch.—An Analysis of Bishop Burnet's Exposition of the Thirty-Nine Articles, with Notes, by Thomas Newland, A.B. T.C.D.—A Second Series of M. Gregor's True Stories from the History of Ireland, containing the Reigns of the Tudors.—An Historical Account of the Siege of Derry, and Defence of Enniskillen in 1688 and 9, by the Rev. John Graham, A.M.—The Northern Tourist, or Traveller's Guide to the North and North-West of Ireland, &c.—Observations on the Rural Affairs of Ireland, &c. by Joseph Lambert, Esq.—Retrospections, a Soldier's Story.—A Spelling-Book on a New Plan, by the Rev. Richard Roe.—Tales of the Irish Peasantry.

LIST OF NEW BOOKS.

Tales of the Wars of our Times, 2 vols. post 8vo. 14 1s. bds.—Bloomfield's Thucydides, 3 vols. 8vo. 2s. 6s. bds.—Hooles's Mission to India, plates, 8vo. 11 7s. bds.—Briggs's Mahomedan Power of India, vols. 8vo. 4s. 4s. bds.—Stephens's Nomenclature of British Insects, 18mo. 4s. 6d. bds.—Brockett's Glossary of North Country Words, crown 8vo. 12s. bds.—Petersdorf's Law Reports, Vol. X. royal 8vo. 11 11s. 6d. bds.—Private Life, by the Author of Geraldine, 3 vols. post 8vo. 11 4s. bds.—Hunter's Halamshire Glossary, crown 8vo. 8s. bds.—Alfred's Boottia, by Cardale, 8vo. 11 5s. bds.—A Few Comfortable Meditations, 12mo. 3s. 6d. bds.—A Present to Young Christians, 18mo. 2s. bds.—Geraldine of Desmond, 3 vols. post 8vo. 11 11s. 6d. bds.—Rybrant de Cruce, 3 vols. post 8vo. 11 8s. 6d. bds.

Barometer—Highest.....	30-18
Lowest.....	29-34
Mean.....	29-78010

Quantity of rain in inches and decimals, 0-506285.

Number of days of rain, 4.

Winds. — 6 East—3 West—9 North—0 South—5 North-east—2 South-east—2 South-west—4 North-west.

General Observations.—During the whole month the barometer was remarkably high, and the mean was much above any one in the last fourteen years: the quantity of rain less than since 1818—nearly an inch-and-a-half more fell in May 1828. The weather generally fine; yet the mean temperature did not reach either of those of the last two years. An indistinct lunar halo seen on the 10th, about 10 p.m., and a heavy gale of wind from the northward on the night of the 25th.

TO CORRESPONDENTS.

✉ We regret that we are compelled again to postpone our notice of Sir Rufane Donkin's excellent book on the Course of the Niger,—this and many other interesting novelties of various descriptions have lately been obliged to give way to articles of so very temporary a nature, as to be absolutely useless if not inserted on the instant:—we witness our detailed weekly reports of the numerous learned bodies now holding their sittings:—but as these Societies will shortly adjourn for the season, we hope then to be able to bring up arrears with a *vet sal*.

We have always purposed using J. W.'s communication, and still intend to embody it with some remarks of our own on the important subject to which it refers, at as early a period as possible.

DESCENT OF THE DANUBE, from Ratis-
bon to Vienna, during the Autumn of 1887; with
Anecdotes and Recollections, Historical and Legendary, of the
Towns, Castles, Monasteries, &c. on the Banks of the River; and
their Inhabitants and Proprietors, Ancient and Modern.

By J. R. FIANCHE.

Author of "Lays and Legends on the Rhine;" "Oberon,"
an Opera, &c.

"His 'Descent of the Danube, from Ratisbon to Vienna,' is a
volume of such varied merit and interest as to insure its popular
success."—*Literary Gazette*, July 5.

"Mr. Fianche's recent publication of his journey from Ratis-
bon to Vienna, over the Danube, contains much useful infor-
mation, as well as elaborate historical notices of the most remark-
able places situated on the banks of that river."—*Times News-*
paper, July 10.

Printed for James Duncan, 27, Paternoster Row.

History of India.

In 4 vols. 12mo. embellished with a correct Map and numerous
Engravings, price 36s. boards, being Parts XLII. to XLVIII. of
THE MODERN TRAVELLER; contain-

ing a Popular Description, Geographical, Historical, and
Topographical, of the various Countries of the Globe: compiled
from the latest and best Authorities. The Work is published in
Monthly Parts, closely and elegantly printed, price 3s. 6d. each;
two of which form a volume.

"We speak within the most cautious bounds when we say,
that in any volume of this work the traveller will find more of
the actual material of which he stands in need—the real, distinct,
matter-of-fact information—than in any ten 'voyages and travel-
lers' to the same region. Of the selection of this history, India,
indeed, the best judgment may be formed from its extent. In the
usual manner of printing, it would fill three large octavo volumes.
The contents of the four volumes exhibit a singular industry in
the collection, and condensation in the quantity of valuable mat-
ter."—*Literary Gazette*, Dec. 6, 1886.

Africa is in the course of publication.

Printed for James Duncan, 27, Paternoster Row.

Prospectuses of the Work may be had of all Booksellers.

PETERSDORFF'S DIGEST. The

SURE METHODS OF IMPROVING
HEALTH AND PROLONGING LIFE, by regulating the
Diet and Regimen; embracing all the most approved Principles
of Health and Longevity, and exhibiting the remarkable Power
of proper Food, Wine, Air, Exercise, &c. in the cure of obstinate
Chronic Diseases, as well as in promoting Health and Long Life.
To which are added, an Account of the Art and excellent Effects
of Treating for Health, Rules for restoring Compulsion, and
Maxims for the Bilious and Nervous, the Consumptive, Men of
Letters, and People of Fashion. Illustrated by Cases.

By A PHYSICIAN.

"We are disposed to think it the most useful and rational
work of the kind we have met with. It is altogether an admirable
code of health."—*Athenaeum*.

"We warmly recommend it."—*New Literary Gazette*.

"It is written by one gifted with good sense, as well as right
feeling, and guided, as we conceive, by enlightened views and
liberal conclusions."—*Scotsman*.

"That this work has been the result of mature study and pro-
fessional experience, we fully believe; and that men of all habits
will derive information from it, calculated to increase their com-
fort and extend their days, is as firmly our conviction."—*Edin-
burgh Observer*.

Published by Simpkin and Marshall, Stationers' Court,

London; and sold by all Booksellers.

Structures cured by an Internal Medicine.

Just published, by Shewell and Co. 25, Paternoster Row,

price 3s. a new edition, very cheap.

PRACTICAL OBSERVATIONS ON
STRUCTURE AND OTHER DISEASES OF THE UTERUS,
and on the various Modes of Cure by an Internal Medicine;
and on the application of Instruments necessary, and
generally preparatory of Injury. Illustrated by Cases. And on
the various Symptoms, and Treatment of Stricture in the Rec-
tum.

By WILLIAM RENOU,

Member of the Royal College of Surgeons, London.

St. George's Hospital.

London, desirous of diffusing the benefits of so valuable a Medicine,
may be consulted every day between 9 and 5 o'clock. Letters from
the Country must be free.

Price 2s. 10s. in cloth boards, illustrated with One Hundred

Engravings.

LONDINIANA; or, Anecdotes, Facts, and
Miscellaneous of the Streets, Buildings, and Personages
connected with the History of London in all Ages.

By E. W. BRAYLEY, Esq.

"The character of Mr. Brayley's work will be tolerably un-
derstood by what we have already said of its contents; but we
may add, that it deserves a place in every library; for the public
it presents the mass of useful and interesting information
which it contains does the greatest honour to the learning and
research of the author, who richly merits the praise of having
done much to redeem the name of an antiquary from the oblo-
quy which sometimes attaches to it, from the aspersions of the
vulgar profane. We trust he will again appear before us, as a
valuable and various field of inquiry is still before him, and the
public has displayed in his present undertaking make his
labours and further exertions a sort of public debt."—*Monthly*
Review, May 1886.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Now republished, with copious Notes, shewing how many of
the same Questions still remain to be asked respecting Ireland.
James Ridgway, Piccadilly; and, by order, of every Bookseller
in the Kingdom.

In 2 large vols. 8vo. price 31s.

THE HISTORY of the HEBREW
COMMONWEALTH, from the earliest Times to the
Destruction of Jerusalem, A.D. 70. Translated from the German
of John Jahn, D.D. With a Continuation to the Time of Adrian.

By CALVIN E. STOWE.

"This very able work of Professor Jahn, one of the most learned
of continental biblical scholars, has long been a desideratum in
the English language. In presenting, therefore, the excellent
work of Dr. Jahn to the English reader, Mr. Stowe has performed
a very acceptable service, and deserves great praise both for
undertaking so laborious a task, and for the creditable manner in
which he has executed it. No biblical student should be without it,
and it may be read with interest and profit by the general
inquirer."—*Monthly Review*, June 1886.

London: Printed for Hurst, Chance, and Co. St. Paul's
Churchyard.

Russia.

In 3 vols. 8vo. with Engravings, price 11s. 6d. boards, dedicated,
by special permission, to the King.

TRAVELS in RUSSIA, POLAND, and
FINLAND.

By WILLIAM RAE WILSON, Esq. F.R.S.
This work gives a History of the Greek Church, Documents
respecting the Conflagration at Moscow, the Emperor Nicholas's
Letters at the Coronation, and those of the Queen of Scots dis-
covered by the Author.

"These volumes discover the strongest evidence of veracity,
and a careful and candid observation. The style is unvar-
nished, and men and things rise before us in the form and
costume of real life. There is a plain straightforwardness about
Mr. Wilson, and we give him full credit in having uniformly
endeavored to adhere to truth whether favorable or otherwise."

—*Scotsman*.
Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author,
Travels in Norway, Sweden, and Denmark,
in 1 vol. 8vo. 14s.

By D. A. Talboys, Oxford; sold by Hurst, Chance, and Co.
London.

In 1 vol. 8vo. price 10s. 6d. extra boards,
A SKETCH of the POLITICAL
HISTORY of ANCIENT GREECE.

By A. H. L. HEKREN,

Professor of History in the University of Göttingen, etc.
Translated from the German.

"The historical works of Mr. Hekren have had a remarkable suc-
cess in Germany. They are recommended by the eloquence of
their style, the liberality of their views, and by the purity and
elevation of their moral doctrines. As a writer he is always
ingenious, generally instructive, and sometimes original and con-
vincing."

The Miscellaneous Works of Sir Philip Sid-
ney, containing the Defence of Poesy, Letter to Queen Elizabeth;
Astrophel and Stella, and other Poems; Defence of the Earl of
Leicester; Letters to his Brother on Foreign Travel, and Sixteen

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

On Saturday, the 3d of May, was published by Mr. Colburn, the First Number of a New Weekly Paper, called
THE COURT JOURNAL. The leading and peculiar object of this Paper is, to supply what has long been felt as a desideratum in the Higher Circles of the British Metropolis. Its pages will furnish a mingled Record and Review of all Matters and Events (Political Subjects alone excepted) which are calculated to interest that class of readers who come within what is understood by the "Court Circle." Much will be the peculiar, but by no means the sole, object of the Court Journal. It will, in fact, embrace every feature which favourably distinguishes the most improved Journals of the day. The Court Journal is published every Saturday Morning, handsomely printed on a 4to. sheet of sixteen pages, containing Forty-eight columns, price 6d.; or, stamped for circulation in the Country, free of postage, 1s.
Orders received by all Booksellers and News-vendors, and by the Clerks of the Roads. Advertisements should be sent to the Office, No. 19, Catherine Street, Strand.
Communications for the Editor may be addressed to the care of Mr. Colburn.

Royal 8vo. with a Portrait and Fifty-two Illustrations, 5s. 2s.

BOOKS IN THE PRESS.
In a few days will be published, in 2 vols. 12mo. with Plates,
CONVERSATIONS on VEGETABLE PHYSIOLOGY; comprehending the Elements of Botany, with their Application to Agriculture.
By the Author of "Conversations on Chemistry," "Natural Philosophy," &c.
Printed for Longman, Rees, Orme, Brown, and Green.

On Monday will be published, in 2 vols. post 8vo. price 11. 8s. 6d. boards,
THE FIVE NIGHTS of ST. ALBANS.
Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

To be published in July 1869, dedicated, with permission, to the Bishop of Bath and Wells,
DELINEATIONS of the NORTH-WESTERN DIVISION of the COUNTY of SOMERSET; with a Descriptive Account of the Antediluvian Bone Caverns in the Mendip Hills, and a Geological Sketch of the District.
To be embellished with Six Engravings on Copper, Five on Stone, upwards of Twenty on Wood, and a Map of the District, coloured geologically.

By JOHN RUTTER,
Author of "Fonthill and its Abbey Delineated."
The Subscribers to this Work are respectfully informed, that its publication has been delayed a few weeks, owing to the Author having been made to make it far superior in the number and finish of its Illustrations, and much more comprehensive in its Literary Department, than he had anticipated. The Plates and Letter-press are, however, in a very forward state, so as to ensure its appearance in the month of July.
London: Published by Longman, Rees, and Co., and J. and A. Arch; of whom Prospectuses, with full Particulars, may be had.

WAVERLEY NOVELS; New Edition.
The Publishers beg to intimate that the Impression of Waverley, in 3 vols. being exhausted, a fresh issue will take place on Wednesday, the 17th June, till which time it will not be in their power to execute any new orders.
As appearances in Town and Country are requested to send their Orders with as little delay as possible, to prevent further disappointment.
Simplin and Marshall the London Publishers; sold also by every Bookseller in Great Britain and Ireland.
41, St. Andrew Square, Edinburgh, 20th May, 1869.

Early in June will be published, in 3 vols. post 8vo. with a colour Map,
TRAVELS in NORTH AMERICA,
in 1867 and 1868.

By Captain RAILL HALL, R.N.
Printed for Cadell and Co. Edinburgh; and Simplin and Marshall, London.

Of whom may be had,
1. **Anne of Geierstein**, by the Author of Waverley, 3 vols. 11. 11s. 6d. Just published.

2. **Saint Valentine's Day; or, the Fair Maid of Perth.** By the Author of Waverley, &c. 3 vols. 11. 11s. 6d. 3d edition.

3. **Chronicles of the Canongate.** By the Author of Waverley. First Series. 2 vols. 11. 11s. 6d. 2d edition. Contents.—I. The Highland Widow—II. The Two Drovers—III. The Surgeon's Daughter.

4. **Tales of a Grandfather; being Stories from the History of Scotland.** By Sir Walter Scott, Bart. First Series. A new edition, 3 vols. 10s. 6d.

5. **Tales of a Grandfather. Second Series.** A new edition, 3 vols. 10s. 6d.

6. **The Practice of Cookery, adapted to the Principles of every-day Life.** By Mrs. Delgairns. In 1 thick vol. price 7s. 6d.

"This is by far the most complete and truly practical work which has yet appeared upon this subject. Mrs. Delgairns is not one of those imaginative and flowery preceptors who think it necessary to call in the aid of fiction and fine writing to give an interest to the engrossing and important matters of which she treats; she proceeds to business at once. Her book will be found an invaluable cook's companion, and a treasure of great price to the mistress of a family. It is stuffed choke-full of the most important gastronomic information. It contains 1434 recipes, 96 of which are for soups, 115 for fish, 70 for beef, 60 for veal, 31 for pork, 41 for poultry, 14 for curries, 104 for gravies, sauces, &c. 86 for vegetables, 289 for puddings, pies, and tarts, 134 for creams, custards, &c. 100 for cakes, &c. 83 for preserves, 61 for domestic wines, 15 for the dairy, and 88 miscellaneous. Then we have remarks, besides, on the poultry-yard, brewing, the kitchen-garden, bees, pigs, &c. With so many arguments in its favour, we cannot doubt that the 'Practice of Cookery' will soon find its way into a wide and useful circulation."—*Edinburgh Literary Journal*, 18th April.

The following Works of Fiction are nearly ready for publication, by Henry Colburn, New Burlington Street:—

DEVEREUX.
By the Author of "Pelham," and the "Discreet." In 3 vols.

2. **The New Forest; a Novel.** By the Author of "Brambleley House," &c. In 3 vols.

3. **The Chelsea Pensioners**, by the Author of the "Subaltern." 3 vols. post 8vo.

4. **Sir Philip Gasteney, a Minor.** By Sir Roger Gressley, Bart. post 8vo. 8s. 6d.

5. **The Exclusives; a Novel.** In 3 vols. post 8vo.

6. **The Davenles; or, a Campaign of Fashion** in Dublin. In 2 vols. post 8vo. 18s.

7. **Waldegrave; a Novel.** In 3 vols.

8. **Old Court; a Novel.** In 3 vols.

No. 647.

SATURDAY, JUNE 13, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Casket. 8vo. pp. 445. London, 1829. Murray.

INSTEAD of analysing the contents of the *Casket*, which we have but just opened, we cannot do better than choose a few specimens; endeavouring, like a fair lady at some favourite fête, to use our best taste in the selection. The two following, by Mr. Edward Fitzgerald, are most touchingly simple and beautiful:—

"Lines to a Young Lady, on her Marriage."

They tell me, gentle lady, that they deck thee for a bride,
That the wreath is woven for thy hair, the bridegroom
by thy side; [tone,
And I think I hear thy father's sigh, thy mother's calmer
As they give thee to another's arms—their beautiful—their
own.

I never saw a bridal but my eyelid hath been wet,
And it always seemed to me as though a joyous crowd
were met

To see the saddest sight of all, a gay and girlish thing
Lay aside her maiden gladness—for a name—and for a
ring.

And other cares will claim thy thoughts, and other hearts
thy love,
And gay friends may be around, and bluer skies above;
Yet thou, when I behold thee next, may'st wear upon thy
brow, [it now,
Perchance, a mother's look of care, for that which decks
And when I think how often I have seen thee, with thy
mild

And lovely look, and step of air, and bearing like a child,
Oh! how mournfully, how mournfully the thought comes
o'er my brain, [thing again,
When I think thou ne'er may'st be that free and girlish
I would that as my heart dictates, just such might be my
lay, [May;
And my voice should be a voice of mirth, a music like the
But it may not be!—within my breast all frozen are the
springs.

The murmur dies upon the lip—the music on the strings.
But a voice is floating round me, and it tells me in my
rust, [guest,
That sunshine shall illumine thy path, that joy shall be thy
That thy life shall be a summer's day, whose evening shall
go down, [frown,
Like the evening in the eastern clime, that never knows a
When thy foot is at the altar, when the ring hath press'd
thy hand,

When those thou lov'st, and those that love thee, weep-
ing round thee stand,
Oh! may the rhyme that friendship weaves, like a spirit
of the air,
Be o'er thee at that moment—for a blessing and a prayer!"

"Stanzas addressed to—"

You ask me, gentle maiden,
For a rhyme, as friendship's boon;
But my spirit is o'erladen,
My heart is out of tune;
I may not breathe a poet's vow,
My music is a name,—
And it seldom breaks its slumbers now
For beauty or for fame.

Yet there are some who still can break
The spell that round it clings,
And gleams of thought, that yet awake
Sweet murmurings from the strings;
But then, with something of its old
And long-forgotten art,
Oh! there mingle tones, that fall as cold
As midnight on the heart.

I hang it on a blighted tree,
In a dream-remember'd land,
Where the waters ripple peacefully,
In their beauty, to the strand,—
Beside my own father's bower,
Where I had traced her name,—
But, from that most ill-omen'd hour,
It never was the same.

Yet, though its gayer notes be flown,
My spirit doth rejoice,
When I deem that visionary tone
The echo of her voice:

For like the voice of the evening breeze,
When the autumn leaf it stirs,
And a murmuring music is on the trees,
Oh! just such a voice was hers.
Silent and sad her tomb is there,
And my early visions too,—
But her spirit is ling'ring in the air,
And her tears are in the dew,
And the light of her maidenly-mourning eyes,
On her bower hath never set,
For it dwells in the stars, and it gleams from
the skies,
On a lonely bosom yet."

Can any thing be more spirited than the fol-
lowing, by T. Marshall?

"The Hunted Stag: a Sketch."

What sounds are on the mountain blast?
Like bullet from the arbalest,
Was it the hunted quarry past
Right up Ben-ledi's dash'd?
So near, so rapidly he dash'd,
Yon lichen'd bough has scarcely plash'd
Into the torrey's tide.
Ay!—The good hound may bay beneath,
The hunter wind his horn;
He dared ye through the flooded Teith
As a warrior in his scorn!
Dash the red rowel in the steed,
Spur, laggards, while ye may!
St. Hubert's shaft to a stripling's reed,
He dies no death to-day!

'Forward!'—Nay, waste not idle breath,
Gallants, ye win no green-wood wreath;
His antlers dance above the heath,
Like chieftain's plumed helm;
Right onward for the western peak,
Where breaks the sky in one white streak,
See, Isabel, in bold relief,
To Fancy's eye, Glenartney's chief,
Guarding his ancient realm.
So motionless, so noiseless there,
His foot on rock, his head in air,
Like sculptor's breathing stone!
Then, snorting from the rapid race,
Snuffs the free air a moment's space,
Glazes grimly on the baffled chase,
And seeks the covert lone."

We regret we have not room for the "Dead
Pirate," by the same author. The next little
poem is very exquisite—"one haunting touch
of melancholy thought." It is from the pen
of Mr. E. Lytton Bulwer.

"The Complaint of the Violets."

By the silent foot of the shadowy hill
We slept in our green retreats,
And the April showers were wont to fill
Our hearts with sweets;
And though we lay in a lowly bower,
Yet all things loved us well,
And the waking bee left its fairest flower
With us to dwell.
But the warm May came in his pride to woo
The wealth of our virgin store,
And our hearts just felt his breath, and knew
Their sweets no more!

And the summer reigns on the quiet spot
Where we dwell—and its suns and showers
Bring balm to our sisters' hearts, but not—
Oh! not to ours!

We live—we bloom—but for ever o'er
Is the charm of the earth and sky:
To our life, ye heavens, that balm restore,
Or bid us die!"

The "Lines to an Orphan," by Mrs. He-
mans, are full of that sweetness yet sorrowful-
ness of affection in which she excels.

"Thou hast been rear'd too tenderly,
Beloved too well and long,
Watch'd by too many a gentle eye:
Now look on life—be strong!
Too quiet seem'd thy joys for change,
Too holy and too deep;
Bright clouds, through summer skies that range,
Seem oft times thus to sleep,—

To sleep, in silvery stillness bound,
As things that ne'er may melt;
Yet gaze again—no trace is found
To shew thee where they dwell.

This world hath no more love to give
Like that which thou hast known;
Yet the heart breaks not—we survive
Our treasures—and bear on.

But oh! too beautiful and blest
Thy home of youth hath been;
Where shall thy wing, poor bird! find rest,
Shut out from that sweet scene?

Kind voices from departed years
Must haunt thee many a day;
Looks that will smite the source of tears,
Across thy soul must play.

Friends—now the alter'd or the dead—
And music that is gone,
A gladness o'er thy dreams will shed,
And thou shalt wake alone.

Alone!—It is in that deep word
That all thy sorrow lies;
How is the heart to courage stir'd
By smiles from kindred eyes!

And are these lost? and have I said
To aught like thee—be strong?
So bid the willow lift its head,
And brave the tempest's wrong!

Thou reed! o'er which the storm hath pass'd,
Thou, shaken with the wind,
On one, one friend, thy weakness cast,
There is but *One* to bind."

There are two clever, but too allegorical,
poems by Mr. Præd: we prefer his charades,
flowing in the most musical verse, filled with
poetical imagery, and original as the character
he alone seems able to give them. How very
gracefully turned is the compliment in this one
page!

"Come from my First, ay, come!"

The battle dawn is nigh;
And the screaming trumpet and the thundering drum
Are calling thee to die!
Fight as thy father fought,
Fall as thy father fell;
Thy task is taught, thy shroud is wrought:
So—forward! and farewell!
Toll ye, my Second! toll!
Fling high the flambeau's light;
And sing the hymn for a parted soul,
Beneath the silent night!
The wreath upon his head,
The cross upon his breast,—
Let the prayer be said, and the tear be shed:
So—take him to his rest!
Call ye my Whole, ay, call!
The lord of lute and lay;
And let him greet the sable pall
With a noble song to-day.
Go, call him by his name;
No fitter hand may crave
To light the flame of a soldier's fame
On the turf of a soldier's grave!"

Need we add the solution in the name of Camp-
bell? We must find space for two or three
more.

"Morning is beaming o'er brake and bower,
Hark! to the chimneys from yonder tower;
Call ye my First from her chamber now,
With her snowy veil and her jewelled brow.
Lo! where my Second, in gorgeous array,
Leads from his stable her beautiful bay,
Looking for her, as he curvets by,
With an arching neck and a glancing eye.
Spread is the banquet, and studied the song;
Ranged in meet order the menial throng;
Jerome is ready with book and stole,
And the maidens fling flowers, but where is my whole?
Look to the hill—is he climbing its side?
Look to the stream—is he crossing its tide?
Out on the false one! he comes not yet—
Lady, forget him, yes, scorn and forget."

"My First was dark o'er earth and air,
As dark as she could be!

The stars that gilded her ebony hair
Were only two or three;

King Cole saw twice as many there
As you or I could see.

“Away, King Cole,” mine hostess said,
“Flaggon and flask are dry;
Your nag is neighing in the shed,
For he knows a storm is nigh:
She set my Second on his head,
And she set it all away.”

He stood upright upon his legs—
Long life to good King Cole!
With wine and cinnamon, ale and eggs,
He filled a silver bowl;
He drained the draught to the very dregs,
And he called that draught my Whole.”

“He talked of daggers and of darts,
Of passions and of pains,
Of weeping eyes and wounded hearts,
Of kisses and of chains;
He said, though Love was kin to Grief,
He was not born to grieve;
He said, though many rued belief,
She safely might believe:
But still the lady shook her head,
And swore, by yea and nay,
My Whole was all that he had said,
And all that he could say.”

He said my First—whose silent ear
Was slowly wandering by,
Veiled in a vapour faint and far
Through the unfathomed sky,—
Was like the smile whose rosy light
Across her young lips passed,
Yet oh! it was not half so bright,
It changed not half so fast:
But still the lady shook her head,
And swore, by yea and nay,
My Whole was all that he had said,
And all that he could say.”

And then he set a cypress wreath
Upon his raven hair,
And drew his rapier from its sheath,
Which made the lady stare;
And said his life-blood’s purple flow
My Second there should dim,
If she he loved and worshipped so
Would only weep for him:
But still the lady shook her head,
And swore, by yea and nay,
My Whole was all that he had said,
And all that he could say.”

In adding the solutions, bridegroom—night-
cap—moonshine, we confess to only guessing,
so that our readers may still exercise their inge-
nuity. We shall finish with a poem by L. E. L.

“The Fountain: a Ballad.”

Why startest thou back from that fount of sweet water?
The roses are drooping while waiting for thee;
“Ladye,” ’tis dark with the red hue of slaughter,
There is blood on that fountain—oh! whose may it be?
Uprose the ladye at once from her dreaming,
Dreams born of sighs from the violets round,
The jasmine bough caught in her bright tresses, seeming
In pity to keep the fair prisoner it bound;
Tear-like the white leaves fell round her, as, breaking
The branch in her haste, to the fountain she flew,
The wave and the flowers o’er its mirror were reeking,
Pale as the marble around it she grew.

She followed its track to the grove of the willow,
To the bower of the twilight it led her at last,
There lay the bosom so often her pillow,
But the dagger was in it, its beating was past.
Round the neck of the youth a light chain was entwining,
The dagger had cleft it, she joined it again,
One dark curl of his, one of her’s like gold shining,
“They hoped this would part us, they hoped it in vain.”

Race of dark hatred, the stars unforgiving,
Whose hearts are as cold as the steel which they wear,
By the blood of the dead, the despair of the living,
“Oh, houses of my kinsmen, my curse be your share!”
She bowed her fair face on the sleeper before her,
Night came and shed its cold tears on her brow;
Crimson the blush of the morning past o’er her,
But the cheek of the maiden returned not its glow.

Pale on the earth are the wild flowers weeping,
The cypress their column, the night-wind their hymn,
These mark the grave where those lovers are sleeping
Lovely—the lovely are mourning for them.”

We do not conceive the volume before us at
all amenable to criticism; it is an appeal to our
kindest and best feelings. Of all changes,
that from affluence to dependence is one which,
while it most imperatively calls for assistance,
yet makes that very assistance a task of the ut-
most delicacy. The plan of the editor, Mrs.
Blencowe, to whom the public are indebted for
projecting this costly of contributions from the

gifted writers of the day, is excellent; and we
think no small credit is due to the active kind-
ness which has thus followed up its first im-
pulse of benevolence. We therefore most
strongly recommend the *Casket* to our readers,
as not less deserving of favour for its intention
—the relief of misfortune—than for the many
beautiful specimens of poetry it contains.

The Life and Actions of Alexander the Great
(being No. III. of the Family Library).

By the Rev. J. Williams, A.M. London,
1829. Murray.

THE author of this volume has long been pos-
sessed of a reputation of the very first order as
an instructor of youth in classical learning.
With all the honours of Oxford on his head,
he begun this business at Winchester College;
—pursued it with great success for some
years at the College of Lampeter, in Car-
diganshire (of which place he is vicar);—
and, latterly, completed his fame by organ-
ising and establishing in complete vigour the
New Edinburgh Academy, the first northern
seminary in which the English system of
classical teaching has been adopted, and which
already, within five or six years at most,
counts some 7 or 800 pupils. Mr. Williams’s
well-won reputation attracted the notice of the
Committee of the University of London, and
he was originally appointed to their Greek
chair. Some misunderstanding, however, arose;
and Mr. W., having in the mean time vacated
his rectorship at Edinburgh, ultimately de-
clined to fill the professor’s seat in Gower
Street. Hence, for the present, leisure—hence
a book; and such a book, that we heartily de-
sire the Vicar of Lampeter may never more be
tempted from that peaceful desk which displays
no *ferula*.

If any one ask, Were there not good enough
lives of Alexander the Great in existence be-
fore now? we answer, that in our humble
opinion the lives of all the heroes of the old
world, whether eminent in arts or in arms, de-
quire to be written over again. Most certainly.
The best biographies of this class date, with
hardly an exception, full a hundred years back;
—and where is the department of knowledge
in which seven-league boots have not been at
work since then? We are satisfied that, con-
sidering the progress made in the studies of
language, chronology, and, above all, geogra-
phy, within the last century, there is an im-
mense field open before those who seem now to
be engaged in the attempt to carry the spirit of
modern philosophy and science into ancient
history and biography, as well as other branches
of “useful and entertaining” knowledge.

Mr. Williams’s book is a happy specimen of
what might be done, and ought to be done,
in respect of many a mighty name of old, be-
sides that of the Macedonian. It is really no
exaggeration to say, that one in reading it feels
—“Well, this is the first time I ever heard
this story told *rationality*.” Mr. W. seems to
be as familiar with the Macedonian court as a
modern gentleman might be expected to be with
that of Louis XIV. or Frederick the Great;
and he contrives to make his readers as fami-
liar with these things as himself, and to take
as much interest in them. Nothing can be
better told than the early history of Alexander
—his education and campaigns of the Danube
and Thebes, when

The great Emathian conqueror bade spare
The house of Phidarus.

Nor has our author failed in rendering the
internal condition of Greece at the time when
the Asiatic expedition commenced, as clear and

intelligible as could have been wished. But it
is with regard to the great expedition itself—
the state of the Persian constitution, court,
and resources—the policy of Alexander in com-
pleting, at whatever expense of time, the con-
quests of Tyre and Egypt, ere he met Darius
in the final and decisive field—the detail of the
circumstances attending Alexander’s recog-
nition by the Persian nation—and, above all,
the march into India, and the masterly pro-
ceedings subsequently, with the view of re-
storing Assyria to her ancient prosperity:—in
a word, it is on the Asiatic history of this
prince, styled by Johnson with such exquisite
absurdity a *madman*—that Mr. Williams has
bestowed his greatest exertions, and been most
splendidly rewarded. Whatever new light
could be thrown on any particular point of
Alexander’s career, by a most strict examina-
tion of all the original writings of the Greeks
and Romans—whatever could be gathered from
the literature of the Arabs and Persians—above
all, whatever the works of modern European
travellers could supply in illustration of topo-
graphical descriptions and local manners—all
this may now be found concentrated in one
handy little volume of the Family Library.
The narrative of Arrian forms the *woof*; and
in the *woof* a thousand threads are mingled—
Athenæus at the one end, and Bishop Heber
at the other.

By way of specimen, we may select Mr.
Williams’s Introduction.

“Greece, its islands, and the western part
of Asia Minor, have from the earliest ages been
the principal scene of the great struggle be-
tween the eastern and western worlds. Be-
tween the European and Asiatic, even under
the same latitude, there exists a marked dif-
ference in feelings, manners, and character.
That this difference is independent of climate
and of country, and attributable to long-
established habits, and a system of education
transmitted down from the remotest ages, is
apparent from the well-known facts, that the
Greek at Seleucia on the Tigris, at Palmyra,
Antioch, and the Egyptian Alexandria, con-
tinued to be still a Greek; while the Arab in
Andalusia and Grenada was still an Arab, and
the Turk in Europe has retained all the feel-
ings, manners, and customs, of his oriental
ancestors. It is not wonderful, therefore, that
two races so inherently different from each
other, should, where liminary, be engaged in
perpetual warfare. The great struggle has in
general been in the vicinity of those narrow
seas that separate Europe from Asia. It has
now continued, with strange vicissitudes, for
more than six-and-twenty centuries, and longer
too, if we add well-founded traditions to his-
torical records; and yet there appears no sign
of an approaching termination. By a curious
inversion of their relative positions, the Euro-
peans are on the banks of the Ganges and on
the shores of the Caspian, and the Asiatics on
the banks of the Danube and the shores of the
Adriatic. But my present object is not to
trace the result of the struggle down to our
days, but to give a short sketch of its leading
events previous to the invasion of Asia by
Alexander. I pass over the conquest of the
Peloponnesus by the Phrygian Pelops, the es-
tablishment of a Phœnician colony in Boeotia,
and of other oriental settlers in various parts
of Greece. I dwell not on the Argonautic
expedition, the conquest of Troy by Hercules,
the seizure and occupation of Rhodes and its
dependant islands by his immediate descend-
ants, not from any doubt of the facts, but be-
cause they are not in the right line that con-

ducts us down to the expedition of Alexander. The result of the second Trojan war was far different, as the superiority attained by the Europeans in that contest enabled them to seize all the intervening islands, and to occupy the whole Asiatic coast, from Halicarnassus to Cyzicus, with their Dorian, Ionian, and Æolian colonies. The first and last did not spread much; but the Ionians, the descendants of the civilised Achæans and Athenians, flourished greatly, covered the seas with their fleets, and studded the shores of the Euxine with wealthy and splendid cities. These colonists in Asia were the founders of Grecian literature. From them sprung Homer and Hesiod, Alcæus and Sappho, Thales and Herodotus. And had they possessed a system of civil polity adapted for the purpose, they had strength, knowledge, and energy, sufficient to have conquered all Asia. But their circle of action was narrowed by their confined views of constitutional governments. Even Aristotle, superior as he was to his countrymen, wrote, in much later times, that a hundred thousand and five thousand citizens were numbers equally incompatible with the existence of a free state, as the greater number would render deliberation impossible, and the less be inadequate for the purposes of self-defence. This limitation was grounded on the principle, that every Greek had an imprescriptible right to attend and vote in the great council of the nation, and to be eligible, in his turn, to the highest offices of the state. To fulfil these duties ably and with advantage to the commonwealth, the constitution supposed all free citizens to be gentlemen or wealthy yeomen, able to live upon their own means, without devoting themselves to any particular profession or pursuit. The number of such men, in comparison with the great mass of the population condemned to hopeless slavery, was very limited. Sparta in the days of Aristotle contained only nine thousand citizens. The loss of seven hundred warriors at the battle of Leuctra had consequently proved fatal to her Grecian supremacy. The number of Athenian citizens varied from twenty to thirty thousand. When, therefore, one thousand, probably the prime and flower of the nation, had fallen at Chæroneia, the blow was regarded as irreparable, and all thoughts of further resistance abandoned. Hence it is apparent that the erection of any powerful monarchy in the vicinity of states constituted on this principle, must eventually prove fatal to their independence. Such was the fate of the Grecian colonies in Asia. Their neighbours, the Lydians, under the government of the Mermnadae, a native dynasty, had become a powerful race; and the discovery of the gold excavated from Mount Tmolus, or sifted from the bed of the Pactolus, furnished them with the means of supporting a regular army. After a lengthened contest, they therefore succeeded in reducing to subjection all the continental Greeks. The conquered and the conquerors were united by Cyrus to his new empire, and became Persian subjects under Cambyzes and Darius. The Ionians revolted from the latter, but were subdued after an unavailing struggle. At the commencement of the revolt the Athenians sent a fleet to aid their colonies. The combined Athenian and Ionian forces marched to Sardes, and burnt the Lydian capital. This rash act drew on Athens and on Greece the whole vengeance of the Persian monarchs. After a long and deadly contest, the Greeks repelled the invaders, pursued them into Asia, and for a time liberated

their Asiatic fellow-countrymen. But their own civil contests diverted their attention from foreign objects, and their splendid victories had no further result. The same may be said of the two campaigns of Agesilaus in Asia, for the management of which Xenophon has praised him far beyond his merits. Then followed the disgraceful peace of Antalcidas, which once more consigned the Asiatic Greeks to the tender mercies of a Persian despot. From that period Persia changed her policy, and spared neither money nor intrigues in attempting to embroil the Grecian states with each other. For this conduct she had sufficient cause—for the expedition of the ten thousand had revealed to the hungry Greeks her weakness and their own strength. They had therefore, of late, been eager to free themselves from the harassing contests of the numerous aristocracies and democracies, and to unite under one head in a serious and combined attack upon the Persian monarchy. Jason, the Thessalian, had nearly matured his plans, and had he not been suddenly arrested in his career, the Greeks would have probably invaded Asia under him as their captain-general; but his assassination only postponed the great event. Philip, the son of Amyntas, had followed the path marked out by Jason; and by patience, prudence, and vigour, succeeded in his great object. The Thebans and Athenians, who contested the Macedonian supremacy in the field, were defeated; and the Spartans, too proud to submit, too weak to resist, sullenly stood aloof from the general confederation, and withheld their vote from the Macedonian captain-general. But Persia was again saved from invasion by the death of Philip; and Alexander succeeded to his throne and pretensions in the twentieth year of his age."

This appears to us to be a passage distinguished alike for originality and for justice of views; and it affords a fair sample of Mr. Williams's style, which possesses much strength and clearness, and sometimes rises into very noble eloquence, but has not as yet reached the felicity of perfect freedom.

By way of shewing how ingeniously and how effectually the author brings modern materials to the clearing up of old mysteries, we may turn to his account of a very striking and hitherto unexplained occurrence which took place immediately before Alexander's fatal illness—we mean the story of the slave who climbed up and seated himself on the royal throne in the midst of the guards, and the wonderful importance attached to this incident by the oriental subjects of the conqueror.

"A few days before his last illness, he was busily employed in superintending the formation of his new corps. The tent, which was his favourite residence, was erected on the plain, and in front was placed the throne, whence he could inspect the proceedings. In the course of the day he retired to quench his thirst, and was attended by all the great officers, who left the throne under the sole care of the eunuchs of the palace. An obscure Greek, who was on the field, seeing the throne and the seats on both sides empty, with the eunuchs standing in rows behind, walked up, and deliberately seated himself upon the throne. The eunuchs, it appears, were prevented by the etiquette of the Persian court from disturbing the intruder, but they raised a loud cry of lamentation, tore their garments, beat their breasts and foreheads, and shewed other signs of grief, as if some great misfortune had befallen them. The event was judged to be highly important, and the intruder

was put to the torture in order to discover whether he had accomplices or not in this overt act of treason, for such it was considered to be by all the Persians of the court. But the only answer which they could extract from the unhappy man was, that he had acted most unintentionally, and without any ulterior views. This confession, in the opinion of the diviners, gave a more fatal complexion to the omen. Without a knowledge of eastern customs it would have been impossible to discover why so much importance was paid to a trifling occurrence; but the following passage from the Emperor Baber's autobiography will illustrate this and other obscure points of eastern history. 'It is a singular custom in the history of Bengal, that there is little of hereditary descent in succession to the sovereignty. There is a throne allotted for the king, there is in like manner a seat or station assigned for each of the amirs, vazirs, and soddars. It is that throne and these stations alone which engage the reverence of the people of Bengal. A set of dependants, servants, and attendants, are annexed to each of these situations: when the king wishes to dismiss or appoint any person, whosoever is placed in the seat of the one dismissed is immediately attended and obeyed by the whole establishment of dependants, servants, and retainers, annexed to the seat which he occupies; nay, even this rule obtains even as to the royal throne itself; whoever kills the king, and succeeds in placing himself on that throne, is immediately acknowledged as king. All the amirs, vazirs, soldiers, and peasants, instantly obey and submit to him, and consider him as much their sovereign as they did their former prince, and obey his orders as implicitly. The people of Bengal say, 'We are faithful to the throne; whoever fills the throne, we are obedient and true to it.' To this passage the editor of Baber adds the following note. 'Strange as this custom may seem, a similar one prevailed down to a very late period in Malabar. There was a jubilee every twelve years in the Samorin's country; and any one who succeeded in forcing his way through the Samorin's guards and slew him, reigned in his stead. The attempt was made in 1695, and again a few years ago, but without success.' The Persians and Medes were not Hindus, but seem to have adopted many ceremonies from the Assyrians, who were a cognate people with the Egyptians and Indians. This doctrine of obedience to the throne had been established for the safety of the great body of the nation during civil contests. It furnished a valid excuse for obeying the king *de facto*, without inquiring into his title *de jure*. But the very principle adopted to insure the national tranquillity became one great cause of civil wars. For when any bold adventurer succeeded in gathering a sufficient number of marauders, bandits, and outcasts, not troubled with any conscientious scruples on the subject of passive obedience, he boldly claimed the throne, and success formed the best of titles. The chance of battle might prove fatal to the reigning monarch, and thus at once convert the loyal troops into a band of rebels. The Persians under Cyrus the Younger did not salute him as king until they had witnessed the defeat of the royal army; although Cyrus had long before claimed the crown, because he was a better man than his brother. The assassination of Darius by Bessus and his accomplices must be referred to the same principle. By the murder of his sovereign, Bessus transferred his rights to himself. But had Darius fallen alive into the hands of Alexander, they would have devolved

upon the captor. Many battles in the East have been lost in consequence of this feeling. Mahmoud of Ghisni gained the battle which opened India to his army, because the elephant of his victorious opponent became unruly, and bore the rajah off the field. And Dara, a descendant of the same Baber from whom we derive the knowledge of this feeling, lost the throne of Delhi, because, in the battle which secured the crown to his brother Aurungzebe, he happened to dismount from his elephant in the heat of the contest. From this digression we may form some opinion of the reasons which induced the Persians to treat with such severity the chance-occupant of the royal seat of Alexander."

We are greatly mistaken if this little volume do not become a school-book. It is far better fitted for that purpose than any one of recent publication with which we have chanced to meet. It will, no doubt, be a great favourite among young persons engaged in the delightful career of classical study: but we are bound to add, that it deserves a place in the collection of the most mature reader, and is, in fact, a permanent addition to the stock of standard histories in the English tongue. There is an excellent map; and two portraits of Alexander, from the best authenticated medals, both very spiritedly cut in wood.

The School of Fashion. 3 vols. 12mo.
London, 1829. Colburn.

LIKE many of its contemporaries, there is little incident, and less plot, to be found in these pages; but, unlike many of its contemporaries, there is both wit and sense, and a tone of satire which would have made a lively correspondent, had its author lived fifty or a hundred years ago. The great merit of the work lies in the first sketches of the characters introduced: were the execution as well developed as originally conceived, the story would have an interest which it now wants: but the *dramatis personæ* are only personified opinions. Of the happy touches in some of these light sketches, the following portraits are fair examples.

"Mr. Lovaine was a worthy, excellent country gentleman, and, as such, had been an M.P., who always voted for the highest duty on imported corn, conscientiously believing it was the only means of affording cheap bread to the poor. He persecuted poachers with almost more than the utmost rigour of the law, because he considered poaching, if not quite the most dangerous crime ever heard of in this country, yet, to say the least, as leading to those that were. He would not have a single Catholic emancipated for all the value he placed on his eternal salvation, because he knew for certain that if such an innovation were ever admitted, the Pope would very soon become Archbishop of Canterbury, and a general conflagration of all Protestants would be the natural consequence. He believed Napoleon to have been a coward, and by far the wickedest man (Cromwell excepted) who had existed since the days of King Herod. He looked upon alteration as innovation, and innovation as a ramification of revolution. He hated what was new because it was so, and spoke with a respect approaching to reverence of the good old times when our ancestors had nothing to fear from the dangers of mitigated small-pox, as the effect of vaccination; of explosion from steam or gas-pipes; or from too great velocity in travelling, owing to the smoothness of Macadamized roads. Let it not, however, be supposed that he was illiberal or pre-

judiced; he seldom missed an opportunity of declaring that he had no prejudices, though he hated the French (and he certainly believed all foreigners to be French); and though not illiberal, he much feared that no true modesty—no real good wives or mothers—were to be found any where but in England; and he heartily thanked his Maker every night, not so much for his creation and preservation, as for the blessing of having been born an Englishman.—Mrs. Lovaine was of a good family; but, from accidental circumstances, her coming out (as the emancipation of a young lady from the disabilities of childhood is termed) was performed at Bath instead of in London. She had charmed her patriotic husband no less by her beauty than by her high gown and long petticoats; her habitual dread of, and implicit belief in, all the dreadful and dangerous conspiracies hatched by a Citizen North and others in Pig's-foot and Pye-crust Lane (*vide* Trickleborough Hall), all of which were duly retailed to her by Mr. Lovaine; and, though last, not least, by her unfeigned admiration of his patriotism, fashion, and fortune. But times change, though men and women never do; it was the fashion at one time to dread all that was not English; it became the fashion to detest all that was so; and if Mrs. Lovaine always followed the same leader, how was she inconsistent? Mr. Lovaine, however, was obstinate, and never could be brought to see this in its proper light; and though they loved each other quite as much, if not more than many other happy couples, it certainly afforded matter of frequent discussion between them, whether there was more or less consistency in always following the times, or going in opposition to them if they changed. Mrs. Lovaine would, we have no doubt, have sacrificed much of her own amusement to promote that of her husband; but not to give Elinor every advantage which she considered necessary to her success in the *beau monde* was impossible. She would have foregone pleasure, but her duty to her child was imperative."

The following short extract is of a more general description, and may illustrate the writer's talents in that way.

"Cynics would fain teach us never to hope; and prudent, well-intentioned advisers would try to undermine this our main support in life, by hinting that hope is but the parent of disappointment. We, however, think that hope and happiness are also very nearly allied; and although the former may tell 'a flattering tale,' it is one to which it is so agreeable to listen, that we much doubt whether, if a regular debtor and creditor account could be made out, the balance would not rather be found in favour of the number of hours spent in agreeable hope, than in those of painful disappointment. We, therefore, advise all young people to indulge in the dreams of hope as long as they can; and should they awake to disappointment in this world, let them remember with pious hope, that 'Blessed are they that mourn, for they shall be comforted.'"

Our concluding example is a capital touch at the imprudence of risking intimacies with parties unknown, either at home or abroad. Mrs. Lovaine gives a *fête* at Florence.

"The company began to assemble; but ere the room was crowded, the Countess Dunhaven was announced. Her height, her fine though harsh features, together with her splendid jewels and dress, gave her what is vulgarly called such a dashing appearance, that she could not fail to excite attention throughout the room. The Marquise de la Bruyère was sitting by

Mrs. Lovaine when she entered. The Marquise was of a noble French family, and from her long residence at Florence, and from her cultivation of literary society, was much looked up to both by natives and foreigners, and her house became the great resort of talent and fashion. With many amiable qualities, which endeared her to her friends and acquaintance, there was in her a propensity to imagine affronts where none had been intended, and a hastiness in shewing her displeasure that often hurried her into acts of injustice, which were not so easily forgiven by others as they were acknowledged by herself. Mrs. Lovaine, knowing that marked attention was agreeable to Madame de la Bruyère, made a point of introducing Lady Dunhaven to her before she conferred that honour upon any other acquaintance. The marquise was *prévenante*—the countess all smiles—Elinor was engaged for every dance.—Mrs. Lovaine was all joy and triumph. As soon as Madame de la Bruyère quitted the ball, Mrs. Lovaine promenaded the rooms arm-in-arm with Lady Dunhaven, and presented the wife of her old friend to all from whom she had received civility during her *séjour* at Florence, and revenged many a little wrong by withholding that advantage from others. It was a night of bliss to Mrs. Lovaine; and so fully satisfied did she feel of her own fashion and consequence, that she determined upon erasing from her visiting-book, the following day, at least thirty acquaintance, who had nothing but good character to recommend them. Balls, however, like all other earthly pleasures, must end; and so, at a late hour, Mrs. Lovaine's banquet-hall was deserted; 'its lights were fled, its garlands dead, and all but she departed.' To Elinor it had been a scene of innocent amusement: she had given pleasure by her simplicity and good nature, and she had been pleased in return by the notice bestowed upon her. But gratified vanity or satisfied ambition had formed no part of her enjoyment: she was amused; but having been unable previously to form any idea from what source she wished to derive her amusement, it was not the success of a design that had delighted her; and, at the end, though she was fully sensible of the effect, she was unconscious of the precise cause. Incessant dancing on her part, and equally incessant smiling, and being agreeable on the part of her mother, soon reconciled both to the idea of repose, and soon were they 'bound in slumber's chains,' alike unconscious of past pleasure or coming woe. It was late the following morning when Mrs. Lovaine and her daughter, with pale faces and slight head-aches, came down to breakfast: both were fatigued, and unable to settle to any employment; Mrs. Lovaine therefore desired Elinor to accompany her to Lady Dunhaven's, for the purpose of inquiring how her ladyship felt after the *fête* of the preceding night. Lady Dunhaven was at home; had slept well; overwhelmed Mrs. Lovaine with compliments upon the success of her ball, the good looks of Elinor, &c. In short, never had she been so agreeable, and never did Mrs. Lovaine feel so sure of her friendship and regard. Upon her return home, she found her table covered with cards and notes: she perused all she saw, and was leaving the room, when Elinor said, 'Here is another letter, mamma, that has fallen on the floor.' Mrs. Lovaine opened and read it with an eagerness which surprised her daughter; but her surprise was quickly succeeded by alarm when she perceived that her mother was as pale as ashes. The contents were as follow:—'If your conduct last night proceeded from igno-

rance, this note will surprise you. If, on the contrary, it arose from a disregard to your own reputation, and still more to that of your interesting and engaging daughter, the writer hopes it may at least produce some feelings of shame. The notorious and infamous Countess Dunhaven, upon whose arm you were fondly leaning, and by the introduction of whom you insulted your friends and acquaintance, is Lord Henry Fitz-Allan's divorced wife, a woman whose depraved conduct, intriguing spirit, and violent temper, rendered her so obnoxious even to her own relations, that, unpitied and unnoticed, she left Ireland with her last dupe (and, strange to say, husband!) to seek abroad an asylum from the virtuous indignation which her character universally excited at home. Your notice of her, not to say your apparent intimacy, has been the general topic of conversation and animadversion this morning."

The Marquise de la Bruyère is indignant; and, indeed, the punishment is quite enough for the error. In conclusion, we have only to add, that though very *fashionable* in its title, this production does not come within the objectionable class of trash of which so much has of late been published under similar names: on the contrary, it bears evidence of being written by a person (a female we should guess?) well acquainted with the upper circles of life, is generally spirited, an agreeable production for the lovers of light reading, and yet containing many hints that ought not to be thrown away.

Civil Architecture. Designs for completing some of the Public Buildings in Westminster, and for correcting Defects in others: humbly submitted to the consideration of His Majesty, the Members of both Houses of Parliament, the Lords Commissioners of His Majesty's Treasury, the Judges of the several Courts, the learned Counsel practising in those Courts, and to the Surveyor-General of His Majesty's Works. By John Soane, &c. &c. (Not published.)

ADMIRING as we do the good taste, talents, genius, and liberal spirit of Mr. Soane, we feel more than ordinary regret that this ill-advised volume should have the notoriety it will obtain even by private circulation. That the New Law Courts are inconveniently constructed, is, we fear, beyond all question, and that their style of decoration is eccentric and unworthy of the artist who built the Bank of England, is to us as little problematical: yet we think that Mr. Soane's feelings have been wounded with unnecessary and undeserved severity; and that in many instances there has been great want of candour on the part of his detractors, and even of those under whose direction or sanction he was proceeding, and at the time too when the evils complained of might have been remedied. We shall quote a few examples.

"In 1820 I was honoured with the commands of the lords commissioners of his majesty's treasury to prepare designs for New Law Courts, to be erected on the space between the south-west turret of the stone building at St. Margaret's Street, leading to the entrance into the House of Commons, and north-west tower of Westminster Hall, projecting in New Palace Yard as far as the buildings erected in the reign of Queen Elizabeth, and which abutted on the west front of the north-west tower of the Hall. During the time I was employed in composing a design adapted to the space allotted, the site proposed for the new buildings was so materially circumscribed, that it became necessary to change the arrangements entirely, and to remodel the first design. Another

design was made, and subsequently altered; which having been submitted to his majesty, approved by the judges, sanctioned by the lords commissioners of his majesty's treasury, and a parliamentary vote for the estimated expense of the edifice granted, the works were immediately begun and carried on with so much zeal and activity, that in February 1824 they were far advanced towards the completion—the building having been inspected in its progress by the chancellor of the exchequer, the attorney-general, Mr. Herries, and other official characters—and I heard of no disapprobation until the 2d of March, when the morning papers gave the debates in the House of Commons of the preceding evening, on the defects and bad taste of the New Law Courts. According to these sources of information, it had been stated, that part of the new structure projected into the New Palace Yard was a miserable 'excrescence of the Boeotian or sixth order of architecture,' stated to have been first promulgated by one of the great luminaries of the law, and ought to be razed to the ground. The exterior also of the Court of King's Bench, not being in the Gothic style, was such a disgrace to the national architecture, that it was 'expedient to suspend the works, and to appoint a committee to examine and report on the same.' That the first disapprobation of the New Law Courts should have originated with the honourable member for Corfe Castle, and have been expressed in language so very distressing to the feelings and so injurious to the professional character of the architect, appears strange when it is recollected that the honourable gentleman, residing in Old Palace Yard, must have frequently noticed at least the exterior of the building; nay, soon after the Court of Chancery and the Vice-Chancellor's Court were completed, that honourable member, accompanied by the surveyor-general and myself, examined the works with scrupulous accuracy, seemed pleased with what he saw, and the only objection made was to the coloured glass in some of the upper lights, which, in deference and respect to the taste of that enlightened individual, was immediately removed. * * *

"I shall now proceed to give some particulars respecting the other buildings in Westminster attached to the department I hold in his majesty's office of works, commencing with the Painted Chamber. It was stated some time since in the daily journals, that the honourable member for Corfe Castle had observed, that 'he had witnessed the demolition of a part of the old palace at Westminster, the ruins of which had been converted into something that he could not mention. From the very unsatisfactory manner in which the alterations in the House of Lords had been performed, he wished to know what further was to be done, and particularly how far the work of destruction of the ancient and venerable monuments of art that once surrounded the House of Lords and parts adjacent was intended to be carried. He was sorry to have reason to understand that the system of destruction was to reach the Painted Chamber. This room—no less admirable for its beauty than its antiquity—it was unnecessary to destroy. Another honourable member said he understood from the remarks made that evening by the honourable member for Corfe Castle, that all the buildings of the ancient palace at Westminster were now devoted to destruction. With this impression on his mind, the honourable member then asked, What had become of the Painted Chamber—what was the character of the building erected in its place? Can any thing be more

incongruous or more inconsistent?' The obvious reply to these questions is, that the Painted Chamber, so far from being demolished, remains unaltered in all its essential parts."

The work contains several etchings of designs in the "Gothic style" of architecture, for the improvement of the buildings about Westminster Hall, which, happily for Mr. Soane's reputation, have not been adopted; for the "Gothic style" is not Mr. Soane's forte. There is also, amongst others, a design for a national monument, forming the western entrance into London—"an effort to 'snatch a grace beyond the reach of art,'" and "to combine together the classical simplicity of the Grecian architecture, the magnificence of the Roman, and the richly varied effects so strongly marked in our ancient ecclesiastical structures." This design is more in the manner of the artist's earlier productions, though not so high in our estimation as many of those splendid performances. On the whole, we consider Mr. Soane to have been cramped by many difficulties, even more than usually attend the execution of public works; and if we must, as holding some differences in taste, disapprove of parts of his erections, we cannot withhold from him the praise of having done much to adorn the metropolis of Britain. His imagination is perhaps too magnificent for a calculating and commercial people, and the interference which this causes must often mar the noblest projects. At any rate, we are satisfied by the present statement, that he has been blamed for faults for which he is not justly amenable; has been controlled and stopped before his labours were fairly finished; and sometimes made a scape-goat for official offenders and intermeddling dabbles, with their friends and partisans.

A Universal Prayer; Death; a Vision of Heaven; and a Vision of Hell. By Robert Montgomery, author of the "Omnipresence of the Deity." Third edition, with additions. 12mo. pp. 220. London, 1829. Maunder.

THERE is something pleasant in prophecy; and if, as Rochefoucault says, we would rather that the heaviest misfortunes befall our dearest friends, than not have our predictions verified,—if so for evil, let us, for the credit of human nature, hope still more so for good: and in this spirit we rejoice to see the public approval thus united with our own. Let any one, for a single month, read through the little hot-pressed volumes which load our table, and he will learn whether we ought not to appreciate any thing like originality of imagery, or truth of feeling. With many faults,—a diction often too turgid, a little tendency to generalise,—Montgomery has the spirit of true poetry in him; for what are such expressions as the following but poetry? For instance, where he speaks of the breezes after a tempest, "panting and wild, like children of the storm;" or the parting sailor, who "looks the promise love has often said;" or,

"When from the fluted organ, full and deep,
Billows of music through the dim aisles sweep."

And again—

"Those sweet stars that, like familiar eyes,
Are wont to smile a welcome from the skies;"
or speaking of a mother, "the fondness in thy fear": the one touch in his description of an earthquake—

"On their bowing trees
The leaves hung shuddering;"
and the streams that

"Shyly roll themselves away,
Like serpents in the sun."

These are surely touches from a poet's hand. We have only room for one eloquent burst of personal feeling.

"Nor—glory to the Power that tunes the heart
Unto the spirit of the time!—are all
The fancy and the flush of youth forgot:
The meditative walk by wood or mead,
The hush of streams, and language of the stars,
Heard in the heart alone—the boom-life
Of all that beautified or graced his youth,
Is still to be enjoyed, and hallow'd with
The feelings flowing from a better world.

Ising of Death: yet soon, perchance, may be
A dweller in the tomb. But twenty years
Have wither'd since my pilgrimage began,
And I look back upon my boyish days
With mournful joy, as musing wand'ers do,
With eye reverted, from some lofty hill,
Upon the bright and peaceful vale below.—
Oh! let me live, until the fires that feed
My soul have work'd themselves away, and then,
Eternal Spirit! take me to Thy home;
For when a child I shaped inspiring dreams,
And nourish'd aspirations that awoke
Beautiful feelings flowing from the face
Of Nature; from a child I learn'd to reap
A harvest of sweet thoughts for future years.

How oft,—be witness, Guardian of our days!
In noons of young delight, while o'er the down,
Humming like bees, my happy playmates roam'd,
I loved on high and hoary crag to muse,
And round the landscape with delighted eye:
The sky besprinkled o'er with rainbow hues,
As if angelic wings had wanton'd there;
The distanced city cap'd with hazy towers;
And river shifty roaming by its banks
Of green repose,—together with the play
Of elfin music on the fresh-wing'd air,—
Entranced with these, how often have I glow'd
With thoughts that wanted to be eloquent,
Yet only ventured forth in tears!

And now,
Though haply mellow'd by correcting time,
I thank thee, Heaven! that the bereaving world
Hath not diminish'd the subliming hopes
Of youth, in manhood's more imposing cares.
Nor titled pomp nor princely mansions swell
The cloud of envy o'er my heart; for these
Are oft delusive, though adored: but when
The Spirit speaks, or beauty from the sky
Descends into my being—when I hear
The storm-hymns of the mighty ocean roll,
Or thunder sound, the champion of the storm!—
Then feel I envy for immortal words,
The rush of living thought; oh! then I long
To dash my feelings into deathless verse,
That may administer to unborn time,
And tell some lofty soul how I have lived
A worshipper of Nature and of Thee!"

We must say of Mr. Montgomery, and it is his most encouraging praise, that we think him capable of much more than he has done: he has feelings that require to be cultivated by thoughts,—there are high models for him to emulate, and a store of years that may be sown for golden harvest;—and our parting advice is, "While we commend you for the present, let your own hopes dwell upon the future,—for futurity is the poet's best heritage."

CHESTERFIELD'S LETTERS.

(Second Notice.)

As we proposed to return more than once to this entertaining and characteristic volume, (though disfigured, as we said, by a few freedom's not consistent with modern feelings,) we renew our miscellaneous task with quoting a letter, full of originality, from the celebrated and witty Sir Charles Sedley.

"My lord,—When your lordship was last in town, you made mee an offer of some venison, which I did not then lay hold off, having no occasion, neither was it then in season; but now I would thank you for a warrant for a buck; tho the town is so empty, that with all my bowling, tennis, drinking, and other general acquaintance, I shall have much a doe to find company for a party: besides, the distinction of Whigg and Tory doth much add to the present desolation. They are in my opinion (at least, the violent part on both sides) much of the same stuff at bottom, since they are so easily converted one in to an other—I

mean self-interest. For instance, the Lord Sunderland, upon the Dutches of Portsmouth's arrivall, is received at court. The Lord Anglesey was voted a libellour, and his boock against the Duke of Ormond a libell at the councill; so that tis thought hee will be three quarters Whigg. The Lord Vaughan is this week to be marry'd to the Lady Anne Savile, notwithstanding he voted her father an enemy to king and country last sessions. Tho wee are not blest with poets that can write us comedys equal to the amitiens, I beleive never was an age so comical as this; and a laugher, where ever he turns himself, will have occasion to hold his sides. Madame de Soyssons is arriv'd, whom the Lord Crafea (were he alive) would call Madame de Soy-xante—for shee is ten years older than her sister Mazarin; but whether our court will have her a beauty, a mis, a wit, or polittion, is not yet known. Ruinous play is grown the only diversion at Windsor; and a man without a thousand gineys to venture is an asse; and, on the contrary, as it has ever been the custome of people of quality that had infirmities to introduce fashions that might hide them, soe they now cover their want of sence and conversation with extravagant play. Some considerable removes are to be made at court; but what they are your lordship cannot but know before mee, so I will not trouble you with my conjectures. I could almost wish England were not so large, that it might fall within my diocess to visit your lordship—for I know no man I would speake more freely to, nor more willing hear, than your lordship, being, without compliment or any regard to the common close of a letter, your very obedient servant,—C. S."

But not the least remarkable portion of the volume before us, is Lord Chesterfield's correspondence with Mrs. Villiers, afterwards the celebrated mistress of Charles II., Duchess of Cleveland, and the progenetrix of several of our noblest families.* They afford a strange

* "Barbara, daughter of William Villiers, Viscount Grandison, of the kingdom of Ireland. She was married shortly previous to the Restoration, to Roger Palmer, Esq., a papist, the heir to an ample fortune. It is evident from the letters in the present publication, wherein she is repeatedly and warmly addressed as 'Mrs. Villiers,' that the Earl of Chesterfield was most intimate with her before her union with Mr. Palmer, to whom she adverts with marked aversion or contempt in a letter in this collection. At all events, the manuscript from which these papers are collated, furnishes intelligible proof of their voluptuous intimacy, and in terms adapted to the glowing fervour of the subject. In the thirteenth year of Charles II., Mr. Palmer was created Earl of Castlemaine, in Ireland; and during her cohabitation with her husband she had a daughter, born in February 1661. This, says Lord Dartmouth, was 'the late Countess of Sussex, whom the king adopted for his daughter, though Lord Castlemaine always looked upon her to be his, and left her his estate when he died; but she was generally understood to belong to another, the old Earl of Chesterfield, whom she resembled very much both in face and person.' Shortly after the creation of Lord Castlemaine, she openly became the mistress of the king, and was, as Burnet says, 'his first and longest mistress.' Her infidelities were numerous and flagrant, nor were they unknown to Charles, and at a time too when, according to the laws of their immoral intercourse, he might have claimed her temporary continence. In the year 1670, she was created Baroness of Nonsuch, in Surrey; Countess of Southampton, and Duchess of Cleveland, during her natural life, with remainder to Charles and George Fitzroy, her eldest and third sons, and their heirs male. In 1673, she was delivered of a daughter, supposed to be by Mr. Churchill, the illustrious Duke of Marlborough, which progeny the king disclaimed. Her children by Charles were, 1. Charles Fitzroy, born 1669, created 1673 Duke of Southampton, and after his mother's death Duke of Cleveland. 2. Henry Fitzroy, Duke of Grafton, born Sept. 20, 1663, and killed Oct. 8, 1690, at the siege of Cork. 3. George Fitzroy, Duke of Northumberland, born Dec. 28, 1665, who died without issue. 4. Charlotte Fitzroy, born Sept. 5, 1664, married Feb. 20, 1675-7, to Sir Edward Henry Lee, Earl of Lichfield. 5. Barbara Fitzroy, born July 18, 1673, who became a nun, at Pontaise, in France. (Ann Fitzroy, whom Charles adopted, but who, according to the Earl of Dartmouth, was supposed to be the daughter of Lord Chesterfield, the author of the greater part of this collection.)

example of the open profligacy of these good old times, which, like the dissolute period of Louis XV. paved the way for change and revolution. The following are letters from Mrs. V. to Chesterfield, in 1667.

"My Lord,—I would fain have had the happiness to have seen you at church this day, but I was not suffered to goe. I am never so well pleased as when I am with you, though I find you are better when you are with other ladies; for you were yesterday all the afternoon with the person I am most jealous of, and I know I have so little merit that I am suspicious you love all women better than my selfe. I sent you yesterday a letter that I think might convince you that I loved nothing besides your selfe, nor will I ever, though you should hate mee; but if you should, I would never give you the trouble of telling you how much I loved you, but keep it to my selfe till it had broke my hart. I will importune you no longer than to say, that I am, and will ever be, your constant and faithfull humble servant."

"My Lord,—I doe highly regret my own misfortune of being out of town, since it made mee incapable of the honour you intended me. I assure you nothing is likelier to make mee sett to high rate of my selfe, than the esteem you are pleased to say you have for mee. What they are your lordship cannot but know before mee, so I will not trouble you with my conjectures. I could almost wish England were not so large, that it might fall within my diocess to visit your lordship—for I know no man I would speake more freely to, nor more willing hear, than your lordship, being, without compliment or any regard to the common close of a letter, your very obedient servant,—C. S."

The next is a still more extraordinary sample of joint intrigue: it is from Lady Ann Hambleton* and Mrs. Villiers together.

"My Lord,—My friend and I are just now abed together, a contriving how to have your company this afternoon. If you deserve this favour, you will come and seek us at Ludgate Hill, about three a clock, at Butler's shop, where wee will expect you: but least we should

Further light accrues from the following correspondence.

"My Lord,—I came just now from the Dutches of Hambleton, and there I found, to my great affliction, that the Lady Ann was sent to Windsor, and the world says that you are the occasion of it. I am sorry to hear that the having a kindness for you is so great a crime that people are to suffer for it; the only satisfaction that one doth receive, is, that their cause is so glorious, that it is sufficient to preserve a tranquillity of mind, that all their mallice can never discompose. I see that the

tion, was born on Feb. 29, 1661, and married in 1674 to Thomas Lennard, Earl of Sussex.) In July 1705, her husband Roger Palmer died, when she married a person of desperate condition, known as 'Handsome Fielding,' from whom she suffered a severe and brutal treatment, and was eventually protected by the law. A dropy put a period to her life, on the 9th Oct. 1709, in the sixty-ninth year of her age. It is impossible to fancy a more distinguished profligacy than that of this abandoned and voluptuous woman."

Pepys notices the indecency of her public behaviour: Jacob Hall, the rope-dancer, was openly said to be one of her paramours.

* "Anne, daughter of William, fourth Marquess, and second Duke, of Hamilton. His grace married Elizabeth, daughter and co-heiress of James, Earl of Drlinton, by whom he had a son, who died in infancy, and five daughters; the duke was mortally wounded at the battle of Worcester. Anne, his above-mentioned daughter, was married to Robert Carnegie, Earl of Southesk. It is obvious from the joint letter of herself and Mrs. Villiers, that a familiar intimacy existed between them; engendered no doubt by their congeniality of dispositions." This intercourse led to the obscene fact which is mentioned in Burnet, and is now to be found in the Memoirs of Grammont also, from many editions of which it had been decently withheld, but was restored again to publicity in that of Strawberry-hill of 1774, which the famous Walpole offers to the Marquise du Desfand, "comme un monument de son amitié, de son admiration, et de son respect."

fates were resolved to make me happier than I could expect, for when I came home I found a letter that came from your lordship, which makes me believe that amongst the pleasures you receive in the place where you are, which I hear affords great plenty of fine ladies, you sometimes think of her who is, &c."

"My Lord,—The joy I had of being with you the last night, has made me do nothing but dream of you, and my life is never pleasant to me but when I am with you or talking of you; yet the discourses of the world must make me a little more circumspect; therefore I desire you not to come to-morrow, but to stay till the party be come to town. I will not fail to meet you on Saturday morning, till when I remain your humble servant."

It is curious to remark the different tone of the profligate of a century and a half ago, and of the present day. Now it is the oath of constancy to one, and one alone, that is thought a plea and recommendation; then, it was the bragging and boast of success with several or many that seem to have constituted the supreme gallant or victorious lady. Witness the foregoing on the female side, and on the male side the subjoined, from Chesterfield to Lady A. Hamilton.

"Madam,—Soon after your ladyship's departure, I came to town, and went to the Park and Spring Garden, just as some do to Westminster to see those monuments that have contained such great and lovely persons. Seriously, madam, I may well make the comparison, since you, that were the soul of this little world, have carried all the life of it with you, and left us so dull, that I have quite left of the making love to five or six at a time, and do wholly content myself with the being as much as is possible, &c."

No wonder that the dissoluteness of the one sex kept pace with the flaring depravity of the other. But we pass to 1650—two years; Mrs. Villiers being now Mrs. Palmer, to whom his lordship writes "when she was very ill of the small-pox."

"My dear Life,—I have been this day extremely ill, and the not hearing from you hath made me much worse than otherways I should have been. The doctor doth believe me in a desperate condition, and I must confess, that the unwillingness I have to leave you, makes me not intertaine the thoughts of death so willingly as otherways I should; for there is nothing besides yourself that could make me desire to live a day; and, if I am never so happy as to see you more, yet the last words I will say shall be a praise for your happiness, and so I will live and stay loving you above all other things, who am, &c." * *

"Madam,—I will not believe that you are not well, for the certain newse of your being sick would infallibly make me so; and I do not find myself yet fit for another world. Besides, I am confident that if I did go to heaven before you, I should want something there till you came; and, therefore, pray send me word that you are in perfect health, and be not so unjust both to yourself and me, as to tell me any more that I do flatter you; for I was never guilty of that vice, and do know that it is much harder to speak those truths which you deserve, than to flatter any body else; and therefore I will only say that I am, &c."

But the lady becomes a duchess, and the love-story draws to its end, as it must always do where there is no foundation in constant affection. In 1661, the once-favoured lover is found thus complaining:—

"Madam,—After so many years service, fidelity, and respect, to be banished for the first offence, is very hard, especially after my asking so many pardons. If Heaven with you should be as rigorous as you are with me, I doubt you never would see it, but in your glasse: therefore use me as you do your domestics, that is, blame me for the first fault, and if I do not mend, turn away your very humble servant, &c."

"Madam,—Let me not live, if I did believe that all the women on earth could have given me so great an affliction as I have suffer'd by your displeasure. This tru, I ever loved you as one should doe heaven, that is, more than the world; but I never thought you would have sent me there before my time; I confess I have allways found you so just, and so apt to excuse the faults of your freinds, that I had rather be condemned to loose the light than your kindness; but therefore doe not suffer one to perish, who desires only to live upon your account. Besides, naturally I hate dying, and it is one of the last things I would willingly doe to shew my passion; yet, if you will neither answer my letters, nor speak to me before I goe out of town, it is more than an even lay that I shall never come into it againe; and then above three parts of all the love that mankind has for you, will be lost in, &c."

After this we hear no more of the correspondence,—which we have quoted thus at length, as throwing light upon the important and moving historical figures of a very strange and vicious era.

The Legendary; consisting of Original Pieces, principally illustrative of American History, Manners, and Scenery. Edited by N. P. Willis. London, 1828, R. J. Kennett; Boston, S. G. Goodrich.

There is a great deal of talent in this volume, especially in the prose, which in America has taken a more national character than its poetry has hitherto done. The new imagery, the new associations, the strongly marked minds of his own country,—these should be the mines of an American writer; and a store of rich material do they indeed present. Like Antæus, his strength will be in touching his mother earth. The contents of the *Legendary* are unequal; yet Elizabeth Latimer, the Step-mother, and the Camp Meeting, are original and interesting tales; but the following short sketch will, from its length, best suit our columns.

"Barney Riley, as he was termed by the whites—his Indian appellation is now forgotten—was a petty chieftain belonging to the confederacy of the Upper Creeks. Being a 'half breed,' and, like most of the mixed race, more intelligent than the full-blooded Indians, he acquired a strong influence among his native tribe. Regarding the people of his father as allied to him in blood and friendship, he took very early a decided part in favour of the United States, in the dissensions among the Creek nation; and, after the breaking out of war, in 1812, joined the American forces with his small band of warriors. Brave and hardy, accustomed to confront danger and conquer difficulties, he led his men to battle, and in many instances proved, by his activity, of material service to the army. His gallantry and abilities attracted the notice of the commander-in-chief; and Riley's name was coupled with applause in many of the despatches during the campaign. On the restoration of peace, he returned to his people, honoured with the

thanks of his 'great father,' and sat down to cultivate his fields and pursue the chase, as in times gone by. Although distinguished in war and in council, he was still young, and devoting himself to his one wife, a lovely Indian girl, he seemed contented and happy. About this time the restoration of tranquillity, and the opening of the rich lands just ceded to the United States on the upper waters of the Alabama, began to attract numerous emigrants from the Atlantic settlements, and the military road was soon thronged with caravans hastening to these fertile countries at the West. The country from the Oakmulgee to the settlements on the Mississippi, was still one howling wilderness, and many discontented spirits among the conquered tribes still meditated a hostile stroke against their white oppressors. Travelling was of course hazardous and insecure; and persons who were not able to associate in parties strong enough for mutual defence, were fain to procure the guidance and protection of some well-known warrior or chief, whose name and presence might ensure a safe passage through those troubled countries. Of this class was L—. I knew him formerly, and had heard some remote allusion to his fate. Though his misfortunes and embarrassments had driven him to seek a distant asylum, a warmer heart beat not in a human bosom. Frank and manly, open to kindness, and prompt to meet friendship, he was loved by all who knew him; and 'eyes unused to weep' glistened in bidding 'God speed!' to their old associate. L— had been a companion in arms with Riley, and knew his sagacity, his courage, and fidelity. Under his direction he led his small family of slaves towards the spot upon which he had fixed for his future home, and traversed the wild and dangerous path in safety and peace. Like most men of his eager and sanguine temperament, L— was easily excited to anger, and though ready to atone for the injury done in the warmth of feeling, did not always control his passions before their out-burst. Some slight cause of altercation produced a quarrel with his guide, and a blow from the hand of L— was treasured up by Riley with deep threats of vengeance. On the banks of yonder creek he watched his time, and the bullet, too truly aimed, closed the career of one who little dreamed of death at the moment. His slaves, terrified at the death of their master, fled in various directions, and carried the news of his murder to the nearest settlements. The story of L—'s unhappy end soon reached his family, and his nearest relatives took immediate measures to bring the murderer to justice. Riley knew that punishment would speedily follow his crime, but took no steps to evade or prevent his doom. The laws of retaliation among his countrymen are severe, but simple—'blood for blood'—and he 'might run who read them.' On the first notice of a demand, he boldly avowed his deed, and gave himself up for trial. No thought seemed to enter his mind of denial or escape. A deep and settled remorse had possessed his thoughts, and influenced his conduct. He had no wish to shun the retribution which he knew was required. When his judges were assembled in the council at the public square, he stood up and addressed them. 'Fathers!' said he, 'I have killed my brother—my friend. He struck me, and I slew him. That honour which forbade me to suffer a blow without inflicting vengeance, forbids me to deny the deed or to attempt to escape the punishment you may decree. Fathers! I have no wish to live.

My life is forfeited to your law, and I offer it as the sole return for the life I have taken. All I ask for is to die a warrior's death. Let me not die the death of a dog, but boldly confront it like a brave man who fears it not. I have braved death in battle. I do not fear it. I shall not shrink from it now. Fathers! bury me where I fall, and let no one mourn for the man who murdered his friend. He had fought by my side—he trusted me. I loved him, and had sworn to protect him.' Arrayed in his splendid dress of ceremony, he walked slowly and gravely to the place of execution, chanting in a steady voice his death-song, and recounting his deeds of prowess. Seating himself in front of the assembled tribe upon yonder fallen tree, and facing the declining sun, he opened the ruffle of his embroidered shirt, and, crossing his hands upon his breast, gave with his own voice the signal of death, unmoved and unappalled. Six balls passed through both his hands and his bosom, and he fell backward so composedly, as not to lift his feet from the grass on which they rested. He was buried where he fell, and that small mound marks the scene of his punishment; that hillock is the murderer's grave; that hovel, whose ruins now mark the spot, was erected for his widow, who lingered a few seasons in sorrow, supporting a wretched existence by cultivating yonder little field. She was never seen to smile, or to mingle with her tribe; she held no more intercourse with her fellows than was unavoidable and accidental, and now sleeps by the side of her husband."

Leaves from a Colleger's Album has a quaintness and cleverness about it, that makes us expect its author will do much more: it is by the editor, Mr. N. P. Willis, who is also the best of the poetical contributors; and, altogether, this is a work that well deserves to be continued.*

* While on the subject of Transatlantic literature, we cannot deny our European readers the amusement of an extract from a recent newspaper called "*The Trenton True American*." It is entitled, "OUR NEW COUNTRY," and is certainly one of the grandest displays of the sublime style which we ever read. "The West begins to blossom with improvements. Canals in perspective Illinois are planning, rivers are clearing, and that state, lately a wilderness, is now on the march to prosperity, greatness and wealth. Civilised man, who but recently usurped the haunts of the tawny sons of the forest, feels and asserts the proud pre-eminence of his destiny, and looks around him as 'lord of the creation' over the waning wilderness, with an eye brightening into joy at the rapid progression of enterprise and exertion. Indiana, too, catching the noble contagion, is moving with majestic strides in the highway of improvement, and is big with animation at the brilliant prospects which brighten into reality before her. Ohio is already one of the greatest among her sisters of the confederacy; and her gigantic undertakings already carrying on, and soon to be completed, mark her out as a star whose brilliant orb no disaster of fortune can obscure. The West is fast becoming the theatre of empire and power. The Mississippi presents no sufficient obstacles to the rush of improvement towards 'the setting sun.' Missouri is on the move to greatness in population, prosperity, and wealth. The mighty rivers that roll their waters through her wide domains, wash the settlements of a people who have risen with the vigour of a Hercules from the weakness of infancy to the full strength of sturdy manhood. The Rocky Mountains will soon fling their lengthened shadows over a swarming population of civilised beings; and towns and cities will lift their spires towards heaven, where now the lofty forests wave their branches. Farther south, Arkansas will soon become a state: her race of glory is already beginning to be run. Further north, Michigan is spreading her arms of empire far and wide, and lakes are about to be married to lakes by the force of invincible enterprise: that territory will also soon become a state. Huron, too, stretching still farther to the north and west, is about to receive a territorial government, and commence its civilised career. The war-whoop there will soon cease; savage haunts will be broken up; the red man will but little longer inspire the white man with dread. In little more than half a century one hundred millions of souls of white men will throng this last great empire of civilised men. The future grandeur of this American empire no prescience can foretell. Prophecy is impotent in tracing out its greatness; and should no unforeseen, no unanticipated evil befall it, the American

SIGHTS OF BOOKS.

The Life of Archbishop Cranmer. By J. A. Sargent. 12mo. pp. 288. London, 1829. Hurst and Chance.

THE Life of Cranmer is a subject on which the best and most learned reasoner would venture with caution. Independently of the high and momentous objects which his career presents, there are many points in the conduct and character of the primate which must be carefully weighed in any respectable memoir of his life, and without the due examination of which it would be failing in its most important parts. In the case of Cranmer, it is impossible to write of him except as a controversialist, and we are hence doubtful of the propriety of treating his biography in so slight a manner as in this little volume. It is, however, ingeniously written as a popular work; but great and most important particulars are passed over in so rapid a way, and the strain of eulogy is so uniform, that we must give the author more praise for the diction and easy style than for the matter of this production.

P. Virgilii Maronis Bucolica et Georgica; with Notes by J. Martyn, F.R.S. Plates. Oxford, 1829. Vincent.

MR. MARTYN, we believe, was among the first men who made the brilliant discovery, that even the classical authors, if not understood, might be read without profit. His edition of the *Georgics*, with notes, was the result of this opinion; and though it has now been long published, it deserves to be regarded as a very useful little work. The present edition is still more adapted than the original one for the purposes Mr. Martyn had in view when he prepared it for the press. Many of the notes which he appended were calculated rather to weary than incite the student to activity. These have been shortened; and an appendix is given, containing explanations of the most difficult words which occur in the *Bucolics* and *Georgics*. It is altogether a useful and meritorious little work.

Tales of Field and Flood. By J. Malcolm. 12mo. pp. 329. Oliver and Boyd, Edinburgh; Simpkin and Marshall, London.

Tales of a Physician. By A. Harrison. London, Jennings.

THE same opinion will apply to both these little volumes—they are graceful in language, but want originality and interest; displaying cultivated taste, rather than inventive talent.

Valley; or, the Citadel of the Lake. By Charles Doyne Sillery. 2 vols.

Portraits of the Dead. By C. H. Deakin. London, Marsh.

The African. D. Moore.

The Vision of Nourredin. By Storza. 12mo. pp. 192. Hurst and Chance.

THE immense number of little hot-pressed volumes that are now swarming like bees on their musical wings, must excuse this somewhat summary mode of passing them in review. Of all the works above mentioned, there is not one that does not possess some merit; and there is considerable taste, elegance of expression, and harmony, in many of their pages.

banner will proudly float from the Atlantic to the Pacific, over ten thousand cities, and its only barrier be ocean everlasting waves. The kingdoms and empires of Europe, disrobed of the gorgeousness of their past greatness, will dwindle into atoms by the side of this great republic. Their day of glory has passed; like Troy, 'they have been.' While the American empire, glowing as brilliantly as the temple of the sun, shall be the favourite star of heaven. Its history will terminate only when time shall cease, and the story of its greatness and its fame will be told in eternity"!!!!

But want of originality is their besetting sin: one catches up sword and shield, and follows Scott;—Byron, Moore, Hemans, L. E. L., &c. are the poetical godfathers and godmothers of others;—all find their inspiration in some favourite author—not in their own hearts and minds; and hence comparative failure, oblivion, and disappointment, where fifty years ago, when poetry was less prolific, success, fame, and applause, would have been the result. There is a fine and characteristic anecdote of Sir Walter Scott in the literary circles. Speaking of modern poets one day to Moore, the great northern Magician said pleasantly to the Lyrist of Erin—"I'll tell you what—it is well for us we made our reputations in time!"

D'Erebine; or, the Cynic. 3 vols.

Simpkin and Marshall.

THE veriest trash that ever attempted to depict fashionable life, of which its author is evidently ignorant; and the endeavour at romantic incident is as tiresome as it is improbable.

Jesuitism and Methodism. 2 vols.

Simpkin and Marshall.

ONE of those books written for the sake of a popular title, and falling in with the prejudices of the period;—a bad specimen of a bad class, and, in a literary point of view, unworthy of notice.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FRIDAY, June 5th.—It may probably be remembered, that amongst the enterprising travellers who have ascended Mont Blanc, the names of Dr. Clarke and Captain Sherwell are to be found. These gentlemen made their successful attempt in August 1825.

On this evening a very full audience was delighted by a *visd voce* account of the ascent of Mont Blanc from Dr. Clarke. It was given with great freedom and spirit, and accompanied with excellent illustrations, consisting of paintings, drawings, models, specimens of the instruments used in the ascent, and of the rocks and plants of the mount and its neighbourhood; and conveyed an idea, perhaps, only less vivid than that which is to be obtained on the spot itself.

The Dr. described the particular nature of the fatigue, hazard, and casualties, incurred during the ascent; spoke of the impropriety of many of the precautions and provisions usually made for that end; and of others, by neglecting which, certain destruction awaited the traveller. This position he illustrated by referring to the melancholy case of three persons who attempted to reach the summit in the season of 1822, but, disregarding the instructions and entreaties of the guides, (who, by the by, frequently and freely ran great risk of their lives,) tumbled headlong down a snowy chasm of immeasurable depth. Of the bodies of these unfortunate individuals, Dr. Clarke observed, that it was highly probable they were now making their way through the heart of the snow and ice of Mont Blanc, and doubtless would one day be discovered, possessing all that ruddy glow of countenance which was the distinguishing mark of living persons in that part of the world. The lecturer particularly cautioned those of an apoplectic tendency against making an attempt to ascend, — the great rarefaction of the air increasing those symptoms to an alarming extent.

An interesting geological, mineralogical, and botanical collection was upon the lecture-table;

an exceedingly choice specimen of the *ansonis*, a butterfly which is seen to flit over the top of Mont Blanc, was much admired. It is to be hoped that Dr. Clarke will, on some future evening in the ensuing session, detail the circumstances and peculiarities of his descent;—during the present one it was enough for him to reach the top.

Amongst the objects on the library-table was an ancient Arabian astrolabe, which we understand will be the subject of investigation by some literary and scientific men;—it has already been partially examined, and is considered to be extremely curious.

INSTITUTION OF CIVIL ENGINEERS.

MAY 19th.—Various experiments on the durability of granite and whinstone pavement were adduced by Mr. Walker, as a sequel to his paper on stone railways. Specimens of different qualities were so disposed as to undergo the traffic of the road between the West India Docks and the city; and after a trial of some months during last winter, a trifling loss of weight was the only observable change. Guernsey sienite thus proved, was found superior to the Aberdeen granite and the Northumberland whinstone.

Mr. Wood stated the comparative wear of malleable and cast-iron rails, occurring in his experience at the Keningworth colliery. Mr. Cottam explained the advantage of malleable rails to consist in the texture of the metal, which is composed of longitudinal fibres, and therefore is more adapted to the strain and friction of tram wheels, than the uncertain crystallised grain of the cast-iron.

A model of a crane, which has been successfully applied in the repairs of harbour jetties at Wick, in Caithness, was presented to the Institution by the president, in the name of Mr. Bremner.

MAY 25th.—The question, "Can any sections be obtained of the strata sunk through in boring for wells in and near the metropolis?" was selected for discussion. Mr. John Donkin and Mr. Gravatt gave a variety of sections obtained from borings at Isleworth and Greenwich, and in London. Mr. Mills described the strata near Croydon, where the water, from borings passed through the blue clay, overflows the surface at 150 feet above high water in the Thames. Mr. Simpson mentioned the process of boring, and accounted for a remarkable change of level in the wells at the bishop's palace, Fulham, where a junction of the upper and lower land-springs had taken place, the former of which is affected by the tide. Mr. Gibb detailed the mode of sinking iron cylinders by pile engines instead of boring.

A sufficient collection of facts to form a correct judgment of the strata which underlay London, is the object of this question; and it is important to remark, from the observations already elicited, that a supply of water equivalent to the wants of even one district of the metropolis cannot be obtained from the water bearing strata beneath the blue clay.

SUPPLY OF WATER TO THE METROPOLIS.

A STATEMENT has been drawn up and circulated by Mr. Wright, to whom the inhabitants of the metropolis are so deeply indebted for his efforts to procure for them a supply of wholesome water, detailing the history of his proceedings, and the steps which the various water companies have already taken, or are preparing to take, to remedy the evil. "When

I first took up the subject," says Mr. Wright, "I had no conception that it would have demanded so large a portion of my time and attention; but, urged on by a conviction of its paramount importance, and by the great interest which it excited, I could not recede. It has, necessarily, interfered with my usual occupation—that of editor of 'Hansard's Parliamentary Debates;' but, whatever may have been the personal inconvenience with which it has been attended, I cannot lament that my time has been so diverted, believing, as I do, that the inevitable result will be, the speedy attainment, to the whole of the metropolis, of a pure supply of an element of life—the purity of which element has been justly pronounced to be 'almost equal in importance with the air we breathe.'"

Prefixed to Mr. Wright's "Statement" is the following honourable recommendation, signed by a number of the most distinguished professional men in London; among whom are Sir Henry Hallford, Sir Astley Cooper, Sir Everard Home, Dr. Paris, Dr. Turner, Dr. Bree, Dr. Merriman, Dr. Macnichael, Mr. Brodie, &c. It will certainly be but a bare act of justice on the part of the public to carry this recommendation into immediate effect:

"We, the undersigned, deeply impressed with a conviction of the value of Mr. Wright's zealous and successful exertions, during the last three years, to obtain for the metropolis the removal of a gross nuisance, and a supply of purer and more wholesome water, consider it to be our duty to call the attention of the inhabitants to the subjoined statement; and earnestly to recommend for their consideration the propriety of indemnifying him for the loss of time, and for the sacrifices which he has made for the attainment of an object so immediately connected with the comfort and health of so large a portion of his majesty's subjects."

FRENCH IRON.

It appears by an official inquiry lately made into the state of forges and furnaces in France, that the prohibitory system adopted in France in the year 1814, for the protection of the French manufacture from foreign competition, although it has increased the production of iron in that country, has not benefited the manufacturer; since the price of wood, which enters so largely into the forging and casting of iron, has undergone a corresponding increase. It also appears that the manufacture of iron by means of coals instead of wood is gaining ground in France, and threatens destruction to the latter process.

NEW PUBLICATIONS.

Hall's Atlas. Part XIV

A PUBLICATION of which every new Part only calls for new praise. Now within three of completion, the present, containing the Eastern Hemisphere, Portugal, and Northern Africa, is eminently worthy of its precursors. The last, in particular, has some useful geographical additions.

LITERARY AND LEARNED.

ROYAL SOCIETY.

At a recent meeting a paper was read, entitled "Experimental Examination of the Electric and Chemical Theories of Galvanism." By William Ritchie, A.M. F.R.S.

After shewing that the theory of galvanism originally proposed by Volta, and generally termed the electric theory, is still the universally received doctrine among continental philosophers, the author adduces several expe-

riments proving the fallacy of the principles on which that theory is founded. He points out the inconclusiveness of the reasoning by which it has been inferred, that dissimilar metals, by being simply placed in contact with one another, are instantly thrown into opposite electric states: for in all the experiments which have been made with a view of establishing this fundamental principle of the electric theory, the metals have been exposed to the oxidizing action of the air, which is a constant source of electric disturbance, and the operation of which has been strangely overlooked. The author found, by forming galvanic circles with two different metals and an interposed acid, that when he used different kinds of acid, or varied the degree of their dilution, the electro-magnetic effects, as measured by a delicate galvanometer, bear no sort of relation to the conducting power of the fluid, as is assumed in the voltaic hypothesis. He deduces the same conclusion from experiments made with an apparatus by which the fluid is confined in a rectangular box, divided by a membranous diaphragm into two compartments, so as to allow of the addition of an acid to the fluid contained in one of the compartments, and thereby limiting its action to one of the metallic surfaces. By means of another contrivance, the author ascertained, that of two different metals, the one which when acted upon by an acid combines with the greatest quantity of oxygen, as measured by the volume of hydrogen disengaged, is always positive with respect to the other metal. Even two pieces of the same metal, differing in hardness, will be acted upon by the same acid in different degrees, and may thus be brought into different states of electricity. In general it is the harder of the two pieces of metal which becomes positive; but with steel the reverse obtains. It would appear, however, that with the same pairs of metallic discs, the direction of the electric current is determined by the nature of the acid employed: thus nitrous acid, acting upon zinc, copper, or iron, gives rise to a current in a direction opposite to the current which is produced by the sulphuric, nitric, or muriatic acids. Variations in the temperature of the metals will also occasion diversities in the results, not hitherto satisfactorily explained on any theory. From one experiment the author is led to infer, that an acid is capable of combining with a pure metal, without the latter being previously reduced to the state of an oxide.

NUMISMATICS: CELTIC REMAINS.*

Paris, March 6, 1829.

YOU are aware that the class of coins called Gallique, from their extreme rudeness, and total absence of legend, have hitherto been the despair of all numismatists: I exclude, of course, those where two or three misshapen letters have given scope upon which to exercise the imagination. The coins I mean are totally devoid of any thing having the least pretensions to the respectable *confrérie* called the alphabet; but are usually known by a sort

* For this interesting letter we are indebted to a friend whose own numismatic labours and discoveries, especially in the Anglo-Norman, &c. coins of our Henrys and Edwards, will soon form a remarkable epoch in the history of these curious documents of our early conquest and possessions in France. In a postscript he tells us of many important acquisitions he has lately made to his already unequalled collection, viz. seventeen of gold of Aquitaine, including an obolus struck by Henry II., a gros of Henry V., and an obole of Edward III., all unique. The lights thrown upon general history by our esteemed friend's exertions, lead us to anticipate the volume, which he is liberally and handsomely preparing, with great impatience.—Ed. L. G.

* London is divided into eight districts under the present monopoly.

of head, setting all "fair proportions" utterly at defiance; and on the reverse, a chariot, or rather wheel of a chariot, with a horse or two and a charioteer, whose whip is like a bunch of spring radishes. Of the Jehu you seldom see more than his head; but then his head is like head, shoulders, and body! The coins are in gold, silver, and copper, and the type of the reverse is taken both from Greek and Roman; the biga, triga, or quadriga, driven by Victory. This most discouraging department has found, in a friend of mine, a person determined to grapple with every difficulty. I know him to possess the requisite perseverance and knowledge, as well as ability. Of the first quality he has already given proof, for he has persevered in this uninviting study for several years, during which he has collected what ought to be called a warehouse of Celtic remains, rather than a cabinet. It consists of an immense quantity of implements and tools which that ancient people employed, mostly of stone (flint), before the use of copper and iron was known to them. Several utensils are of leather; and a prodigious number of their coins occupy a distinguished place in the warehouse. His work must throw a new light on the history of the early possessors of the soil of France. But hear what he says himself: I will not disfigure his French by a translation. "*Mais travail sur les Gaulois sera, je crois, d'un très grand intérêt pour les savans de toutes les nations. J'espère que j'ouvrirai une route inconnue, ou du moins que je l'indiquerai; car moi-même, je ne pourrais faire qu'un petit trajet sur cette nouvelle voie: je poserais de principes, j'en montrerais l'application par de nombreux détails; je présenterais quelques problèmes à résoudre; et je prouverais qu'en suivant le même chemin que moi, on finira par arriver à de grands résultats.*" It is a most important work, and the coins form only a division of the whole: it will be some time, however, before it appears. I need not conceal the learned author's name, although his intension in publishing is known to very few. It is M. De Meurcius, formerly a vice-president of the Celtic Society at Paris, a Fellow of many learned societies, and author of the second volume (a comely 4to.) sur les Antiquités de Vesone, (now Périgueux), and one or two approved works on antiquities.—I have read for the second time, with much pleasure, l'Histoire des Expéditions Maritimes des Normans, et de leurs Etablissements en France, two vols. 8vo. Paris, 1826, par M. Depping. The account of the Normans is most interesting; the first half of the first volume particularly so: and his state of the most ancient nations in the North, their origin, manners, traditions, and habits, is the best I have read. The Society of Antiquaries of Normandy, a very zealous and distinguished body, of which the venerable Abbé de la Rue is the head, lately sent the diploma of foreign associate to the admirable Sir Walter Scott, Drs. Brewster and Brunton, Thomas Thomson, Esq.—to whom all interested in the preservation and illustration of the ancient records in the Register House of Scotland, (of which he is the Deputy Lord Registrar), owe so much—and lastly, to E. Drummond Hay, Esq. the unwearied Secretary to the Society of Antiquaries of Scotland, of which the other eminent persons are office-bearers. This friendly feeling of the Norman society, I have reason to believe, will be met by a corresponding sentiment towards the office-bearers of the *Nouvelles*, by transmitting the diplomas of the antiquaries of Caledonia.

THE PRUSSIAN UNIVERSITIES.

UPON an investigation of the system pursued in the six universities in the Prussian dominions, (*Berlin, Bonn, Breslau, Greifswald, Halle, and Königsberg*), we have felt perfectly astounded at the lavish extent to which the professorial department is carried in most of these institutions. From four to six is the general limit of the ordinary professorships in other European universities, whether for the faculty of medicine or of philosophy; but so paltry an establishment would seem totally incommensurate with the zeal of the Prussian ministry, or the presumed requirements of its subjects, if we are to judge of either from the subsequent facts. The "medical faculty" of the university of Berlin comprises *thirteen* ordinary and *nine* extraordinary professors, besides *thirteen* lecturers! And the "philosophical" corps musters *nineteen* ordinarios, *seventeen* extraordinarios, and *twelve* doctores legentes. This last alone exceeds the *entire* professorial establishments of either Oxford, Cambridge, or Edinburgh; neither of which is altogether so abundantly supplied as the solitary faculty of *philosophy*, which enumerates twenty-seven professors and six lecturers at Halle, and twenty-four professors and three lecturers in the twelve-years-old university of Bonn! Some may say, *superflua non nocent*; but others will reply, with equal reason, "*omne nimium vertitur in vitium.*" For our own parts, we opine that the higher powers in Prussia have lost sight of the Horatian prescription, "*Est modus in rebus, sint certi denique fines.*"

TYPOGRAPHY.

LEIPZIG, the great Teutonic bazar of typographers, book-makers, et *ad genus omne*, contains two-and-twenty printing-establishments, which keep 128 presses and 549 mechanics and apprentices in an incessant state of activity, and annually consume 40,437,000 sheets of paper. These establishments afford occupation to at least 200 founders, copper-plate printers, and lithographers. The number of regular book-sellers amounts to 60; and 450 foreign establishments have their agents within its walls. The sale of books at the great fair during the three weeks at Easter has been estimated at 3,000,000 of dollars (460,000*l.*).

Christiania, the Norwegian book-mart, possesses seven printers, three principal book-sellers, and one lithographic press.

The most northern library in Europe, or perhaps in the world, is at Reikiavik, the capital of Iceland. It contains about three thousand six hundred volumes; and a second is forming at Ekefjorden, for the northern quarter of that island.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.
(Sixth Notice.)

No. 456. *Portrait of the Bishop of Jamaica*. C. W. Fagler.—The fine effect of this able portrait ought of itself to be enough to induce our right reverend prelates, and indeed all our other dignified persons, to abandon those absurd and hideous accumulations of horse-hair, grease, and dirt, called wigs.

No. 454. *Brigands disputing the Spoils of their Victim*. Collin.—A well-painted picture. The feud is evidently a deadly one. What a pleasant world would this soon become if all the rogues in it would thus engage in a war of extermination!

No. 462. *Portraits of two young Gentlemen*. W. Bagg.—Graceful and energetic.

No. 449. *Sylvan Festivities*. Rev. T. J.

Judkin, H.—There is a great deal of glitter in this classical composition; but it also manifests much talent.

No. 455. *Portrait of Mrs. Locke, sen.* Sir T. Lawrence, P.R.A.—How, in the present age of wear and tear to health and complexion, has this venerable lady contrived to retain the clear and florid hues of youth? There is so much of apparent truth and reality in the performance, that we are not inclined to think it the flattery of art.

No. 38. *Idlers*. T. S. Good; No. 212. *Guspowder Plot*. T. Webster.—We take leave to be sometimes erratic in our course, and, before we descend to the lower apartments, we beg to introduce these two pictures, as cause and effect; for all must allow that idleness is but too frequently the suggester of mischief. The latter performance, the subject of which is, boys blowing up the apparatus of an old fruit-woman's stall, is so completely in the spirit of Mr. Webster's former works, that it confirms us in the opinion which we some time ago took the liberty of expressing of his own juvenile disposition. Nothing of that sort can be inferred from the other picture: as a man, it is evident that the artist is good; and we have no doubt that he was a good boy. There is great talent in both these entertaining productions.

We now proceed to the miscellaneous assemblage in the antique Academy, where oil and water-colours unite, as far as light and situation will permit, to attract attention. We say "as far as light and situation will permit;" for, in several cases, so unfavourable are these circumstances, that some of the works exhibited might just as well be hung with their faces to the wall. As a striking instance of utter disregard, on this point, of the feelings of the artist, and of the character of the subject, we may point out

No. 577. *Portrait of Robert Montgomery, Esq., author of "The Omnipresence of the Deity," &c. &c.* W. Hobday.—That at some future day Mr. Montgomery's effigy may decorate the Poet's Corner in Westminster Abbey, no one who has read the beautiful works which he has already produced can doubt; but there is a wide difference between that resplendent corner, and the miserable corner into which Mr. Hobday's clever and characteristic portrait has been thrust,—a corner, in which the little light that enters, enters only to destroy. This is really great injustice on the part of those whose duty it is to discriminate, and to render to merit the attention to which it is entitled.

A similar remark is applicable to No. 512. *Portrait of A. T. Weinsright, Esq., J. Wood*; No. 521. *Portrait of Campbell Riddell, Esq., J. Partridge*; No. 525. *Portrait of T. G. Street, Esq., J. Simpson*; No. 535. *Portrait of Marquess Clanricarde, J. Lonsdale*; No. 554. *Portrait of Francis Denby, Esq. A., J. King*; No. 584. *Portrait of J. Taylor, Esq., J. Lonsdale*; and No. 592. *Portrait of John Parker, Esq., T. Woodward*. These are all very clever portraits, and well entitled to much better situations than they occupy.

Of paintings which come under the class of works of imagination, there are but few in this room. No. 595, by H. Corbould, is pretty and sentimental; No. 611. *Young Swiss Peasants crossing a River*, W. Foy, a very pleasing performance.

No. 594. *Dead Game*. A. J. Oliver. A.—We have before spoken of Mr. Oliver's talents in still-life. This is an additional specimen of them.

No. 587. *Going to the Well*, C. Horn, is an

exceedingly well-treated rustic group, but hung too low for convenient inspection. No. 607. *Portrait of an Artist*, H. Room, is, on the other hand, hung too high for its merits: the effect is admirable.

No. 488. *Henry Bone, Esq., R.A.*, and No. 489. *The late John Flaxman, Esq., R.A.*, both enamelled by H. Bone, R.A., after pictures by John Jackson, Esq., R.A., are very beautiful productions.

No. 505. *Portrait of Mrs. Damareq*; No. 613. *Portrait of Miss Gordon*; and No. 605. *Portrait of Mlle. Sontag*; all by A. E. Chalon, R.A., are eminently elegant and attractive drawings.

No. 503. *Head of a Child from Nature*; and No. 507. *Portrait of a Lady*; by R. J. Lane, A.E.—Full of the taste which always pervades Mr. Lane's works. The execution is singularly curious, and finished so as almost to defy scrutiny.

No. 499. *Portrait of Miss Georgiana Ward*, Miss L. Sharpe.—Again we ask, why is this exquisite drawing, which deserved to be made a leading feature among the best of its class, placed so miserably?

No. 601. *An enraged Hound*, J. F. Lewis.—A very spirited representation of a very spirited animal; provoked, we conjecture, for the purpose of study.—rather a hazardous experiment.

Fruit, flowers, and birds, pour their rich tints in profusion upon the sight from various parts of this room. We are unable to do justice to all; and can only select as among those most entitled to admiration, No. 564. *Fruit*, and No. 567. *Fruit and Flowers*, Mrs. D. Dighton; No. 566. *Different Species of Cactus, from Nature*, E. D. Smith; No. 565. *Foreign Birds, from Mr. Leddier's collection*, A. Peltier; No. 586. *Flowers and Fruit*, Mrs. Pope; No. 549. *Fruit and Flowers*, Mme. de Comolera; No. 566. *Roses from Nature*, Miss Cecilia Gandy; No. 622. *Flowers and Fruit*, Mrs. Withers; No. 639. *Fruit and Flowers*, Mme. Edine Robin; and No. 614. *Group of Helly-hocks, &c. from Nature*, V. Bartholomew. The last mentioned is an extraordinary specimen of brilliance of colour, and power of execution.

BRITISH GALLERY.

THE splendid "Selection of the Works of the Italian, Spanish, Flemish, Dutch, and English Schools," which was opened to public view on Tuesday last, affords an additional proof of the almost inexhaustible stores of art in this country: stores which, if they could be accumulated, would undoubtedly constitute the most magnificent and valuable national gallery in the world. As we have observed on former occasions,—but it is an acknowledgment which cannot be too frequently repeated,—the public are deeply indebted to the liberal proprietors of these fine works, who thus deprive themselves for a time of their personal enjoyment, for the general gratification and advantage. On the merits of these beautiful productions, many of which are *chef-d'œuvre*, it would be easy and delightful to expatiate, were it not that, under the circumstances in which they have been brought together and exhibited, we do not consider them to be the legitimate subjects of critical remark. Some notion, however, may be formed of the quality of the collection, when we state that it consists of the works of Netscher, Teniers, Sir Joshua Reynolds, Cuypp, Vandyke, Both, Pólemburgh, Rembrandt, Van der Velde, A. Ostade, Garofalo, Salvator Rosa, Munnio, Le Sueur, Ruyssdael, Jan Steen, Paul Potter, J. de Inola, Claude, Wouverman, John

Wouverman, A. Sacchi, A. Caracci, Vander-neer, Metz, Vander Heiden, Watteau, Terburg, Hobbema, Bourgoigne, Vander Helst, Rubens, Camilli Procaccini, De Witt, G. C. Procaccini, Paul Veronese, Fran. Mola, Le Nain, Seb. Bourdon, Carlo Dolce, Spagnioletto, Berghem, Moucheron, A. Van der Velde, Hondekoeter, G. Poussin, P. da Cortona, Gainsborough, Gerard Douw, Guardi, L. Caracci, Titian, Mieris, Vander Meulen, Canaletti, Bassan, P. da Hooze, Tintoretto, Maas, Lingelbach, Carlo Maratti, Fran. Halls, Velasquez, Cavaliere d'Arpino, Guido, Schiavone, Raphael, Luca Giordano, Dietrich, Sir Peter Lely, Weenix, Isaac Moucheron, Gonzalez, Pynacker, Guercino, M. Zouge, Swaneveldt, Vander Cappella, Pordenone, Leonardo da Vinci, Sir Godfrey Kneller, Corregio, Scipio Gaetano, and Gyselles. The number of pictures is 194. Of these, His Majesty has contributed 13; the British Institution 2; W. Wells, Esq. 9; Earl Brownlow 4; A. Baring, Esq. 6; Lord Wharnclyffe 5; A. W. Roberts, Esq. 8; C. Dixon, Esq. 4; G. J. Cholmondeley, Esq. 4; Duke of Buccleuch 16; Sir S. H. Clarke, Bart. 2; C. A. Bredel, Esq. 3; M. M. Zachary, Esq. 5; Right Hon. R. Peel, 2; Earl of Caledon 4; W. Wilkins, Esq. 7; Earl of Mulgrave 4; Viscountess Cremorne 3; J. Wardrop, Esq. 1; F. B. Morland, Esq. 1; H. Rogers, Esq. 3; J. Barchard, Esq. 1; Duke of Wellington 5; F. Perkins, Esq. 2; Hon. G. Agar Ellis 7; Sir R. Frederick, Bart. 7; Marquess of Lansdowne 3; H. Howard, Esq. 1; Sir A. Hume, Bart. 7; G. W. Taylor, Esq. 1; N. W. R. Colborne, Esq. 3; Earl Howe 1; J. Fairlie, Esq. 2; Earl of Hardwicke 3; Marquess of Aylesbury 1; Earl Grosvenor 1; Colonel H. Baillie 2; H. Barnes, Esq. 2; Earl of Carlisle 5; W. Collins, Esq. 1; T. Hamlet, Esq. 3; Earl of Orford 1; W. Hastings, Esq. 2; Sir W. Gomm 2; Earl of Plymouth 2; Lady Holland 1; Earl of Darlington 4; Lord Holland 1; Sir J. R. Reid, Bart. 1; Lord Heytesbury 3; Rev. Sir S. C. Jervoise, Bart. 4; Earl of Tyroconnel 1; G. Wilbraham, Esq. 4; C. B. Wall, Esq. 1; Sir W. Beechey 1; T. Jones, Esq. 1; H. Briggs, Esq. 1; R. Palmer, Esq. 1; J. P. Anderdon, Esq. 1; Hon. Henage Legge 1; and Sir J. Stewart, Bart. 1.

NEW PUBLICATIONS.

The Fresh-Water Fishes of Great Britain. Drawn and described by Mrs. T. Edward Bowdich. No. II. Ackermann.

WHEN it is considered how laborious a task it must be to produce the multiplied drawings which illustrate this beautiful and interesting publication, it is not surprising that so long a period has elapsed since we announced the appearance of the first No. The present No., like its predecessor, does Mrs. Bowdich's taste and industry the highest credit. The drawings, which are of the perch, the chub, the common eel, and the minnow, have a brilliance and a truth in them which we have rarely seen equalled, and never surpassed; and the descriptions, both scientific and general, are very satisfactory.

Fisher's Illustrations of England, Nos. VI. and VII.; *Fisher's Illustrations of Ireland*, No. IV.

THE plates in the two Numbers of the English work are "Speke Hall," "Hale Hall," the "House in which William Roscoe, Esq. was born, Mount Pleasant," "Liverpool Royal Institution," "Childwall Abbey," "Wavertree Hall," "County House of Correction, Kirk-

dale," and "Sessions House, Kirkdale." The plates in the No. of the Irish work are the "Vice-Regal Lodge, Phoenix Park;" "Terenure, co. Dublin;" the "King's Bridge, Dublin, West View;" and the "King's Bridge, Dublin, East View." They are all very pleasingly designed and engraved.

Picturesque Antiquities of the English Cities. By John Britton, F.S.A. M.R.S.L. &c. No. III. Longman and Co.

JUDGING from the beauty of the plates and other embellishments, this must be a very expensive publication; but the same cause ought eventually to remunerate, and no doubt will eventually remunerate, the spirited and indefatigable editor. There are in the present No. two Views in London, one in Bristol, one of Bath, one of, and one in Worcester, one in Salisbury, and two in Lincoln. They are all fine; but those of the magnificent Cathedral of Lincoln are transcendent, and make us envy Old Nick the prospect which proverbial tradition declares he is always enjoying:

"As sure as I look over Lincoln,
That never shall happen which you think on."

Prior.

The woodcuts also, of which there are six, are highly picturesque, and are executed with singular skill.

Lady Jane Gray importuned to accept the Crown. Engraved in meszotint by John Bromley, after the original painting by C. R. Leslie, R.A. Bowyer.

OUR remarks on this painting, in June 1827, will be found highly in commendation of the performance, as one exhibiting the talents of the artist to very great advantage, both in historical composition and in the truth and power of expression, in which the silent pleadings of the mother's look, and the reluctant consent of the daughter, are depicted with a skill that will not easily be surpassed. In spirit and execution the print has lost nothing of the character of the original; and if we except the right hand of the young Lord Dudley, which has too much of colour, or rather of blackness, and seems smaller than the left, the engraving cannot fail of being a favourite with the public, as the subject has ever been with the poet, the painter, and the historian, who have severally exercised their genius in lamenting the fate of these ill-starred, and it may be said innocent, victims. It is indeed one of the finest and most captivating specimens of the art which has issued from the press for a long, long period.

The Fountain of Tophana, Constantinople. Drawing of W. Page; engraved by R. G. Reeve. Coloured. Ackermann.

THIS print exhibits a truly magnificent specimen of Turkish architecture. It is of peculiar form, highly ornamented, and the overshadowing roof is a singular feature in the building. The whole is rendered attractive by the varied colours and costumes of the gay groups which occupy the space on every side. It is altogether a beautiful and splendid production, and published at a time when the interest attached to the fate of the original building and its living contemporaries render it more likely to be highly popular. A neat memoir accompanies it, from the pen of Mr. John Landseer.

An Introduction to Perspective, Drawing, and Painting. By Charles Hayter. 4th edition. Kingsbury, Parbury, and Allen.

A New Practical Treatise on the Three Primitive Colours. By Charles Hayter. Booth.

THE earlier editions of the former of these

works have rendered it well known to the public; and it has been generally acknowledged by the best judges to be an excellent elementary treatise. Since its original appearance, however, it has been considerably augmented. The first edition consisted of but 168 pages; the fourth contains 400. One of the most curious portions of the additional matter is a conversation on finding the vanishing point of architectural back-grounds to be out of the picture; in which it clearly appears that both Sir Joshua Reynolds and Gainsborough, able artists as they were, have in that respect repeatedly violated the laws of the science of perspective.

Of the Treatise on Colours it is impossible to convey to our readers any idea, without the assistance of the diagrams. As far as we have been able to examine it, it seems to us to exhibit in a manner which must render it exceedingly useful to artists and to amateurs of the fine arts, the numerous and beautiful combinations of which the three original colours are susceptible.

ORIGINAL POETRY.

THE BATTLE OF HASTINGS.

An Historical Ballad.

It was the Duke of Normandy
Rode forth at break of day,
With pennons curling on the breeze
In bright and proud array:
The flower of all the continent
Composed his valiant train;
The knights of Flanders and Poitou,
Bologne, Orleans, and Maine.

It was at ancient Pevensey,
On the noble Sussex coast,
The bold Duke William landed
With a fierce and warlike host,
Of sixty thousand gallant men,
With splendid arms supplied—
Cross-bows and quivers at their back,
And broad-swords by their side.

To win fair England's glorious crown
Duke William rode that morn,
With battle-axe, and spear, and dart,
With sounding drum and horn.
Nor long nor weary was the way
They march'd ere fall of night,
When, by the brave King Harold led,
Came the rival host in sight!

Then spake the Duke of Normandy:
"Speed, herald, bold and free,
To the leader of yon martial host
This challenge bear from me—
In single combat to decide
Our stern and mortal feud;
Thus blood of thousands may be spared,
If either falls subdued."

One moment, in the monarch's sight
The fearless herald stood,
And gallantly the challenge gave,
To spare the waste of blood.
Scarce breathed the word, ere on him lower'd
Full many a dark'ning glance—
A hundred warriors struck the shield,
And grasp'd the ponderous lance!

Straight answer made the wrathful king:
"Return thou to the duke;
To meet his chivalrous desire
Would rouse our chiefs' rebuke:
Unto the God of Arms we leave
The chances of the fight;
And wear his brow the victory
Whose sword is in the right!"

With banquet-song and revelry,
Within the British tent,

The hours from dusky evening
To twilight dawn were spent.
Not thus within the Norman camp—
A different scene shone there,—
Hands clasp'd in deep solemnity,
Knees lowly bent in prayer!

Ere yet the purple morning hour
Illumed the eastern sky,
The clash of arms rang merrily
With the stirring battle-cry.
A fatal shower of piercing steel
From the Norman cross-bows flew,
And many a valiant Kentishman
On the stormy onset slew!

But swift to closer fight they rushed,
And briker warm'd the strife;
And deadlier the contention grew,
Fiercer the thirst for life!
Beneath the bold, adventurous duke
Three fiery steeds were slain!
His falchion waved the goriest
Upon that gory plain!

On spurr'd the Saxons to the charge,
While axe and glaive swept far;
And bravely smote they to the hilt,
Like lions bred to war!
Full to the centre of their square
The Normans felt the shock;
Yet stood they firm and steadfastly,
As stands the giant rock!

Like lightning through the element
A trenchant arrow flashed,
And into Harold's royal brain
Through helm and temple dashed!
He sank: yet to the death his voice
Was heard in hoarse command;
And fiercely grasped, his reeking blade
Gleam'd in his red right hand!

Then joyous shouts of victory
Far shook the circling air;
And helms were doffed, and banners waved,
And knees were bended there!
With—Live, long live the Conqueror!
Did thousand voices ring:
God save illustrious William,
Our great, our glorious king!

CHARLES SWAIN.

BIOGRAPHY.

FREDERIC VON SCHLEGEL.

THIS celebrated writer died of apoplexy at Dresden on the 11th of January last. He was born at Hanover in the year 1772, and was afterwards apprenticed to a merchant in Leipzig; whilst his elder brother, A. W. von Schlegel, was highly distinguishing himself at Göttingen. Frederic, however, evincing a decided distaste for the mercantile profession, returned upon his father's hands, and was permitted to follow the natural bent of his genius, which led him, during his sojourn at the universities of Göttingen and Leipzig, to devote himself to the study of languages with exemplary ardour. He entered the lists as an author at a very early age, attracted the attention of the public by the novelty of his opinions on subjects connected with ancient literature, and acquired no little note by his critical labours in the field of ancient and modern poetry. His first attempts, the "History of Poetry among the Greeks and Romans," which appeared in 1792; and the "Greeks and Romans," which followed in 1797, were very favourably received. At a later period, particularly after his conversion to the Roman Catholic religion, his favourite pursuit was ethics and romantic literature, in which departments his "Prelections on German History," and

"History of Literature," are highly creditable to his attainments. His public lectures on Modern History, and on the Literary Annals of all nations, delivered in 1811-12, created a deep sensation throughout Germany, as combining a high degree of literary attainments with much originality of perception. His manner of viewing and treating these subjects, no less than his dramatic compositions and poems, afforded abundant aliment to the new school of the *romantiques* in that country, soon after its foundation had been laid in contra-distinction to the "classical school," and through the chief instrumentality of his brother. An overwrought impression of the pre-eminent genius and glory of the middle ages strengthened the principles his mind had already imbibed; and though himself the son of a Protestant clergyman, he scrupled not to pass over to the Roman Catholic religion, within the exclusive pale of which he conceived the regeneration of that golden epocha to be placed. Having prevailed upon his wife, a daughter of the celebrated Jewish deist, Mendelssohn, to follow his example, he had associated himself with Gents and other converts to the same opinion, and in 1808 transferred his residence to Vienna, where he was appointed to the situation of counsellor of legation in the imperial chancery by Prince Metternich; and for several years conducted the affairs of secretary to the Austrian envoy at the diet of Frankfort; where the fervour of religious feeling does not appear to have rendered him a less useful tool in promoting the machinations of his princely patron. In 1819 he was allowed to retire from official avocations, and zealously embarked in labours calculated to promote the interests of the faith to which he had attached himself: his days were now absorbed by religious studies and spiritual speculations, and the fruits of his investigations were exhibited in the lectures he had begun to deliver at Dresden a few days before his decease. It is a remarkable circumstance, that the intelligence of his death so deeply affected his fellow-labourer and bosom-friend, Adam Müller von Nütendorf, that he died of grief the day after the tidings reached Vienna.

Sir H. Davy is stated, in letters from Geneva, to have died there on the 29th ult.

Lord Blessington, a nobleman of literary taste and pursuits, also died about a fortnight ago at Paris; and Lord Thurlow, another literary nobleman, died a few days since, at Brighton. We have, at present, no materials for obituaries of any of these individuals beyond what are well known.

SKETCHES OF SOCIETY.

THE CHATEAU D'OLIFERNE.

[A tradition of the department of the Jura, in France.]
ON the ridge of a long chain of mountains, which bounds the horizon towards the west, is the celebrated Château d'Oliferne; less renowned for the sieges which it underwent in the sixteenth century, than for the fables which the sight of its mouldering walls revives. The approach to it is almost inaccessible; the rocks on which it stands overhang a deep valley; and, looking from its battlements towards the east, the waters of the Ain glitter like a blue girdle fallen into the plain. In the wars of the Conquest, the French, irritated by its long resistance, put to death all the inhabitants, and dismantled the old ramparts, — not leaving a single bastion to be a memorial of the glory of its defenders.

Among the extraordinary incidents in the fabulous chronicles of this place, is one which

might advantageously occupy the pen of the romance writer. One day,—and who can describe the dreadful jealousies of which the crime was the result?—three young ladies, rivals in grace and beauty, were doomed by the tyrant of Oliferne to the punishment of Regulus. In a cask lined with sharp nails, they were rolled, from the summit of the rock, into the waters of the Ain; so beautiful, so pure, so like the heaven which they reflected. For a long time the horrible machine floated on the river,—such groans proceeding from it as had never before disturbed the peaceful banks, and which were redoubled whenever the eddies drove it upon the shoals. At length it sunk, and soon after, dashed to pieces by the furious waters, a passage was opened from it for three bleeding spectres; who, stopping at the rocks opposite the château, seated themselves, and there established their eternal abode. These rocks are *Les Aiguilles des trois Dames*, which the traveller may still distinguish in the midst of the rude channel. Every night the spectres quit the rocks to go and visit their ancient dwelling. Sustained by the air, they gently descend on the banks of the river, lightly bathe their long white robes, mount to the ruins of the old palace, which they rapidly traverse, and then, at sunrise, regain, borne on the morning mists, their silent rocks.

The cruel baron did not remain unpunished. Since his death he has been constantly hunting in the neighbouring mountains. At break of day, when the three ladies retire to rest on their rocks, the lord of Oliferne issues from the great gate of the castle, with his courtiers and his household, followed by a led horse, bloodhounds, greyhounds, pages, and huntsmen; and the echoes resound afar with the bugles of the dreadful band. The bears and the wild-boars are vehemently pursued by this intrepid hunter; and there is not a peasant in the mountains who does not declare that he has witnessed all these prodigies, and who does not retire from the chase when he fancies he hears the howls and barking of the Lord of Oliferne's pack. It is the Freyschütz of the Jura. These old traditions have probably given some repose to the bears of these rocks, and have enabled them to continue their race until the present day; for the mountain of Oliferne is the only mountain of the Jura on which they yet occasionally appear.—*Voyage Pittoresque et Romantique de l'ancienne France.*

SIGHTS OF LONDON.

M. VICTOR'S READINGS.

WE anticipate great delight from the dramatic readings of M. P. Victor, which commence this evening at the Argyll Rooms, and are highly patronised. They are to be given on four days during the ensuing fortnight, from the *Zaire* of Voltaire, the *Cinna* of Corneille, *Marie Stuart* of Le Brun, and M. Victor's own striking play of *Les Scandinaves*. From what we have seen and heard of this gentleman, we look for very instructive as well as effective examples of French elocution on these occasions; and trust that, as a foreigner and man of letters, he will meet with the encouragement his merits claim.

Among the present sights of London, Haydon's *Pharaoh*, *Passover*, and other capital works, exhibiting while the artist is finishing his *Eucles*, deserve to be noticed with much praise.

MUSIC.

VALLUTI's concert, on Tuesday, was exceedingly well attended, and most deservedly so:

his own performance was admirable. We doubt whether, as far as musical science goes, he does not carry it to its utmost perfection.

Graziani's concert, the same morning, was also crowded. Malibran sang delightfully; and a Mr. Lennox, a pupil of Graziani's, has a voice of much promise, and does credit to his master, who sang himself with his usual spirit.

Miss Gautherot's concert was held on Wednesday evening. Sontag and her pretty little sister Nina sang delightfully; and Mr. Phillips did his country justice amid so many foreign voices. But the great novelty was the exquisite manner in which Miss Gautherot executed the "Recollections of Wales" on the harp. She is a very charming performer; and both from talent, amiable character, and situation, deserves all possible encouragement.

Madame de Vigo's concert, which we recommended in our preceding Number, was spoken of so that, without reference to the advertisements, the night might have been mistaken for last instead of next Wednesday; and lest we might injure where we wished to serve, we take this opportunity of setting the date right. The Dowager Marchioness of Salisbury, we perceive, patronises this accomplished exile; and Camporese, Stockhausen, Blasius, Miss Wilkinson, Braham, Donzelli, Curioni, &c. &c. afford her the aid of their great talents.

DRAMA.

THE winter theatres are on the eve of closing, and benefits are consequently crowding on each other. We regret to hear that few of them have been truly benefits. The important assistance of the Sontag produced bumper houses to Miss Paton, Mr. Farren, and Mr. C. Kemble,—and Braham's is always an overflow; but the rest, with few exceptions, have woefully disappointed the unfortunate speculators. Since Easter, both theatres have been deserted by the town; and we should not wonder if in a year or two, Drury Lane and Covent Garden should close with Lent, and throw the field open to the summer theatres. The only novelty within the last fortnight has been the performance of a German opera company at Covent Garden; but John Bull has been as uncourteous to the foreigners as to his own countrymen, and, despite the very clever acting and singing of Mr. Schütz as *Caspar*, and the usually attractive idea of listening to something he cannot understand, the obstinate old gentleman has kept aloof, and left the theatre in the quiet possession of red devils and blue devils. Drury Lane, we understand, is to close on the 20th, and Covent Garden on the 24th. Miss Smithson also had a good benefit on Thursday, when she played *Belvidera* excellently, to the *Jaffier* of a débutant, Mr. Cathcart,—an able performer.

The Haymarket opens on Monday, with a one-act farce by Mr. Poole, entitled, *Lodgings for Single Gentlemen*.

VARIETIES.

Vaccination.—It appears, from a table lately published in Paris, that the number of individuals vaccinated under the direction of the committee appointed by the Academy of Medicine within twenty years past, is about eight millions; and the number of persons vaccinated throughout France in the same period is thirty millions.

Literary Fund: Greenwich Meeting.—The meeting of Wednesday amounted to about 70 friends of the Institution; Lord Torrington, a V.P. in the chair. There were a number of

literary men present, and, we are sure, not a few firm friends added to the cause of the Charity by the good-humour and social enjoyments of the day. M. Roscafuerte, the Mexican Minister, in returning thanks for his health being drank, made an admirable speech, in which patriotic feeling, penetration, sound sense, and an ardent admiration of the best establishments of England, were conspicuous. Sir W. Betham also addressed the chair in a neat speech, on having his health proposed. At nine o'clock the party broke up, much pleased with their entertainment.

The British Institution has complimented Mr. Pickersgill with one hundred guineas, as a mark of admiration of the talents he has displayed in several recent works, which it did not fall within the plan to purchase.

Chlorure of Lime.—The chlorure of lime, which some time ago was so advantageously used in the Penitentiary at Milbank, has lately been applied with great effect in the purification of the spinning places for silk-worms, in France. It has been found preferable to the more rapid and frequently too powerful operation of Guyton-Morveau's disinfecting process.

Antiquities.—The last number of the *Bulletin Universel* contains an account of the discovery of some Roman antiquities at Baval, in France. One of the inhabitants, while digging his garden, found a large human skeleton, lying from east to west, having between its legs a two-edged sword, the blade alone of which measured three feet and a half French, so that the whole sword must have considerably exceeded in length four English feet. The feet of the skeleton rested upon a bronze helmet, and near the head was a small vase of gray clay, containing a Roman medal of the reign of Antoninus Pius. The same publication contains a notice of the researches, made by order of the minister of the interior, in the Amphitheatre of Frejus: among other things discovered, are part of a column of white marble, a bronze medal with the effigy of Adrian, and several pieces of well-sculptured marble, which appear to have formed part of a frieze.

Subterranean Warehouses for Grain.—Considerable interest seems to have been excited in Paris, during the late scarcity and high price of corn, by the opening of several siloes which had been made three or four years ago by M. Ternaux, the celebrated agriculturist and manufacturer, and the supply of corn, in a perfect condition, at something less than the market price. M. Ternaux has been more fortunate in his experiments than others who have made similar attempts to preserve grain under the earth; but the result which has at length been obtained shews that perfect success may be secured under proper management. One of the first persons who has endeavoured to introduce this mode of housing corn into France in modern times is General Demarcay. He began in 1823, and in 1825 opened the siloes which had been made. They were found nearly filled with weevils, and the corn was in almost a rotten state from humidity. At the time of closing the siloes, every precaution that could be thought of had been used to prevent the admission of air; but it seems that the air contained in the straw and in the ears of the grain was quite sufficient to support the weevils. The moisture was found to be occasioned by the evaporation of the earth; to remedy which, new siloes were made in a spot which was constantly in the shade, and means were taken to express the air from the straw with which the siloes were covered. On re-opening the new

silos, the corn was found to be in a much better condition than what had been previously housed, but still not perfect; however, as the mode adopted by M. Ternaux has succeeded, little doubt is entertained by M. Demarçay that his next attempts will also be successful. This gentleman housed a quantity of corn in an ice-house, and on removing it the following year, it was found to be in the best possible condition. The process of this mode of preserving grain is not given; but it is probably similar to the plan adopted by the gardener of Prince Leopold, at Claremont, to preserve vegetables. The articles to be preserved are first covered with powdered ice, then with small pieces of ice, and then with larger, and so on until all air is effectually excluded, and a proper supply of cold is kept up. In this way cauliflowers, asparagus, and other vegetables, are kept until the following year, without the slightest deterioration in appearance or flavour.

Production of Cochineal in Spain.—The *Bayonne Gazette* of the 16th January last contained an account of the successful cultivation of this branch of industry, near Cadiz, by a gentleman, who obtained 4½ lbs. of very fine cochineal. It is now stated in a letter from Madrid, that cochineal has been produced in much larger quantities at San Fernando and Puerto Real, and that there is every prospect of its becoming an important branch of commerce.

Use of Salt for Cattle.—The practice of giving salt to cattle has been introduced into Bavaria, but (with the exception of cows) without the beneficial results which are attributed to its use in this country by Mr. Curwen and other distinguished agriculturists. The cows, however, in Bavaria are said to thrive amazingly upon food in which salt is mixed; and the milk from cows thus fed is said to be as abundant and as rich in quality in the winter as in the spring.

Royal Shooting.—The following account of the field sports of Charles X. appears in a French paper called the *Courier des Electeurs*. "There is printed every year a volume called *Livret des Chasses du Roi*. Of this book only fifteen copies are printed, which are intended as presents. It contains not only the history of the field excursions of his majesty, but also an exact inventory of the heads of game destroyed by him and the persons who are permitted to share in his pleasures. Each of these has an account opened in the *Livret*, in which the kind and quality of the game and the nature of the shots are enumerated. In 1836 the king killed 11,954 heads of game, in which are included three rats, who had the misfortune to quit their holes and expose themselves to the royal lead. The expenses of the shooting establishment for the year were 1,800,000 francs (upwards of £70,000), being at the rate of 150 francs for each head of game. It is proper to add, that this sum is paid out of the civil list."

Foreign Uniforms.—It is in contemplation by the French ministry to substitute the red colour in the army for blue. The madder, from which the red is dyed, is produced in large quantities in France; and by the change, it is said a saving of 1,500,000 francs a year will be effected. Part of the troops forming the garrison of Paris were reviewed, dressed in red, last week by the dauphin, in order that he might judge of the effect.

"Pompey's Statue."—Lord Hertford, who is living like a prince at Rome, has, it is stated, purchased the celebrated spada Pompey, at the foot of which "great Caesar fell," for £5,100.

Spain.—Spain appears to be rousing from

the deep sleep in which for the last two hundred years she has been sunk. The loss of her South American colonies, and of the precious metals which she used to derive from that source, seems to have brought about this favourable change in her character. A work has lately been published at Madrid, recommending the formation of companies for the digging of coal, for the establishment of foundries, for the manufacture of steam-engines, for the construction of iron railways, bridges, and machines of all kinds, for the casting of cannon, for the completion of the canals of Castile and Arragon, for the preservation of the forests, for the cultivation of agriculture, and, in short, for giving to every description of industry and commerce a new and powerful impulse. It is very gratifying to learn that these plans have received the cordial support of the Spanish aristocracy—hitherto so disdainful of useful and laborious employments.

Académie des Sciences.—The Académie des Sciences lately ballotted for a corresponding member in the sections of agriculture and rural economy. Of forty-eight votes, M. Gasparin, of Orange, obtained twenty-six; Sir John Sinclair, of Edinburgh, seventeen; and M. Bonnafont, of Turin, five. M. Gasparin was consequently elected.

Clubs of Paris.—Notwithstanding the severity of the police regulations against the formation of even literary clubs in Paris with more than a limited number of members, new societies of this kind are forming daily; and it is expected that the law prohibiting them will be relaxed. The chief political clubs in Paris are la Réunion Beausset, la Réunion Marbé, Marbois, et Choleseul, and la Réunion de la Rue de Rivoli. The first consists of constitutional royalists; the second of pure constitutionalists; and the third of liberals—such as Ternaux, Gevandan, and Lafitte. In addition to these, there are several political *soirées*, chiefly frequented by literary and professional men: the principal is that of Lafayette, who contrives to get together on every Tuesday evening, at his house in the Rue d'Anjou, from two to three hundred persons of all nations.

Ecstasy.—The animal magnetisers of Paris pretend that when they have thrown any one into a state of what they are pleased to call "ecstasy," the body is insensible to suffering; and they are just now circulating and attaching great importance to the case of an old lady of sixty-four, who, having been thrown by them into a state of ecstasy, underwent, as they say, the severe operation of having an ulcerous cancer cut out of her neck, without experiencing the slightest pain! During the whole of the operation, adds the statement, she exhibited no sense of suffering, or even of sensation, until towards the end, when she laughed, like a person who was being tickled, and exclaimed, "Finissez, ne me chatouillez pas—Leave off, do not tickle me." Previous to each dressing of the wound she was again magnetised, with perfect success, and the cure was complete.

Anticatelephor.—We have received several papers descriptive of a new and curious engine with the above name, invented by Mr. T. W. C. Edwards, Lecturer on Experimental Philosophy and Chemistry, and designed for "the instantaneous conveyance of intelligence to any distance." After noticing some of the greatest inventions of preceding times, Mr. E.

"Undertakes to demonstrate clearly and briefly, in the work which he has now in the press, the practicability and facility of transmitting from London, instantaneously, to an agent at Edinburgh, Dublin, Paris, Vienna, St. Petersburg, Constantinople, the Cape of Good Hope,

Madras, Calcutta, &c., any question or message whatever; and of receiving back again at London, within the short space of one minute, an acknowledgment of the arrival of such question or message at the place intended, and a distinct answer to it in a few minutes." He adds:—"In principle this engine is altogether different from every kind of telegraph or semaphore, and requires neither intermediate station nor repetition. In its action it is totally unconnected with electricity, magnetism, galvanism, or any other subtle species of matter; and although the communication from place to place is instantaneous, and capable of ringing a bell, firing a gun, or hoisting a flag, if required, yet this is not effected by the transit of any thing whatever to or from—nor in the operation is sought either audible or visible, except to the persons communicating. It may be proper, however, to state, that a channel or way must previously be prepared, by sinking a series of rods of a peculiar description in the ground, or dropping them in the sea; but these, after the first cost, will remain good for ages to come, if substantial when laid down."

LITERARY NOVELTIES.

The MS. note-books of the Rev. Gilbert White, the author of the *Natural History of Selbourne*, containing many curious observations not hitherto published, are at present in the possession of Mr. Murray, of Albemarle Street, who will issue in a few days a cheap and elegant edition of that work. The labours of editor have fallen into the hands of a gentleman eminently qualified for the undertaking; and the addition of notes and new illustrations will scarcely fail to bring into more general notice this delightful book, whose merits, owing to the cumbersome and unpopular form in which it has hitherto appeared, are not known as they deserve.

Views of Bath and its Environs. In a popular form, are announced by Mr. Worsley, an artist, of that city.

The author of *Reginald Trevor* has a new novel in the press, entitled, *Laurence Mertoun, or a Summer in Wales*. It is, we hear, descriptive of modern Welsh manners, and contains some sketches of character especially referable to the highlands of Merionethshire.

Progress of Periodical Literature.—At Bucharest, in Wallachia, and at Yassi, in Moldavia, newspapers have recently been established: they are (according to accounts—for we have not seen either) very unlike the more mature press to which we are accustomed; but, nevertheless, we trust they will go on and do good, though we cannot expect it unmixd with evil.

The translation of the Books of Confucius, by the principal of the Anglo-Chinese College, the Rev. David Collie, was, by last accounts from the Straits, expected to be out in March.

A Life of Sir Walter Raleigh, by Mrs. A. T. Thompson, authoress of the *Memoirs of the Court of Henry the Eighth*, is announced for early publication.

We are glad to hear that Don T. de Trueba, author of the *Castilian*, &c. &c., is engaged in writing the *Life of Hernan Cortes*, including the History of the Conquest of Mexico. This work is for *Constable's Miscellany*.

In the Press.—Observations upon the Condition of Negro Slavery in the Island of Santa Cruz, and some Remarks upon Plantation Affairs; with a Notice of the Danish West India Islands.

TO CORRESPONDENTS.

¶ We are sorry that we received the card for Mr. Forster's lectures on the Ventilation of Coal-mines too late to attend; and the more so, as we are informed they developed great practical intelligence, and opened some very ingenious views on this important subject. Many concert and other tickets have also failed to reach us in time.

ADVERTISEMENT

Connected with Literature and the Arts.

BRITISH INSTITUTION,
FALL MALL.

The Gallery, with a Selection of the Works of the Italian, Spanish, Flemish, Dutch, and English Schools, is open daily, from Ten in the Morning till Six in the Evening.

OF CHRISTIAN SINCERITY.

By JOHN PENROSE, M.A.

Formerly of Corpus Christi College, Oxford.

"For if these two things be supposed, that a man set before him honest and good ends; and again, that he be resolute, and constant, and true unto them; it will follow that he shall mould himself into all virtue at once."—*Second's Advancement of Learning*.

Oxford: Printed for J. Parker, and C. G. J., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

Price Six Shillings.

THE FOREIGN REVIEW.

No. VI.

"The sixth number of this Review, just published, fully maintains the station which the talents, judgment, and taste, displayed in former numbers, have assigned to it in the opinion of the literary world. The History of the Roman Law is a valuable dissertation, which will amply repay a careful perusal; it evinces throughout an intimate and extensive acquaintance with the subject."—*The Morning Post*.

"The Foreign Review has a very clever article on Voltaire. We think that we recognize Mr. Carlyle's eloquence in it. Great enthusiasm, energy, and pious sentiments, distinguish the writings of this author."—*The Edinburgh Evening Post*.

No. VII. will be published 30th June.

Black, Young, and Young, 2, Tavistock Street, Covent Garden; and Hoesange, Bartholomew, and Lowell, Great Marlborough Street.

In 8vo.

Price 12s. crown 8vo. boards.

ANCIENT METAL TALES, printed

chiefly from original Sources. Edited by the Rev.

CHARLES HENRY HARTSHORNE, M.A. Forming a Supplement to the Collections of Percy, Ritson, and Ellis.

This Volume contains the Romance of King Athelstene, a Tale of King Edward and the Shepherd, Piers of Fulham, &c. In the republication of portions of our early literature, materials are afforded to the philologist wherewith to analyse the structure of our language; and to the poet, interesting images of ancient manners; we find ourselves at one time inmates of the Gothic hall, witnessing the rude splendour of its chieftain in his hours of festivity; at another time, accompanying the challenger to the listed field, we are made partakers of or witnesses to the gallant deeds of feudal chivalry: they likewise preserve to us facts transcribed from books which have not descended to posterity.

London: Printed for William Pickering, 57, Chancery Lane.

For Travellers on the Continent.

3. **Lectures on Miracles selected from the New Testament.** 4th edition, 8s. in boards.

BOOKS IN THE PRESS.
Early in June will be published, in 3 vols. post 8vo. with a coloured Map,
TRAVELS in NORTH AMERICA, in 1827 and 1828. By Captain BASIL HALL, R.N. Printed for Cadell and Co. Edinburgh; and Simpkin and Marshall, London.

Of whom may be had,
1. **Anne of Geierstein,** by the Author of *Waverley*, 3 vols. 11s. 6d. Just published.
2. **Saint Valentine's Day; or, the Fair Maid of Perth.** By the Author of *Waverley*, &c. 3 vols. 11s. 6d. 2d edition.
3. **Chronicles of the Canongate.** By the Author of *Waverley*. First Series. 3 vols. 11s. 6d. 2d edition. Contents.—I. The Highland Widow—II. The Two Doctors—III. The Surgeon's Daughter.
4. **Tales of a Grandfather; being Stories from the History of Scotland.** By Sir Walter Scott, Bart. First Series. A new edition, 3 vols. 10s. 6d.
5. **Tales of a Grandfather. Second Series.** A new edition, 3 vols. 10s. 6d.
6. **The Practice of Cookery, adapted to the Business of every-day Life.** By Mrs. Delagrange. In 1 thick vol. price 7s. 6d.
"This is by far the best and most practical work which has yet appeared upon the subject. Mrs. Delagrange is not one of those imaginative and literary persons who think it necessary to call in the aid of fiction and story-writing to give an interest to the uninteresting and important details of which the details of business are composed. Her book will be found an invaluable cook's companion, and a treasure of great price to the mistress of a family. It is stuffed chock-full of the most important gastronomic information. It contains 1644 receipts, 95 of which are for soups, 118 for fish, 70 for beef, 60 for veal, 31 for pork, 41 for poultry, 14 for curries, 104 for gravies, sauces, &c. 66 for vegetables, 393 for puddings, pies, and tarts, 124 for creams, custards, &c. 100 for cakes, &c. 88 for preserves, 61 for domestic wines, 15 for the dairy, and 88 miscellaneous. Then we have remarks, besides, on the poultry-yard, brewing, the kitchen-garden, beer, pigs, &c. With so many arguments in its favour, we cannot doubt that the 'Practice of Cookery' will soon find its way into a wide and useful circulation."—*Edinburgh Literary Journal*, 18th April.

Works nearly ready for publication, by Henry Colburn, New Burlington Street:—
THE BOOK of the BOUDOIR. By LADY MORGAN. In 3 vols.
2. **The Loves of the Poets.** By the Author of the "Diary of an Eunuch." In 2 vols. post 8vo. 18s.
3. **Life of John Locke, with Extracts from his Correspondence, Journals, and Common-place Books.** By Lord King. In 1 vol. 4to. with Portrait.
4. **Personal Narrative of a Visit to Constantinople.** By Captain C. C. Frankland, R.N. In 3 vols. 8vo. with Plates.
5. **Travels in Turkey, Egypt, Nubia, Palestine, &c.** By R. R. Madden, Esq. In 3 vols. 8vo. 24s.
6. **Memorials of Charles John, King of Sweden and Norway,** illustrative of his Character, of his Relations with the Emperor Napoleon, and of the present State of his Kingdom; with a Discourse on the Political Character of Sweden. By William George Meredith, Esq. A.M. of Brasenose College, Oxford. In 8vo.
7. **The Diary and Correspondence of Philip Doddridge, D.D.** 8 vols. 8vo. Edited from the Originals, by his Great-Grandson, John Doddridge Humphreys, Esq.
8. **Memoirs of Lady Fanahawe, Wife of the Right Hon. Sir Richard Fanahawe, Bart. Ambassador from Charles II. to the Court of Madrid.** Written by herself, now first published from the original MS. To which are added, Extracts from the Correspondence of Sir Richard Fanahawe. Handsomely printed in 1 vol. 8vo. with a Portrait.

LONDON: Published every Saturday, by W. A. SCHIFFS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 95, Royal Exchange; R. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, 2, Rotherhithe; and Atkinson, Glasgow; and J. Cunningham, Dublin.
J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 648.

SATURDAY, JUNE 20, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Constantinople in 1828. A Residence of Sixteen Months in the Turkish Capital and Provinces; with an Account of the present State of the Naval and Military Power, and of the Resources of the Ottoman Empire. By Charles Macfarlane, Esq. 4to. London, Saunders and Otley.

THE publishers having been obliging enough to put into our hands the narrative portion (consisting of 352 pages) of this well-timed and, at present, peculiarly acceptable volume—we feel much pleasure in rendering it subservient to the information and amusement of our readers. That it may the more effectually fulfil these objects, we have passed over the author's journey through part of Asia Minor, and proceeded at once to what appears to possess higher immediate interest, as bearing upon the grand problem now at issue between Turkey and Russia—involving, indeed, all the important views and politics of the world. The book itself is easily (if not quite elegantly) written:—the production of an intelligent and observant gentleman; though perhaps the languor of ill health, alluded to in the preface, may have been the occasion of a little feebleness which is here and there visible in the general execution of the work. But it is a redeeming merit in Mr. Macfarlane that he is, though a *liberal* in the best sense of the word, obviously and happily free from any political bias to distort his remarks; and the consequence is, that we have here a simple and faithful record of his impressions, just as they were made upon his own mind. Among other prominent matters, we find a sketch of the reigning Sultan *Mahmood*, very spiritedly drawn; and the volume abounds with anecdotal and piquant details, which readily assist our judgment upon the existing situation and probable future destinies of this remarkable empire and curious people. But we will detain our readers no longer from the extracts to illustrate this brief introduction:—we begin with their head.

“Mahmood the Second, the reigning monarch of the Osmanli people, who has had the fortune and the merit to attract so great a portion of the attention and interest of Europe, was born in the year of the Hegira 1163, or 1785 of the Christian era. He is the son of Sultan Abdul-Hamid, and the only survivor of a very numerous family of brothers and sisters. At the deposition of his cousin, Sultan Selim III., he was, as he had been from the moment of his birth, a close prisoner in the harem, confined to the society of slaves, and denaturalised men and women. This abominable system of captivity and demoralisation, which was first instituted by Soliman the Magnificent, about the middle of the sixteenth century, to avoid the dangers of revolt and disputed successions, was not, however, rigorously adopted until the reign of the fratricidal mon-

ster, Mahomet III.* at the commencement of the seventeenth century. Since that period, the princes of the Ottoman race languish within the walls of the seraglio until death liberates them, or the course of events calls them to a throne, for the duties of which, the whole of their preceding life has directly tended to unfit them. The effect of the system has been to give to the Ottoman empire, instead of spirited and warlike princes, such as the brilliant and uninterrupted series of their first ten monarchs, a disgraceful succession of imbecile and effeminate sultans—cruel, but cowardly; luxurious, yet barbarous in their very luxury; a compound of the characters of the malignant eunuch, and the sensual uninformed woman. It is true there have been no more direct revolts and disputed successions between the princes of the blood; they have been passive tools in the hands of the janissaries and oulemas, who have dethroned them, or girt them with the kingly sabre, at their caprice; and if a father, a brother, has been strangled on his fall, by the imperial mandate, that measure of guilt has been dictated by the ruling will of the sultan's masters more frequently than by his own hate or jealousy. When Selim was deprived of his throne, and returned to his original imprisonment in the seraglio, the imperial stock of the blood of Osman was reduced to so weak a state as might terrify the Turks, who are attached to legitimacy, and consider their political existence as interwoven with the perpetuity of the Osman dynasty, which has given them their names,† and ruled, or at least occupied their throne, for the lengthened period of five hundred years. With the exception of the deposed Selim, the son of Mustapha III.,‡ there were but two princes surviving children of Abdul-Hamid, and cousins to Selim. Mahmood, being the younger of the two, was left to share the captivity of Selim; and his brother, the imbecile Mustapha, was called to the throne by the united voice of the mufti, the oulemas, and janissaries. Had the gentle Selim possessed the character of many of his ferocious predecessors, he might yet have saved his throne and life; for when obliged by his rebellious subjects to take refuge in the interior of the seraglio, he could instantly have put to death the princes his captives, and thus, re-

maining alone of the sacred race, have secured to himself safety for the present, and full immunity for the future; and the deed might have been excused in the eyes of a sanguinary people, by the natural impulse of self-preservation. But of such deeds, the nature of Selim was incapable; he could not be moved to the bloody tragedy by the cries of the blind, ungrateful mob, who were hailing Mustapha, his cousin, as his successor; and as the mufti, deputed by the insurgents to announce his deposition, approached the strong and well-defended walls of the seraglio, he mildly ordered the gates to be opened to him; he listened with dignified silence to the discourse of the arch-hypocrite, whose benefactor he had been, and, shrinking at the picture of civil war and bloodshed, he bowed his head to the decrees of fate, retired to his prison, and left his puerile cousin an undisputed throne. The misfortunes of Selim were productive of the greatest advantage to Mahmood; the deposed monarch—who, on the threshold of the throne he was retiring from, is said to have had the magnanimity to advise the dazzled Mustapha, who, with ungrateful eagerness was stepping in his place, and to wish him more happiness on it than he had experienced himself—beguiled the irksome hours of captivity in instructing his youthful cousin and fellow-prisoner, whose mental development had hitherto been favoured or checked by the obsolete science and benumbing dogmas of a chodga chosen from the fanatic body of the oulemas—the only instructor allotted to these unhappy princes. The lights and information acquired from the sagacious Chelibi-Effendi, and the few others of his subjects who had broken the bonds of Moslem restriction and prejudice—the imperfect, but still valuable reflex of European thought and civilisation he had sedulously sought after, even in converse with Christians—all the experience and knowledge gained by a naturally intelligent mind whilst the master of his own actions and the monarch of a vast empire, Selim might impart to an attentive hearer; and in the midst of the barbarity that surrounded them, the secluded cells of the captive princes might be looked upon as an ‘academe,’ the resort of wisdom and worth. The decline of the Ottoman empire from its original splendour, and the rapid rise of their Christian neighbours, who had trembled at the Osmanli name—the inferiority of lawless, ignorant, and disorganised bands, to the disciplined troops of their enemies, and all his projects of reform, and all his political views—could not fail of forming a part of the discussions between Selim and his pupil. And in addition to the practical course of instruction which had qualified him to reign and to reform a barbarous people, the mind of Selim had been humanised by the cultivation of oriental literature and the study of the Arabian poets. He was himself a poet and musician; and from him Mahmood acquired a taste for poetry, and a proficiency in his own and the Arabic languages, which is said, by those who are not his flatterers, to

* “I have heard the number of the children of Abdul-Hamid (or the servant of God) differently stated,—at twenty, twenty-four, and thirty, male and female.”

* “Le lâche et cruel Mahomet III fit périr ses dix-neuf frères, et toutes les concubines que son père avait laissées enceintes, et resta seul de toute sa famille. Par suite de cette politique barbare, tous les enfans mâles nés du mariage d’une sœur ou cousine du sultan régnant avec un des sujets de l’empire, sont condamnés à une mort inévitable au moment de leur naissance. Des actes trop fréquents de cette politique cruelle ont exposé plusieurs fois la dynastie Ottomane au danger imminent de son extinction.—*Juchereau de Saint-Denis, Révolutions de Constantinople. Paris, 1819.*”

† “Osman (the founder of the dynasty), hence Osmanli, or the children of Osman, which is the name the Turks prefer. They indeed consider our word *Turk* as insulting; and I remember seeing a poor Greek well kicked for exclaiming: ‘*Turques*,’ where he thought no Turk would hear him.”

‡ “The order of succession is not, as in European monarchies, from father to eldest son; but on the death or deposition of a sultan, the eldest prince of the race, be he brother, cousin, or son, is called to the throne.”

surpass the acquirements of most of the professedly learned of his subjects.* He may have paid more attention to these literary pursuits than it is the usual practice of princes to do: his brother Mustapha, a young man, might reign many years—his own accession was an uncertainty—he might finish life in the prison where life began; and every mental occupation was to be prized in the unvarying monotony and tedium of such a state of existence. But what Selim did not (for he could not change the fiery nature of the man), was to infuse into the mind of Mahmood his own mildness, forbearance, and mercy: the example of his own gentler virtues was lost; and his cousin continued headstrong and violent, and gave indications of a cruel and unrelenting disposition. There was one illustrative anecdote of the captive princes which affected me extremely. Some trifling act of neglect or omission in an attendant slave drove Mahmood into a paroxysm of rage more than usually violent: he started from the sofa where he was sitting with Selim, struck the trembling offender on the mouth, threw him down, and trampled upon him. 'Ah! Mahmood,' said the deposed sovereign, reproachfully, 'when you have been tried in the furnace of the world's troubles, like me, so slight a matter will not discompose you: when you have suffered as I have, your heart may feel even for the sufferings of a slave!' If tales like this—and there are many such—admit of doubt where authentication is difficult or impossible, their prevalence will at least prove the estimation in which the Turks hold the memory of the injured Selim, and the character of the violent Mahmood. When Selim, as a captive, undertook the instruction of his cousin, Mahmood was twenty-two years old; and we ought rather to be surprised that at such an age he should have profited intellectually so well as he seems to have done, than wonder at his not having reformed the vices of original disposition, hitherto unchecked, and now confirmed in the stability of manhood. Those very vices, however, have served him well in his stormy career, as their opposite virtues had been fatal to Selim. The impetuosity of Mahmood has overthrown obstacles that seemed insurmountable to the cooler philosophy of his cousin; his unrelenting nature has enabled him to wade through torrents of blood to his object, without shrinking or hesitation; and remorseless as unsympathising, he has set human suffering and justice and right at naught, whenever they have interfered with his projects and gratifications. To those who consider success as merit, and look to the end without reference to the means, the partial, yet important reforms effected, will veil the atrocities by which they have been wrought; and the character of Mahmood will be honoured with admiration and applause: but still those who are so injudicious in this calculating world as to retain the more amiable feelings of our nature, and to revolt at cruelty and injustice, whatever be their result, will only place him among those moral hurricanes which, like their physical proto-

types, may purify the air and the earth they desolate, but can never become the objects of sympathy or affection. The reign of Mahmood's brother Mustapha, who had stepped so unfeelingly on the throne of Selim, was destined to be as brief as it was inglorious."

His deposition was effected by Mustapha-Bairactor; and the details of the tragical revolution are very striking.

"The manes of Selim were conciliated by the sacrifice of his degraded murderers, and of the parasites of his cousin Mustapha. On the day that Mahmood ascended the throne, thirty-three heads were exposed at the gate of the seraglio; among which, the hideous deformity of the chief of the black eunuchs shone conspicuous on a silver dish, allotted to him on account of the dignity of his office. The officers of the Yamacks (a division of the janissary corps that had been peculiarly obnoxious to Selim, and the chief agents in the revolution that dethroned him fourteen months before), or all that could be seized, were strangled and thrown into the Bosphorus; and such of the women of the seraglio who had manifested joy at Selim's death, were sewn up in sacks and drowned at the tower of Kiz-Koulessi, opposite the seraglio point."

The well-known and bloody revolt of the janissaries, which, on their defeat, led to the death of Mustapha, is a frightful picture; and "From this dreadful moment (continues the author) Mahmood may be said to have borne a charmed life. He felt this; and strong in the peculiarity of his situation, and the concurring prejudices of a whole nation, he undertook and accomplished measures which none of his predecessors dared contemplate, and which would many times have hurled him from the throne, had there existed other princes of the blood of Osman to substitute in his place. The birth of sons did not immediately endanger his safety, as the Turks have no idea of regencies, and count their princes as nothing until they reach the age of manhood; yet the sudden death of his eldest son, (on whom the eyes of the party adverse to reform and innovation were fixed), in the tenth year of his age, is by many attributed to poison administered by a jealous and unnatural father; though such a crime would have been premature, and it seems more probable that the child died of the small-pox."

The following is a very curious illustration of our preceding quotations:—

"A man who has shewn the strength and superiority of mind that Sultan Mahmood has unquestionably done, might be supposed to have emancipated himself from the trammels of a degrading superstition; but, be it remembered, he is still a Turk; his superiority is elicited only by comparison with his own barbarous race and predecessors; and we should be guilty of folly, if, in our admiration of the good qualities he may possess, we give him credit for others which from education and situation he can have no conception of: if we make of him, as too many have done, a miracle of intelligence and talent; the regenerator of a countless people; the creator of armies, compared to whom the great Czar Peter is an unenlightened savage, and Frederic of Prussia nothing but a drill-sergeant. Mahmood retains near his person, as his predecessors have done,

—though astrology is denounced by the Koran as a crime only inferior to idolatry,—a *munedjim-bashf*, or head astrologer; and it has been said, in circumstances of extraordinary hazard and difficulty, he has had also recourse to other seers and conjurers, of whom he had learned extraordinary things from his courtiers and officers, who are just as superstitious as the mob. The following story was current at Constantinople a short time after my arrival. I pretend not to have penetrated the recesses of the imperial kiosks, or to have had opportunities of observing a sultan's private amusements or occupations; I can hardly vouch for the truth of the ridiculous tale, but it was in the mouth of all the Turks. It is strikingly in character, and may amuse as a specimen of Osmanli ingenuity. The story was this:—The sultan sent for a conjurer of repute, to learn from him what would be the result of the war in which he was already engaged with Russia, and of the prospective difficulties with England and France. The conjurer brought into his presence four cocks. Each of these cocks he selected to represent a nation; thus, one was England, another France, one Russia, and one Turkey. He placed Turkey in the centre of the kiosk, and then threw England, France, and Russia, upon him. But the three cocks, instead of falling upon Turkey, presently began to fight among themselves; the combat was indeed general, but in pairs. Turkey had most bottom, he fought the longest, and remained conqueror of the field; while Russia was severely treated, and had one of his wings broken. The inference was plain: the sultan was to be more confident of success than ever, his army must beat the Muscovites, and the French and English would cry out *avvala*.* The typical representation might do honour at least to the necromancer's quickness of perception and knowledge of human nature, under political modifications. The three allies being thrown on Turkey, and then fighting among themselves, is a good idea; and as his object was to flatter, he would have been a fool not to choose the gamest cock of the four for the emblem of the Moslem empire. Other professors, however, were less favourable and auspicious; they practised among the vulgar, and not in the serais of the great. The effect produced on a credulous people might be bad, and it was not thought beneath the care of government to check or suppress them: the sultan would have no seers or prophets but such as saw and predicted in his way. In the month of April, a certain Turk of Constantinople asserted that a sainted *hadji*, long since defunct, had appeared to him several times on the point of a minaret of the mosque nearest to the spot where his ashes reposed, and had announced in solemn terms the calamities of the empire, which would result from the sultan's subversion of the law and usages of the people of the prophet. As this voice from the other world coincided with the opinions and prejudices of thousands of Turks in this, it rapidly circulated through the city, and could hardly fail of reaching ears to which it was disagreeable. It came to those of the sultan, who, declaring the Stambouli seer to be a child of the devil, had him severely bastinadoed—a process which was said to have completely destroyed his supernatural perceptions for the future. To explain the nature and tendency of his numerous reforms, military and civil, already in operation, or projected, and to conciliate the minds of the Montenapins,

* "*Avvala*, a common Turkish exclamation, equivalent to *bravo! bravo!*"

* "Some of his hatt-i-sherifi and state papers are said to have been composed solely by himself, and are cited as models of composition. The poetry of Selim is often spoken of; and there are several little songs attributed to him in the mouths of all the Turks. I once heard a strapping fellow singing one of these in a public bath. The air, like all the Turkish airs I am acquainted with, was simple and monotonous, but not devoid of a natural pathetic melody. The burden of the song was—'There is no happiness here below'; a fact which the chorister's circumstances at the moment seemed to deny; for, stretched on a couch, disencumbered of his clothes, and sipping a cup of coffee to his chibouk, he was certainly enjoying beatitude, the acme of Turkish bliss."

* "The following are the dates of the rapidly succeeding revolutions and atrocities: Selim was deposed the 31st of May, 1807. Mustapha was deposed, after having murdered Selim, the 28th of July, 1808. Mahmood was girt with the imperial sash on the 11th of August, 1808, at the mosque of Eyoub, and put his brother Mustapha to death the 16th of November following."

Sultan Mahmood had recourse to a measure extraordinary in an oriental despotism,—he addressed public opinion! A work entitled 'The Basis of Victory,' was composed, under his superintendence, by the most enlightened of the few pretenders to literature that still illuminate the Turkish capital. The prejudice for manuscript copies was despised; it was desired that the work should circulate widely and rapidly; and it was elegantly printed at the press established by the unfortunate Sultan Selim, at the Asiatic suburb of Scutari. I was much surprised at the elegance of the volume: it was about the size of our larger octavo, but broader, and still more resembled the form of the small quarto impressions of the Spaniards. The types were set, and the sheets drawn by Armenians,—a portion of the rayahs that I have already described, as possessing considerable mechanical dexterity. Christendom had furnished the paper, for of the two manufactories established by the same ill-starred reformer, one at the bottom of the port of Constantinople, near 'les Eaux Douces,' had been abandoned; and the other, on the Asiatic bank of the Bosphorus, opposite to Therapia, can furnish but a coarse, thick article, which, though used by the Turks in their common writing with reeds, could not be adapted to printing. I saw some copies of this book very prettily bound in morocco. This popular measure of the sultan, which I have designated as extraordinary, has, however, one solitary precedent. In the time of Sultan Selim, Chelibi-Effendi, one of the principal dignitaries of the empire, and a man revered for his age and reputed wisdom, drew up a defence and explication of the reforms of the day, and applying more particularly to the institution of the Nizam-Djedid, the reform of the janissaries, and the formation of disciplined troops on the European model. And indeed, to judge from copious translations I had made to me from the volume, the 'Basis of Victory' seemed but a repetition and extension of the work of Chelibi-Effendi. Like its predecessor and its model, it exposes that the empire of the Crescent, once so glorious, has been shorn of its beams; and now, instead of inspiring terror to the infidel nations, is reduced to feel it in its own bosom. This change is attributed to the demoralisation of the janissaries, and to the ridiculous prejudices of the Moslems,—prejudices falsely pretended to have their origin in religion, and in the institutions of the prophet,—against adopting the discipline and military improvements of their enemies."

(A continuation in our next.)

Forest Scenes and Incidents, in the Wilds of North America; being a Diary of a Winter's Route from Halifax to the Canadas, and during Four Months' Residence in the Woods, on the Borders of Lakes Huron and Simcoe. By George Head, Esq. 12mo. pp. 362. London, 1829. J. Murray.

THIS is a very amusing, Robinson Crusoeish sort of book—one of those actual truth-telling narratives where we seem to take a personal interest, and where the writer appears more like a friend whose letter, than an author whose book, we are reading. We can conceive no situation more disconsolate, on the first glance: a log-hut, in which the snow is a familiar visitant, surrounded by trackless forests; frost and fly-bitten; no society, no books,—the case is decidedly a desperate one: no such thing; Mr. Head goes skating, shooting, wood-cutting; talks of his good fires and good sport, till, had we been a few years younger, we

should have thought a winter in the American wilderness one of the finest things imaginable. But let Mr. Head give his own account.

"On entering the wood, I ascended a steep acclivity, which I had no sooner surmounted than I found myself amongst a parcel of small huts, made up of a few poles, thatched over with spruce boughs, scattered here and there; and from two or three of these it was that the smoke issued. There was not such a thing as a log-house to be seen; but I observed, that one of the huts was rather better finished than the rest, and a farther distinction was allotted to it by a flag, which was placed upon the roof. It was evident that none of them could have been long erected, the snow was so excessively deep, and the foot-marks so few; however, I made my way immediately towards the one with a flag, where I found Captain C—, of the navy; and I had no sooner entered and introduced myself, than I received a very cordial welcome. Captain C— immediately afforded me the assistance of a couple of men to build me a hut; and, as it was necessary that it should be ready for me to sleep in the same night, I went back to the place where I had left my servant with the baggage. I told him where I would have the hut built; and, leaving him to superintend the works and remove the things, I returned to Captain C—, where I was regaled with a fine piece of boiled beef, which I was hungry enough to think excellent, though from its toughness it would hardly remain upon the fork. Captain P— and Lieutenant E—, the other officers appointed to the establishment, had assembled at the commodore's hut, and with them I remained till nearly seven o'clock, when I left the party, to attend to my own affairs. I had directed my hut to be erected on the summit of the brow which rose close from the bay; and when I returned to the spot I found my servant busily arranging my different articles of property in an edifice which, if not equal in splendour to the renowned palace of Aladdin, had been, at least, completed nearly in as little time. By the help of a few poles and cedar boughs, I had now, such as it was, a house of my own. There were at least two sides, with a back part, and the front was open; but a brilliant fire was blazing before it, big enough for the kitchen of the London Tavern, and in itself a world of comfort. The plan of the hut was not of my own contriving; it was such as local experience had determined upon, and of the following description: the front, where the fire was burning, was six feet high, and eight feet broad; but the roof dipped towards the extreme end, which was only four feet high; and the length was exactly ten feet. The snow had been well cleared away from the bottom, and, being banked up, it helped to support the poles which formed the framework. A bundle of spruce boughs laid across the extreme end, with a sack of potatoes for my pillow, formed my bed; and if I had no door opposite, all the cold that got in necessarily passed through the fire and smoke. My baggage,—that is, a very small valise, a gun-case, and some other little packages,—was easily disposed of within these narrow limits, and every thing was perfectly ready for my repose soon after it was dark.

"Early this morning I provided myself with one of the workmen's axes, and began, by way of practice, to cut down trees; and there were many ways of turning this exercise to account. Of all things, I was the most anxious to keep the smoke out of my hut, and contrived various

methods for the purpose, but unfortunately all without effect; so, not succeeding in my first object, I set about making a bedstead. To this end I got four short, upright, forked pieces, upon which I placed poles across, tying them with strips of the bark of the bass tree, which I also wove in longwise and across, so as to make a tolerable substitute for a ticking, on which I might lie before the fire high and dry; on this I placed a mattress of spruce boughs; and altogether, with my buffalo skin for a covering, I rested comfortably."

There is a most spirited sketch of his pleasure in skating. While so employed, he sees "at a distance on the ice, what appeared to be a mound of earth thrown up,—an appearance, under present circumstances, not to be readily accounted for; so I made towards it, that I might see what it was. As I approached within a few hundred yards, I thought I perceived it move a little, and, halting for a moment, I saw that that was really the case. It was of a light-brown colour; but the figure was so indistinct, that while I watched it attentively I could not decide what it could possibly be. A bear would have been blacker, and I knew of no living creature of those regions answering its description. But, whatever it might be, there it was; and it was therefore necessary to be a little cautious, as I had no arms, in approaching it. I stood for some seconds thinking what I should do, and had almost determined to go home for my gun, when I saw the hide which caused all my speculation thrown suddenly aside to make way for the head and shoulders of an Indian, who protruded his rough matted locks into daylight from under it. This solved the problem in a moment, and I saw that the man had been employed in fishing, and had so completely enveloped himself in a large buffalo-skin, that no part of his body, head, feet, or hands, were to be discovered. He sat over a square hole cut in the ice, with a short spear ready to transfix any fish which might be attracted by his bait. The hole was about a foot square, and the bait was an artificial fish of white wood, with leaden eyes and tin fins, and about eight or nine inches long. The ice where he had cut it was about three feet thick. Being within a few yards of him, I commenced a parley by signs, for he did not appear to understand a word of English; but he seemed to wish me any where else, and to be much annoyed at having been interrupted in his occupation. As my object was to pacify him, I gave him a small ball of twine I had in my pocket, and with this he was highly gratified; much more so, however, by my skates, which he viewed with marks of great astonishment. He looked narrowly at the straps which bound them to my feet; but when I made him acquainted with their use, there were no bounds to his delight: at the same time he kept his own interest in view; for he tried to persuade me to give him a piece of a red shirt of flannel which I wore, to make a bait with. This I refused, by shaking my head, and saying, 'No, no!' rather loudly; but he kept on entreating, taking hold of a corner of the collar with his finger and thumb. I persisted in refusing, and kept him off. But he was not so easily answered, and offered me his knife, giving me to understand I might cut it from what part of the garment I pleased. So, shaking him by the hand, and patting his shaggy locks, I skated away.

"The frost continued, and the cold increased to a very low temperature, the effect of which, upon the extended sheet of ice which

covered the bay, was somewhat remarkable. It cracked and split from one end to the other, with a noise which might have been mistaken for distant artillery; but this, when it is taken into consideration that the sheet of ice was of fifteen or sixteen square miles area, and three feet thick, may be easily imagined. Nor was this all; I was occasionally surprised by sounds produced by the wind, indescribably awful and grand. Whether the vast sheet of ice was made to vibrate and below like the copper which generates the thunder of the stage, or whether the air rushing through its cracks and fissures produced the noise, I will not pretend to say; still less to describe the various intonations which in every direction struck upon the ear. A dreary undulating sound wandered from point to point, perplexing the mind to imagine whence it came or whither it went, whether aerial or subterranean; sometimes like low moaning, and then swelling into a deep-toned note, as produced by some Eolian instrument; it being, in real fact, and without metaphor, the voice of winds imprisoned on the bosom of the deep. This night I listened for the first time to what was then perfectly new to me, although I experienced its repetition on many subsequent occasions, whenever the temperature fell very suddenly. The weather being so excessively severe, I had added an extra covering of spruce boughs to my hut, by means of which, and the profusion of logs which I heaped upon my fire, I was better defended from its effects. Nevertheless, I was obliged to rise before daylight and heap on eight or ten more, which lay ready for the occasion, each of them as big as I could conveniently lift."

The rest of the officers leave the settlement, and he remains sole proprietor of the logwood hut.

"Returning to my house through the snow, I found my servant had put every thing in order. The fire was replenished, and my simple repast was nearly ready. What was to be done? I had no books; and if I had, my house was too cold to sit still in. Reading, therefore, was out of the question. I fashioned a couple of forked boughs with my axe, to be fastened with a cord in a warm place over the fire, to support my gun, which I had taken out of its case and put together; and, confiding in the private communication I had received, I resolved to fancy myself at least settled for some time to come in my present abode. The house of the Canadians was about 150 yards from mine; and with these men my servant, whose services I seldom needed, resided. When I wanted his assistance, I opened my door and shouted; and if the wind happened to set the right way, my summons was heard. If not, I was obliged to wade through the slushy snow to fetch him. Rising soon after daylight, I immediately breakfasted; dined at noon, and supped at sunset. To prepare these meals cost little trouble; my toilette less; and the wood for my fire I chopped and piled myself, keeping the latter always alive both day and night. I began to make a bedstead, such as I had at Penetanguishene, and spread moss and spruce boughs before the fire to dry, intending to make a bed whereon I could lie undressed so soon as the bedstead was finished; for I had, besides my buffalo skin, four small blankets, as many sheets, and a strong rug. These arrangements took up nearly the whole of the day, and served to banish the apathy which in the morning had made me unwilling to attach

myself to any sort of occupation. — March 16th. Before noon I had perfectly finished my bedstead, and heaped upon it as much spruce boughs and moss as necessary, confining the whole by a long cord made of strips of bark tied together, which I wound round and round till the whole was not only tight and compact, but soft withal to lie upon. This done, I laid my buffalo skin on the top, then my sheets and blankets — and all was ready. A large bundle of spruce boughs, confined with strips of bark, made also a good pillow. Having thus provided for my rest, I took my gun off the hooks over the fire, and sallied forth into the forest, in hopes of finding any thing to shoot, no matter what, that would come in my way. The snow had been frozen hard; but the top, thawed by the sun of the morning, was so soft, that sometimes I sank in up to my knees. The walking was excessively heavy and difficult, and the solitary appearance of the woods moderated my expectation of success. (I wore moccasins during my walk now, as at all other times, except when I was obliged to wear shoes for the purpose of skating.) The tracks of squirrels were abundant, and there were also some woodpeckers which I saw, speckled with white and scarlet; and I perceived on the snow the track of a larger bird, which, as it was quite fresh, I followed for a good way. It turned backwards and forwards and round and round, twisting about the trees in such a manner as to make it difficult to follow the track; and I was on the point of giving up the pursuit, when I heard the sound as of a pheasant rising into a tree close by me. Turning round, I saw the partridge I had been pursuing sitting on a bough, and shot him. An unsportsmanlike act, certainly! but to be justified by the stupid disposition of the bird, which nothing can persuade to fly. Besides, a pound of any sort of fresh meat was then to me a prize not by any means to be neglected. This was a beginning in the way of partridge shooting. With game in the woods, there was an end of solitude; and so, blowing at the feathers of the bird, and minutely examining his plumage, I put him into my pocket, with the intention of having him, ere long, twirling at the end of a string before my fire. * * *

"March 17th. This was a very tempestuous day. An unusually high wind hurried along clouds of small drifting snow, which penetrated the sides and roof of my house from top to bottom. Not a dry place was to be found in it; and upon my table, which stood close to the fire, I could write my name with my finger in the covering of snow which, like powder, lay upon it. The temperature, too, was exceedingly low. Finding it impossible to stay in the house, I took my axe and went to the most sheltered spot that I could find in the forest, where I worked, without stopping, till I made myself warm, when I returned home to dinner. The partridge had served me for supper the evening before, and now the squirrel and woodpecker [shot also on the preceding day] were put before me in a pudding. * * *

"I had walked this morning, with my gun on my shoulder, some distance from my house, considerably farther than I had ever ventured before, having come upon a spot so clear from snow, as to induce me to extend my ramble, as the day was fine, without thinking of my return. Trusting only to my footsteps, and neglecting all other means of precaution, it was not till I began to attempt to return home, that I perceived I was bewildered and

unable to find my way back. I grew very eager, and ran backwards and forwards in the hopes of being able to retrace the path by which I had arrived at the spot where I was, but to no purpose: at last I came quite to a stand still, and very soon became completely puzzled. Very uncomfortable reflections immediately suggested themselves, not at all calculated to assist the dilemma, and they were not much relieved when, having climbed to the top of a high tree, I could see nothing but the waving summits of trees in all directions. I began to think of my own folly and the change in my life and prospects thus effected within the space of a few short minutes. I might, by good fortune, find my way back, but should I take a wrong course, the long odds were certainly against me. Not to make a bad matter worse, I thought it as well to sit still and think a little, being moreover as near the summit of the tree as I could venture without the immediate chance of breaking my neck. Having observed the highest spot of ground, and taking the best observation I could of the direction of this point, I descended and made towards it, notching the branches as I went on with my knife. Then making choice of the highest of the trees, I climbed to the top, where I received payment in full and compound interest for my trouble, by catching a glimpse of the ice in the bay. I very joyfully made towards it, marking the trees in my way as before, and having arrived at the shore, found I was not more than three miles from my house, to which I bent my steps as straight as possible; so much so as to toil pretty hard in clambering over the trunks of the huge trees which impeded my progress, and floundering through the deep snow. My exertions brought to my mind reflections relating to the scanty way I had provided myself with clothes; for I had not calculated upon the extra wear and tear to which my manner of life subjected my wardrobe. What with working with my axe, moving and piling heavy logs, and such sort of occupations, I had been for some days past very much out at elbows; and when I got home, after this morning's adventure, the state of my dress was a matter of serious consideration. In climbing the trees, I had really left parts of my things sticking on the branches, from the eagerness with which I went up and down; and now that I came to take a cool survey of myself, I found that I was literally in rags, and that too without a tailor to help me. I had, however, needles and thread in abundance, which nothing but sheer necessity could induce me to use; but the time was come, and I employed myself upwards of two hours in the evening, by the light of the fire, in cutting out patches and sewing them on as well as I could."

While employed in making a kind of mask or veil against the flies, he is surprised by some visitors.

"My attention was attracted to the latch of my door, which was lifted up, and at the same moment two very pretty young Indian squaws appeared, by their smiling looks, to be asking admittance to my dwelling. Even in these uncivilised regions there was, nevertheless, a spirit of flirtation in their manner, which has existed no doubt throughout all ages, even from the day when, upwards of two thousand years ago, Galatea threw a hard apple at the head of the Roman poet. The minds of both were evidently made up to pay me a visit, though it appeared they were undetermined which of the two ought to walk in before the other; and so the one pushed her friend by

the shoulders. Thus, she that was first could not help being pushed, and being pushed, could not help being first. Not much time was expended on the threshold, for their scruples, whatever they might have been, were speedily adjusted, and on tip toes, with a cautious step, they commenced an inquisitive survey of every thing I had, of which my double-barrelled gun seemed most to attract their attention. Bound to do the honours of my house, I was equally civil to both, and my civilities had of late been but little in demand. In the wilds where I had lived, civil speeches, compliments, &c. had been frozen up, as it were, like the music in Baron Munchausen's French horn, and now I had occasion for all at once. I continued to hold an intelligible conversation, although neither of the damsels could speak a word of English, and I was equally ignorant of their language. Their quickness of apprehension, however, was such, that I was readily understood. One of them took the needle and sewed the strings to the mask I had been making, which very much amused them both. And they recommended me to rub my face with grease, by way of a certain defence against all sorts of flies. Disagreeable as it may seem, I resolved, in case of the failure of my present plan, to follow their advice. After a sufficiently long morning visit, my guests seemed at last anxious to depart, and I accompanied them to the edge of the bay, where they had left their canoe. They were, it seemed, without other company, and, stepping lightly into their little vessel, they paddled away round a point of land between the spot on which I was standing and the head of the bay. They waved their hands as long as they were in sight. I knew nothing of their history, and I regretted that I might never see them again. Such, indeed, was the case! In point of clothes and appearance they were superior to any I had seen of their race, and in face and figure seemed to me really beautiful. They had silver ornaments in their ears, a necklace each of blue beads, and quantities of scarlet serge disposed about their dress instead of riband."

The simple, unaffected animation with which these Forest Scenes are depicted deserves much praise; and we can only tell our readers, that we have been very much amused ourselves, and recommend them to be amused also, and read these pages at their earliest convenience. The author is, we believe, the brother of Captain Head, with whom we scamped so delectably over the Pampas.

The Five Nights of St. Albans. 3 vols. 12mo. W. Blackwood, Edinburgh; T. Cadell, London. 1829.

THE question whether our present author has been fortunate or not in his choice of a subject, is so completely matter of taste, that, hardened critics as we are, it is a case where we hesitate to pronounce judgment. Some readers enjoy being carried out of this every-day world, and

"Love to dream
On summer night by haunted stream."

We have heard one of our greatest barristers, a potent signior of the Chancery Court, protest, that nothing ever gives him so much pleasure as reading the *Arabian Nights*; and we have more than once seen the long, dim, spectre-like candle bear witness to the fearful fascination of German *diablerie*. A reader must have some imagination himself to enter properly into works of this kind; and we promise those who read the *Nights of St. Albans* an ample store of horrors, mysteries, wonders, all those "shadowy terrors of the other world," which con-

stitute the charm of such wild tales. The following is the scene in which the hero appears:—

"Before Peverell had quitted his chamber the next morning, he was informed that a stranger was below who wished to speak with him. 'He will not tell his errand,' quoth the serving man, 'but he will wait your pleasure.' 'What like is he?' said Peverell. 'Of my troth,' replied Francis, 'I cannot say, except that he be tall enough for a May-pole. He is closely wrapped in a cloak from head to foot; and save a glimpse I had of one of his eyes, which was as fierce as a dragon, and as black as a raven, I did not see so much as a hair of his beard.' 'Bid him tarry awhile,' rejoined Peverell, 'and I'll be with him.' He was not long before he descended into the room where the stranger was waiting. Upon his entrance, he was standing with his back towards him, contemplating with apparent earnestness a painting of the crucifixion, which hung over the fire-place. The approach of Peverell roused him from his meditation. He turned round, and with an air of much dignity as well as of courtesy, saluted him. Peverell surveyed him with a hasty glance. His stature was gigantic, but well proportioned withal: and as he strode across the chamber to meet Peverell, the solid oaken flooring seemed to creak beneath his tread. He had suffered his cloak to fall back, and the richness of his apparel denoted a person of superior rank. His entire dress was sable, of the most costly texture, and in his hat waved a lofty plume of ostrich feathers of the same colour. He appeared to be about the middle-age of life, but his black hair and beard were flecked with gray. On his ample forehead sat deep thought, while from his large, penetrating eyes, flashed a dauntless and resolute spirit, without, however, any mixture of ferocity."

He proceeds to give the following narration: "I am but a sojourner in this land, and, as my tongue declares, not a native. My name—but there will be another time for ancestry and descent—call me, as I call myself, plain Fitz-Maurice. Do you see this scar?" and he parted his hair on one side of his forehead, when Peverell perceived a crimson transverse mark, with a freshness of appearance as if it were a newly-healed wound. 'When I was in Mauritania, now some twenty years since, I adventured my person and my life against a fell magician, who by midnight spells and potent charms, had power to wake the dead—to make charnel houses yield up their clattering bones, and the deep-dug grave its shrouded tenant. The fiendish dwarf, for he was as misshapen in body as in soul, could visit with swift death, too (where his malice aimed at life), by occult sympathies of the contagious air which he infected; or strike the limbs with hideous distortion, foul sores, and wasting disease, by his sorcery. This imp of Acheron dwelt in a cave, or den, a mile beyond the city, whose entrance was guarded by a monster, engendered, as it was said, by his necromantic art, from the seed of the serpent cast into the seething blood of infants (the first-born of their parents), during an eclipse of the moon; and kept boiling for nine-times-nine hours, by a fire fed with maidens' eyes. The fairest and the loveliest drooped and died, to make the accursed charm complete. But the wealth of princes, in rare jewels, in precious stones, and bars of unwrought gold; bales of rich silk, dyed in all the colours of the rainbow, and any one of which had been a dowry for an empress; pearls beyond price; aromatic gums, gathered in the phoenix' nest;

the essence of an Egyptian mummy, distilled two thousand years ago by a sibyl, who, in a prophetic mood, called it *Yenarkon*, or the 'GIVER OF LIFE,' from its power of bestowing immortality upon whomsoever should obtain it at the peril of life and soul:—these, and the privilege to wife with the noblest and fairest damsel in the country, even though she stood next the throne itself, were offered to him who should slay the magician of the den. A largess like this tempted many, but none ever came back to tell of their encounter. Their bones whitened the ground in front of the cave, and their flesh fattened the monster which guarded its mouth. I was journeying through Mauritania, and heard the things which I have related. I offered myself for the enterprise, and the reward, if I succeeded. My offer was accepted. To tell you how I fared were tedious. I should myself grow weary of a tale I have told through many a summer's day, in bower, in court, and hall, to wondering listeners. Suffice it, that I prevailed. I slew the monster—I penetrated into the den—grappled the dwarf devil by the throat—and mangle his pestiferous breath, which belched forth poison, as he yelled within my grasp, while the surrounding hills rebelled with his roar, I held him, dashed his talisman to the earth, and then threw his fell carcass from me—a black and strangled corpse. In the conflict I received this,' pointing to the scar on his forehead: 'I know not how or when; I felt no blow—I was conscious of no wound; but there it ever remains, fresh as if done but yesterday—a crimson trophy of my victory I choose to call it. There are times, indeed, when it seems to burn inwards to my brain; but I know how to quench its fires. I returned to the city in triumph. The people fell down before me in an ecstasy of gratitude and admiration. The mighty wealth which I had earned—the wondrous riches that awaited me, I refused—I wanted them not, and they would have encumbered me. I claimed only, and I obtained, the prophetic sibyl's elixir, which I ever carry about me. Whether it have the power of bestowing immortality, or whether the deed I performed fulfilled the condition upon which that power depended, must be read in some page that futurity shall open before me."

As a variety, we quote the affecting description of a girl who falls a victim to the first night of supernatural appearances:—

"The night was dark, but in the deep-blue vault above, myriads of stars were gleaming with that calm lustre which seemed to shed no light beyond their own spheres. And now a scene presented itself which struck terror into the stoutest heart. The abbey clock began to strike—when suddenly a sound like the rushing of mighty waters, or of a blast of wind roaring through a grove of forest-trees, was heard, and the next moment, devouring flames appeared to wrap the walls in one vast sheet of fire. A cry of horror burst from the multitude—the shrieks of women, and the screaming of children, were mingled with the hoarser exclamations of fear uttered by the men; some fled in dismay, others threw themselves on the ground; wives clung round the necks of their husbands for safety, and hundreds fell upon their knees in a wild agony of prayer. Meanwhile the rushing noise continued with increasing loudness—the flames tossed and heaved about, like the waves of a troubled ocean, now seeming to dart from the windows in masses resembling pillars of fire; then curling up the walls as if instinct with life, or flickering in fantastic shapes round the buttresses and towers. But most

strange it was, that neither light nor heat was emitted from this awful mockery of a conflagration. From the bottom to the top, it was one burning surface; yet the grass and weeds that fringed the former were no more revealed to the eye by it, than they were before the mysterious volcano blazed forth. . . . One melancholy circumstance accompanied this night of mystery and panic. A poor idiot girl, about sixteen years of age, had been left in bed by her mother, (who was of humble occupation), while she stole out to join the throng of anxious spectators. It was never known under what impulse, or in what way, this witless creature, with merely her night-clothes on, had wandered forth; but so it was; for on her return, the distracted mother found her gone; and the next morning she was discovered a corse, beneath the walls of the abbey. Whether she had strayed unobserved to the spot, beheld the strange scene of the night before, and fell a victim to terrors which she could only feel, but not express; or whether, having roamed beyond her knowledge of return, she, after a while, laid her down to sleep, close by where she had seen what she deemed a warming fire, and so perished from cold, thinly clad as she was, could be nothing more than surmise. It was too true that the poor idiot died, and that her wretched, self-accusing mother, felt more than a mother's anguish for her death. She was her only child, and the very calamity which shut her out from all the rest of the world, made her tenfold more dear to her. 'She could have borne her loss,' she said, 'had it pleased God to take her in the usual way; but she knew her poor Marian had gone in search of her, who had never left her thus before, and so she met her death; and that thought she could not bear.'"

We have not attempted to analyse the story, still less to forestall the *dénouement*; and to such readers as wish to give free course to their imagination, "sup full of horrors," and fairly leave our counting, common-place life behind, we cannot do better than recommend these volumes to their notice.

A Dissertation on the Course and probable Termination of the Niger. By Lieut.-Gen. Sir Rufane Donkin, G. C. H., K. C. B., and F. R. S. 8vo. pp. 195. London, 1829. Murray.

THOUGH we have postponed our notice of this publication for several weeks, till we are ashamed to defer it any longer, we feel that we have not yet given sufficient time to those researches which, alone, could enable us to decide positively upon its merits, or the truth of the difficult positions it undertakes to maintain. We must, therefore, that we may not allow its novelty to pass away, rather report upon, than criticise it; and this we do with great pleasure, as a means of recommending it to the attention of the literary world.

In commencing, we may observe, that it is a gratifying thing to see a person of Sir R. Donkin's experience, rank, and fame, turning from the habits of an eventful life, to adorn the quiet of these peaceful times with learned and scientific speculations. The letters appended to his name in the title-page, indeed indicate both the successful soldier and the scholar; but it is not always that we find such initial capitals realised by the absolute facts of the individual case, and long and active military services combined with the studious and laborious inquiries of the man of science. This, which is a high attainment, is very elegantly alluded to in an apolo-

getical form, in the dedication to the Duke of Wellington: "The only excuse I can offer for this intrusion is, the leisure and inactivity to which persons of my profession have been reduced by your Grace's victories; which, having given peace to Europe, leave the soldier without occupation."

With regard to the main question for investigation—that question which has perplexed geographers from the days of Herodotus to the days of Barrow, some three-and-twenty centuries—the course and termination of the Niger of Central Africa, Sir Rufane supposes that "the reason why geographers and travellers had hitherto failed in settling this question was, because they had made a verbal or grammatical error in stating the object of their search to be the Niger, or rather the Nile, (for by the name of Nile, the great river of Central Africa has been generally known to ancient and Arabian writers,) instead of searching for a Nile, or a Niger; and they have thus been endeavouring to unite and reconcile in some one individual river qualities and circumstances which have been predicated of several distinct rivers, and they have thus confounded a specific appellative with a generic and descriptive one. My attempt in the following pages will be to reconcile all or most of what has been said of the Niger, from the times of Herodotus and Ptolemy, down to those of Park and Denham, notwithstanding the many apparent contradictions we find in it; and this I hope to do partly by the rectification and proper use of a grammatical particle, in following out the solution of the geographical problem before us. My research, then, shall be directed to the discovery, not of the Niger or Nile hitherto demanded, which shall unite in itself all that has been related by ancient and Arabian writers, and by natives, of several Niles watering North and Central Africa,—but to shew that all, or most of what has been said or written, if applied to a Nile—that is, to some Nile or great river, and not to any specific one—will be reconcilable with fact and reason."

The author then enters upon the etymology and meaning of the word *Nile* or *Neil*, which he states to imply a blue, black, or dark colour, in the river alluded to, not only in Africa, but in the East.

"In the Hindoostanee, as well as in the Persian and Arabic languages, 'Nile,' 'Neil,' or 'Neel,' means *blue*. 'Neil-gau,' is the blue cow,—an animal most of us have seen in Europe, though a native of Asia. Neil-panee is blue water, and in Hindoostanee is applied to any mass of deep water. A greater intensity or depth is implied by the word 'kolla,' or 'kala,' black, as 'kala-panee,' or the 'black water,' which is the name given in Hindoostan to the great ocean, over which the English pass, say the natives, in going to and coming from Europe. Now here we have the term or idea blue, or black, applied by Asiatics to water when congregated in great quantities; and we shall see by and by the same idea and word, 'Neil,' imported by Arabian merchants into Central Africa, and applied to all the large rivers of which they have any knowledge in that country. The natives of India generalise in the same way; and they call the river Indus, not only a Kala-panee, or the Kala-sinde, but they give it the descriptive generic name of 'Nile.' The people on its banks, I am told, call it the Nile, using the definite article to express their great river,—in the same way as an Arabian geographer would call our Thames the Nile of

England, while the Severn and the Humber would be called each a Nile. The definite article is used also in Egypt by the natives when speaking of their Nile; and I once heard a native of Hindoostan, who had travelled a good deal, call the Ganges 'the Nile.' In all which cases nothing more was meant than a great or blue river. But the name given by the Greeks to the Egyptian Nile was *Μαλας*; and in Hebrew that river is called 'Shihor,' both which words imply 'a black river.' Again, the Syracusans call their largest river the Cyane, or *Κυανη*, from its deep or blue waters: in short, Cyane means 'Neil-panee.' Ovid personifies and makes the Cyane all over as blue as indigo. By the way, Neil is the Hindoostanee word for indigo. Ovid says of this river nymph,

'Cerulei crines, digitique et crura, pedesque.'

The chief river of Æthiopia is called 'Bahr el Azrek,' or the Blue River. Here, then, is another Nile: and thus it was that the earlier geographers, in speaking of a large river in Central Africa, called it by the generic name of 'Nile'; while some of the Arabian writers, fully aware of the true meaning and general use of this term, called the river of which we are speaking, 'the Nile of the Negroes,' by way of distinction. I will here just remark, that the name of 'Niger' is unknown both to the Arabian geographers, and to the natives of Central Africa. We have further an exemplification of the force of the word Nile or Neil, *ex contrario*, from an opposed name being given to the upper part of the Egyptian river, which is called there a 'Bahr Abiad,' or White River, to mark its white, shallow, foaming course amongst rocks, in contradistinction to the deep blue Nile, which it becomes lower down. Park, unconsciously catching the descriptive language of the country in which he had been for some time, on first seeing the Gambia, or some large branch of it, rolling under the mountain on which he stood, calls it 'the Black River;' and he also speaks of the plain which extends from the Faleme to the 'Black River.' But Major Denham gives us a notable instance of the generic application of the word 'Nile;' and I only wonder that the question he records did not at once awaken his attention to the fact, that 'Nile' was the general appellative of all large rivers, and not of a specific one only. 'I had before been asked,' says Major Denham, 'if the Nile was not in England?' the real meaning of which was, 'Have you no Nile, or large river, in England?' But Major Denham, not so understanding it, said, 'No, the Nile is not in England.' Now if this Moor were a literary man, and kept, as Major Denham did, an account of his travels, I can quite imagine such an entry as the following in his journal:—'On such a day I met a white man called Major Denham, a man of courage, discretion, and truth: he, like all the other travellers from his country, which is far in the North, inquired constantly for a great river, calling it the Niger, a name we know not of,—but it is clear that they all want to see a great river. From this I conclude that they have no great river in his country, called England; indeed I asked him, and he said there was none. I suppose, therefore, that his country must be a dry, bad country, not like ours, watered by a Nile; and I begin to suspect that these white men want to discover a country where Niles are to be found, that they may leave their own deserts, and come and live by our deep waters.' Now, after all, such a conclusion on the part of the Moor

would be about as fair as some we have come to on the same subject. Of the word or name *Quorra*, *Quolla*, *Kosorra*, and others similar, applied to the Niger, and apparently to other rivers, I can give no etymological account; I am assured by a competent orientalist and Arabic scholar, that it is not an Arabic word, or traceable to the Sanscrit, Persian, or Hindoostanee. I conclude, then, that it is an African name given by the natives, but evidently used, by what Park, Denham, and Clapperton say, in a general sense, and applied to any large river, as the word Nile is; and if so, we shall have here another instance of the generalisation of a word by the natives, which our travellers have not perceived, but have taken the word or name *Quorra*, *Quolla*, or *Kosorra*, (for they are all the same,) for the specific name of the river on the banks of which they were standing, or about which they were talking."

Succeeding this curious illustration, we have an inquisition into the Euterpe of Herodotus and the Geography of Ptolemy; and the author contends, that the river mentioned by the former as seen by the five young Nasamonians, and the Ni-Geir of the latter, is demonstrated by all authorities to have run from west to east. The great point, however, in this discussion is, that Sir Rufane argues, with every appearance of proof, in support of his having detected a gross error in the received opinion of the longitude as laid down by Ptolemy. The discussion is altogether learned and curious, but we can only give its result, viz., that instead of the ancient geographer's first meridian being drawn through Ferro, as by Montanus, Gerard Mercator, D'Anville, and others, it ought to be drawn through the westernmost of the Cape Verd (as he contends, Ptolemy's "Fortunate" Islands.) By this rectification, seven degrees of west longitude is gained; and assuming this, the author applies it very ingeniously to all his after argument on the course of the Niger, and the positions of lakes, &c. in central Africa. The Geir of Ptolemy and the Nile of Bornou being considered identical, on these and other premises, Sir R. goes on to shew, that after the river is lodged in the lake Dombou, it pursues a northern course to the Mediterranean, into which it originally poured itself by the Gulf of Syrtis, but is now lost in the vast sands of the great desert, which have for so many ages been encroaching on the once fertile and populous region of the Negro Nile. "If we turn (says he) to the valley of the Nile of Egypt, we shall see at this moment the very process going on by which the lower part of the Niger, or Nile of Bornou, has been choked up and obliterated by the invasion of the Great Sahara, under the names of the Deserts of Bilmah and Libya. There has been rubbed out from the face of the earth a river which had once its cities, its sages, its warriors, its works of art, and its inundations like the classic Nile: but which so existed in days of which we have scarcely a record. . . . In the same way shall perish the Nile of Egypt and its valley! its pyramids, its temples, and its cities! The Delta shall become a plashy quicksand—a second Syrtis! and the Nile shall cease to exist from the Lower Cataract downwards; for this is about the measure or height of the giant principle of destruction already treading on the Egyptian valley, and who is advancing from the Libyan Desert, backed by other deserts whose names and numbers we do not even know, but which we have endeavoured to class under the ill-defined denomination of Sahara,—advancing, I repeat, to

the annihilation of Egypt and all her glories, with the silence, but with the certainty too, of all-devouring time! There is something quite appalling in the bare contemplation of this inexorable onward march of wholesale death to kingdoms, to mighty rivers, and to nations; the more so, when we reflect that the destruction must, from its nature, be not only complete, but eternal."

Pursuing his system of the course of the Niger, Sir Rufane strengthens himself by reasoning on the recent statements of Jackson, Park, Denham, Clapperton, and other travellers, through which our limits forbid us to follow him. He scouts the idea of the river running into the Congo; and, in fine, if he does not convince us of the perfect accuracy of his opinions, (for who could expect to do this upon so knotty and so bewildering a subject?), he does produce much that is entertaining even to the general reader, and much that deserves the consideration of the scholar and philosopher. In one of his digressive illustrations he falls upon the famous Greek Digamma—a question as puzzling as the course of the Niger itself; and as this must afford scope for the talents of our classical and biblical critics, we shall conclude by copying his theory upon it.

"My belief is, that the Greek Digamma was used universally in all the dialects, and that it was nothing more or less than a variable euphonic, interposed at the will or taste of the speaker, to prevent either a hiatus, in which case it was a consonant; or to give melody to the sentence, in which case it was a vowel; or to impart force to the *ictus metricus* of the passage, in which case it was an aspirate: and my opinion further is, that those learned persons who have thought proper to represent the digamma at all times, and in all situations, by any particular letter, or by any unvarying mark, have been in error: indeed, I object to the name of digamma as descriptive or explanatory of the thing I am speaking of, which in truth was, 'vox et præterea nihil.' If one might venture to give it a new name, I would call it *αεφ*—the Greek Euphonic; but as a change of that sort must come, if ever, from much higher authority than mine, I shall continue to speak of the sound in question by the usual and received term—Digamma. The digamma, then, was a nonentity, without either form or substance, until it was called into existence, properly and gracefully, by the good taste of the speaker. The delicate organs of the Athenians made them, no doubt, above all the other Greeks, pre-eminent performers on the digamma, if I may so express myself; while a Boeotian would probably introduce his intended euphonic in bad taste, just as a bad performer now might introduce an unharmonious or impertinent 'grace' into a piece of music. The educated and polished amongst the Greeks doubtless used, in general, the digamma with a taste and judgment analogous to the delicacy of their organs. But who shall say now, with any thing like certainty, what this variable and airy euphonic was? whether it was always the same in the same dialect? or whether it was changeable and uncertain as the taste and fancy of each speaker? or whether there was some rule directing its use in particular places and before particular words or letters, as the moderns pretend is the case with some words, particularly the word *ἐπὶ*, before which, say they, there must always be the digamma sounded 'Vau?' Who shall give answers to these queries, particularly in England, where we have lost, perhaps in a greater degree than any where else, all vestige of the

true pronunciation of the Greek and Latin languages? . . .

"It would not be difficult, I think, to shew that the digamma is virtually used in other languages besides the Greek—I think I have detected it in Latin, on the Duilian Rostral Column at Rome, where we find an indurating D introduced every now and then, as in 'Marid,' for 'Mari.' This is a sign of very bad taste in the earlier Romans—for their language was always, from first to last, too abundant in consonants, and consequently too hard and inflexible. Virgil felt this, and did all he could to melodiise and soften his native tongue by introducing Greek names, and, above all, Greek cadences—I will take one instance:

'supervent Egie,
Ægle, Naldum pulcherrima'

into which one of the old hard-bitten Romans would have wedged a digammic D or two. But our neighbours the French, whose agreeable language is not very mellifluous, but which is formed by them for conversation, in which they excel, found they could not get on without an occasional digamma. For instance, their pronunciation would have broken down, and their rapidity of speech would have been brought to a full stop, without the aid of a digammic T in the following colloquial sentence—*n'y a-t-il pas*. Let any one insert the above phrase in a sentence, and leaving out the T, try to pronounce the whole in the usual style of conversation, and he will feel where he will be without the friendly support of the French digamma:—but, strange to say, the Hottentots at the Cape of Good Hope have *their* digamma. Their language is extremely vocal—perhaps indeed they have no consonants strictly speaking; but as it would be impossible, or very difficult, to go on talking always in vowels, the Hottentots have invented a sort of clicking, hard sound, which they modify *ad libitum*, but of which it would be in vain to try to give the least idea by the combination of any letters of any known alphabet, but which prevents their words and sentences from being melted down into one another in one mass. We Europeans cannot ever learn to imitate this digammic clicking sound when we hear it; but as we are obliged to try to write down the Hottentot names of places, I will take the name of a river, the Keis-Kama, for what we do in this way, in which the first K and the second K are meant to represent the Hottentot digamma as we hear it, or as we think we hear it. The ears and voices of the Hottentots are naturally very musical; and those who have been taught to sing by the Moravian missionaries excel as vocalists. Should it be objected that the Hottentots are too low in the scale of civilisation to deal in such luxuries, I will ask, How much higher in that scale did the Pelagot stand, when they brought their harsh language and the digamma from Thrace into Greece, according to the theory of the right reverend and learned author of the 'Horn Pelasgics?' It rather appears, from all we can collect on the subject, that the good old substantial digamma was of very barbarous origin; and that, like the nymph Echo, it was only by degrees that it dwindled away to its graceful tenuity in Homer's days—'corpus adhuc Echo—non vox erat,' but, by and by,

'in ætra succus
Corporis omnis abit'

and we find the hard Pelasgic digamma at last refined down into a sort of musical sound. But it is time to say something of the character F, by which the learned have been accustomed to

represent the Æolic digamma. This may, or may not, have been the mark peculiarly used by the Æolians—or they may have had more than one mark to indicate the introduction of some adventitious sound; but I feel a strong conviction on my mind that the ancient Greeks had many other modes of noting where, and even how, a required euphonic was to be introduced into a word or sentence which had either too many or too few vowels; but the sound and power of the digamma so introduced would vary according to the genius and character of the dialect to which it was to be applied. If the dialect abounded in vowels, a consonantal digamma would be interposed as an *appoggiamento*; if consonants were too thick and hard, they would be softened by a digammic ou, vau, or waugh, or some diluting sound—perhaps by the letter L. The vau has generally been attributed to the Ionic dialect. Homer is supposed to have graced his verses with it; but I never could hear of any satisfactory reason for the rule which has been laid down for prefixing the vau always to the word *ἴφι*, although I confess I myself feel the want of it, or something like it, to prevent the hiatus in Homer's

ἴφις ἰφὶ κλισίῃ.

Mr. Payne Knight, in his Analytical Essay, says, that the digamma was 'certainly pronounced rather as a simple aspirate, than as an aspirated consonant.' If this learned gentleman had taken a wider view of the subject, he would have extended the power of the digamma, and have discovered that it was necessary, in forming a complete idea of Greek cadence and intonation, that the digamma should be assimilated to the dialect to which it was appended—a consonant in some, a vowel in others—and only every now and then merely an aspirate, as suggested by Mr. Knight. Professor Dunbar, of Edinburgh, whose admirable work on Greek Prosody ought to be better known and more highly appreciated than it yet appears to be in this southern part of our island, quotes Hesychius to shew that the letters B and F were frequently employed by different tribes *instead* of the digamma. I will extend Hesychius's remark, and say that B and F were actually and absolutely the digamma of those tribes; or, to speak more philosophically, these two letters were their adjuvatory euphonia;—they felt the want of such sounds in their dialects, and introduced them accordingly. But, even now-a-days, moderns—nay, Englishmen—may have their ears so Hellenised by a residence in the Greek islands, that they acquire a craving after a digamma when speaking modern Greek;—so much so, that a most amiable and accomplished acquaintance of mine, the late Mr. F. Douglas, adopted one off-hand in an interview he had with Ali Pasha, when the pasha seeing him in some volunteer or militia uniform, asked him abruptly, 'Where have you served?' 'On this,' said Mr. Douglas, 'I immediately tipped him the digamma, and answered, *ἐν τῇ Εὐμβλίῳ κλισίῃ*;' giving to his F the force of Gh, strongly aspirated, to avoid the painful hiatus of *ἐν τῇ Οὐμβλίῳ κλισίῃ*, as our vernacular Wimbledon would be spelt in modern Greek. This shews how much taste and ear have to do in the selection of an appropriate digamma. Had Mr. Douglas applied the vau as an inhabitant of Bow would have done, it would have produced a most unclassical effect, and would have been an instance of the very *σαῶς* in euphonia. It will be seen by this, that a speaker of even modern Greek, whose ear is properly attuned, will in-

terpose a well-suited digamma wherever it is wanted; and I have no doubt but the accomplished scholar of whom I have just spoken did vary his according to the principles I have been laying down, and which he appears to have applied in his answer to the pasha."

We cannot do better than finish with this example illustrative of the use and need of digammic interpolation. We ought to add, however, that two maps serve greatly to elucidate the author's ingenious positions, which will no doubt provoke much learned controversy.

ORIGINAL CORRESPONDENCE.

Paris, June 7.

THE *beau monde* are daily leaving this capital for their *beaux châteaux* in the provinces; news, therefore, is on the decline,—as literary meetings, which are now the principal resource against ennui, contribute but little to the volume of scandalous anecdotes. Some evenings since, I had the honour of being admitted to a *réunion of blues*: an assembly of monks, friars, nuns, and saints, would have been far preferable; for a day spent at La Trappe is infinitely less calculated to give the vapours or a fit of the spleen, than an evening passed with *intellectuals*. There were gathered together from at least sixty to seventy *savans* and *savantesses*, who had all of them mounted their wise looks. On entering the *salon*, my attention was first attracted by a little old man, who stood in a theatrical attitude, waving his arm backwards and forwards, whilst he repeated verses, which he had composed in memory of the late General Foy. The words *charmant! charmant!* being reiterated with enthusiasm by his auditors, I also expected to be *enchante et ravi*; but the same poetic effusions which excited such energetic applause from learned judgments, had a similar effect on my ignorant and untrained organs as the tinkling of a bad guitar, or the monotony of the drone of a Scotch bagpipe. Being no amateur of irritating sensations, I joined another group of gesticulators, whose monkeyish grimaces highly amused me: politics was the point in discussion; no one listened, but each strove to talk down his opponent's opinion, not by force of reasoning, but by dint of contortions and volubility of speech. I could not retain a single sentence, neither do I believe they knew themselves what they said; and as it would have been a Herculean labour to have essayed to understand them, I did not make the attempt, but entered an adjoining boudoir. There I hoped to hear what is termed trifling conversation, as the Venuses, Mercuries, Cupids, Apollos, Daphnes, &c. with which the walls were hung seemed a *bon augure*, and to promise some happy inspiration: but, oh! "disappointment dire," amidst these loves and graces, a lady was holding forth on the science of craniology, and in a long harangue explained the difference between the skulls of cats, dogs, asses, hogs, elephants, owls, eagles, and human beings. I was uncharitable enough to wish her struck dumb, at least for some hours. A young antiquary next besieged our ears with an account of his travels and his discoveries: he had been in every country in Europe, Asia, Africa, and America; he had mounted to the top of the pyramids of Egypt; (it was a great pity he ever came down!); and, *selon lui*, understood the hieroglyphical characters better than the most learned of the Egyptians. Amongst other assertions, he pretended that the ancients held an ass in great

veneration; this I easily conceived, from the adulation which moderns paid to the speaker: folly in every age, no doubt, has had its votaries, and stupidity its worshippers. Then came a philosopher with a Bacchus mien, who insisted that he could prove, beyond a doubt, that pleasure and pain were equally delightful to a well-regulated mind, and fasting and feasting similar in their effects on the body; he, however, decidedly preferred the latter, if it be permitted to judge from a corpulency which would do honour to a cardinal, and a pair of ruddy cheeks not unworthy of a middle-aged alderman. This philosopher is also a mathematician: according to his calculations, *l'esprit* has attained its grand climacteric, and must of necessity now decline, until the human species be reduced to a mere state of animality, and the passions be so weakened, that by degrees the race will become extinct; so as to leave place for a new creation, which are to spring up, and are to be endowed with superior reason and a larger portion of soul. These beings will be gifted with wings, tails, fins like those of fishes, and horns similar to a stag's. As to food, they are to exist on *arome*. Here the lady of the mansion interrupted this seer into futurity, to expatiate on the delights of that state when mortals should no longer experience the vulgar necessity of eating and drinking. *En attendant*, it would have been only merciful to have suited her refreshments to the actual nature of her guests, for, alas! she deemed sugar and water a sufficient digestive to a feast of reason. The English who were present by no means shared her opinion in this respect; for at each apparition of the footman they hoped to behold ham, sandwiches, *ponche*—in fact, some less intellectual food than that which they had already enjoyed; nor could they conceal their disappointment as their hopes vanished: one would have supposed they were yawning for a wagger.

The German singers and the *royal whale* share the public attention: a portrait of the latter is hung up in the print-shops, and sells for fifteen sous; whilst for three francs the original may be seen. This *very English* price does not alarm the Parisians, or prevent them from gratifying the passion of curiosity. We buried the Marshal Hoënlohe last week, consequently the public prints have exaggerated him into a hero. Such is the effect of death, that once we have made our exit, detractors become instantly warm panegyrist: as said an Irishman, "It is almost worth while to die, that we may hear ourselves praised!"

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FRIDAY, May 12th. — His Grace the Duke of Somerset in the chair. The meetings for the session were closed this evening by Mr. Faraday, who delivered as full an account as an hour would allow, of the experimental researches which have already been adverted to in the *Lit. Gaz.* as carried on by that gentleman in the laboratory of the Institution, for the purpose of improving the manufacture of glass used for optical purposes. We gathered from Mr. Faraday's opening statement, that his experiments were neither quite so complete as he could have wished them, nor as a week or two would probably make them.

These inventions, it may be necessary to state, were set on foot by a committee of the Royal Society, and the expenses of the necessary materials were defrayed by government: this committee, after a time, appointed Messrs.

Herschel,* Dollond, and Faraday, to be a working sub-committee. In September 1827, the experiments were carried on at the Royal Institution,—being before that period conducted elsewhere, we suppose; and in September, last year, the train of investigations respecting a new kind of glass was commenced; the general results of which formed the subject for this evening.

Mr. Faraday first took a brief view of the discovery made by Dollond, in 1758, of the principles and manufacture of achromatic object-glass; and touched upon the important services rendered by Guinard, and others, in their laborious inquiries regarding the manufacture of glass. He next referred to Barlow, and others, who had tried by the use of fluids to avoid the almost inseparable difficulties attending the use of the flint glass; and by a reference to the present state of the difficulties encountered by the optician, shewed to what extent the question at this time interested the scientific world. The object was to obtain a glass perfectly homogeneous throughout, and uniform in its action upon light; the nature of striae, veins, tails, bubbles, &c. &c. was pointed out, and illustrated by referring to specimens of glass, and of various fluids. The experiments in flint glass were then briefly noticed, and passed for the moment, to admit of describing a new kind of glass,—or at least new in its application,—which, according to the experiments that have already been made, promises to have all the advantages of flint glass, with some very important points of superiority. But here, and indeed in every part of the discourse, Mr. Faraday seemed to us rather willing to say too little than too much, and expressed a desire, that no hopes should be raised beyond those which could be justified by what had actually been done.

Numerous specimens of the glass were upon the lecture-table; amongst them a telescope of 1-three-fourth inches in aperture; and two object-glasses, the one four inches in aperture, constructed by Mr. Dollond, possessing a high dispersive power, and giving a pale yellow colour; the other was nearly of the same extent of aperture. The piece of glass, out of which it had been constructed, was only taken from the furnace in the beginning of the week. It was remarkably pure, no striae could be discovered in it on the closest examination; there were some bubbles, but these, when few in number, do not affect the performance of the telescope.

Before quitting the table, Mr. Faraday, in the name of the committee of management for the evening meetings, took leave of the members and friends of the Institution; not, however, without first earnestly calling their attention to the principles and practice which, within the last few years, have made the Institution so highly interesting. He also claimed their united assistance for the next year, in the good cause of advancing and diffusing science and knowledge,—the only objects which the Institution had in view.

In the library were, amongst the presents, a magnificent specimen of the Venus fan coral, presented by Mrs. Jones; and casts of the Canterbury pilgrimage and processions in Ivanhoe, executed and presented by Mr. Henning. There were also some pieces of oak timber from the New Forest, upon which experiments relative to their strength had been tried; the particulars of which, with drawings, were laid on the table by Mr. Hillyer; also

models of various mechanical inventions; and an original drawing, in water colours, of the west window of Westminster Abbey, by Sir James Thornhill.

On a review of the past session, it appears that about fifty new members have been added to the list. Amongst the deaths are those of Sir H. Davy and Dr. Wollaston. Dr. Young, though not a member, was formerly a lecturer in the Institution. Mr. Faraday, in his observations, referred to these three distinguished men as having formed a triumvirate, the loss of which science would long have to deplore. During the year considerable accessions, both to the library and museum, have been made. Mr. Fuller's medal, we are led to understand, will be given away next year.

SOCIETY OF ARTS.

A FEW days ago, the last sectional division of the rewards of this Society took place. The prizes were delivered in the following order, by his Royal Highness the Duke of Sussex, the President of the Society; viz.—

1. Mr. J. Vandramlin, 14, Brompton Row, for his engraving from the picture by Sebastian del Piombo of the raising of Lazarus, the large gold medal.—2. Mr. J. Robertson, Worton House, Isleworth, for his improvements in the art of painting in water-colours, the gold Isis medal.—3. Mr. Joseph Nethercliff, 9, Newman Street, for his improved method of making lithographic transfers, twenty pounds.—4. Thomas Dowler, M.D., for his musical instrument called the glassophone, the large silver medal.—5. Mr. J. Cuthbert, 5, Purbeck Place, Lambeth, for his stand for an astronomical telescope, the large silver medal and twenty pounds.—6. Mr. W. H. Hilton, 10, Regent Street, for his pump for racking wine, the large silver medal.—7. Mr. R. Parvin, 3, Carpenter Street, Mount Street, for his improved French window, the silver Isis medal and five pounds.—8. Mr. W. Tindall, Leeds, for his wheel with an oblique axle, the silver Isis medal.—9. Mr. W. Aust, Hoxton New Town, for a copper lining to a leaden pump-barrel, five pounds.—10. Mr. T. Williams, Lieut. R.N., for his own to be worked by one hand, the large silver medal.—11. Mr. W. P. Green, Lieut. R.N., for his spoke for a disabled rudder, the silver Isis medal.—12. Mr. W. Rodger, Lieut. R.N., for his syphon for watering ships, the gold Isis medal.—13. Ditto, for his make-shift anchor, the large silver medal.—14. Mr. Edward Carey, R.N., for his method of preventing dry rot in ship timber, the large silver medal.—15. Mr. T. Reynolds, 13, Arbour Terrace, Commercial Road, for his repeating stop for a naval sextant, the gold Isis medal.—16. Mr. D. Davies, 15, Wigmore Street, for a fire-escape, the large silver medal.—17. Mr. S. Mordan, 22, Castle Street, Finsbury, for his self-centering lathe-chuck, the large silver medal.—18. Mr. Joseph Clement, 19, Prospect Place, St. George's, Southwark, for his self-acting double-driver for a lathe-chuck, the large silver medal.—19. Mr. James Roberts, 7, Abbey Street, Bethnal Green Road, for his improvements in weaving velvet, five pounds.—20. Mr. J. Hughes, 93, Sebright Street, Bethnal Green, for his improved cards for weaving figured silks, the silver Isis medal and fifteen pounds.—21. Mr. C. S. Smith, 3, Kirkman's Place, Tottenham Court Road, for his method of manufacturing melting pots for iron and steel, twenty pounds.—22. Mr. R. Green, 67, Ernest Street, Regent's Park, for his draining plough, fifteen pounds.—23. Mr. J. Pearson, Frittenden, Kent, for his draining plough, the large silver medal and fifteen pounds.—24. Joseph Kirby Trimmer, Esq., Strand on the Green, Kent, for his flock of improved Merino sheep, the large gold medal.—25. Josias Booker, Esq., Liverpool, for his substitution of machinery in aid of slave labour, the large gold medal.

His Royal Highness then retired, amidst the plaudits of a numerous meeting.

Expedition up the English and Dundas Rivers, on Capt. Owen's Survey of Africa, in 1822.

ABOUT 2 P. M., a party left the ship in four boats: Mr. Vidal and Tambo in the first, Captain Lechmere and Mr. Watkins in the second, Mr. Rozier and myself in the third, and Mr. Daniel and Mr. Williams in the fourth. We were supplied with a pilot, as an interpreter, from the Port Juan fort, rockets for comparing time with the ship, two chronometers, two tents and a marquee, arms, ammunition, and provisions for fourteen days, with

directions to proceed first up the northern branch as far as navigable, then to examine any other considerable branch, to ascertain our position by observation when practicable, and to invite the natives to intercourse, as well as to make remarks on their habits and customs. With the wind easterly and half flood, we made a fair progress. At 4 observed a break in the woods to the left, with canoes hauled up. Saw a large flight of flamingoes, with hawks, pelicans, cranes, and storks. Saw a fire at 30 min. past 4, on the right-hand side, and another on the left. At 5 h. 10 m. we arrived, after proceeding in a westerly direction about ten miles, to where the river widens and branches off in three different directions: one to the N.W., another to the W., and a third to the S.W.; the latter being, to all appearance, the most considerable. Here all the boats met and disembarked the baggage of the crews, and pitched their tents for the night; this being the only eligible situation we could see within a considerable distance, as the shores on both sides of the river are covered with trees and bushes to the water's edge. Mr. Forbes, naturalist, shot a crane, but the bushes were so thick it could not be found. The wind at this time was E.N.E. After settling ourselves in the tents to dinner, we found that the tide rose so high as completely to enclose us in an island, as indeed we found the place in reality to be so afterwards. This place of encampment is on the western side of a large opening or basin in the river, about two miles across. Wind S.W.: high water. From past 6 till 10 the following morning, we had heavy rain, thunder, and lightning. We obtained a meridian altitude of the moon in the morning for the latitude; and at six we struck the tents, breakfasted, and put off again for the northern branch of the river. Mr. Forbes shot a toucan at this island, and a crane, which latter was soon roasted and made an end of, in the middle watch, by the men. We entered the northern river at 9 o'clock A. M., and shortly after came to a place where the river again branches into two parts, one to the westward, and the other to the northward. About 9 h. 40 m., wind S.W., and rain; half ebb. The latter branch of the river being the largest, we proceeded through it. We were annoyed all this forenoon by small rain, which wet all our writing materials through. We now began to see great numbers of hippopotami, which animals, it seems, do not frequent the saltier parts of great rivers. Here the banks on both sides were covered with impervious woods to the water's edge, principally mangroves and mimosa. We saw great numbers of cranes, storks, vultures, kites, herons, curlews, king-fishers, *certhia*, and a number of other species of birds whose names we did not know. About 11 A. M., wind N. W., we passed a boat full of natives, which we saluted, and which they cordially returned. After proceeding up here some miles, the river gradually decreases from 800 to 2 or 300 feet, the banks become less woody, and the country appears crowded with inhabitants and their huts. Both banks of this northern river, as well as that of the western side of the southern branch, are under the dominion of king Ma-taub; and all the eastern side of this latter branch acknowledges king Capell. Both these nations are in amity together, but there is an active warfare carried on against them by a people whom they call the Horrentantos, who seem to be a fierce set of marauders, that keep these people in continual dread of an invasion. The few canoes that the natives possess are in constant requisition to carry their wives, chil-

* This gentleman, we are informed, has retired from the committee.

* Of this splendid engraving (one of the greatest works of its class ever produced in this country) we spoke in the highest terms on its publication, a few months since. It now ornaments almost every fine collection of prints at home and abroad.—Ed.

dren, and baggage, from one side of the river to the other, as their fear of this nation happens to drive them. We came to a place where the hippopotami were in such numbers, and rose so close to the boat, that we were tempted to fire at them repeatedly, none of which, however, seemed to take any effect, but a shot from Captain Lechmere caused the animal immediately to get off into deeper water out of our reach. From what we afterwards observed of these animals, I have reason to think a musket ball will not penetrate their skins, so great is its toughness and thickness. About 1 h. 30 m. P. M., low water, we landed several times to look for watering and traffic with the natives: none of the former, however, could we obtain, such is the scarcity of fresh-water wherever we have been; but we purchased some spears and a shield, made offers of friendship to the natives, and invited them to bring their things to the ships for sale. At 2 h. 40 m. we passed a dead child on the bank, above high-water mark, which had apparently been drowned. On our return we examined it, and found a great many beads on its neck and legs: it seemed to have been purposely drowned. 3 h. 30 m. We had rain, thunder, and lightning, for two hours, which inconvenienced us very much. About this time we had proceeded nearly seven or eight miles in a direct line, and twelve or fourteen through the windings of the river, the stream diminishing to the breadth of thirty or forty feet; and it becoming difficult to go further, even in the boats, we turned about, having accomplished our object in this direction. On our return we shot a vulture and several other birds; but the want of convenience and room prevented them from being properly preserved, as well as a number of specimens of plants which were collected by Mr. Forbes, who quartered himself in the whale-post this afternoon. The banks, too, being generally a foot deep in mud, and the ground near the Point, where we were obliged to encamp, soft and wet; so that we have been (through necessity) kept in a continual state of dirt and filth both in the boats and in our persons. At 5 h. 40 m. P. M. we landed and pitched our tents on the right banks, about half-way down the river, which seems to be nearly the extent to which it is navigable for small vessels. The place where we encamped is a complete haunt for hippopotami, as the banks are all torn down by them, and their tracks were round us in every direction—indeed, we heard them repeatedly, both in the woods and in the river, snorting like a war-horse in the water; and one of them roared so close to Mr. W. and the cooks, who were a little outside the tents, that they dropped their utensils in a hurry and ran away. The method adopted with respect to the officers' mess was, for each boat to take it in rotation to supply the rest and cook for them, which was found to be much the best plan, as the work would become too tiresome for any single person.

On the 5th, cloudy, with rain. The run of this river being nearly north and south meridian, we were anxious to obtain an observation for the latitude at this place; but the weather was so bad all night, that we could see neither moon nor star. At 6 A. M. we struck our tents and proceeded down, with a view principally to look for water. At 7 h. 30 m. wind S.W. and ebb tide. At 9 A. M. the Hard and Hardy landed for that purpose on the left bank; and having met an officer of King

Mataanb's, with his assistance we obtained some. We also made some exchanges of beads and buttons for assegays. Nothing could exceed the amazement which the natives evinced on beholding their own images in a looking-glass: some started back, others screamed and ran away, and all hallooed out, "O!" and "Augh!" in all the various keys of pleasure, surprise, and even horror: none of the girls and women, however, joined in this general confusion. At 10 A. M. we met a tribe crossing the river, with their wives and children, and all their little household. Near the entrance of this northern river another branch goes off to the left, which we now entered a little way, but found it too inconsiderable to be worth pursuing. At noon we reached the place where we encamped the first night, and Mr. V. landed to obtain the latitude. After looking into the west river, and finding a large shoal extending over the western side of the basin (no doubt occasioned by it), we entered the south river about 1 P. M. The aspect of the country here is nearly the same as in the northern river, only not quite so woody; the trees and bushes are very thick near the banks, but on proceeding a little way inland, the country is variegated with plains and villages, and is pretty thickly inhabited. The trees are principally mimosas, (which grow to a great size, and are almost naked from want of moisture,) mangroves, palms, euphorbia, and a kind of sweet-smelling hawthorn, with small white flowers. Mr. Forbes got a fine orchid here, and a few other plants, and shot several birds. Nothing can exceed the beauty of the kingfishers and small birds of the order of *certhia*, which are here very numerous, as well as the birds mentioned before, among which we observed a large quantity of vampire bats. At 5 P. M. we pitched our tents on the right bank, near a village, and sent a party in search of water, which we at length found in a dirty puddle, after hunting for more than an hour. We met with a son of King Capell's in the village, who was pretty civil; but he had a most troublesome secretary, who was constantly begging something from us, and even wanted to make us pay for the muddy water we took away. The place where we encamped was more uncomfortably wet than the last, but there was no better ground to be had, except by retiring farther from the boats. We were tormented all the first part of the night by a tribe (Vatois) coming down, under pretence of selling bullocks and fowls,—but no doubt to steal,—till we were obliged to threaten to fire upon them. At twelve we observed three rockets in the north-east quarter from the ship, and fired two in return; which, we found from the natives, in passing this place on our way back, had so frightened the Vatois, a tribe of marauders who infest these parts, that they have never troubled them since. Indeed, the whole country seemed to be in alarm all this night, for there were large fires kept up in every direction.

At seven, on the morning of the 6th, we proceeded onwards, and met with nothing particular, except a little trafficking with the natives, and shooting a few birds. A vulture that we wounded was immediately attacked by a hawk; and we saw numerous instances of that bird being in fight with hawks,—usually two of them against one vulture. It is difficult to lay down any scale for the value of articles here, as it depends altogether upon the whim of the seller. Sometimes we got three fowls for a Malay knife, and at other times a spear for a twopenny looking-glass. No

doubt every thing would have been cheaper were it not for the warfare which prevails in all these parts. At 5 P. M. we landed on the left bank; but before we could pitch the tents there came a very heavy shower of rain, with thunder and lightning. This encampment, as well as most of the others, is surrounded with the tracks of hippopotami, zebras, buffaloes, deer, and other wild animals, which we sometimes saw in our course along the river; and at one time a leopard. At night a party went a-rod to look for hippopotami in their retreats, but without any success. At 7 h. 30 m. on the morning of the 7th, Capt. Lechmere shot two hares. At 7 h. 40 m. we started, and at 9 came to a place where Capell's people were flying from the Oorontotes. We carried their women and children across, who trusted themselves to us without the least fear; but finding the men would not follow, at their own request we carried them back again. At 10 we landed on the right bank to look for water, which we found after hunting about several minutes; and had some trafficking with the natives. The numbers of the hippopotami increased very much; but our bullets never seemed to have any effect. At last, however, about 5 P. M. we took a cub in the mud; and shortly after encamped on the right bank. This animal seemed very young, as it could only totter, and refused all kind of food. Its weight might be about 100 lbs., and its shape something between a hog and an elephant. This encampment was covered with the traces of wild beasts, exclusive of ourselves. At 7 A. M. we started, and came to where the river branches off. We followed the southern, being the largest; and about noon it becoming impracticable, only the Cockburn and Hardy reached this place,—the Troughton, a larger boat, could not proceed so high; and we drank a bottle of wine on the occasion, upon ground which might rival our best parks in England, although uncultivated, and where probably no European adventurer dare make three days' halt, without some serious kind of disaster. The water here was tolerable. Shot a Guinea fowl. As the hippopotamus could not long live entirely from its usual element, we killed it for dinner, and found it made an excellent stew, being of the colour of veal, and not very unlike it in taste, skin, &c. We were detained this whole day in survey; and Mr. Forbes having surprised a hippopotamus asleep on shore, a large party sallied forth, armed with boarding pikes, spears, and musketry; but having first waited, like Englishmen, to fill their bellies, we saw no more of the enemy, as we now called that animal, from the fatigue and trouble it had so repeatedly occasioned. Soon after our return a body of seventy or eighty of the tribe of Oorontotes, entered the plain, armed with spears and shields. A few of us advanced towards them, with signs of friendship; but they appeared too much alarmed at our appearance to know how to act; and they made a retreat into the woods. Ever after this a guard was kept round the tents, to watch against any further surprise of these natives. One of the crew having been missing during the night, led to the discovery of the natives' mode of trepanning the hippopotamus, which was by means of a pit being dug near the river, and carefully scattered over with thick grass, into which our adventurer had fallen, and was with difficulty extricated by his comrades, perchance passing within hail of his alarm.*

* This was truly a noble sight, and created good sport to all hands.

* Captain Owen's survey (as the readers of our many notices may recollect) occupied four years and a half; and upwards of thirty officers lost their lives upon

On the Existence of the Unicorn as a distinct Animal of our own Times.

"His horns are like the horns of unicorns."—
Deut. xxxiii. 17.

It may not be known, even to some of our naturalist readers, that the male camelpard or giraffe is not only furnished with two short horns above the ear and on each side of the upper part of his head, but with a third, rising from the centre of his forehead, and in this respect distinguishing him from every other species of ruminating creature of which the animal kingdom as yet affords us any example. When we combine with this circumstance the no less remarkable fact, that the three horns are distinct bones seated upon the sutures of the skull, it is impossible not to draw inferences of a deep importance towards establishing the veracity of the Scripture and of many ancient records, where they speak of the *re'em*, *raam*, *parimim*, or unicorn, an animal which the sacred writings celebrate for its strength, noble bearing, and wildness; and Pliny for its ferocity; whilst Elian and Solinus relate that its feet are undivided and like the elephant's; but Vartemannus, on the contrary, that the two specimens he saw at Mecca were footed like a goat, and of the size of a colt. To the testimony of travellers who have reported the existence of this animal in the remote deserts of Africa, or steppie wastes of Asia, and to every attempt at proving that some other known animal was that which the ancients recognised as the unicorn,* the anatomist has always replied, it was inconsistent with any hitherto observable law of nature in her conformation of the horns of animals, that a single horn should rise from the centre or sagittal suture of their forehead. Recent observation, however, has demonstrated, in the instance of the male of the giraffe species, that such a frontal horn is quite within the pale of the laws by which the structure of animals is ordered, and has consequently removed every doubt as to the possible existence of the unicorn. The late discovery of the Addax, which was hitherto supposed to have existed only in the credulous imaginations of Strabo and Pliny, but the description of which they drew, it is now evident, from reports derived from Northern Africa, induces us to anticipate, with something like a confident expectation, that the time is not distant when the perseverance of some enterprising traveller will place the positive existence of the unicorn beyond the cavil of scepticism.

We have another and scarcely less tenable ground for indulging in this expectation. Ruppell, in a letter written during his sojourn in Kordofan, mentions that the unicorn is well known in that country, under the appellation of the *nillekma*. "The information which I have acquired," says he, "in regard to this animal, from individuals of various classes, uniformly agrees in the following particulars: its skin is of a reddish hue; it is of the size of

it. It extended to the entire eastern coast of Africa, beginning from the Cape of Good Hope, including the whole of the coasts of Madagascar, with the numerous channels of the Mozambique Channel, and those lying to the N.E. of Madagascar, as well as the Mauritius, Bourbon, and other islands. He again commenced from the Cape, and surveyed the western shore of Africa up to the Right of Benin, including Fernando Po, of which place he was subsequently appointed to be governor. Leaving the Gold Coast, he again employed himself about Sierra Leone and the River Gambia, and included the Isles de Lo, as well as part of the Bijago Islands. Captain Boteler, one of the officers who served under Captain Owen, is now engaged in completing the survey of the north-western coast of Africa.

* Some affirm it to have been the Indian ox or ass; and others the rhinoceros, oryx, or hippopotamus, which last has grown into a generally received opinion.

a small horse; its stature is slender as the gazelle's; and the male *nillekma* has a long, straight, narrow horn protruding from his forehead, which is not the case with the female. Some of my informants reported that it has split or cloven hoofs, others that the hoof is entire. It is an inhabitant of the steppes, which lie to the south of Kordofan, possesses great swiftness, and occasionally strays as far north as the mountainous range of the Koldagi, which borders on Kordofan. I have conversed, at different times, with three Arabians, who have themselves seen this animal after it had been killed. One of my own slaves, on seeing the antelopes M. Hey had slain in the desert of Korti, of his own accord described the *nillekma* in terms which entirely coincided with the information I afterwards obtained: he had eaten of its flesh in his native country, and spoke of it as being a remarkably handsome animal. This slave came from Koldagi, and I have had repeated opportunities of ascertaining the veracity of his assertions; for we always found his previous descriptions of the animals we met with on a subsequent occasion to be extremely correct."

Ruppell had afterwards another opportunity, when in company with Arabians, of hearing mention made of the unicorn, as inhabiting the desert already alluded to. They called it the *Anase*; and he observes that "the description given by these Arabians, who had seen the unicorn whilst they were engaged on a southerly incursion along the banks of the Bahhar-Abiad, corresponded with the accounts I had received in Kordofan, as well as from my slave. They asserted positively that its hoofs were cloven."

S.

LITERARY AND LEARNED.

OXFORD, June 13th.—The regius professorship of divinity in this University, to which are annexed a canonry of Christ Church, and the rectory of Ewelme, Oxfordshire, has been given to the Rev. E. Burton, B.D., late student of Christ Church, and chaplain to the deceased bishop. Mr. Burton is known to the literary world as the author of a theological work on the "Testimonies of the Antient Fathers to the Divinity of Christ." On Saturday last, being the last day of Easter term, the following degrees were conferred:

Masters of Arts.—H. H. Bobart, Christ Church; Rev. F. Annesley, St. John's College; Rev. J. Missing, Magdalen Hall; L. B. Wither, Oriel College; Rev. E. True-man, Worcester College.

Bachelors of Arts.—C. Marriott, Queen's College; E. H. Orme, St. Mary Hall; Sir T. F. F. Boughby, bart., Sir J. Mordaunt, bart., E. Hulse, W. S. London, Christ Church; W. H. Mackworth, Balliol College; J. Lawson, St. Alban Hall; J. S. Slater, Worcester College; W. W. Ellis, E. A. Waller, B. V. Townshend, Brasenose College; T. Lewis, W. Bowling, W. Lloyd, C. Lloyd, Jesus College; R. B. Wilson, W. H. Rooper, University College; A. C. Bridge, H. Mogg, W. Littlehales, C. Moore, T. W. Martyn, Exeter College; H. Fleisher, Lincoln College; C. J. Laprimaudaye, St. John's College; H. Matthie, Pembroke College; G. R. Marriott, O. C. Huntley, J. Forbes, J. H. Hallett, Oriel College.

On Wednesday last, being the first day of Act term, the following degrees were conferred:

Bachelor in Civil Law.—W. H. Smith, Queen's College.

Masters of Arts.—J. Johns, Brasenose College, Grand Compounder; Rev. A. Neate, Trinity College; Rev. J. B. Gwyn, J. Jones, Rev. J. Price, Jesus College; Rev. J. Trevelyan, Rev. N. Small, St. Mary Hall; W. Jones, Rev. J. Kynaston, Rev. A. Browne, Christ Church; Rev. R. Lewis, Magdalen Hall; E. Ray, Rev. C. W. Pitt, Brasenose College; Rev. G. Wyle, Rev. S. Bellas, Queen's College; Rev. J. West, W. S. Bricknell, Worcester College; Rev. C. Reed, Exeter College; Rev. J. F. Hone, Rev. J. C. Campbell, University College; J. L. Lamotte, Rev. G. Lea, Wadham College; Rev. R. Whitelock, Rev. H. M. Spence, Lincoln College; D. L. Badham, Pembroke College; W. J. Trower, Fellow, Oriel College.

Bachelors of Arts.—Hon. A. J. Ashley Cooper, C. O. Mayne, S. C. J. Berdmere, W. Moore, Christ Church; R. Healis, W. Leech, W. Hutton, M. Burnham, H. T. Streeten, J. Tardiffe, H. Sweeting, Queen's College; J. K. Simpkinson, C. T. Dawson, Balliol College, Grand Compounder; C. T. Cary, E. Bagnall, Magdalen Hall; F. Reyroux, St. Edmund Hall; R. Stranger, W. Gilkes, Pembroke College; E. Williams, T. Davies, W. D. Phillips, J. Roberts, Jesus College; R. Suckling, C. T. James, M. Monahan, Exeter College; G. Kennard,

E. E. Blencowe, A. Stewart, D. Lang, St. Alban Hall; E. Lilley, Worcester College; G. J. Quarmby, G. J. Gould, Lincoln College; E. Meade, Wadham College; A. T. Corfe, All Souls College; J. Pope, H. Horn, G. E. Smith, St. John's College.

Mr. Edwards, B.C.L. of Cambridge, was admitted as student.

CAMBRIDGE, June 13th.—On Saturday last the Chancellor's gold medal for the best English poem by a resident undergraduate, was adjudged to A. Tennyson, of Trinity College. Subject, *Timbuctoo*.

The Porson prize (for the best translation of a passage from Shakespeare into Greek verse) was on Saturday last adjudged to C. R. Kennedy, of Trinity College. Subject, Henry VIII., Act IV., Scene 2, beginning, "This cardinal," &c., and ending, "Peace be with him."

At the congregation held yesterday the following degrees were conferred:

Bachelors in Divinity.—Rev. E. D. Rhodes, Rev. E. Boteler, Rev. C. Smith, Fellows of St. Peter's College; Rev. T. H. Horne, Rev. T. Jones, St. John's College; Rev. G. H. Bowers, Clare Hall; Rev. W. Thomas, Jesus College, Compounder.

Masters of Arts.—Rev. W. Metcalf, Fellow, J. A. D. Meakin, St. John's College; Rev. C. W. Hughes, Corpus Christi College, Compounder; Rev. W. Powley, Jesus College, Compounder; Rev. A. T. R. Vicary, Jesus College.

Bachelors in Civil Law.—R. Cargill, Catharine Hall; F. Trotter, Christ College.

Bachelors in Physic.—A. Murray, A. Frampton, St. John's College; T. Bilgic, Caius College; F. Johnston, Jesus College.

Bachelors of Arts.—W. Whittier, St. John's College; F. Elwes, Pembroke College; J. Abbott, G. Kemfer, H. W. Stuart, Queen's College; T. Brand, Magdalen College.

ROYAL SOCIETY.

JUNE 18th. The President in the chair.—A paper was read "on the conversion to a vacuum of the experiments with Captain Kater's pendulum;" by Captain Sabine, Sec. F.R.S. The presents enumerated were, the first Part of Dr. Richardson's *Zoology of the Northern Parts of British America*, containing the quadrupeds.—Mr. Brande's *Outlines of Geology*—the third volume of M. Legendre's *Treatise on Elliptical Functions*—the Baron De Prony's *Historical Notice of Perronet*—the Baron Roger's work on the *Onolof Language*—along with the *Transactions of numerous learned Societies*. Bransby B. Cooper, Esq., of Guy's Hospital, was ballotted for, and elected. E. F. Maitland, Esq., M.P., was introduced, and took his seat as a Fellow. C. Collier, Esq., late of Ceylon, Dr. W. Nicholl, and J. W. Moss, Esq., were severally proposed.

The worthy President, in taking a seasonal farewell of the Fellows, congratulated the Society upon its continued prosperity, and paid a just tribute to the memory of Wollaston, Young, and Davy, whose loss the Royal Society felt in a particular manner: but, said the President, whilst we lament their death, let us hope that their mantle will descend upon others. The meetings were then declared adjourned for the season.

ROYAL ASIATIC SOCIETY.

SATURDAY, June 13.—Sir Alexander Johnston, V.P. in the chair. The meeting took into consideration the propriety of holding the Society's meetings every Saturday during the remainder of the session. A resolution to that effect being proposed by the Chairman, was carried unanimously.

Baron De Ferussac, the able editor of the "Bulletin Universel des Sciences et de l'Industrie," who has arrived in England on a scientific mission, was present at the meeting.

FINE ARTS.

NEW PUBLICATIONS.

Open your Mouth, and shut your Eyes! Painted by R. Farrier; drawn on stone by W. Fairland.

A PIECE of boyish waggery, very entertainingly represented. Two urchins, who have induced a third to obey the command compe-

handed in the title, are about to pop a candle between his teeth, instead of the cherry for which his mouth is watering. This is really a wicked trick.

Engraved Illustrations of Ancient Armour. After the Drawings, and with the Descriptions of Dr. Meyrick. By Joseph Skelton, F.S.A. Part XVIII.

THE plates in the eighteenth Part of this interesting publication are "Indian coat of plate;" "Ancient Britannie arms of bronze;" "Armour of a German Ryter, A.D. 1640;" "Roman arms;" "Fluted breast-plates, A.D. 1500;" "Japanese and Bootan arms;" and "Partisan of the Guard of Louis XIV."

Her Highness the Princess Victoria. Engraved by T. Wright, from a drawing by S. Catterson Smith. Colnaghi.

THIS is a very tasteful and interesting little print. The Princess is just at that age so delightful in female childhood, when the eye beams with innocence as well as with intelligence, and the heart is not agitated, or the countenance clouded, by those passions against which even royalty is no protection.

The Right Hon. George Canning. Painted by Sir T. Lawrence; engraved by C. Turner. Colnaghi, Son, and Co.

THE President's admirable whole-length portrait of the late lamented Premier, finely scraped in mezzotint by Mr. C. Turner. It represents Mr. Canning in a frock-coat and undress, standing with his arms folded, (a usual position with him), and the full face looking at the spectator. The expression is mild and quiet—not one of those ever-varying, lighted glances, which passed with such rapidity over his beautiful yet sufficiently masculine countenance, and indicated the emotions which touched the soul, or the flashes of genius which irradiated the inner mind. It is indeed a pleasing and grateful recollection of the most amiable and intellectual man, and the most illustrious and patriotic minister, of our eventful age; and must be highly prized by the British public.

Holy Family.—Mr. Kruseman, a Dutch artist, who has acquired great celebrity at Rome, has recently sent to this country a fine picture of the Holy Family, which we have seen at Mr. Smith's in Bond Street. Having been recommended to our notice by a correspondent, we lost no time in examining this work of art; and we are glad to be able to bear testimony to its high merits. There is great beauty in the countenances of the mother and child; and great skill in the grouping. The colouring is also charming; though we think there is a greenness in the flesh-shades more like the imitation of an ancient master, than like nature—but, altogether, we have seen no modern work on this oft-repeated subject, so well-deserving of eulogy. It does honour to the Dutch school, in a style which it has rarely attempted, and must have raised the painter high in the estimation of his country. The picture should be visited by amateurs.

ORIGINAL POETRY.

FAME: AN APOLOGUE.

The Three Brothers.

"The sands of those deserts which lie to the westward of Egypt are encroaching on and narrowing, by a constant and irresistible inroad, the valley of the Nile of Egypt. We see the pyramids gradually diminishing in height, particularly on their western sides; and we read of towns and villages which have been buried in the desert, but which once stood in fertile soils, some of whose minarets

were still visible a few years ago, attesting the powers of the invading sand. . . . Advancing, I repeat, to the annihilation of Egypt and all her glories, with the silence, but with the certainty too, of all-devouring time! . . . We have a broad and inextinguishable flood of light breaking in on this death-like gloom."—*Sir Rufus Donkin's Course, &c. of the Niger.*

I.

THEY dwelt in a valley of sunshine, those Brothers; [dwelling;]
Green were the palm-trees that shadowed their Sweet, like low music, the sound of the fountains [home:]
That fell from the rocks round their beautiful There the pomegranate blushed like the cheek of the maiden [lover,
When she hears in the distance the step of her And blushes to know it before her young friends. [corn-field]
They dwelt in the valley—their mine was the Heavy with gold, and in autumn they gathered The grapes that hung clustering together like rubies;
Summer was prodigal there of her roses, And the ringdoves filled every grove with their song.

II.

But those Brothers were weary; for hope like a glory
Lived in each bosom—that hope of the future Which turns where it kindles the heart to an altar,
And urges to honour and noble achievement: To this fine spirit our earth owes her greatest; For the future is purchased by scorning the present,
And life is redeemed from its clay soil by fame. They leant in the shades of the palm-trees at evening, [the mountain:]
When a crimson haze swept down the side of Glorious in power and terrible beauty, The Spirit that dwelt in the star of their birth Parted the clouds and stood radiant before them:—
Each felt his destiny hung on that moment; Each from his hand took futurity's symbol— One took a sceptre, and one took a sword; But a little lute fell to the share of the youngest, And his Brothers turned from him and laughed him to scorn.

III.

And the King said, "The earth shall be filled with my glory;" [lumn]
And he built him a temple—each porphyry column Was the work of a life; and he built him a city—
A hundred gates opened the way to his palace (Too few for the crowds that there knelt as his slaves,) [walls.
And the highest tower saw not the extent of the The banks of the river were covered with gardens;
And even when sunset was pale in the ocean, The turrets were shining with taper and lamp, Which filled the night-wind, as it passed them, with odours. [monarch;]
The angel of death came and summoned the But he looked on his city, the fair and the mighty, [fame."
And said, "Ye proud temples, I leave ye my

IV.

The Conqueror went forth, like the storm over ocean, [vanquished;
His chariot-wheels red with the blood of the Nations grew pale at the sound of his trumpet, Thousands rose up at the wave of his banners, And the valleys were white with the bones of the slain. [him,
He stood on a mountain, no foeman was near Heavy and crimson his banner was waving

O'er the plain where his victories were written in blood,
And he welcomed the wound whence his life's tide was flowing;
For death is the seal to the conqueror's fame.

V.

But the youngest went forth with his lute—and the valleys
Were filled with the sweetness that sighed from its strings;
Maidens, whose dark eyes but opened on palaces, Wept as at twilight they murmured his words. He sang to the exile the songs of his country, Till he dreamed for a moment of hope and of home; [tives,
He sang to the victor, who loosened his cap—While the tears of his childhood sprang into his eyes. [cypress,
He died—and his lute was bequeathed to the And his tones to the hearts that loved music and song.

VI.

Long ages past, from the dim world of shadows
These Brothers return'd to revisit the earth; They came to revisit the place of their glory, To hear and rejoice in the sound of their fame. They look'd for the palace—the temple of marble—
The rose-haunted gardens—a desert was there; The sand, like the sea in its wrath, had swept o'er them,
And tradition had even forgotten their names. The Conqueror stood on the place of his battles, And his triumph had passed away like a vapour, And the green grass was waving its growth of wild flowers, [place.
And they, not his banner, gave name to the They past a king's garden, and there sat his daughter,
Singing a sweet song remember'd of old, And the song was caught up, and sent back like an echo, [beside.
From a young voice that came from a cottage Then smiled the Minstrel, "You hear it, my Brothers,
My songs yet are sweet on the lute and the lip." King, not a vestige remains of your palaces; Conqueror, forgotten the fame of your battles: But the Poet yet lives in the sweetness of music—
He appeal'd to the heart, and that never forgets.

L. E. L.

MUSIC.

ARGYLL ROOMS.

ON Monday last, Mr. T. Welsh took his benefit at these rooms. From an individual of his tact and professional experience, we had anticipated a better selection of vocal music. A drowsy duet by tame tenors, or a fly-away solo by a capering soprano, are not sufficient to support a concert. We name no one—Mr. Welsh will, doubtless, understand us; and we only regret, for his own sake, that he did not think proper to avail himself of our former advice with respect to getting up concerted pieces. We think it injudicious in Mademoiselle Sontag to allow Miss Nina yet to venture on a solo. Name may do a good deal with *Mister* and Mrs. Bull; but we agree with Ollapod, that "name's nothing, merit's all—rhubarb's rhubarb, call it what you will." We throw this out as a friendly hint to the blue-eyed siren.

* "See, in the West, what clouds of sand arise,
Parching the earth, and dark'ning all the skies!
'Tis He—the giant of the desert's there—
Death on his foot, and in his look despair!
At each fell step see panting Nature die,
And all deform'd beneath the whirlwind lie."

On the same day, that meritorious teacher and excellent musician, M. Pio Ciancettini, had a benefit at the King's Concert Room, which was (as he well deserved) fully attended; and the musical treat comprised the first-rate talents of the day in every department.

DRAMA.

KING'S THEATRE.

THE long and uninterrupted run which the operatic compositions of Rossini have had at this theatre, to the almost total exclusion of those of Mozart, has, for some time past, given considerable umbrage to the *soi-disant* dilettanti of the day. Nor have the critics altogether been silent on the subject. The press, to which nothing comes amiss, and which, by virtue of office, is necessarily competent to discuss all subjects of science, but more particularly matters connected with the fine arts,—whether music or a mill,—a fight or a fugue,—a pugilistic or a vocal round,—has not only assailed the bad management of the manager, but the bad taste of the *ton*, for their unaccountable predilection for Rossini.

Upon three or four occasions this season, the operas of Mozart have been produced, and upon each the house has been literally crammed long before the curtain had risen. Yet, strange as it may at first sight appear, the first act of each representation had hardly been completed, ere the gapings in the pit, and the somniferous symptoms in the boxes, proclaimed that any thing but the delight anticipated by the impatient auditory had been realised. To account for the disappointment experienced on these occasions by the greater portion of the audience, would, it strikes us, be no very difficult task. Rossini has, for the last ten or twelve years, throughout Europe, kept strong possession of the Italian stage. Both abroad and at home his music has been in vogue; and as there is a fashion in music as well as in millinery, (the one not being a whit more arbitrary than the other), the ear, like the eye, becomes imperceptibly reconciled to the prevailing taste, and ultimately recognises no other. Were the Elizabethan mode of millinery revived, the “bussell,” in less than a “little month,” would yield to the heavier hoop, and the tenant of the huge umbrella-bonnet would soon have to hide her diminished head. So it is in music. Were the scientific fugues of Sebastian Bach introduced by a Wellington instead of a Wesley,* the pleasing lightness of Rossini would soon be pronounced as heavy as Handel. But this is not the sole secret which has caused Rossini to be now more popular than the gifted German. The music of the latter, and we speak it not profanely, is not so dramatic as that of the former. The bustle and business of the stage is better conveyed by the Italian composer; but scenic effect was not so well understood in the days of Mozart as it is at present. Witness the compositions of Weber. Much may be done by orchestral accompaniments to assist situation and heighten the effect of scenic illusion; and it is in this particular that we consider Rossini to surpass his great predecessor. It is true that the music of Mozart, strictly speaking, is more conversational than that of the present popular composer; but dialogue, however elegant and classic, is not sufficient for dramatic effect.

Addison's Cato is an admirable composition in the closet, but on the stage it is monotonous and tame, and has consequently, as an acting

tragedy, sunk into the scenic tomb of the Capulets.

We cannot better illustrate our remarks than by comparing Mozart and Rossini in situations where instrumental aid is essential to add to the business and stir of dramatic incident. In the scene in the *Nosse di Figaro*, where the Page is discovered by the Count concealed in the chair, and subsequently when Susanna persuades him to jump out of the window, Mozart has given nothing but a few chords to add to the effect of these striking incidents. How different would this have been managed by Rossini! Witness his accompaniments in several of his scenes in *La Gassa Ladra*, particularly those wherein search is made for the spoon suspected to be stolen by Ninetta, and where depositions are taken by the magistrates. Nor is this Rossini's only dramatic excellence. His choruses are always effective, and his finales, though frequently noisy, are always dramatic. Not so with Mozart. He seldom introduces a chorus; and some of his finales, dramatically speaking, are very ineffective. To wit, the last in the *Nosse di Figaro*.

On Saturday this opera was performed; and as our previous remarks are every way applicable to its representation, we shall not notice it further. There were one or two *encores*, out of compliment to Sontag and Malibran; but the attempt, upon the fall of the curtain, to demand a repetition of the opera, utterly failed. We shall close our observations with a short colloquy which occurred between ourselves and a fat, full-faced, commercial-looking gentleman, who sat by our side in the pit. “Are you sure, sir,” asked our aldermanic amateur, upon the close of the first act, “that this is *Mister Mozart's* music?” “Quite sure,” was the reply. “Then all I can say,” rejoined the city connoisseur, “is, that there is a great quantity of opium in it; for it has set me once or twice a-nodding.” “We are a’ nodding,” hummed we, and withdrew.

HAYMARKET THEATRE.

THE Haymarket theatre opened on Monday last, with the pleasant comedy of *Spring and Autumn*, a new ballet, a new comic piece by Mr. Poole, and the opera of *John of Paris*. Why, with a very fair comic company, many excellent stock pieces of the Haymarket genus, and a good promise of new matter (for the bills announce that “various novelties are in preparation”)—why, we say, under such circumstances should the manager detract from the gratification of the laughter-loving public, who consider the Little Theatre as the only true Temple of Thalia, by meddling with mummery and music, of which, Heaven knows! we have enough elsewhere at this season of the year; and, moreover, in the quality of which Richardson would beat him hollow? The infiction is as cruel as it is unnecessary. If his ears are proof, however, against the “harsh discords and displeasing sharps” of his vocal corps, we imagine they could not have been deaf to the broad hints of the audience, who very properly damned the ballet, and were not over-gracious to the opera. As a set-off to this misfortune, we are happy to have it in our power to record the complete and deserved success of *Lodgings for Single Gentlemen*. It is written in Mr. Poole's happiest vein, smart, and full of incidents; and the character of Mrs. Prattle, admirably acted by Mrs. Glover, is nearly equal to his illustrious *Paul Pry*. Mrs. Prattle is the paragon of landladies,—of that daily increasing class of landladies who rent a large house, live in a

cupboard, and let every other nook and cranny to government clerks and half-pay officers. She talks of her parlours being out all night, of the studious propensity of her drawing-rooms, and the utter derangement of the household affairs, in consequence of an amour between Betty and the back-attic! It has almost driven her to the desperate resolution of turning her kitchen out of doors! The portrait is from the life—not a whit overcharged, though rich as a caricature. All the actors did well. Mr. Webster, from Drury Lane, is likely to be a very useful member of this company, and contributed greatly to the success of the piece. Let us hope to see the *Female Sentinel* relieved by another farce of this description. We love the Haymarket, despite its inconvenient boxes and wretched scenery, and shall rejoice to see it flourish; but our conscience hanging about the neck of our heart, will not permit us to wink at its ballet, or shut our ears to its opera: we wish, for our own sakes, it would. There have been some creditable *débuts* this week, which we will notice in our next.

THE English Opera House opens next Saturday; and Mr. Arnold has been making exertions worthy of his preceding seasons, to produce both novelty and excellence in the musical and dramatic departments, and in the company.

VARIETIES.

Cornelle.—The French papers some time ago endeavoured to rouse public sympathy on behalf of M. P. Cornelle, a descendant of the illustrious poet, who is in a state of great distress. A few days since a representation was given at the Theatre Français, in Paris, for his benefit; but the receipts were too trifling to be of any permanent assistance to the unfortunate man for whom they were intended.

Bones.—At the sitting of the Paris Academy of Sciences on the 8th inst. a letter was read from two gentlemen of Montpellier, announcing the discovery of a cave, containing bones of animals, at Argant, near Vingran, in the department of the Eastern Pyrenees. Among the bones found in this cave were those of the *rhinoceros theoricinus* of Cuvier, an antediluvian animal; of the wild boar, horses, oxen, different kinds of sheep and of deer, of the species still existing, mixed with the bones of several species which are now extinct. As there were no bones of carnivorous animals among them, it might be inferred that the received opinion of these caves having been the habitual retreat of hyenas and other carnivorous animals, was not quite correct; but it has been observed, that there is nothing in this discovery to overthrow the general doctrine, as there are many carnivorous animals which have no habitual retreat, and therefore carry their prey to some lonely spot, where they devour it. Such might have been the case in the present instance.

Repression of Duelling.—At one of the recent sittings of the sovereign council of Geneva, a member of the assembly, M. Fazy Pasteur, moved that the law relative to duelling presented in France, should be adopted at Geneva. “Duels (said M. Fazy) have been very frequent, even among us, since the wars of the empire have ceased, and particularly since the Court of Cassation of France has decided that such cases are not provided for by the French penal code, which has compelled the ministry to request the legislature to replace this barbarous prejudice in the catalogue of crimes.

* Samuel Wesley, the celebrated organist, who, though no relation to the late Lord Mornington, spells his name in the same way.

As we have the same code at Geneva, we ought to follow in the same path. Besides, surrounded as we are by Savoy, where duelling is punished with death—by the Canton de Vaud, where severe penalties are attached to it—and by France, which is about to class it among assassinations,—can we remain in the back-ground; and ought our territory to become a place of refuge, an asylum where the duellist may bring his victim, and sacrifice him with impunity?" M. Pasteur concluded by stating that he could not possibly foresee any grounds for rejecting his proposition. The motion was warmly supported by Professor Bellot and M. Bellamy Aubert.

Gelatine.—The use of gelatine from bones is becoming very general in the French hospitals as an article of diet. In the hospital of La Charité, in Paris, upwards of 1000 rations a day are produced by means of a steam-apparatus. This gelatine is said to be much liked by the patients, as it is pure, and may be flavoured in any way that is desired.

Accounts from Rome, dated the 31st May, state, that shocks of an earthquake continue to be felt daily at Albano. Columns of smoke were seen to rise from the banks of the lake, but at the time of the first shock only, and that only twice. This appears not to be a new phenomenon; for a similar circumstance occurred in 1766, when the shocks of an earthquake continued at the same spot, or in the environs, every day from September to New Year's Day. In 1799, shocks were felt for nineteen days in succession. Albano is always the centre of these commotions, which extend as far as Marino, Larioci, and Gensano. It is apprehended, that the volcanoes in this region—of the eruptions of which no memory remains, but in whose extinct craters lakes now exist (Albano, Nemi, &c.)—are again on the eve of breaking out. The fears of Rome are great; and a commission of men of science has been sent out to examine the country.

The epidemic disease which we noticed last year as having made such ravages at Paris, on the borders of the Seine, is stated to have again made its appearance with equal intensity.

Cost of Sugar on the Continent.—It is stated in an article in the last Number of the *Revue Encyclopédique*, that although, in consequence of the colonial system, sugar is so expensive an article in France, the best refined sugar was to be had at Antwerp, duty paid, at sixpence or sixpence-halfpenny per pound; in Prussia, for nine-pence or nine-pence-halfpenny; and in Hamburgh for seven-pence or sevenpence-halfpenny; and that sugar exported from France, with the allowance of the drawback, is sold in Switzerland at about half the cost at which it is to be had by the consumer in France. In consequence of this high price of sugar, the consumption in France, except among the better classes, is very small—it is only at the rate of five pounds to each individual in the population; whereas in the United States, according to Humboldt, it is eight pounds; in England fourteen pounds; in Hamburg ten pounds; and in the rest of Germany six pounds.

Eau de Cologne.—The last Number of the *Journal des Connaissances Usuelles* contains the following recipe for making eau de Cologne of the purest quality:—Spirits of wine of thirty-six degrees, four litres (the litre is about an English quart); essential oil of cedar and of citron, each three drachms; oil of bergamot, two ounces; oil of lavender, one drachm and twenty-four grains; oil of thyme, twelve grains; neroli, three drachms; oil of

rosemary, three drachms and twenty-four grains. Put the oils into the spirits of wine and leave them to infuse for one month, then filter through blotting-paper: put into the mixture when bottled one pint of eau de melisse.

Musical.—A Signor Canzi, of Naples, has invented a new musical instrument called the *trumpet-flute*, from its pleasing, yet powerful tone.—*Beck's Repertorium.*

A new and extremely interesting periodical, *Der Musikalische Ausseiger*, begun only in February last at Vienna, and edited by the very popular poet Castelli, contains excellent critiques on the musical publications of the day. In the tenth No. it is stated, that a new opera, *La Straniera*, by Bellini, has been extraordinarily successful at Milan; and in the first No., that a gigantic bass has lately been invented, which has seven strings, and the bow of which is moved by a machine. The effect, the writer says, is wonderful.

The Week.—Towards the close of our week we often receive communications, and see and hear things, which, though we have not time to notice at length, seem to be deserving of a brief record. A paragraph including them has suggested itself to us as a closing memorandum, and it shall appear when necessary under the above title.

Drury Lane closes to-morrow with the veteran Spring's benefit: Covent Garden keeps open till next Thursday inclusive.—A collection of the late Mr. Bonington's drawings, &c., above two hundred in number, are on private view at Sotheby's to-day and Monday, previously to being brought to the hammer. There is also on the same days a farther sale of Mr. West's productions, and of articles of virtu belonging to him.—We have received the complete volume of Mr. Macfarlane's work since writing our first review: it is stated to us, with reference to the war of last year, that the highest military as well as political authority in England has said, "On one side I see nothing but blunders; but I cannot detect a single false move on the other." So much, as a corollary on Turkish tactics!—The lighted exhibition of the British Institution on Monday night was most brilliant, and brilliantly attended by rank and beauty. Most of the pictures were seen to great advantage, till the fashionable crowd presented other attractions to promenaders.—At the last meeting of the Royal Society of Literature for the season, on Wednesday, Mr. Sotheby, at the request of the Council, read a portion of his translation of the Iliad. The part selected was the description of the shield of Achilles; which, on recital, seemed to be as poetical as it was close to the splendid original.—At the King's Theatre a new ballet, called *Les Dégisements Imprévus*, and founded on Boieldieu's *Fils au Village Voisin*, has been successfully produced.—A most disgraceful plan for building over Hampstead Heath has nearly been smuggled through Parliament: we trust that resort of the valetudinarian and the artist may yet be preserved from this unhallowed design.

LITERARY NOVELTIES.

Parisian Periodicals, 1839.—A correspondent at Paris has kindly favoured us with a complete list of the periodicals published in that capital; adding a detail of their objects, their periods of publication, prices, &c. Classing them according to their character, it appears that there issue at present from the Parisian press, on subjects connected with Bibliography, 4 journals; Commerce, Industry, and Finance, 16; Husbandry, 3; Jurisprudence, 20; Administration (customs, prisons, domains, &c.), 6; Military Science, &c., 3; Religion, 9; Education, 61; General Science, 13; Medicine, 22; Literature, 18; Music, 5; Fashion, 2; Funnecuary, 1; the Lottery (1) 1.

—Independently of seven annual publications, and thirty-two daily papers. Of a truth, if the "march of intellect" among the Gauls keep pace with the march of letters, every other competitor must rapidly be put *hors de combat*. Our correspondent, however, bids us take comfort, and allay our apprehensions; for, says he, "l'imagination gallopie; le jugement ne va que le pas!"

A Paris correspondent writes:—"Some of the English papers having stated that M. Cesar Moreau, the late French Vice-Consul at London, was engaged upon an important work for the young Duke of Bourdeaux, I have taken some pains to get information concerning it. I find that M. Moreau has undertaken to prepare a sort of Library of Reference of all the Works of Interest in the fifty public and forty extensive Libraries in this capital. There are in these libraries about six millions of volumes of books, and two millions of manuscripts; and M. Moreau intends to analyse them all, so as to take about one million of the best books and about 500,000 manuscripts, of which he will make a Catalogue of Reference, so that the young prince may, at a glance at the titles, be able to turn to the work of every author of note, on whatever subject. For this purpose a room is to be prepared, fitted up with drawers, on each of which will be pasted the title: each drawer will form a division, and within will be the subdivisions and sections, with the heads.—For instance, the word *population* will be placed on a drawer, in which will be found cards of reference to every author, ancient and modern, who has written on the subject, with notes by M. Moreau; and so with every other title. This useful work will of course require a long time for completion; but it has already advanced considerably, although M. Moreau has only four amanuenses to assist him. He is now in London, collecting materials for his undertaking."

Under the title of "a Commentary, Mythological, Historical, and Geographical, on Pope's Homer and Dryden's *Æneid* of Virgil," we recognise that excellent work "the Classical Manual," republished by Mr. Murray at the reduced price of twelve shillings. This reduction brings it within the reach of young persons and teachers at schools and private tutors, to whom it has already been so strongly recommended in various critical publications, that any further praise from us would be superfluous. We must, however, observe, that it is not merely adapted to the classes of readers above mentioned, but will afford amusement and instruction to persons of either sex and of every age.

A new (the sixth) edition of the Little Villager's Vase-Book, by Mr. Bowles, is announced.

Sir Jonah Barrington has nearly ready a third volume of his amusing work.

Dr. Burrows, Dean of Cork, announces a volume of Sermons on the First Lessons of the Morning Service for the Sundays from Septuagesima to Trinity Sunday.

At Hamburgh the first edition of the *Second-æneid* in the original, with a critical and exegetical preface, is printing under the superintendence of Professor Olshausen, of Kiel, at the expense of the Danish government.—*German Papers.*

LIST OF NEW BOOKS.

Spinoza's Lectures on Hieroglyphics, 8vo. 16s. bds.—Kennedy's *Æschylus Agamemnon*, royal 8vo. 12s. bds.—Maddin's Travels in Turkey, 2 vols. 8vo. 1l. 4s. bds.—Waldgrave, 3 vols. post 8vo. 1l. 7s. bds.—Josephine's Memoirs (French), Vol. III. 8vo. 8s. bds.—Macfarlane's Constantinople, 4to. 2l. 10s. bds.—Carleile's Account of the Privy Chamber, 8vo. 1l. bds.—Adventures of a King's Page, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Memoirs of Lady Fanshawe, 8vo. 14s. bds.—Parry's Anthology, 8s. 8vo. 4s. bds.

Longitude 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

C. H. H., of the Temple, does indeed seem to be "an amorous boy;" and we advise him, besides communicating directly with the lady of the "pulpy lip" which says, "I will be kissed," to allow the nearest surgeon about Fleet Street to take twenty ounces of blood from his left arm.

If any body is obliged to be near one Mr. Robert Story, of Gargrave, Craven, who appears by a letter we have received with his signature, to have had some concern in a work called "the Magic Fountain," we advise them to beware of that individual, for he is certainly in a rabid state, and may do them mischief, as he has done us to the tune of *elevenpence*.

Our concluding notice of the Somerset House Exhibition is unavoidably deferred till next week.

ERRATUM.—In our review of *Tales of a Physician* (No. 647) we mentioned A. Harrison as the author: it should have been William Henry Harrison.

ADVERTISEMENTS

Connected with Literature and the Arts.

TURES, particularly the First Installation of the Order
of the Garter, a Chief-d'œuvre, one of the most elaborate Works
of the late Benjamin West, P.R.A.; the admired Cabinet Picture,
Damon and Melidoro; the curious Picture of the Two Prismatic
Spheres, illustrated by the System of Colours and referred to
by the Professor of Painting to the Royal Academy.

Upwards of One Hundred unfinished Pictures and Sketches
from the Inimitable Pencil of the same celebrated Master, amongst
which may be enumerated: The Death of Caesar; Venus attended
by the Graces; Deposition of Leonidas; the American Treaty;
including Portraits of Dr. Franklin, Mr. Temple Franklin, Mr.
Joy, Mr. Adams, and Mr. Pinney; Governor Penn's Treaty with
the Indians; Lear and Cordelia; Abraham and Isaac, fine piece
size; Studies of Thetis bringing the Armour to Achilles; Infant
Saviour, with Mary and Joseph; a beautiful Study of Wilson;
the large Cartoon for the Painted Windows of Windsor Castle;
Two superb Copies of Stella, from the celebrated Pictures by
Nicolo Poussin, in the possession of the Earl of Radnor, of co-
eval date with the Originals, and supposed to be touched upon by
the Master; a singularly fine Set of Raphael's Cartoons, coloured
by Sir James Thornhill; the System of Colours and referred to
by Dürer; for his celebrated Plates: this Series is more valuable
for not being revised. The Annals, coloured by Mr. West, from
the original at Hampton Court; Two fine Drawings by Goupy,
from Salvator Rosa; Three by the late G. Barrett, P.R.A. &c.;
fine Prints, from the numerous engravings of the famous
Fables, of various Dimensions; large carved Picture Frames;
Two large rolling Maps; Porphyry marble-colour Slabs; fine
Colours, &c.

Catalogues, at 1s. each, may be had at the Gallery; of T. R.
Smith, Esq. Solicitor, Furnival's Inn; and at Mr. George Ro-
bins's Office, Covent Garden.

INFORMATION and DIRECTIONS for
TRAVELLERS on the CONTINENT.

By MARIANA STARKER.
5th edition, thoroughly revised, and with considerable Additions.
Fest. 8vo. 2s.

2. The Diary of an Invalid in pursuit of
Health: being the Journal of a Tour in Portugal, Italy, Switzer-
land, and France. By the late Henry Matthews, A.M. 2d edit.
3 vols. post 8vo. 15s.

3. Antiquities, Arts, and Literature of Italy.
By Joseph Ferrary, Esq. 2d edition, 3 vols. post 8vo. 15s.

4. Rome in the Nineteenth Century. 4th
edition, 3 vols. 8vo. 11s. 6d.

5. Switzerland; or, a Journal of a Tour
and Residence in that Country. Followed by a general View of
its History, brought down to the present time. By S. Simond,
2d edition, 2 vols. 8vo. 36s.

6. An Autumn near the Rhine; or, Sketches
of Courts, Society, and Scenery, in Germany near the Rhine, the
3d edition, 8vo. 14s.

7. Italy; a Poem, in Two Parts, by Samuel
Rogers. Foolscap 8vo. 7s. each Part.

8. Italy, and other Poems. By William
Sotheby. Foolscap 8vo. 7s.
John Murray, Albemarle Street.

THE ETON COMPARATIVE ATLAS
of ANCIENT and MODERN GEOGRAPHY, from
original Authorities.

By A. ARROWSMITH, Hydrographer to the King.
In 58 Plates, royal 4to. for the Use of the Students at Eton Col-
lege, is just published, 21. 2s. boards, or 21. 18s. full coloured and
half-bound.

"It is a work of the most essential service to every man of
liberal education, and worthy of introduction into every respect-
able library in the Kingdom. It is so superior to every other pub-
lication of the kind, whether as regards its matter or the beauti-
ful style in which it is engraved, that it needs only to be seen to
be admired and adopted."—*New Monthly Magazine*.
To be had at the Author's, Soho Square, and at the Eton
Warehouse, Red Lion Court, Fleet Street.

THE FOREIGN REVIEW.
No. VI.

"Of the present Number of the 'Foreign Review,' we will say,
that its learning, labour, and talent of its contributors, could insure
the success of a periodical journal of the 'Foreign Review' may be
represented as established on a permanent basis. The History of
Roman Law is decidedly good; but our great favourite is Article
Sixth (Voltaire), in which we instantly recognise the pen of Mr.
Carlyle. It betrays all the usual power of that ingenious writer:
we could not dispense with one single observation it makes in
regard to the illustrious Philosopher of Ferney."—*Edinburgh Courier*.

No. VII. will be published 30th June.
Black, Young, and Young, 2, Tavistock Street, Covent Garden;
and Bossange, Barthès, and Lowell, Great Marlborough Street.

Recently published, in a Series of 31 Plates, price 21. 7s.

ANUMISMATIC ATLAS of ANCIENT
HISTORY, comprising a Series of 300 Grecian Coins,
arranged in the form of an Historical Chart, designed and exe-
cuted on Stone.

By BENJAMIN RICHARD GREEN.
The Work is accompanied by a Descriptive Letter-press, and
may be had in boards, 21. 12s.; mounted to fold up in a Case,
21. 17s.; and on a Roller, varnished, 21. 2s.
Published by Longman, Rees, Orme, Brown, and Green.

Of whom may also be had,

A Lecture on the Study of Ancient Coins,

as connected with History; illustrated with Plates. Price 3s. 6d.
"The plan adopted in the arrangement of the medals in the
Atlas, we think, excellent."—*Athenaeum*.
"Nothing of the kind has hitherto appeared in this country;
and Mr. Green's work has therefore the merit of novelty, as well
as of accuracy and information."—*Weekly Dispatch*.

A JOURNEY through NORWAY,

LAPLAND, and PART of SWEDEN, with some Re-
marks on the Geology of the Country, its Climate, and Scenery;
the Ascent of some of its principal Mountains, the present Political
Religions of the two Countries, Statistical Tables, Meteorolo-
gical Observations, &c.
By the Rev. ROBERT EVEREST, A.M. F.R.S.
Late of University College, Oxford.
Printed for Thomas and George Underwood, 23, Fleet Street.

Mr. Malcolm's New Poem Work.
In 1 handsome vol. price 7s. 6d. boards.

TALES of FIELD and FLOOD, with

SKETCHES of LIFE at HOME.
By JOHN MALCOLM,
Author of "Scenes of War," "Reminiscences of a Campaign
in the Pyrenees and South of France," &c.

"The author is free from mannerism or affectation, and exhi-
bits great natural powers in the simplest form imaginable. In
some of his lighter fragments, Mr. Malcolm indicates a quiet,
sly humour, that is capable of higher and more expanded pur-
poses; witness his outline of Jack Flanagan's personal appear-
ance."—*Atlas*, 9th May, 1850.

"Mr. Malcolm's volume is well known to our readers; well
known in every sense of the word. Of his power as a writer we
were perfectly aware; but there is a freshness, a delicacy, and
a quiet humour about these sketches, that we hardly expected
from the author of 'Memorials of the late War.'—*The Spirit*
and Age, Jan. 1850.

"Seriously, this is a book of tales and sketches which all the
gentle and the good will peruse with delight. Our author has
a great deal of quiet humour, and gives it out in the most effective
of all ways, as if there was nothing humorous about it. 'The
Orkney Wedding,' and 'The Borough,' in particular, contain
many things equal to some of the happiest touches of Washing-
ton Irving. They are all full of tender and interesting reflections,
calculated to soften and refine the heart."—*Edinburgh Literary*
Journal, 16th May, 1850.

"It is characterised throughout by nice and delicate touches
of humour, of pathos, and of bright, and glowing descriptions, in
the most choice, and musical, and flowing language. The more
refined and discriminating will, we are persuaded, see in the
volume more of that delicate humour, fine touching of char-
acter and wit, which is frequently developed in the turn of a
sentence, or a characteristic description of the finest of our
English classical writers—than in any other work of imagination
which has issued from the press for a long time."—*Glasgowian*
Mercury, 1st June, 1850.

"In every page the poet lives and breathes, and many of the
similes and expressions are turned with a felicity that none but
one accustomed to think in poetry could have accomplished."—*Edinburgh Observer*, 3d June, 1850.

"This is an elegant volume, and is the production of a refined
and amiable mind. Indeed, we have found more of genuine
feeling, poetic fervour, and delicate humour, than we are gener-
ally accustomed to meet with among the numerous similar pub-
lications of the day."—*Edinburgh Weekly Journal*, 3d June, 1850.

Also, lately published, by the same Author,
Scenes of War, and other Poems. Foolscap
8vo. 7s. boards.

Published by Oliver and Boyd, Edinburgh; and
Simpkin and Marshall, London.

In post 8vo. price 2s. 6d. boards.

FUGITIVE PIECES and REMINIS-

CENCES of LORD BYRON, containing an entire New
Edition of the Hebrew Melodies, with the addition of several
never before published; together with some original Poetry,
Letters, and Recollections of Lady Caroline Lamb.
By I. NATHAN.

Published by Whittaker, Treacher, and Co. Ave Marie Lane.
"Mr. Nathan has here presented us with a variety of anecdotes,
remembrances, and respecting Lord Byron. An acquaintance
founded on mutual esteem, sprung up between the noble poet and
the composer, the glowing recollections of which supply, for the
most part, the materials of the good-humoured gossiping volume
before us; and a very interesting one it is. It conveys a republi-
cation of the Hebrew Melodies, to each of the finest of our
classical authors attached, descriptive of the circumstances attend-
ing its composition, or illustrative of the character and feeling of
Lord Byron. Mr. Nathan relates some pleasant and piquant an-
ecdotes of Lady Caroline Lamb, which, together with his Remin-
iscences of Lord Byron render his volume one of the most inter-
esting we have perused for some time."—*The Sun*, May 29, 1850.

Handsome printed in 8 vols. 8vo. price 4l. 4s. boards.
THE HISTORY OF GREECE.
 By WILLIAM MITFORD, Esq.
 A new edition, with numerous Additions, Corrections, and a copious Index.

PRICE 8d.

REVIEW OF NEW BOOKS.

Devereux: a Novel. By the Author of "Pelham," &c. 3 vols. 12mo. London, 1829. Colburn.

To say that novel writing, within the last few years, has changed its very nature, would give but a faint idea of what change has actually taken place. The novel has gone forth like a Roman conqueror, not only adding new regions to its domain, but often incorporating with itself all the better institutes of the newly acquired country: it is the change not so much of alteration, as of acquisition. It is not too much to say, that a novel now-a-days is the first-rate test of first-rate talents. We expect to find in its pages the feeling of the poet, the reflection of the philosopher, the observation of the essayist. We expect exquisite description; thoughts that will either come home to every memory from their truth, or flash upon the judgment by their accurate novelty. We look for pathos to touch, and wit to enliven us; in short, our mental progress is the very reverse of the Caliph Vathek's plan;—he built a separate palace for every pleasure, while we would fain crowd all ours into one; and with truer philosophy,—for the pleasures, like the graces, are linked together. Our novels are to the present age, what epic poems, and, we may add, dramas, were to a former;—the animated pictures where we study men and manners, touched with all the truth of the imagination; for imagination is but the power of embodying real and actual events, and its truth of creation is at once its power and its merit. The novel before us is truly a great work,—great as the work of an historian; for Lord Bolingbroke is a fine historical portrait, finished in an historian's noblest and best spirit,—that of doing justice; and great as a philosophical work, if insight into human character, profound reflection, and moral excellence, constitute philosophy. We hold even the interest of the story, the brilliant wit of the dialogues, the living painting of the times, though most attractive accessories, to be still far below the fine and philosophic whole. We shall attempt no analysis of the story. It is a life full of excitement and adventure; but the life not of a hero of romance, but of a real and living being, involved in strange and stirring circumstance. We may truly say we quote at hazard, for scarcely a page could we find that does not shew something of thought, wit, observation, or description, that would give some idea of the varied and extraordinary powers of their writer. Now characteristic is the following sketch of a very worthy, if not very first-rate, man! After all, are not our weaknesses the most loveable parts about us?

"My uncle did as his ancestors had done before him; and, cheap as the dignity had grown, went up to court to be knighted by Charles II. He was so delighted with what he saw of the metropolis, that he forewore all intention of leaving it, took to Sedley and champagne,

flirted with Nell Gwynne, lost double the value of his brother's portion at one sitting to the chivalrous Grammont, wrote a comedy corrected by Etherege, and took a wife recommended by Rochester. The wife brought him a child six months after marriage, and the infant was born on the same day the comedy was acted. Luckily for the honour of the house, my uncle shared the fate of Plimneus, king of Sicily, and all the offspring he ever had (that is to say, the child and the play), 'died as soon as they were born.' My uncle was now only at a loss what to do with his wife, that remaining treasure, whose readiness to oblige him had been so miraculously evinced. She saved him the trouble of long cogitation,—an exercise of intellect to which he was never too ardently inclined. There was a gentleman of the court celebrated for his sedateness and solemnity; my aunt was piqued into emulating Orpheus, and six weeks after her confinement she put this rock into motion,—they eloped. Poor gentleman! it must have been a severe trial of patience to a man never known before to transgress the very slowest of all possible walks, to have had two events of the most rapid nature happen to him in the same week. Scarcely had he recovered the shock of being ran away with by my aunt, before, terminating for ever his vagrancies, he was ran through by my uncle. The wits made an epigram upon the event; and my uncle, who was as hold as a lion at the point of a sword, was, to speak frankly, terribly disconcerted by the point of a jest. He retired to the country in a fit of disgust and gout. Here his own *bon naturel* rose from the layers of art which had long oppressed it, and he solaced himself by righteously governing domains worthy of a prince, for the mortifications he had experienced in the dishonourable career of a courtier. Hitherto I have spoken somewhat slightly of my uncle; and in his dissipation he deserved it, for he was both too honest and too simple to shine in that galaxy of prostituted genius of which Charles II. was the centre. But in retirement he was no longer the same person, and I do not think that the elements of human nature could have furnished forth a more amiable character than Sir William Devereux, presiding at Christmas over the merriment of his great hall. Good old man! his very defects were what we loved best in him; vanity was so mingled with good nature that it became graceful, and we revered one the most, while we most smiled at the other. One peculiarity had he, which the age he had lived in, and his domestic history, rendered natural enough, viz. an exceeding distaste to the matrimonial state: early marriages were misery; imprudent marriages idiotism; and marriage at the best, he was wont to say, with a kindling eye and a heightened colour, marriage at the best—was the devil. Yet it must not be supposed that Sir William Devereux was an ungallant man. On the contrary, never did the *beau sexe* have a humbler or more devoted servant. As nothing in his estimation was

less becoming to a wise man than matrimony, so nothing was more ornamental than flirtation. He had the old man's weakness, garrulity, and he told the wittiest stories in the world, without omitting any thing in them but the point. This omission did not arise from the want either of memory or of humour, but solely from a deficiency in the malice natural to all jesters. He could not persuade his lips to repeat a sarcasm hurting even the dead or the ungrateful; and when he came to the drop of gall which should have given zest to the story, the milk of human kindness broke its barrier despite himself, and washed it away. He was a fine wreck, a little prematurely broken by dissipation, but not perhaps the less interesting on that account; tall, and somewhat of the jovial old English girth, with a face where good nature and good living mingled their smiles and glow. He wore the garb of twenty years back, and was curiously particular in the choice of his silk stockings. Between you and me, he was not a little vain of his leg, and a compliment on that score was always sure of a gracious reception."

The following scene is a good contrast:

"I approached the apartments appropriated to my mother—I knocked at her door; one of her women admitted me. The countess was sitting on a high-backed chair, curiously adorned with tapestry. Her feet, which were remarkable for their beauty, were upon a velvet cushion; three handmaids stood round her, and she herself was busily employed in a piece of delicate embroidery, an art in which she eminently excelled. 'The count—madam!' said the woman who had admitted me, placing a chair beside my mother, and then retiring to join her sister maidens. 'Good day to you, my son,' said the countess, lifting her eyes for a moment, and then dropping them again upon her work. 'I have come to seek you, dearest mother, as I know not if, among the crowd of guests and amusements which surround us, I shall enjoy another opportunity of having a private conversation with you—will it please you to dismiss your women?' My mother again lifted up her eyes—'And why, my son?—surely there can be nothing between us which requires their absence; what is your reason?' 'I leave you to-morrow, madam; is it strange that a son should wish to see his mother alone before his departure?' 'By no means, Morton; but your absence will not be very long, will it?—dear, how unfortunate,—I have dropt a stitch.' 'Forgive my importunity, dear mother—but *will* you dismiss your attendants?' 'If you wish it, certainly; but I dislike feeling alone, especially in these large rooms; nor do I think our being unattended quite consistent with our rank; however, I never contradict you, my son;' and the countess directed her women to wait in the ante-room. 'Well, Morton, what is your wish?' 'Only to bid you farewell, and to ask if London contains nothing which you will commission me to obtain for you?' The countess again raised her eyes from her work. 'I am

greatly obliged to you, my dear son, this is a very delicate attention on your part. I am informed that stomachers are worn a thought less pointed than they were. I care not, you well know, for such vanities; but respect to the memory of your illustrious father renders me desirous to wear a seemingly appearance to the world, and my women shall give you written instructions thereon to Madame Tourville—she lives in St. James's-street, and is the only person to be employed in these matters. She is a woman who has known misfortune, and appreciates the sorrowful and subdued tastes of those whom an exalted station has not preserved from like afflictions. So, you go to-morrow—will you get me the scissors, they are on the ivory table, yonder.—When do you return? ‘Perhaps never!’ said I, abruptly. ‘Never, Morton! how singular—why?’ ‘I may join the army—and be killed.’ ‘I hope not. Dear, how cold it is—will you shut the window?—pray forgive my troubling you, but you would send away the women. Join the army, you say?—it is a very dangerous profession!—your poor father might be alive now but for having embraced it; nevertheless, in a righteous cause, under the Lord of Hosts, there is great glory to be obtained beneath its banners. Alas, however, for its private evils!—alas, for the orphan and the widow!—You will be sure, my dear son, to give the note to Madame Tourville herself; her assistants have not her knowledge of my misfortunes, nor indeed of my exact proportions; and at my age, and in my desolate state, I would fain be decorous in these things—and that reminds me of dinner. Have you ought else to say, Morton?’ ‘Yes!’ said I, suppressing my emotions—‘yes, mother! do bestow on me one warm wish, one kind word, before we part—see—I kneel for your blessing—will you not give it me?’ ‘Bless you, my child—bless you!—look you now—I have dropt my needle.’ I rose hastily—bowed profoundly—(my mother returned the courtesy with the grace peculiar to herself)—and withdrew. I hurried into the great drawing-room—found Lady Needleham alone—rushed out in despair—encountered the Lady Hasleton, and coquetted with her the rest of the evening. Vain hope! to forget one’s real feelings by pretending those one never felt.”

From the many witty and dramatic dialogues we select a single one.

“Boulainvilliers! Comte de St. Saire! What will our great-grandchildren think of that name? Fame is indeed a riddle! At the time I refer to, wit—learning—grace—all things that charm and enlighten—were supposed to centre in one word—*Boulainvilliers!* The good count had many rivals, it is true; but he had that exquisite tact peculiar to his countrymen, of making the very reputations of those rivals contribute to his own. And while he assembled them around him, the lustre of their *bons mots*, though it emanated from themselves, was reflected upon him. It was a pleasant, though not a costly apartment, in which we found our host. The room was sufficiently full of people to allow scope and variety to one group of talkers, without being full enough to permit those little knots and coteries which are the destruction of literary society. An old man of about seventy, of a sharp, shrewd, yet polished and courtly expression of countenance, of a great gaiety of manner, which was now and then rather displeasingly contrasted by an abrupt affectation of dignity, that, however, rarely lasted above a minute, and never withstood the shock of a *bon mot*, was the first

person who accosted us. This old man was the wreck of the once celebrated Anthony Count Hamilton! ‘Well, my lord,’ said he to Bolingbroke, ‘how do you like the weather at Paris?—it is a little better than the merciless air of London—is it not?’ ‘Slife!—even in June, one could not go open-breasted in those regions of cold and catarrh—a very great misfortune, let me tell you, my lord, if one’s cambric happened to be of a very delicate and brilliant texture, and one wished to penetrate the inward folds of a lady’s heart, by developing, to the best advantage, the exterior folds that covered his own.’ ‘It is the first time,’ answered Bolingbroke, ‘that I ever heard so accomplished a courtier as Count Hamilton repine, with sincerity, that he could not bare his bosom to inspection.’ ‘Ah!’ cried Boulainvilliers, ‘but vanity makes a man shew much that discretion would conceal.’ ‘*Au diable* with your discretion!’ said Hamilton, ‘’tis a vulgar virtue. Vanity is a truly aristocratic quality, and every way fitted to a gentleman. Should I ever have been renowned for my exquisite lace and web-like cambric, if I had not been vain? Never, *mon cher!* I should have gone into a convent and worn sackcloth, and, from Count Antoine, I should have thickened into *Saint Anthony*.’ ‘Nay,’ cried Lord Bolingbroke, ‘there is as much scope for vanity in sackcloth as there is in cambric; for vanity is like the Irish ogling master in the Spectator, and if it teaches the playhouse to ogle by candle-light, it also teaches the church to ogle by day! But, pardon me, Monsieur Chaulieu, how well you look! I see that the myrtle sheds its verdure, not only over your poetry, but the poet. And it is right that, to the modern Anacreon, who has bequeathed to Time a treasure it will never forego, Time itself should be gentle in return.’ ‘Milord,’ answered Chaulieu, an old man who, though considerably past seventy, was animated in appearance and manner, with a vivacity and life that would have done honour to a youth—‘Milord, it was beautifully said by the Emperor Julian, that Justice retained the Graces in her vestibule. I see, now, that he should have substituted the word *Wisdom* for that of *Justice*.’ ‘Come,’ cried Anthony Hamilton, ‘this will never do. Compliments are the dullest things imaginable. For God’s sake, let us leave panegyric to blockheads, and say something bitter to one another, or we shall die of ennui.’ ‘*Vous avez raison*,’ said Boulainvilliers:—‘let us pick out some poor devil to begin with. Absent or present? Decide which.’ ‘Oh, absent,’ cried Chaulieu; ‘’tis a thousand times more piquant to slander than to rally! Let us commence with his majesty: Count Devereux, have you seen Madame Maintenon and her devout infant since your arrival?’ ‘No!—the priests must be petitioned before the miracle is made public.’ ‘What!’ cried Chaulieu, ‘would you insinuate that his majesty’s piety is really nothing less than a miracle?’ ‘Impossible!’ said Boulainvilliers, gravely; ‘piety is as natural to kings as flattery to their courtiers: are we not told that they are made in God’s own image?’ ‘If that were true,’ said Count Hamilton, somewhat profanely—‘if that were true, I should no longer deny the impossibility of atheism!’ ‘Fie, Count Hamilton,’ said an old gentleman, in whom I recognised the great Huet, ‘fie—wit should beware how it uses wings—its province is earth, not heaven.’ ‘Nobody can better tell what wit is not, than the learned Abbé Huet!’ answered Hamilton, with a mock air of respect. ‘Psha!’ cried Chaulieu, ‘I thought, when we once gave the rein to satire,

it would carry us *pêle-mêle* against one another. But in order to sweeten that drop of lemon-juice for you, my dear Huet, let me turn to Milord Bolingbroke, and ask him whether England can produce a scholar equal to Peter Huet, who in twenty years wrote notes to sixty-two volumes of Classics,* for the sake of a prince who never read a line in one of them?’ ‘We have some scholars,’ answered Bolingbroke; ‘but we certainly have no Huet. It is strange enough, but learning seems to me like a circle—it grows weaker the more it spreads. We now see many people capable of reading commentaries, but very few, indeed, capable of writing them.’ ‘True,’ answered Huet; and in his reply he introduced the celebrated illustration which is at this day mentioned among his most felicitous *bons mots*. ‘Scholarship, formerly the most difficult and unaided enterprise of Genius, has now been made, by the very toils of the first martinet, but an easy and common-place voyage of leisure. But who would compare the great men, whose very difficulties not only proved their ardour, but brought them the patience and the courage which alone are the parents of a genuine triumph, to the indolent loiterers of the present day, who, having little of difficulty to conquer, have nothing of glory to attain? For my part, there seems to me the same difference between a scholar of our days and one of the past, as there is between Christopher Columbus and the master of a packet-boat from Calais to Dover!’ ‘But,’ cried Anthony Hamilton, taking a pinch of snuff, with the air of a man about to utter a witty thing—‘but what have we—we spirits of the world, not imps of the closet,—and he glanced at Huet—‘to do with scholarship? All the waters of Castaly which we want to pour into our brain are such as will flow the readiest to our tongue.’ ‘In short, then,’ said I, ‘you would assert, that all a friend cares for in one’s head is the quantity of talk in it?’ ‘Precisely, my dear count,’ said Hamilton, seriously; ‘and to that maxim I will add another applicable to the opposite sex. All that a mistress cares for in one’s heart is the quantity of love in it.’ ‘What! are generosity, courage, honour, to go for nothing with our mistress, then?’ cried Chaulieu. ‘No; for she will believe, if you are a passionate lover, that you have all those virtues; and if not, she won’t believe that you have one.’ ‘Ah! it was a pretty court of love in which the friend and biographer of Count Grammont learnt the art!’ said Bolingbroke. ‘We believed so at the time, my lord; but there are as many changes in the fashion of making love as there are in that of making dresses. Honour me, Count Devereux, by using my snuff-box, and then looking at the lid.’ ‘It is the picture of Charles the Second which adorns it—is it not?’ ‘No, Count Devereux, it is the diamonds which adorn it. His majesty’s face I thought very beautiful while he was living; but now, on my conscience, I consider it the ugliest phiz I ever beheld. But I pointed your notice to the picture because we were talking of love; and Old Rowley believed that he could make it better than any one else. All his courtiers had the same opinion of themselves; and I dare say the *beaux garçons* of Queen Anne’s reign would say, that not one of King Charles’s gang knew what love was. Oh! ’tis a strange circle of revolutions, that love! Like the earth, it always changes, and yet always has the same materials.’ ‘*L’amour, l’amour—toujours l’amour*, with Count Anthony Hamilton!’ said Boulainvilliers. ‘He is always

* “The Delphin Classics.”

on that subject; and, *sacre bleu!* when he was younger, I am told he was like *Cacus*, the son of *Vulcan*, and breathed nothing but flames.' 'You flatter me,' said Hamilton. 'Solve me now a knotty riddle, my Lord Bolingbroke. Why does a young man think it the greatest compliment to be thought wise, while an old man thinks it the greatest compliment to be told he has been foolish?' 'Is love foolish, then?' said Lord Bolingbroke. 'Can you doubt it?' answered Hamilton; 'it makes a man think more of another than himself! I know not a greater proof of folly!' 'Ah! *mon aimable ami!*' cried Chaulieu; 'you are the wickedest witty person I know. I cannot help loving your language, while I hate your sentiments.' 'My language is my own—my sentiments are those of all men,' answered Hamilton; 'but are we not, by the by, to have young *Aroust* here to-night? What a charming person he is!' 'Yes,' said Boulainvilliers. 'He said he should be late; and I expect Fontenelle, too, but he will not come before supper. I found Fontenelle this morning conversing with my cook on the best manner of dressing asparagus. I asked him the other day, what writer, ancient or modern, had ever given him the most sensible pleasure? After a little pause, the excellent old man said, 'Daphnus'—'Daphnus!' repeated I, 'who the devil is he?' 'Why,' answered Fontenelle, with tears of gratitude in his benevolent eyes, 'I had some hypochondriacal ideas that suppers were unwholesome; and Daphnus is an ancient physician who asserts the contrary; and declares—think, my friend, what a charming theory!—that the moon is a great assistant of the digestion!' 'Ha! ha! ha!' laughed the Abbé de Chaulieu. 'How like Fontenelle! what an anomalous creature 'tis! He has the most kindness and the least feeling of any man I ever knew. Let Hamilton find a pithier description for him if he can!''

We reserve till our next some further specimens and remarks; including the grand feature of the novel—the character of Lord Bolingbroke; and we hope the author and the public will pardon us for offering so hasty a sketch of a work we have so greatly admired: our excuse is, a hurried reading previous to publication.

The Life of John Locke; with Extracts from his Correspondence, Journals, and Common-place Books. By Lord King. 4to. pp. 407. London, 1829. Colburn.

WHEN we had begun to look for some relaxation from our labours, towards the usual close of the publishing season, we find ourselves (not disagreeably for the *Literary Gazette*, nor, we trust, for its readers) almost overwhelmed with a mass of new and very interesting works. Of these, certainly one of the most important, and one which must ever remain a standard book in English libraries, is Lord King's *Life of John Locke*. With the opinions of the noble author, which we consider the least valuable portion of the volume, we shall have nothing to do: whether his dislike to High Church doctrines, or his general polemical and political sentiments, are right or wrong, we leave it to others to canvass,—for on such points no one can determine; while we thank him with all our hearts for the delightful addition he has here made to the literature of our country.

Where almost every page teems with matter which claims attention or admiration, it is no easy task for a Reviewer to do justice to his original,—and especially in a periodical like ours, so various, and, of course, so limited;

since, in endeavouring to afford a comprehensive view of all that is really worthy of public regard in letters, science, and the arts, so as to guide our contemporaries in their choice and judgment, and serve as a useful index and reference to those who are to succeed us, it will readily be seen that we have it not in our power to dwell at length upon the elucidation of any one subject, however desirous we might be to shine in the character of elaborate critics, rather than in the more humble department of faithful reporters. In this instance, in order to do as much as we can, we shall pass over the biography of Mr. Locke, as well known to the world in its leading circumstances, from his birth in 1632, to his death in 1704, and address ourselves to these papers, so happily preserved by their having gone into the possession of Sir Peter King, the ancestor of Lord King, his near relation and sole executor. 'They consist of the originals of many of his printed works, and of some which were never published; of his very extensive correspondence with his friends, both in England and abroad; of a journal which he kept during his travels in France and Holland; of his common-place books; and of many miscellaneous papers; all of which have been preserved in the same acutroire in which they had been deposited by their author, and which was probably removed to Ockham in 1710.'

Speaking of the design, Lord K. adds: 'It is impossible, after the lapse of one hundred and thirty years, to portray with accuracy those minute features of character which make biography often so interesting when sketched by the hand of contemporaries and friends. The most authentic account of Locke which has hitherto been published, is to be found in the *Bibliothèque Choisie* of 1716, written by Le Clerc, about twelve years after the death of his friend. In the present attempt, the order of events, and in part also the narrative of Le Clerc, has been followed; and I have endeavoured, from the letters and memorials which still remain, to make Mr. Locke, as far as possible, his own biographer. * * * It appears from the character of the hand-writing in Mr. Locke's original sketches, that after having well considered his subject, he was able at once, without the least hesitation, to draw upon his own ample resources, and striking out his work, as it were, at a heat, to write down his thoughts, *currente calamo*, without difficulty, hesitation, or impediment. Perhaps this decision of the author, proceeding from his habit of previous reflection, and from his devotion to the cause of truth, gives to his writings that peculiar spirit which distinguishes them. His works intended for publication, had of course the advantage of revision and correction; but as many of the following were extemporaneous thoughts, committed hastily to paper, and never afterwards corrected, the reader will make allowance for any inaccuracies that he may find in them. Some persons may think that too many, and others that too few of the letters have been published; the great difficulty was to make a selection, and to shew, without fatiguing the reader, the interest which was felt by Mr. Locke on so many different questions, the versatility of his genius, and the variety of his occupations. Of the letters from different correspondents found amongst Mr. Locke's papers, the whole of those from Sir Isaac Newton, and the greater part of those from Lord Shaftesbury and Lord Peterborough, are now printed. Of the remainder, nearly one hundred are from Limborch; perhaps double that number from Monnier

Toinard, containing the scientific news of Paris from 1679 for several years following; many from Le Clerc; from M. Guenelon, of Amsterdam; from Lord Ashley, afterwards the third Earl of Shaftesbury; from Mr. Tyrrel and Dr. Thomas, Mr. Clark of Chipstead, to whom the *Thoughts on Education* were addressed; and from A. Collins, &c. &c. amounting altogether to some thousands in number. The desire of keeping this publication within reasonable bounds, has prevented the publication of more than a very few of these letters.'

Such is the scope of the work before us: of what has been retained, we are ignorant; but we can truly say, that ten times as much as has been permitted to appear, if of any thing like the same quality, would be most acceptable to every reader of taste and intellect. So early as page 3 we have a charming letter—a model of filial affection—from Locke to his father; and to p. 41, where his foreign journal begins, in 1675, there are ample materials for an interesting paper. But we can only select the briefest examples.

In advising Lord Peterborough respecting the choice of a tutor for his son, Mr. L. says finely and wisely: 'I must beg leave to own that I differ a little from your lordship in what you propose; your lordship would have a thorough scholar, and I think it not much matter whether he be any great scholar or no; if he but understand Latin well, and have a general scheme of the sciences, I think that enough; but I would have him well-bred, well-tempered; a man that, having been conversant with the world and amongst men, would have great application in observing the humour and genius of my lord your son; and omit nothing that might help to form his mind, and dispose him to virtue, knowledge, and industry. This I look upon as the great business of a tutor; this is putting life into his pupil, which when he has got, masters of all kinds are easily to be had; for when a young gentleman has got a relish of knowledge, the love and credit of doing well spurs him on; he will, with or without teachers, make great advances in whatever he has a mind to. Mr. Newton learned his mathematics only of himself. * * * With the reading of history, I think the study of morality should be joined; I mean not the ethics of the schools fitted to dispute, but such as Tully in his *Offices*, Puffendorf de *Officio Hominis* et *Civis*, de *Jure Naturali* et *Genitum*, and above all, what the New Testament teaches, wherein a man may learn to live, which is the business of ethics, and not how to define and dispute about names of virtues and vices. True politics I look on as a part of moral philosophy, which is nothing but the art of conducting men right in society, and supporting a community amongst its neighbours.'

While at Cleve, in 1665 (where he was Secretary to Sir W. Vane, our envoy to the Elector of Brandenburg), we have pleasing specimens of Locke's playfulness and good humour, in letters to a friend (Mr. John Strachy)—they exhibit him in a more amiable and social point of view than any of his correspondence yet published; and we wish we could copy more of them than the following mosaic bits:—

'You must not expect any thing remarkable from me all the following week, for I have spent it in getting a pair of gloves, and think, too, I have had a quick despatch; you will perhaps wonder at it, and think I talk like a traveller; but I will give you the particulars of the business. Three days were spent in

finding out a glove; for though I can walk all the town over in less than an hour, yet their shops are so contrived, as if they were designed to conceal, not expose, their wares; and though you may think it strange, yet, methinks, it is very well done, and 'tis a becoming modesty to conceal that which they have reason enough to be ashamed of. But to proceed: the two next days were spent in drawing them on—the right-hand glove (or, as they call them here, hand shoe), Thursday, and the left hand, Friday; and I'll promise you this was two good days' work, and little enough to bring them to fit my hands and to consent to be fellows, which, after all, they are so far from, that when they are on, I am always afraid my hands should go to cuffs one with another, they so disagree: Saturday we concluded on the price, computed, and changed our money; for it requires a great deal of arithmetic and a great deal of brass to pay twenty-eight stivers and seven doits; but, God be thanked, they are all well fitted with counters for reckoning: for their money is good for nothing else, and I am poor here with my pockets full of it. I wondered at first why the market people brought their wares in little carts, drawn by one horse, till I found it necessary to carry home the price of them; for a horse-load of turnips, would be two horse-load of money. A pair of shoes cannot be got under half a year: I lately saw the cow killed out of whose hide I hope to have my next pair. The first thing after they are married here is to bespeak the child's coat, and truly the bridegroom must be a bungler that gets not the child before the mantle be made; for it is far easier here to have a man made than a suit. To be serious with you, they are the slowest people, and fullest of delays, that ever I have met with, and their money as bad. * * *

"I had formerly seen the size and arms of the duke's guards, but to-day I had a sample of their stomachs (I mean to eat, not to fight; for if they be able to do as much that way too, no question but under their guard the duke is as much in safety as I believe his victuals are in danger). But to make you the better understand my story, and the decorum which made me take notice of it, I must first describe the place to you. The place where the elector commonly eats is a large room, into which you enter at the lower end by an ascent of some few steps; just without this is a lobby: as this evening I was passing through it into the court, I saw a company of soldiers very close together, and a steam rising from the midst of them. I, as strangers used to be, being a little curious, drew near to these men of mettle, where I found three or four earthen fortifications, wherein were intrenched peas-porridge, and stewed turnips or apples, most valiantly stormed by those men of war: they stood just opposite to the duke's table, and within view of it; and had the duke been there at supper, as it was very near his supper-time, I should have thought they had been set there to provoke his appetite by example, and serve as the cocks have done in some countries before battle to fight the soldiers into courage; and certainly these soldiers might eat others into stomachs. Here you might have seen the court and camp drawn near together, there a supper preparing with great ceremony, and just by it a hearty meal made without stool, trencher, table-cloth, or napkins, and, for ought I could see, without beer, bread, or salt; but I stayed not long, for methought 'twas a dangerous place, and so I left them in the engagement. I doubt by that time you come to the end of this course of entertainment, you will be as weary of reading

as I am of writing, and therefore I shall refer you for the rest of my adventures (wherein you are not to expect any great matter) to the next chapter of my history."

It was ten years later, in 1675, that Locke went to reside in France for the benefit of his health, and kept the interesting daily journal from which the following are selections:—

At Lyons "they shewed us, upon the top of the hill, a church, now dedicated to the Virgin, which was formerly a temple of Venus: near it dwelt Thomas Becket, when banished from England. * * * About half a league from St. Vallier, we saw a house, a little out of the way, where they say Pilate lived in banishment. We met with the owner, who seemed to doubt the truth of the story; but told us there was mosaic work very ancient in one of the floors." At Montpellier "I walked, and found them gathering of olives—a black fruit, the bigness of an acorn, with which the trees were thick hung. All the high-ways are filled with gamesters at mall, so that walkers are in some danger of knocks. * * * Parasols, a pretty sort of cover for women riding in the sun, made of straw, something like the fashion of tin covers for dishes. * * * Monsieur Renaie, a gentleman of the town, in whose house Sir J. Rushworth lay, about four years ago, sacrificed a child to the devil—a child of a servant of his own, upon a design to get the devil to be his friend, and help him to get some money. Several murders committed here since I came, and more attempted; one by a brother on his sister, in the house where I lay." [This species of crime is therefore not so new in France as recent cases have induced the philosophical to imagine.]

"At Toulouse saw the chartreux, very large and fine; saw the relics at St. Sernin, where they have the greatest store of them that I have met with; besides others, there are six apostles, and the head of the seventh; viz. two Jameses, Philip, Simon, Jude, Barnabas, and the head of Barthelmy. We were told of the wonders these and other relics had done being carried in procession, but more especially the head of St. Edward, one of our Kings of England, which carried in procession, delivered the town from a plague some years since.

"Paris, Dec. 20th.—In the library of the Abbé de St. Germain, M. Covell and I saw two very old manuscripts of the New Testament, the newest of which was, as appeared by the date of it, at least 800 years old, in each of which I John, chap. v. ver. 7, was quite wanting, and the end of the eighth verse ran thus, 'tres unum sunt;' in another old copy the seventh verse was, but with interlining; in another much more modern copy, ver. 7 was also, but differently from the old copy; and in two other old manuscripts, also, ver. 7 was quite out; but as I remember in all of them the end of the eighth verse was 'tres unum sunt.' The story of the nuns of Lodun possessed, was nothing but a contrivance of Cardinal Richelieu to destroy Grandier, a man he suspected to have wrote a book against him, who was condemned for witchcraft in the case, and burnt for it. The scene was managed by the capuchins, and the nuns played their tricks well, but all was a cheat. 23d. At the king's levee, which I saw this morning at St. Germain, there is nothing so remarkable as his great devotion, which is very exemplary; for as soon as ever he is dressed, he goes to his bed-side, where he kneels down to his prayers, several priests kneeling by him, in which posture he continues for a pretty while, not being

disturbed by the noise and buzz of the rest of the chamber, which is full of people standing and talking one to another. The Marquis de Bordage, who married M. Turenne's niece, being at Rome about the year 66 or 67, being at a mass where the Pope was present, and not above a yard or two from him, a very considerable cardinal, who was just by him, asked him just after the elevation: 'Che dice vostra signoria di tutta questa fanfantara?'"

The next is a remarkable paragraph to contrast with our day:—

"At Paris, the bills of mortality usually amount to 19 or 20,000; and they count in the town about 500,000 souls, 50,000 more than at London, where the bills are less. Quere, whether the Quakers, Anabaptists, and Jews, that die in London, are reckoned in the bills of mortality."

We proceed with some amusing anecdotes:

"They tell here, that the Bishop of Bellay having writ against the Capuchins, and they against him, Cardinal Richelieu undertook their reconciliation, and they both promised peace; but the Capuchins writing again under another name, the bishop replied; so that the cardinal, seeing him some time after, told him, that had he held his peace he would have canonised him. 'That would do well,' replied the bishop, 'for then we should each of us have what we desire; i. e. one should be pope, and the other a saint.' Cardinal Richelieu having given him the Prince of Balzac and the Minister Silhon to read (which he had caused to be writ, one as a character of the king, and the other of himself), demanded one day, before the king, his opinion of them; to which the bishop replied, 'Le Prince n'est pas grande chose, et le Ministre ne vaut rien.' A devout lady being sick, and besieged by the Carmes, made her will, and gave them all: the Bishop of Bellay coming to see her after it was done, asked whether she had made her will; she answered yes, and told him how: he convinced her it was not will, and she desiring to alter it, found a difficulty how to do it, being so beset by the friars. The bishop bid her not trouble herself for it, but presently took order that two notaries, habited as physicians, should come to her, who being by her bed-side, the bishop told the company it was convenient all should withdraw; and so the former will was revoked, and a new one made and put into the bishop's hands. The lady dies, the Carmes produce their will, and for some time the bishop lets them enjoy the pleasure of their inheritance; but at last, taking out the other will, he says to them, 'Mes freres, you are the sons of Eliah, children of the Old Testament, and have no share in the New.' This is that bishop of Bellay who has writ so much against monks and monkery.

"The Mémoires de Sully are full of fables and self-flattery, so concluded by the company chez Mr. Justel; the same which Mr. Fénelon had before told me; those of the Duc de Guise, a romance; but those of Modena, concerning Naples, good.* I saw the Père Cherubin, the Capuchin so famous for optics, at least the practical part in telescopes, at his convent in the Rue St. Honoré. The Capuchins are the strictest and severest order in

* "During his residence at Paris, Locke made acquaintance with Mr. Justel (whose house was then the resort of the literati of France); and with him he continued to correspond long after his return to England. He also formed an acquaintance with Mr. Guessen, the celebrated physician of Amsterdam; these friendships were most useful some years afterwards, during his retreat in Holland. He became also intimately acquainted with Monsieur Toinard, the author of Harmonie Evangelicorum."

France, so that to mortify those of their order, they command them the most unreasonable things, irrational and ridiculous: as to plant cabbage-plants the roots upwards, and then reprove them, the planters, because they do not grow. As soon as they find any one to have any inclinations any way, as Père Cherubin in optics and telescopes, to take from him all that he has done, or may be useful to him in that science, and employ him in something quite contrary; but he has now a particular lock and key to his cell, which the guardian's key opens not. This severity makes them not compassionate one to another, whatever they would be to others. Within this year past, were bills set up about Paris, with a privilege for a receipt to kill lice, whereof the Duke of Bouillon had the monopoly, and the bills were in his name. Par permission et privilège du Roy, accordé à perpétuité à Monsieur le Duc de Bouillon, Grand Chambellan de France, par lettres patentes du 17 Sept., 1677, vérifiées en parlement par arrêt du 13 Dec. au dit an, le public sera averti que l'on vend à Paris un petit sachet de la grandeur d'une pièce de quinze sols, pour garantir toute sorte de personnes de la vermine, et en retirer ceux qui en sont incommodés sans mercure. Il est fait défense à toutes personnes de le faire, ni contre-faire, à peine de trois mille livres d'amende. Extrait de l'affiche."

Having now copied so many characteristic traits in the picture of France, we hope our readers will receive equal amusement from the following directions, which "appear to have been set down for some foreigner about to visit England. They are curious, as affording a comparison with the improvement of the present time. *England, 1679.*—The sports of England, which, perhaps, a curious stranger would be glad to see, are horse-racing, hawking, and hunting: bowling,—at Marebone and Putney he may see several persons of quality bowling, two or three times a week all the summer; wrestling, in Lincoln's Inne Field every evening all the summer; bear and bull-baiting, and sometime prizes, at the Bear-Garden; shooting in the long-bow and stob-ball, in Tothill Fields; cudgel-playing, in several places in the country; and hurling, in Corn-wall. *London.*—See the East India House, and their magazines; the Custom House; the Thames, by water, from London Bridge to Deptford; and the King's Yard at Deptford; the sawing-windmill; Tradescant's garden and closet; Sir James Morland's closet and water-works; the iron mills at Wandsworth, four miles above London, upon the Thames; or rather those in Sussex; Paradise by Hatton Garden; the glass-house at the Savoy, and at Vauxhall. Eat fish in Fish Street, especially lobsters, Colchester oysters, and a fresh cod's head. The veal and beef are excellent good in London; the mutton better in several counties in England. A venison pasty and a chine of beef are good every where; and so are crammed capons and fat chickens. Rattles and heath-pots, ruffs, and reeves, are excellent meat wherever they can be met with. Puddings of several sorts, and creams of several fashions, both excellent; but they are seldom to be found, at least in their perfection, at common eating-houses. Mango and saio are two sorts of sauces brought from the East Indies. Bermuda oranges and potatoes, both exceeding good in their kind. Cheddar and Cheshire cheese. Men excellent in their arts. Mr. Cox, in Long Acre, for all sorts of dioptrical glasses. Mr. Opheel, near the Savoy, for all sorts of machines. Mr. —, for a new invention he has,

and teaches to copy all sorts of pictures, plans, or to take prospects of places. The king's gunsmith, at the Yard by Whitehall. Mr. Not, in the Pall Mall, for binding of books. The Fire-eater. At an ironmonger's, near the May-pole, in the Strand, is to be found a great variety of iron instruments, and utensils of all kinds. At Bristol see the Hot-well; St. George's Cave, where the Bristol diamonds are found; Ratcliff church; and at Kingwood, the coal-pits. Taste there Milford oysters, marrow-puddings, cock-ale, metheglin, white and red muggets, elvers, sherry, sack (which, with sugar, is called Bristol milk), and some other wines, which, perhaps, you will not drink so good at London. At Gloucester observe the whispering place in the cathedral. At Oxford see all the colleges, and their libraries; the schools and public library, and the physic-garden. Buy there knives and gloves, especially white kid-akin; and the cuts of all the colleges graven by Loggins. If you go into the North, see the Peak in Derbyshire, described by Hobbs, in a Latin poem, called 'Mirabilia Pecci.' Home-made drinks of England are beer and ale, strong and small; those of most note, that are to be sold, are Lambeth ale, Margaret ale, and Derby ale; Herefordshire cider, perry, mede. There are also several sorts of compounded ales, as cock-ale, worm-wood-ale, lemon-ale, scurvygrass-ale, college-ale, &c. These are to be had at Hercules Pillars, near the Temple; at the Trumpet, and other houses in Sheer Lane, Bell Alley, and, as I remember, at the English Tavern, near Charing Cross. Foreign drinks to be found in England are all sorts of Spanish, Greek, Italian, Rhenish, and other wines, which are to be got up and down at several taverns. Coffé, thé, and chocolate, at coffee-houses. Mum at the mum houses and other places; and molly, a drink of Barbadoes, by chance at some Barbadoes merchants'. Punch, a compounded drink, on board some West India ships; and Turkish sherbet amongst the merchants. Manufactures of cloth that will keep out rain; flanel, knives, locks and keys; scabbards for swords; several things wrought in steel, as little boxes, heads for canes, boots, riding-whips, Rippon spurs, saddles, &c. At Nottingham dwells a man who makes fans, hand-bands, necklaces, and other things of glass, drawn out into very small threads."

And here we must, for the present, close; leaving much of what is admirable, both in the miscellaneous style of these quotations, and in far more important things (*ex. gr.*, some remarks on *Study*, on *Error*, &c.) to enrich our columns hereafter.

Macfarlane's Constantinople in 1828.

(Second Notice.)

THE state of the sultan's new troops is a circumstance of so much importance, that we endeavour to place the author's view of it before the public.

"Considering that these troops were, at the time, of little more than a year's standing, they went through their evolutions in good style; they handled their muskets with great activity and tolerable precision; but they had not yet caught the military march-step. The marching, indeed, was the worst part of the exhibition; and its slovenliness is perhaps to be accounted for by the habitual locomotion of the Turks, which is performed by something which I should describe as between a shuffle and a strut, and by their wearing clumsy *papousses*, which fit ill to their feet. The most striking deficiency, of course, was that of non-commis-

sioned officers and subalterns; these being imperfect in their service, threw all the work on a few of the superior officers, who were seen running from place to place, performing the duties of drill-sergeants: even the colonel did this, and was seen racing and storming, and using the flat of his sword, until he appeared ready to drop from heat and fatigue. Strange work this for a colonel! but so few were the subjects possessing any previous knowledge of the military art, that they were obliged to submit to it. Another strange sight to see, was, that many of the officers carried thick heavy horse-whips, made of plaited thongs, not merely for ornament, as was demonstrated by their frequent application to the shoulders of the awkward or careless soldiers. This endurance of blows, which the tacticoes bear with the equanimity of an Austrian recruit, is considered, by those acquainted with the proud and fiery character of the Turkish people, as not one of the least strange workings of the 'new order of things.' The colour of the uniform of the Smyrna corps of regulars is blue; their jackets, like those frequently worn by Italian sailors, are long, and rather more loose than become military *tenue*; their trowsers are very wide down to the knee, where they are tied in, thence they fit close to the leg, and descend to the instep; neither stock nor stockings have been introduced, and the want of them, and bare necks and feet, give a dirty, forlorn look to the whole man in the eye of a European. The European military hat, or *shako*, has not been introduced; but the eastern turban has been entirely put aside. They wear red cloth caps (not small, and gracefully clapped on the crown of the head, as with the Albanians, but large), padded, and descending over the whole of the upper part of the head, and reaching the ears: a blue tassel in silk or wool is pendant from the crown, as an ornament. This description will certainly not convey a splendid idea of the uniform of the tacticoes; but even this, as worn by some of the officers, properly made to fit, and in good materials, with a crescent worked in silver, or in small brilliants (according to their rank), on the breast, with a good cap, and flowing bushy tassel, and a neat pair of morocco leather boots, or at least a pair of stockings in their slippers, does not look amiss. The best part of an officer's equipment is, however, a cloak or mantle, worn occasionally: this is fastened round the neck by a silver clasp, and descends below the knee in loose folds: the colour is a rich Turkish red. It has a graceful and military appearance; and so sensible are the wearers of this, that they can scarcely be induced to resign it by the heat of the dog-days. No people, perhaps, are more attached to dress than the Turks; and had the grand signior's finances permitted, it would have been wise in him to create an affection to his essay (the regular service) by giving them a dashing uniform. The muskets and bayonets of the troops, which were furnished by a house at Marseilles, are of inferior French manufacture, and were not kept remarkably clean. The belts and cartouche boxes were extremely slovenly, and hung too low; a trifling defect to the eye, which they share with the French. The instructors and officers were all Turks. At the commencement, the pasha had a Piedmontese; but he was dissatisfied by his entire ignorance of the Turkish language, without which it was impossible for him to do much; and the soldier of fortune, on his side, thought his services inadequately recompensed, and retired. The colonel and one or two elderly officers had acquired their knowledge during the fatal attempt made

by Sultan Selim to introduce discipline and European tactics. Indeed, it was a few of these men who escaped massacre at the time from the hands of the janissaries, and who were found alive at the suppression of that body, that formed the nucleus of the infant Turkish army of Mahmoud. It was on these men the sultan called, and on them he relied. A very false idea prevails in Europe as to the number of Christians employed in the formation of the new troops, and also as to those actually in Mahmoud's service. The fact is, he never has had more than a few individuals employed merely as instructors, without rank or command in his army, and they had dwindled down to almost nothing before the opening of the Russian campaign of 1828. As the Turks of the *Nisam djeid*, under Sultan Selim, were instructed by French officers, and as the Europeans employed by the present sultan were either French or Italians who had served in Buonaparte's army, the French system of drill and evolution has been naturally adopted for the new troops.

"The countenance and admiration of the fair sex to the new military, and to 'the pomp and circumstance of glorious war,' even though such were but imitations of the faithless Christian, seemed to be pretty generally shared by the young Turks, particularly by those of the city. There were, however, not wanting sneerers and scoffers, and deprecators of the departure from the old and true Osmanli arms and tactics, and the modern and impious adoption of the *unmanly* weapons, and riddling, incomprehensible manoeuvres of the Ghiaours. Such men, indeed, were numerous both at Smyrna and Constantinople, though in the latter city the expression of their contempt and complaints was, for good reasons, much more guarded. Besides the exclusive attachment to what was Mussulman and antiquated—besides their religious fanaticism—a considerable portion of the spirit of janissaryism entered into all this. A grim old Osmanli, from the inland district of Magnesia, a true Turk, who looked upon every change as a crime, happened one morning at the review to enter into conversation with a Levantine gentleman, with whom he was acquainted. 'So these are the new troops,' said he, 'that I have heard so much of; these are the troops that are to defend the Ottoman empire from its enemies! And what, in Allah's name, can the sultan expect to do with these beardless, puny boys, with their little shining muskets? Why, they have not a yataghan among them! What does this mean? It was with the yataghan the Osmanlis conquered these territories and the countries of the Christians; and it is with the yataghan they ought to defend them. The yataghan is the arm of Mahomet and of his people, and not that chibouque-wire I see stuck at the end of their guns. Mashallah! And what sort of a monkey's dress is this? What sort of ugly-faced, shrivelled, puling dogs are these? Why they don't look like Osmanlis! And the land of Mahomet to be defended by such as these! — Baccaloom!' He continued somewhat in this style, blaming all he saw, and breathing his choler from time to time with a—'If it please Allah!' 'Allah be praised!' 'We shall see!' 'What is written is written!' and other good Turkish orthodox exclamations. Of their deploying, their lines, their squares, and other mathematical figures the *tacticoes* formed in the course of their evolutions, he could make out nothing, except that it all appeared very silly. But when they came to firing; when he saw a regular rolling fire maintained along

the line; the firing in platoons; the means of defence of a solid square;—all which was very tolerably executed,—and other things which his philosophy had not dreamt of,—he was obliged to confess, that it would not be so easy as he had imagined to charge and cut such troops to mince-meat, with the yataghan in hand. Indeed, at length his progress to conversion seemed merely impeded by the conviction that, though clever and effective, this mode of warfare was wicked and unbecoming of the children of Mahomet, being derived from profane, infidel sources. One remark of the prejudiced old man does, however, merit attention, at least in my opinion, as I have frequently made the same myself. The *tacticoes*, in fact, do not look like Turks (generally a fine set of men, physically considered); they are short in stature, clumsily made, by no means robust, and abominably ill-visaged. Only a trifling part of this difference can be accounted for by the change in their dress, the rest must be sought for in other causes, to which the following circumstances may afford some induction. On carrying into execution his long-favoured plan for raising a disciplined army, the grand signior directed the levies to be made among young lads, and principally in districts remote from the great cities of the empire; thus wisely ensuring to himself a superior degree of docility, and running little risk of his conscripts having the dangerous taint of janissaryism among them. The regular service, as may be well imagined, was not much affected; and the better class of Turkish peasants bought off their sons from the officers and local authorities, who, in Turkey, are universally corruptible by bribes, to an extent perhaps unknown in any other country. The weight fell on the most degraded of the peasant caste, and for the most part in poor, mountainous, rude countries. The Turkish people, when they first came in contact with the nations of Europe, were remarkably ugly, and their great improvement has been attributed to the intermarriages, once very frequent, with women of different countries, where the standard of beauty is high. But immense portions of the original race, that remained stationary in remote districts (particularly in the interior of Asia Minor, which has furnished so great a part of the levies), can have had no such opportunities of improvement, and may have retained their original Tartar ugliness. To bid farewell to the *tacticoes* of Smyrna, for the present, I will say, from the experience of several months, that they were remarkably docile, inoffensive, and quiet; and that when the news of the battle of Navarino arrived, and the Christians dreaded some movement of popular fury, they considered their presence a valuable protection."

From these *tacticoes* we leap to those of Constantinople (some 300 pages of the volume before us):—

"I have described a portion of the *tacticoes* at Smyrna in the beginning of this work; and though their brethren of the capital were generally somewhat more advanced, most of my early details may apply to both. The uniform, with a variation of colour* for the jacket, was the same, except a great improvement in the article of *chaussure*, which seemed, however, almost confined to the imperial guards, who wore Christian-like shoes, clasped over the instep with a small buckle, instead of the loose, shuffling papousses. Stockings, however, were

* "Some wear Turkey red, some blue, some brown; but when I arrived at Constantinople, they had put on their summer dress of white cotton, the regiments being distinguished by the caps and collars."

scarce even with them. I have said that the want of stock and stocking, and bare legs and bare necks, give a dirty, forlorn look, to the *tacticoes* in the eyes of a European; and were I inclined to further cavil, I might find fault with their wide, baggy trousers, which, confined above the knees, hang about the 'nether man' in a loose, slovenly manner, and should seem to impede the freedom of motion. But the Turks have always been attached to an amplitude in that portion of their toilette, and are accustomed to call a shabbily dressed fellow 'tight breeches.' Great reforms cannot be carried at once, and the sultan satisfied himself by curtailing a few feet of the ambitious diameter. The regulars of Smyrna I have described as an ill-looking set of fellows, unlike Turks; and in my third chapter I have attempted to account for the physical inferiority, which struck me equally at Constantinople, except in a portion of the guards that were picked men. A humorous friend of mine would maintain, that the only difference that struck me arose from the change of dress. 'In their eastern and orthodox attire of loose robes and ample turbans,' said he, 'the Osmanlis impose on the eye; but peel them—strip me the monsters to the skin,' like Colman's ghosts, and what are they?—neither more athletic nor better favoured than these poor recruits.' But wit here, as usual, was not argument, and I still maintain that the *tacticoes* are generally 'short in stature, clumsily made, by no means robust, and abominably ill-visaged.' The good-looking Stamboulis certainly were of my opinion, and wondered where the sultan had collected such a set of scare-crows. Such as they are, however, they almost universally possess a valuable quality in a military view, which the rest of the Turks seem deficient in. They are extremely active, and quick in all their movements. I several times saw them perform evolutions with a rapidity that astonished me, even with the *cette* in manœuvring of some fine European regiments fresh in my memory. These, it is true, were not done neatly or symmetrically, but the result was obtained,—lines were changed, squares, solid or hollow, formed, and the troops again deployed with celerity; and if their style of step and march would not satisfy the critical eye of an English or a German sergeant-major, there was nothing to be said against the promptness and regularity of their fire. I am speaking, it will be understood, of the troops of the oldest standing, and more especially of the imperial guards. There were, at the time, from two to three thousand men at the capital in this advanced stage; the rest were bad indeed. At the breaking out of the present war with Russia, the total of the grand signior's regular troops was rather below than above thirty thousand, in which must be included all those raised in the Asiatic as well as European provinces; and raw recruits, and half-instructed *tacticoes*, must have formed a considerable portion of this whole. [Our author adduces proofs in support of this calculation.]—A conversation I and my friend D. S. had at Smyrna, with a Russian *diplomatic*, after the departure of the ambassadors, but previous to the publication of the sultan's hatt-i-sherif, and several months before the Emperor Nicholas's declaration of war, may throw some light on the feelings and real motives which induced the cabinet of St. Petersburg to a fresh attack on Turkey. 'Do you think,' said this gentleman, 'that Russia can stand by as a quiet spectator, whilst Turkey is thus raising armies on every side?' 'But Russia has no right to interfere with the mili-

tary, any more than with the civil organisation, of a country that owes her no allegiance. The sultan is only replacing with better materials the troops he has suppressed; he is not as yet raising armaments that might awaken the jealousies and apprehensions of his neighbour. 'We will waive the question of abstract right, and look to circumstances as they stand. Russia has grievances of which she may sooner or later be constrained to seek redress from Turkey: now, is it to be expected that she can see with complacency the progress of measures in Turkey that must render the obtaining of that redress more and more difficult? would it be prudent for the emperor to wait, like a hero in the list of chivalry, until the sultan shall have put on all his arms and appointments, and throw the gauntlet in his teeth?' Substituting expediency to right, there was, indeed, nothing to be advanced against the argument, and Nicholas was prudent to seize the moment he did. I return to the tactics. I remarked at Constantinople, as well as at Smyrna, a want of a sufficient number of well-instructed non-commissioned officers and subalterns; a deficiency which threw too much of the business on a few superior officers. This was not so obvious in the guards, but it existed even among them. Another defect, in part consequent on the former, was, that there was not a sufficient gradation of respect and subordination. To the eyes of the troops, the Bimbashi or colonel, with his scarlet cloak and diamond crescent, seemed, indeed, a great personage, and was properly honoured; but the subalterns, dressed little better than themselves, and perhaps, generally, not much superior in condition, education, or manners, were treated with great familiarity. For instance, a fellow in the lines would call or make a sign to his officer, and on his approach, whisper in his ear, or talk and laugh with him aloud; and this I have seen many times during drills. Another fault I could not help observing, was a too general neglect of cleanliness of dress and person. The imperial guards were, during summer, a uniform composed of strong, coarse, white cotton stuff, which too frequently betrayed the marks of powder and gun-polishing, mixed with the stains of the pluff-kettle and contents. The idleness of the Turks would be delighted with our sensible plan of bronzing muskets, but it has not yet been introduced: theirs appear mostly in a dirty condition."

Here we must stop;—perhaps, in a future No., to admit a miscellaneous notice of the anecdotes, &c. with which Mr. Macfarlane's agreeable volume relieves the tedium of graver discussions.

Travels in North America, in the Years 1827 and 1828. By Captain Basil Hall, R.N. 12mo. 3 vols. Edinburgh, Cadell and Co.; London, Simpkin and Marshall.

A book replete with sound sense and judicious information; but one to which even long leisure and mature analysis could not enable us to do sufficient justice. Captain Hall investigates, weighs, and discusses the many subjects presented to him so fully, that our remarks and extracts must fail to exhibit any one of them in all its bearings: we must, therefore, after a hasty perusal too, as the work reached us late, and is only published this day—be content with a very imperfect selection of examples—a selection which, we confess, can furnish but a poor idea of the whole work, and merely serve as suggestions of its character and importance to our readers. It will, we are sure, be amply noticed by others, on both sides

of the Atlantic. Our first specimen is towards the conclusion of a striking inquiry into the relative popular feelings of England and America towards each other.

"The artificial structure of society in the two countries is, besides, so dissimilar in nearly all respects, and the consequent difference in the occupations, opinions, and feelings of the two people on almost every subject that can interest either, is so great, and so very striking, even at the first glance, that my surprise is not, why we should have been so much estranged from one another in sentiment and in habits, but how there should still remain—if indeed there do remain—any considerable points of agreement between us. It will place this matter in a pretty strong light to mention, that during more than a year that I was in America—although the conversation very often turned on the politics of Europe for the last thirty years—I never, but in one or two solitary instances, heard a word that implied the smallest degree of sympathy with the exertions which England, single-handed, had so long made to sustain the drooping cause of freedom. It will be obvious, I think, upon a little reflection, how the same causes have not operated in America to keep her so entirely ignorant of England, as we in England are of America. Nearly all that she has of letters, of arts, and of science, has been, and still continues to be, imported from us, with little addition or admixture of a domestic growth or manufacture. Nearly all that she learns of the proceedings of the other parts of the world also comes through the same channel, England—which, therefore, is her chief market for every thing intellectual as well as commercial. Thus, in a variety of ways, a certain amount of acquaintance with what is doing amongst us is transmitted, as a matter of course, across the Atlantic. After all, however, say what they please, it is but a very confused and confined sort of acquaintance which they actually possess of England. There was, indeed, hardly any thing in the whole range of my inquiries in the United States, that proved more different from what I had been led to expect, than this very point. At first I was surprised at the profundity of their ignorance on this subject; though I own it is far short of our ignorance of them. I was also wellnigh provoked at this sometimes, till I recollected that an opinionated confidence in our own views, all the world over, is the most prominent characteristic of error. The Americans, of course, very stoutly, and I am sure with sincerity, assert their claims to infallibility on this point; and accordingly they receive with undisguised incredulity the more correct accounts which a personal familiarity with both countries enables foreigners to furnish. I learnt in time to see that similar causes to those already stated, though different in degree, in addition to many others, were in action in America to render England as ungrateful a topic with them as America is undeniably with us. The nature of the monarchical form of government, with its attendant distinctions in rank, we may suppose is nearly as repugnant to their tastes as democracy is to ours. The eternal recollections, too, of all the past quarrels between us, in which—probably for want of any other history—they indulge not only as an occasional pleasure, but impose upon themselves as a periodical duty, and celebrate, accordingly, with all sorts of national rancour, at a yearly festival, render the Revolutionary war in which they succeeded, nearly

as fertile a source of irritation to them, with reference to poor Old England, though the issue was successful, as its disasters formerly were to us, who failed. But there is this very material, and, I take the liberty of saying, characteristic, difference between the two cases:—we have long ago forgotten and forgiven—out and out—all that has passed, and absolutely think so little about it, that I believe, on my conscience, not one man in a thousand amongst us knows a word of these matters, with which they are apt to imagine us so much occupied. Whereas, in America, as I have said before, the full, true, and particular account of the angry dispute between us—the knowledge of which ought to have been buried long ago—is carefully taught at school, cherished in youth, and afterwards carried, in manhood, into every ramification of public and private life. If I were asked to give my countrymen an example of the extent of the ignorance which prevails in America with respect to England, I might instance the erroneous, but almost universal opinion in that country, that the want of cordiality with which, I grant, the English look upon them, has its source in the old recollections alluded to. And I could never convince them, that such vindictive retrospections, which it is the avowed pride and delight of America to keep alive in their pristine asperity, were entirely foreign to the national character of the English, and inconsistent with that hearty John Bull spirit, which teaches them to forget all about a quarrel, great or small, the moment the fight is over, and they have shaken hands with their enemy in testimony of such compact. At the same time, I cannot, and never did deny, that there existed amongst us a considerable degree of unkindly feeling towards America; but this I contended was ascribable, not by any means to past squabbles, recent or remote, but almost exclusively to causes actually in operation, in their full force, at the present moment, and lying far deeper than the memory of those by-gone wars, the details of which have long been forgotten, even by the few eye-witnesses who remain, and about which the English of the present day are either profoundly ignorant, or—which comes to the same thing—profoundly indifferent. Be the causes, however, what they may, the curious fact of our mutual ignorance is indisputable. At least so it appears to me; and I have good reason to believe, that such is the opinion of almost every foreigner, continental, as well as English, who has visited America. We, however, in England, as I have said before, frankly and fully admit our very small acquaintance with that country; whereas the Americans, probably with as much sincerity, proclaim their perfect acquaintance with England. The conclusion is odd enough: both parties are satisfied—they are convinced that they know all about us; and we are perfectly conscious that we know nothing about them. While, therefore, I may perhaps indulge myself in the expectation of being able to furnish some slight information to people on this side of the water respecting that country, I have had far too much experience of the hopeless nature of the converse of the proposition, to attempt changing the opinions of the Americans as to what is passing in England. On this topic, indeed, to use the words of Burke in speaking of another nation, the inhabitants of the United States are, it is to be feared, pretty nearly—reason-proof."

Our next extracts relate to the press—an object of infinite importance to every nation of the earth:—

"No foreigner, unless he be a resident in the United States, can take out a copyright in America, either openly or by indirect contrivance. An American publisher, therefore, who succeeds in obtaining a copy of a book written in Europe, may reprint and put it into circulation, without sharing the profits with the author, or having any connexion with him at all. Mere extent of sale, it may be observed, is the grand object aimed at by the American republishers; and as nothing secures this but low prices, competition takes the direction of cheapness alone. This circumstance affords a sufficient explanation of the miserable paper, printing, and binding, by which almost all reprinted books in that country are disfigured. It is very true, they serve their purpose; they are read and cast aside, or, if kept for any time, they inevitably go to pieces. Except in the large cities, in the houses of the wealthiest persons, or in public institutions, there is no such a thing to be seen as a library. Undoubtedly, a vehement passion pervades America for reading books of a certain light description; but there does not exist the smallest taste, that I could ever see or hear of, for collecting books, or even for having a few select works stored up for occasional reference. In truth, the rambling disposition of the great mass of the people, their fluctuating occupations and habits of life, even in their most settled state, and various other causes, some domestic, and some political, puts it out of their power to form libraries;—at all events, be the causes what they may, very few individual persons ever seem to think of such a thing—a transient perusal being all that is looked for.

"The sale of a book does not go on from month to month, or from year to year, as with us—the whole being over in a few weeks, or, at the most, months;—consequently, the printer who is most expert, and most ingenious in cheap devices, makes the most profit while the public curiosity is alive."

We copy, as a miscellany, the account of a visit to Franklin's last resting-place, near Philadelphia:—

"On the 12th of December, we made a pilgrimage to the tomb of Franklin—dear old Franklin! It consists of a large marble slab, laid flat on the ground, with nothing carved upon it but these words:—

BENJAMIN
AND
DEBORAH } FRANKLIN.
1790.

Franklin, it will be recollected, wrote a humorous epitaph for himself; but his good taste and good sense shewed him how unsuitable to his living character it would have been to jest in such a place. After all, his literary works, scientific fame, and his undoubted patriotism, form his best epitaph. Still, it may be thought, he might have been distinguished in his own land by a more honourable resting-place than the obscure corner of an obscure burying-ground, where his bones lie indiscriminately along with those of ordinary mortals; and his tomb, already wellnigh hid in the rubbish, may soon be altogether lost. One little circumstance, however, about this spot is very striking. No regular path has been made to the grave, which lies considerably out of the road; but the frequent tread of visitors having pressed down the rank grass which grows in such places, the way to the tombstone is readily found without any guide."

Our last, for the present week, affords a curious sketch of manners:—

"One day, when walking through the streets of Baltimore, my eye was caught with the following title-page of a book stuck in a shop window:—'The American Chesterfield, or Way to Wealth, Honour, and Distinction, &c. &c., with alterations and additions, suited to the Youth of the United States. By a Member of the Philadelphia Bar.' The work in question I found to contain, besides an abridgement of Lord Chesterfield's Letters, 'a chapter addressed to the Americans.' I should probably not have ventured to touch on these delicate topics, had it not been for this casual opportunity of quoting the words of a witness who must be supposed impartial. 'The foregoing instructions,' says the writer, were originally written for the improvement of a European. The editor of this work takes the liberty of adding a few remarks, addressed particularly to the young gentlemen of the United States. As there is no nation that does not exhibit something peculiar in its manners worthy of commendation, so there is none in which something peculiar cannot be observed that demands reproof. Should an American gentleman, during a visit to Europe, be seen chewing tobacco, it matters not what may be his dress, or his letters of introduction, he will immediately be set down as a low-bred mechanic, or at best, as the master of a merchant vessel. No gentleman in Europe ever smokes, except it be occasionally, by way of frolic; but no person, except one of the very lowest of the working classes, is ever seen to chew. The practice of chewing leads to that most ungentlemanly and abominable habit of spitting upon the floor and into the fire. No floor in the United States, however clean,—no carpet, however beautiful and costly,—no fire-grate, however bright,—not even our places of divine worship, are free from this detestable pollution. A person who is guilty of so unpardonable a violation of decorum and outrage against the decencies of polished life, should be excluded from the parlour, and allowed to approach no nearer than the hall-door steps. When in a house, and a person has occasion to spit, it should be into one's pocket handkerchief, but never upon the floor or into the fire. The meanest and the rudest clown in Europe is never known to be guilty of such an indecorum; and such a thing as a spitting-box is never seen there, except in a common tavern. There is another habit, peculiar to the United States, and from which even some females, who class themselves as ladies, are not entirely free; that of lolling back, balanced, upon the two hind-legs of a chair. Such a breach of good-breeding is never committed in Europe. Lolling is carried even so far in America, that it is not uncommon to see attorneys lay their feet upon the council-table; and the clerks and judges theirs also upon their desks, in open court. But, low-bred and disgusting as is this practice, how much more reprehensible is it in places of a still greater solemnity of character! How must the feelings of a truly religious and devout man be wounded, when he sees the legs extended, in the same indecent posture, in the house of God! Another violation of decorum, confined chiefly to taverns and boarding-houses of an ordinary class, is that of reaching across a table, or across three or four persons sitting next to him, who wishes for some particular dish. This is not only vulgar, but inconvenient. It is a sure sign of having been accustomed to low company, and should be avoided by every one who is ambitious of being thought a gentleman. The nasty practice of carving with one's own knife and fork, and of using one's own knife or spoon when wanting salt or

sugar, does not call less loudly for amendment; but cannot always be dispensed with, unless the mistress of the house will be careful in performing her duty, by seeing that the table is fully provided with such things as a decent table requires.' Upon these statements I have only to observe, that while I bear testimony to their too great fidelity, I think it right to state, that I never saw the slightest indecency of the kind above alluded to, or of any other kind, in an American church; on the contrary, there always appeared to me the most remarkable decorum in every place of worship which I entered in that country. Neither did it ever fall in my way to see an American judge in the strange attitude above referred to; but I have seen many a legislator extended in the manner described by the American Chesterfield,—a posture of affairs, by the way, which, by bringing the heels on a level with, or rather higher than, the head, affords not a bad illustration of the principle as well as the practice of democracy."

SIGHTS OF BOOKS.

Beauties of the Modern Dramatists; with Notes. Pp. 174. G. Man.

WE give the editor of this little work great credit for industry; but we must confess, these *Beauties* of our Modern Dramatists do not impress us with any very overpowering admiration. The wit ("we call it so, wanting more fitting term,") is as deficient in antithesis as in point,—at least so it is with the great mass of extracts; and the poetical specimens are, too generally, as commonplace as even the comprehension of the galleries could desire. The Drama has declined: we judge by its "*Beauties*!"

Sermons on Christian Duty. By the Rev. Plumpton Wilson, LL.D. Second edition. pp. 317. Rivingtons.

WE do not wonder that these volumes should have reached a second edition; eloquent, luminous, and with a style worthy of subjects of such elevated nature. We most cordially and universally recommend them to our readers: they will be the better for them.

Palaeographia Critica, auctore Ulrico Frederico Kopp Hasso Casselano. 4 vol. 4to. Mannhemii, 1829.

Or this great and learned work, we have seen, perhaps, the only copy which has reached this country; and we take the opportunity of mentioning it as an astonishing monument of human labour and erudition. The first and second volumes treat of the ancient Greek and Roman tachygraphy, or "art of swift writing," and are full of extremely curious information, for the use not only of modern short-hand professors, but of all scholars. The third and fourth volumes apply to the difficulty of interpreting such writings, and discuss some of the most mysterious secrets of antiquity—inscriptions, numbers, symbols, &c. &c. The whole is, as we have said, a very extraordinary production, and illustrated by a multitude of figures, engravings, and fac-similes.

The Adventures of a King's Page. By the Author of "Almack's Revisited." 12mo. 3 vols. London, 1829. H. Colburn.

WHEN Herbert Milton, afterwards Almack's Revisited, appeared, about the end of 1827, we spoke of its author as a clever observer of the world, and a smart writer. The *mystification* of that period ascribed the publication to Colonel Leach; but we are now given to understand that the author is a Captain White. With regard to the King's Page, if we could recall all

the preliminary advertisements about it which have graced the newspapers, it would be as curious a story of preparation and expense as ever were lavished on any publication; but as we have no vocation for such a tale, we shall merely content ourselves with saying, that the novel is one of those in which many individuals who can be readily recognised are made to figure, and many of the circumstances of the day, reviews, races, &c. &c. are described, so as, with a narrative of hero and heroine adventures, to make a book which may amuse the class of readers who patronise circulating libraries, though of a kind which we, as public and literary critics, never can approve.

ORIGINAL CORRESPONDENCE.

Paris, June 15th.

Marino Faliere is now the piece in vogue; consequently, the theatre of the Porte Saint Martin is crowded to such an excess, that those who trust to chance for places must either stand for hours waiting for the opening of the doors, or take a seat behind a three-row hedge of bouquets and turbans. Fortunately, much Christian forbearance is evinced on all occasions where curiosity is to be gratified; and even being broiled, squeezed, jostled, fried, and steamed, are deemed but small evils in comparison to the pleasures arising from vivid emotions. Rapid sensations are as necessary to Parisian constitutions as the air they breathe; and perhaps no author has better succeeded in electrifying the imagination than M. Casimir de la Vigne in his last dramatic work.—On Saturday I went to see *Marino Faliere*; and though we had paid for box tickets, we were obliged to be satisfied with places in the balcony; where we were so unsuccessfully wedged together, that not only was it impossible to move heads or limbs, but a very sigh would have deranged the economy of our packing. This tight stowage of human beings did not, however, prevent the box-opener from coming every quarter of an hour to insist on our reducing our size (as though she imagined us of an elastic nature), to admit of her cramming between us some slight percentage of twenty stone weight;—for whenever a pecuniary advantage is to be attained, impossibilities appear possibilities. I never recollect to have witnessed so much enthusiasm as the public testified during the scene between the *Doge* and *Israël*; even the working classes appeared alive to the flashes of *esprit* with which it abounds. Now and then there were a few reproving voices heard when the senate's dignity was called into question; but the pervading sentiment was that of admiration. Ladies, of course, shed tears—weeping being the peculiar privilege of the tender sex, and one they use largely, to the great inconvenience of their less sensible neighbours: for nothing is more provoking than pocket-handkerchiefs being flourished every now and then before the eyes, or having one's attention interrupted by sobs. M. de la Vigne has received much credit for having, in opposition to Lord Byron, made the *Doge's* wife a victim to love previous to her marriage. It seems a strange contradiction, that to render a heroine interesting, she must be guilty of the only fault for which human charity makes no allowance! The English bard is said to have used, or rather abused, his poetical license in imagining an immaculate woman—such being contrary to nature. There is, however, something novel and pure in the idea of a being rising above earthly passions; and here, at least, Byron shewed his superior

taste: besides, one grows weary of Magdalens, remorse, and repentance;—a virtuous woman, even in ideal life, would create some variety.—The arrival of English actors and actresses is looked forward to with impatience; and the amateurs of Shakespeare and British performances have already purchased tickets. We also expect here a Spanish *troupe* of comedians, as the theatres in Spain are to be closed for six months.

There are few of the new works worthy of notice; memoirs are still the order of the day. *On s'ennuie des rois et de leurs maîtresses*; for, thanks to the revelations of "a lady of quality" and Madame de Barry, we hear of nothing else; and kings are reduced from demigods to less than demi-men. "Monumens des Grands Maîtres de St. Jean de Jerusalem," by the Vicomte de Villeneuve-Bargemont, is an extremely interesting work—much superior to the Abbé de Vertot's History of Malta; at least M. de Villeneuve does not exaggerate humanity into divinity, or make his heroes angels. The pamphlet entitled "Le Fils de l'Homme," composed by two liberal poets, was seized some days ago; several copies, however, were saved, and sent into foreign countries, notwithstanding the precautions of an active police.—It is reported that General Clausel is to be chosen *Maréchal*, in place of the Prince de Hohenloe-Bartenstein.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR JULY.

1st day—the sun in apogee, and appearing under its least angle of 31 min. 3 sec.: its daily motion at its minimum of 57° 11' 48".
19th day—enters the constellation Cancer.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ First Quarter in Virgo	8	18	31
☾ Full Moon in Sagittarius	16	9	42
☾ Last Quarter in Aries	22	18	14
☾ New Moon in Cancer	30	5	39

The moon will be in conjunction with

	D.	H.	M.
Mercury in Gemini	1	4	40
Venus in Gemini	1	16	20
Mars in Gemini	2	0	0
Saturn in Cancer	2	17	7
Jupiter in Scorpio	12	16	45

5th day, 3 hrs. 30 min.—Mercury in inferior conjunction. 16th day—stationary. 26th day—greatest elongation, and visible as a morning star.

1st day—nearly the whole of the disc of Venus is illuminated: the following are its proportions:—

Illuminated part	11/78736
Dark part	0/24264

3d day—Venus in perihelion. 13th day, 19 hrs.—in conjunction with Regulus in Leo.
8th day, 5 hrs.—Mars in conjunction with Venus; 19th day, with Saturn.

29th day—Jupiter stationary. This beautiful planet continues in a very favourable position for observation, and will, during the remainder of the summer, shine the brightest gem on the brow of eve. The northern belt of Jupiter has been very conspicuous the past month.

Eclipses of the Satellites.

	D.	H.	M.	S.
First Satellite, Emersion	12	10	31	17
	28	8	50	5
Second Satellite, do.	31	9	48	49
Third Satellite, Emersion	3	10	37	19
	3	13	7	50

1st day—the following are the proportions of the ring of Saturn:—

Transverse axis	1/000
Conjugate axis	0/356

30th day, 23 hrs. 45 min.—Saturn in conjunction.

27th day—Uranus in opposition, in Capricornus.

From the preceding sketch of the positions of the planets, it appears, that, excepting Jupiter and Uranus, the whole of the system will be nearly in conjunction at the commencement of the month; and if supposed to be seen from a point in the heavens in the direction of the head of Sagittarius, the sun, earth, moon, Mercury, Venus, and Mars, would be in close proximity to each other in the constellation Gemini, and separated about nine degrees from Ceres and Saturn.

Occultation of Aldebaran.—25th day, midnight.—Owing to the position of the moon's nodes, several occultations of this bright star occur in the present year: that in April was not visible; and the one in this month will be over a short time before the moon rises: when above the horizon of the British Isles, the star will be seen close to the dark edge of the moon: the emersion will be visible to all places a few degrees to the east of the first meridian. The following are the times of its occurrence at three principal observatories:—

	Sideral Time.	Mean Solar Time.
	H. M.	H. M.
Dorpat	21 36	13 29
	22 29	14 16
Königsberg	21 7	12 54
	21 59	13 46
Vienna	Below the horizon	Immersion.
	21 35	18 21
		Emersion.

The other occultations of this star will occur in August, October, and December; and very interesting problems are proposed to be solved by a special attention to the phenomena,—relative to geographical position and terrestrial compression, but principally to a singular phenomenon which has been observed more frequently in occultations of Aldebaran than of any other star,—that, immediately preceding the immersion or emersion, the star has appeared projected on the disc of the moon, as though it was between it and the earth. A similar appearance was observed in the occultations of Jupiter and his satellites, and of Uranus, in the year 1824, which appeared for a few seconds as if embedded in the limb, and yet separated from it by a fine line of light. An attentive observation of the ensuing occultations will, it is hoped, assist in deciding the question, whether this appearance is to be attributed to a lunar atmosphere, or some hitherto unexplained optical inflection.

Deptford.

J. T. B.

LINNEAN SOCIETY.

TUESDAY, June 16.—The last meeting for the season took place this evening; Robert Brown, esq. V.P. in the chair. A paper was read on "the anatomical construction of the organs of voice in birds," by Mr. William Yanell, F.L.S. This paper may be considered as supplementary to a former one on the same subject, which has been published in the Society's Transactions. On the present occasion the author described the various muscles attached to the superior and inferior larynx in birds, by the action of which their extraordinary powers are produced. By numerous drawings he exhibited the modifications in the form as well as the number of the muscles which the various orders present. This communication is esteemed a very interesting one by the Society. George Ord, esq. the distinguished naturalist of Philadelphia, was introduced, and took his seat, for the first time, as a fellow. Several excellent works were on the table: amongst them Dr. Richardson's *Fauna Boreali-Americana*; and Baron De Ferussac's *Histoire des Mollusques*, with the Zoological Atlas to Rüppell's *Travels*

in Northern Africa, presented by these eminent writers. Adjourned till Tuesday, 3d November.

At the previous meeting, a paper, by the Rev. R. T. Lowe, was read, on the *Chamaejas coriacea* and *sempervivum glutinosum*, two plants natives of the island of Madeira.

MEDICO-BOTANICAL SOCIETY.

At the last meeting of this Society the Director took the chair. Earl Stanhope presented Titford's *Hortus Botanicus Americanus*; M. J. Le Souef gave Barton's Essay towards a *Materia Medica* of the United States; and Mr. Aiton several valuable plants, amongst which were the camphor, the coffee, tamarind, and mango trees. Mr. Rocafuerte, the Mexican minister, was admitted a foreign member; and, in presenting a very valuable work on the plants of Mexico, expressed a hope that the correspondence he maintained with the learned men of his own country, and other parts of South America, would not be unprofitable to the Society. A letter was read, addressed by the Right Hon. Sir John Sinclair, Bart. to the President, directing the attention of the Society to the medicinal properties of marine plants. A paper on the prepared extracts of the hemlock and dandelion, by Joseph Houlton, esq. was also read.

LITERARY AND LEARNED.

Oxford, June 30th.—The following degrees were conferred:

Bachelor in Divinity.—Rev. A. B. Clough, Fellow and Tutor, Jesus College.

Bachelor in Civil Law.—W. Evans, Jesus College.

Masters of Arts.—Rev. J. Oliver, Worcester College; Grand Compounder; Rev. G. Heron, Brasenose College; Rev. H. Fowler, University College; Rev. W. M. Ellis, W. Dowdewell, Christ Church; F. V. Woodhouse, Rev. W. S. Robinson, Rev. G. G. Gardiner, Rev. J. Ley, Rev. H. Willoughby, Exeter College; Rev. R. W. Kemplay, Queen's College; Rev. W. Tahourdin, Fellow, Rev. P. Maurice, Chaplain, New College; Rev. H. W. Hikes, E. Benbow, Pembroke College; Rev. D. Wilson, Wadham College; W. Purton, Trinity College.

Bachelors of Arts.—S. H. Whittrick, A. Hadfield, St. Mary Hall; J. F. West, Scholar, H. C. Partridge, Brasenose College; J. S. Williams, W. Williams, Jesus College; S. H. Palaret, Worcester College; E. Fitzgerald, J. Ekins, H. B. Lott, Balliol College; J. Wood, Merton College; E. M. Atkins, Magdalen College; R. Jones, Oades' Exhibitioner, Pembroke College; B. W. R. Boothby, C. Baring, Students, the Earl of Osowry, W. R. Fremantle, Christ Church; W. Synes, Wadham College; H. Wells, Trinity College.

The prizes for the year 1839 have been adjudged to the following gentlemen:

Latin Essay.—Mr. Sewell, Fellow of Exeter College.
English Essay.—Mr. Denison, Fellow of Oriel College.
Latin Verse.—Mr. Willmot, Scholar of Balliol College.
English Verse.—Mr. Cloughton, Scholar of Trinity College.

SOCIETY OF ANTIQUARIES.

JUNE 2d.—Hudson Gurney, Esq. M.P. V.P. in the chair. The secretary read, for the third time, the proposed alterations in the rules of the Society, which, after some discussion, were confirmed by ballot of 21 to 2. The meetings of the Society, in consequence of Whitsun-week, were adjourned to June the 18th. Henry Hallam, Esq. V.P. in the chair. A communication from Sir William Betham (Ulster) was read respecting a bronze hand and arm, bearing inscriptions in the Irish character, which was exhibited to the Society some time since, when considerable interest was excited respecting it. The inscriptions on it had been accurately lithographed by Mr. Crofton Croker, and were circulated among the most distinguished Irish scholars, but they were unable to decipher them; all agreed, however, that the characters were extremely ancient. Sir William conjectures this singular relic to have been an ecclesiastical badge of office used as a mace; and stated, that he had found two similar arms

figured in saltier on a seal dug up at Clonmethan, in the county of Dublin, which proved to be the seal of the pope's legate in Ireland in the 16th century. The conclusion of Mr. Britton's paper upon bells, and some other communications, were also read. The meeting of the Society was then adjourned to November next.

In bringing our report of the session to a close, we cannot help remarking on the benefit which the Society of Antiquaries will, in all probability, receive from the new arrangements adopted by the president and council for a conversation taking place after the business of the meeting is over. We also feel it just to advert to the handsome present of a tea service made to the Society by Mr. Hudson Gurney, one of the vice-presidents.

ASIATIC SOCIETY.

JUNE 20th.—Sir Alexander Johnston, V.P. in the chair. The Right Rev. the Bishop of Calcutta was introduced, and took his seat for the first time as a member; on which occasion the chairman congratulated the Society on such an accession to their body. Drs. Christie and Kennedy, the Rev. Dr. Mill, principal of Bishop's College, Calcutta, and several others, were elected; Professor Charnoy of St. Petersburg, and the Rev. R. J. A. Gonsalves of Macao, were chosen foreign members. A great variety of donations were on the table; amongst them we noticed sundry specimens of the *materia medica* of Java, a copy of the *Grammatica Latina ad usum Sinensium*, Mr. Green's *Nismatic Atlas of Grecian History*, Burnouf's edition of the text of the *Vendidad Sade* (a work of Zoroaster's), Jomard's *Description de la Ville du Kaire*, and numerous other foreign works of literature. A dissertation on the establishment and present state of the Arabic press, both in the East and West, by F. C. Balfour, Esq. was read.

STATE OF OPINION IN INDIA.

As the Parliament of Great Britain will very soon be called upon to legislate for eighty millions of British subjects in India, it is important that the people of this country should be informed of the opinions and feelings which the natives of that part of the world entertain at present upon the subject of education, and upon that of every branch of science and literature, and every department of the administration of justice and government; and also the great sense of gratitude which they are capable of entertaining for all those who promote their welfare, and improve the state of their government.

Sir Alexander Johnston, as Vice-President of the Royal Asiatic Society of Literature in London, at their last anniversary meeting, in congratulating them on the strong feeling which had recently shewn itself in every part of India in favour of education, science, and literary research, alluded to a variety of interesting documents illustrative of this spirit. Of these we have selected the three following, as coming from different parts of India and different classes of the people: they afford the strongest and most interesting proof of the rapid and general progress of the feeling to which we have alluded. The first is an address presented by the principal native inhabitants of Bombay to the two surviving judges of the King's Supreme Court at that place, on the death of the late Chief-Justice West, who had rendered himself popular with the natives of the country by the manner in which he carried into effect amongst them the provisions of the Act of Parliament of 1826, by which those

rights and privileges of sitting upon juries, which had been introduced amongst the natives of Ceylon with so much success by Sir Alexander Johnston in 1811, were, in consequence of that success, extended to the natives of the continent of India.—The second is a letter from the King of Tanjore to Sir Alexander Johnston, thanking him for a colossal bronze bust of Lord Nelson, executed by the late Hon. Mrs. Damer, which her relative Sir Alexander had sent to the king, with a diploma nominating him the first honorary member of the Royal Asiatic Society.—The third is a letter from Radhakant Deb, a native of high caste and considerable talents, and the native vice-president of the Agricultural Society at Calcutta, to the same distinguished individual, in return for his having proposed him as a corresponding member of the Asiatic Society, in consequence of the ability which he had displayed in some communications made by him to that Society upon subjects of oriental literature and science.

To the Honourable Sir Charles H. Chambers, Knight, &c. and the Honourable Sir John Peter Grant, Knight, &c., Judges of his Majesty's Supreme Court of Judicature, Bombay.

My Lords.—We, the undersigned members of the several tribes composing the native community, subject to the jurisdiction of his Majesty's Supreme Court of Judicature under the Bombay Presidency, beg leave respectfully to present ourselves before your honourable bench, for the purpose of offering a last mournful tribute of affection to the memory of your late distinguished colleague, our gracious chief-justice, the Honourable Sir Edward West. We are conscious that it is a novelty for the people to come forward to address a bench of English judges on such a subject; it is no less a novelty (actually witnessed by many of us) to be rescued, in the short space of twenty-nine years, since the establishment of a regular court of British law on this island, from the evils of an inefficient and irregular administration of justice which previously existed. Grateful for such advantages, we resort to those means which alone are open to a community constituted like ours, to express publicly our sense of them; and, indeed, we should justly merit the reproach of want of feeling, did we now silently confine within our own breasts, the grief, the unfeigned sorrow, we experience in the event which has deprived us of him at whose hands those advantages have been so largely extended and confirmed to us. In expressing to your lordships our sorrow for the death of Sir Edward West, we seek a balm for our sufferings, and would fain hope thereby to alleviate the distress with which you must contemplate your earthly separation from a colleague so able and indefatigable, so undaunted and upright. The time is past when any commendation of ours, or, indeed, any earthly honours, can be of value to him, whom the joys and sorrows of this world can no longer affect, and who is, therefore, equally removed beyond the reach of human censure and of human applause. But we should deem it an omission of duty, as well as of gratitude, did we not come forward, now that our motives cannot be misconstrued! to mark, in the strongest manner, the deep sense we entertain of his virtuous administration. The spirit of even-handed justice which prompted his decisions; the unconquerable assiduity and unshaken firmness which he evinced in discharging the functions of his high office; the unshrinking zeal which animated him in making salutary reforms;

but, above all, that high principle of independence and integrity which led him to sacrifice so much of his private happiness to the conscientious performance of his public duties:—these, my lords, are the virtues which have grown upon our gratitude, since every day's succeeding experience teaches us to appreciate their value. In briefly noticing the most prominent features in the administration of Sir Edward West, we cannot but dwell with grateful delight on the easy access which that humane and honourable judge at all times afforded to the poor and needy part of our countrymen. That he rendered the administration of law less expensive to the inhabitants of this Presidency, thus throwing open to the poor the avenues of justice, so long barred against them, is not the least solid advantage derived from a career fertile in benefits. But, great and salutary as was this reform, it did not satisfy that glowing spirit of philanthropy, ever thoughtful to devise, and active to execute, what might lessen the distresses, or increase the happiness, of his fellow-creatures. Scrupulous in the discharge of his high functions as a judge, which alone seemed labour too great even for his energetic mind, he found leisure, and had the condescension, to become himself the advocate of the indigent. But amongst the many great favours received at the hands of Sir Edward West, that for which we would chiefly record our gratitude, is the manner in which, jointly with your lordships, he carried into execution the recent provision of the British legislature for admitting the natives of this country to sit on juries. The wise and conciliatory method he took to give effect to the wishes of Parliament, the condescension with which he conferred with every class of the native community, the prudent deference he paid to all their national and religious feelings, the zeal with which he laboured to overcome innumerable difficulties arising out of the multiform constitution of our body, and the solicitude he displayed to set the intention of the enactment in its true light,—are fresh in the recollection of us all. To these exertions it is owing that the natives of Bombay are now in the enjoyment of one of the greatest privileges of freemen. A knowledge of the virtuous and enlightened character of the late chief-justice cannot fail to have prevailed throughout a large portion of our countrymen in India; but it has only been permitted to the inhabitants of this island to enjoy the immediate fruits of his distinguished judicial administration. However imperfect, therefore, any further addition may prove to this record of our deep sorrow for his demise, and respect for his memory, we beg to announce that we have raised a sum of money which it is designed to make over to the Native Education Society, to be vested by them in government securities, for the endowment of one or more scholarships, and the distribution of one or more annual prizes, according to the amount of interest realised from the total fund, to be denominated 'Chief-Justice West's Scholarships and Prizes.' Engaged as the late judge was himself so earnestly in improving the condition of the natives, we humbly hope that we have devised the most durable and appropriate method of perpetuating the grateful recollection of him among them, and training up our children to the proper discharge of those public duties to which he first shewed them the way. With a firm reliance on the continued favour and kindness of your lordships, we are, with the greatest respect, my lords, your lordships' most obedient and most humble ser-

vants. (Signed by about 140 of the principal Hindoos, Parsees, Mohammedan merchants, and inhabitants.)

Bombay, 1st October, 1828.

To the Hon. Sir Alexander Johnston, &c. &c. his Highness Chatterputry Rajeswari Maharajah Sirfojee Rajah Sahab presents his compliments.

SIR,—The letter which you did me the favour to write to me, together with the bust of the late Admiral Lord Nelson, and the diploma appointing me the first honorary member of the Royal Asiatic Society of Great Britain, reached Tanjore in safety some time ago, and were delivered to me by the resident. I must beg that the delay which has occurred in acknowledging their arrival, may not be considered as any proof that I am indifferent about such flattering marks of distinction; on the contrary, I request that you will assure both the Royal Asiatic Society and the Hon. Mrs. Damer that I fully appreciate the compliment which they have respectively been pleased to pay to me. I wish I could persuade myself that these compliments were well-merited; but I am sensible that I am indebted for them to the partiality of your representations. It is true, indeed, that I have always taken great pleasure in endeavouring, by the establishment of free schools and every other means in my power, to promote among my people the general diffusion of useful knowledge, and the study of such arts and sciences as I thought might be conducive to their temporal advantage or moral improvement; but it would be wrong to say that from what little has been done much good has already resulted. The character and manners of every people are necessarily in some degree modified by circumstances, which, though certain in their result, are more or less slow in operation. In the present state of India, while knowledge is unprofitable, few can afford to become wise, or to devote themselves, whatever predilections may exist, to any particular study or pursuit which does not hold out a fair prospect of a livelihood; but the British nation must ere now have seen enough of their Asiatic subjects to know that they are naturally clear-sighted to their own interests, and keen and persevering in the pursuit of them: they will therefore very readily cultivate such talents as are likely to find profitable and honourable employment, and better their actual condition in life as well as enlighten their understandings. For a long time to come these two objects must of necessity go hand in hand; but concluding that a liberal and enlightened government, anxious for the happiness and prosperity of its subjects, will not be sparing in the requisite incentives to laudable ambition and honourable exertion, I hope it will be found that the moral and political improvement of the people, the development of useful talents and good qualities, and their progress in literature, science, and the arts, will keep pace with the encouragement held out to them, and the confidence bestowed upon them by those rulers in whose hands Providence has placed their destiny. I must again repeat my acknowledgments to your relation the Hon. Mrs. Damer, who at so much personal trouble has sent me a very beautiful specimen of an elegant art: and I beg you will do me the favour to assure the Royal Asiatic Society that I trust their labours may tend to make Europeans and Asiatics better acquainted with each other, and be rewarded with all the other benefits and advantages contemplated by

its illustrious and enlightened founders. What can I say more?

(Signed) SREE RAM PRETAP.

Tanjore, October 11, 1828.

To Sir Alexander Johnston, Chairman of the Committee of Correspondence of the Royal Asiatic Society of Great Britain and Ireland, &c. &c. &c.

SIR,—I have the honour to acknowledge the receipt of your favour of the 4th July, 1828, and beg to express my deep sense of obligation for your kind attention to my communication of the 20th May, 1827, returning you at the same time my sincere thanks for the honour which the Royal Asiatic Society, in compliance with your proposal, was pleased to confer on me, by electing me a corresponding member, and transmitting me a copy of their Transactions. I had the pleasure of replying to their corresponding secretary's letter a short time ago, and of forwarding to him, by the ship Lord Amherst, the second volume of the Sanscrit Dictionary, of which the first volume was before sent for the Society's kind acceptance. It is highly gratifying to me, indeed, that you entertain so good an opinion of the talents of the inhabitants of Asia, as to be anxious to promote their literary attainment, and thus advance their happiness as well as the improvement of their country. Although the encomium you have deigned to bestow on me is perfectly undeserved by any merit in me, yet I feel infinitely obliged for your kindness in forwarding to the governor-general of India a copy of the Society's resolution, in order that his lordship may, as would seem best, encourage my literary pursuits. I have collected some interesting matters to submit to your valuable Society, amongst which, I have been translating into English a small Persian work on horticulture, which I will do myself the honour of sending you as soon as finished.—I have the honour to be, sir, &c.

RADHAKANT DEB.

Calcutta, January 12, 1829.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

(Seventh Notice.)

MINIATURES.

It is no small disadvantage to these gems of art, that they come clustering upon the sight in almost unavoidable confusion. They exhibit, however, an ample show of talent; although we must confine ourselves to the general statement, that among the most attractive are those from the pencils of Mr. A. E. Chalon, Mr. S. J. Rochard, Mr. A. Robertson, Mr. W. J. Newton, Mrs. J. Robertson, Mrs. Green, Miss Madeline Ross, Mr. W. C. Rols, Mr. M. Haughton, Mr. W. Hudson, Mr. C. R. Bone, Miss E. Jones, Miss Heaphy, Mr. Harding, &c.—On coming to 738, *Portrait of the late William Corder, Esq. painted from recollection, from a pencil outline, J. M. Davis*, we looked, paused, reconsulted our catalogue, looked again, rubbed our eyes, applied our glass, and softly repeated "William Corder! No, it is impossible. Esquire: if so, there's an end of the squirarchy; for who would be an esquire after this?" We were proceeding to give line to our thoughts, on which to hang a notice, when caution whispered "It may not be; and, as the old tombstone has it, 'Silence is wisdom!'"

SCULPTURE.

There is little in the sculpture of this year's exhibition to mark the present as an era of

* This signature marks the Mahratta family of the celebrated Sevajee, from whom the Rajah is descended.—*Ed. L. G.*

general improvement in this department of the fine arts, or greatly to distinguish individual excellence. Still there is enough to excite attention, and to shew, that, if works of imagination, and forms of grace and beauty, do not abound, as on former occasions, when the "Lord's Prayer" of Flaxman, the "Children" of Chantrey, the "Eve" of Baily, and the "Psyche" of Westmacott, adorned the sculpture-room of the Royal Academy; there is yet talent enough to fulfil the promise of national reputation which those and similar works held out, whenever it may please the public to elicit it.

No. 1198. *Statue of Sir Edward Hyde East, Bart. to be erected in the Court House, Calcutta.* F. Chantrey, R.A. — This statue is in the same character of chaste simplicity which first brought Mr. Chantrey's great powers into notice, and which, with the admirable truth of his busts, has established his reputation at an elevation far beyond that to which it seems probable that any efforts of his chisel in the classic of art would have raised him. In the latter part of this observation we allude to his basso relievos; No. 1217, *The Parting of Hector and Andromache*, and No. 1218, *Penelope with the Bow of Ulysses*.

No. 1196. *A Brahmin*; No. 1201. *A Mussulman Moulah*; — *Statues in marble; being parts of a monument to the Right Hon. Warren Hastings, proposed to be erected at Calcutta.* R. Westmacott, R.A. — These two fine statues come in excellent contrast to each other; although it is impossible fully to appreciate their merits; as much must depend upon their relative situation in the monument to which they are to belong. In such a case as this, we think it would always be advantageous to the artist, if a drawing of the whole composition accompanied the separate parts.

No. 1199. *Cupid, a statue in marble.* J. Gibson. — This youthful figure is evidently formed on the model of the antique, and is full of beauty and elegance.

No. 1197. *Marble Statue of the late Dean of St. Asaph.* J. Ternouth. — It is for the benefit of the living that the memory of departed excellence is thus perpetuated; but subjects of this nature do not task the imagination of the artist: all that they require is truth in the resemblance, and a certain quiet dignity in the disposition of the figure. In both these respects Mr. Ternouth has been eminently successful.

NEW PUBLICATIONS.

England and Wales. From Drawings by J. M. W. Turner, Esq. R.A. With descriptive and historic Illustrations, by H. E. Lloyd, Esq. No. 6. Jennings.

THIS work may be considered, with reference to English landscape, as on a par with Mr. Lodge's elegant publication with reference to English portrait. The Views in the present No. are, "Malmesbury Abbey," "Kilgarren Castle, Pembroke," "Exeter," and "Richmond, Yorkshire." They are all beautiful; the View of Kilgarren, especially, is singularly powerful and picturesque.

A Turk, Plate 13, and Portraits of the Lady Caroline Lascelles, the Lady Georgiana Agar Ellis, and the Countess Gower, Plate 14, of Lithographic Imitations of Sketches by Modern Artists, by R. J. Lane, A.R.A.

THE first is a picturesque little fragment of poor Bonington, whose loss to the arts of this country can never be sufficiently lamented; the second is a combination of three tasteful

sketches, *en profile*, by J. Jackson, Esq., R.A. We doubt if the subject of the first of these interesting plates ever had in his harem three such lovely women as the subjects of the last of them.

ORIGINAL POETRY.

MATRIMONIAL WISHES.

(Anecdote verified.)

A HAPPY pair, in smart array,
By holy church united,
From London town, in open *shay*,
Set off, by love incited.

The day was dull as lead could be,
So (dreaming of no pun)
Quoth John, "I hope, my dear, that we
May have a little sun."

To which his bride, with simple heart,
Replied ('twas nature taught her),
"Well!—I confess—for my own part,
I'd rather have a daughter!"

HYMEN.

DRAMA.

KING'S THEATRE.

ON the night of our last publication, Rossini's opera of *Tancredi* was performed at this theatre. Of Madame Malibran's personification of the juvenile hero, we are sorry that we cannot speak altogether in favourable terms. With the exception of that most beautiful and effective duet of "Lasciami, non t'ascolto," in the second act, and in which Sontag takes an equal part, the performance of Malibran was more characterised for vocal flourishing and histrionic gesticulation, than for appropriate feeling and pathos. From the extravagant tumblings, ground and lofty, of Madame M., in the vocal execution of Rossini's beautiful cavatina of "Di tanti palpiti," we could hardly recognise the original melody of that exquisite air. The music of Rossini is already sufficiently embroidered, and does not require any tasteless tinsel, or gingerbread gaudery, to add to its original garb. How different in this particular is Pasta! Pasta rather diminishes than adds to the numberless notes of this popular composer: aught of alteration she makes in the text of her author is always for the better. With Malibran it is quite the reverse. This proceeds, in a great measure, from an ambitious desire in the latter to display the extraordinary compass of her voice. But Madame M. should bear in recollection, that though she possesses a voice of great extent, and in which, by the by, there are two distinct registers, yet it is not, by nature, sufficiently flexible to give full effect to *executional* passages, — and this is principally the cause why she so frequently fails in her wandering flights.

On Monday night a variety of dramatic sketches were given on these boards; as much (with the exception of one, Mr. Begrez) for the benefit of the different performers' fame as for the benefit of Mr. Bochsa's pocket. The novelty of the night was *Acis and Galatea*. Braham personated the Sicilian shepherd, and acquitted himself to the universal satisfaction of his crowded auditory: — never was he in higher song. The part of *Galatea* was sustained by Miss Paton; and into abler hands it could not possibly have fallen. But another chief attraction of the piece was Zuchelli, in the character of the celebrated Cyclops. We have heard Bartleman in his best day; but even the performance of that gifted vocalist must sink in recollection, after the extraordinary effect produced by Zuchelli in the part of *Polyphemus*.

The succeeding performance was that of the tomb scene in *Romeo e Giulietta*. Malibran personated the distracted lover. Her performance of this character — (and, after our previous remarks, we should be doing her injustice not to record it) — approximated nearer to perfection than that of any other character in which she has as yet appeared. In her recitative she displayed her beautiful rich contralto tones to the greatest advantage; all unmeaning embellishment was abandoned, — and had she not, in Pasta's celebrated song of "Ombra odorata aspetta," indulged in her wonted predilection for flights of fancy, her *Romeo* had been faultless. In *Giulietta*, Sontag had but little to do; she was a "sleeping partner," until she rose from the silent tomb — and was roused to excited action by the appalling intimation of *Romeo's* unfortunate fate. Here Sontag played admirably up to Malibran. The whole of this scene excited intense interest. The dying moments of Malibran, and her final drop, were given quite *à-la Kean*. The ladies in the boxes, who were not prepared to witness a female fall flat upon her face, were quite electrified. The curtain dropped behind the departed lovers; and both bodies lay prostrated for some seconds on the boards, until removed by the stage servants. This, however, added considerably to the dramatic effect; and the illusion had been complete, but for the busy interference of the *resurrection men*, who now practise their calling within the walls of this theatre. We must not, though late, omit to mention the admirable acting and singing of Blais in *La Vestale*. We conclude by seriously advising Mr. Begrez never again to meddle with the music of Handel.

DRURY LANE AND COVENT GARDEN.

DRURY LANE closed last Saturday, and Covent Garden last Thursday. The season, we regret to say, has been far from profitable. Each theatre has had its flashes of good fortune; but they have been but flashes, like the lightning's, which are gone

"Ere one can say 'it lightens.'"

Want of novelty cannot have been the cause, for there have been twenty-seven new pieces produced between them, — sixteen at Drury Lane, and eleven at Covent Garden; — nor want of success, as *Rienzi*, *Charles XIIth*, *Massaniello*, *the Maid of Judah*, and *Home, sweet Home* — to say nothing of pantomimes and Easter-pieces — have all for a term brought large sums of money. That these establishments should suffer, in common with all others, from the peculiar pressure of the times, is to be expected; yet as, despite the want of money as generally complained of, the best pieces produced this season have really brought it in shoals, we have a right to place the heavy loss to the account of circumstances unconnected with the public. Law has pounced upon Covent Garden; and the poor theatre quivers in its clutch like a sparrow in the talons of a hawk. The star system — the next most fatal misfortune on the theatrical list — has shed its baneful influence upon Drury Lane. Did the management put up the *Provoked Husband*, or the *Jealous Wife*, with *Love in Wrinkles*, or *Massaniello* — away went from sixty to eighty pounds between three performers, before the regular nightly expenses could be thought of. Place only twenty or thirty such evenings at the back of a rent of 12,000*l.*, and let our readers say if the lessee or proprietor of a theatre royal has not some reason to shudder at a bad box-book, or a pit you may count the heads in.

The strength of Drury Lane has this season lain in its new pieces. The tragedy of *Rienzi*,—the dramas of *Charles XII.*, the *Youthful Queen*, and the *Partisans*,—the farce of *My Wife! what Wife!* and the operas of *Massaniello* and *Love in Wrinkles*, rank justly high amongst modern dramatic productions, either for their intrinsic merit as compositions, or for the effect of their situations and music. Covent Garden has existed principally upon revivals, and the popularity of Mr. Kean, Miss Paton, and Madame Vestris. Out of the eleven new pieces produced upon its stage, only one (*Woman's Love, or the Triumph of Patience*), has had any pretension to language or character as a drama; and but two (the *Maid of Judah*, and *Home, sweet Home*), have, by their music and decorations, merited the approbation of the press and the public. We have excepted the pantomimes and Easter-pieces at both houses—those necessary gew-gaws having, like *Tom Thumb*, done their duty, and done no more. We shall conclude this brief sketch of the winter campaign with our usual list of the killed and wounded on both sides.

Drury Lane: Season, 1828-29.

Oct. 9.	<i>Rienzi</i> , Tragedy	Miss Mitford.
24.	<i>Youthful Queen</i> , Drama	Shannon.
Nov. 11.	<i>Rhyme and Reason</i> , Farce. (5 nights)	Lunn.
22.	<i>The Beggar's Daughter</i> , Comedy. (Withdrawn)	Knowles.
Dec. 4.	<i>Love in Wrinkles</i> , Opera	Lacy.
11.	<i>Charles XII.</i> , Drama	Planche.
26.	<i>Queen Bee</i> , Pantomime	Barrymore.
Jan. 12.	<i>Cassillon</i> , Tragedy	Walker.
Feb. 12.	<i>Master's Rival</i> , Farce. (4 nights)	Peake.
21.	<i>Peter the Great</i> , Drama. (6 nights)	Morton and Kenney.
Mar. 10.	<i>The Casket</i> , Opera. (2 nights)	Lacy.
21.	<i>All at Sixes and Sevens</i> , Farce. (Withdrawn)	C. Dibdin.
April 2.	<i>My Wife! What Wife!</i> Farce	Poole.
20.	<i>Thierne-Na-Oge</i> , Easter-Piece	Planche.
May 4.	<i>Massaniello</i> , Opera	Kenney.
21.	<i>The Partisans</i> , Historical Play	Planche.

To which may be added four new Divertissements.

Covent Garden: Season, 1828-29.

Nov. 5.	<i>The Soldier's Stratagema</i> , Comedy. (2 nights)	Lacy.
Dec. 5.	<i>Sublime and Beautiful</i> , Farce—altered from the Sultan by	Morton.
17.	<i>Woman's Love</i> , Play. (5 nights)	
26.	<i>Harlequin and Red Riding-Hood</i> , Pantomime	Farley.
Jan. 15.	<i>Nymph of the Grotto</i> , Opera	Dimond.
Feb. 3.	<i>Widows Bewitched</i> , Comedy. (4 nights)	Lunn.
5.	<i>Yvra, Melodrama</i> . (3 nights)	Bishop.
23.	<i>Battle of Pultowa</i> , Melodrama	Raymond.
Mar. 7.	<i>Maid of Judah</i> , Opera	Lacy.
19.	<i>Home, sweet Home</i> , Musical Drama	Pocock.
April 30.	<i>Devil's Elixir</i> , Easter-Piece	Bail.

To which may be added, two new Divertissements, and the farce of *Master's Rival*, successfully transplanted from Drury Lane.

HAYMARKET THEATRE.

M^r. POOLE's pleasant little comedy is established in public favour, and, in the hands of two or three clever performers, stands admirably out from the rest of the entertainments, which, with few exceptions, have scarcely deserved that name. We regret to be so often obliged to tell the manager of this theatre, that operas are out of place at it, even had they a company capable of supporting them decently. As it is, without even a second-rate singer attached to it, the murdering of Mozart and Rossini, Boteldieu and Bishop, passes all endurance, and we are bound to enter our critical protest against it. When Miss Paton and Madame Vestris were members of the company, there were reasons for introducing some music in the light and lively pieces written to display their peculiar talents; though even then they bore the burden alone, having neither tenor, bass, chorus, or orchestra, fit to support them. But with them the spirit of song departed, which, by the way,

never had any business there, but was merely an agreeable intruder for the time being. Besides this, operas were not then performed during the summer in the capital way they now are at the Lyceum. Times have changed, and it seems downright folly for the Haymarket to volunteer a nightly display of its deficiencies, and provoke the most mortifying comparisons, when it is in its power to defy competition in its own legitimate, and we may say unique, style of performances. We have another complaint to make of the management of this theatre;—the unexampled lateness of the hour at which its entertainments conclude. The curtain frequently rises for the last piece after midnight; and the other evening, *The Heir at Law*, a long five-act comedy, commenced after two other dramas, at nearly eleven o'clock. We are convinced this cannot be good policy. Both actors and audience are tired to death, and the *répertoire* of the theatre is unnecessarily exhausted and deteriorated. We have no doubt we shall be set down amongst the list of "d—d good-natured friends" for volunteering this advice and remonstrance; but we shall, notwithstanding, persevere in pointing out such reforms as we sincerely think will ultimately benefit all parties. Of the new performers, Miss Melton and Mr. Western appear to have most claim on our approbation: but we repeat, operas are so foreign to the soil of the Haymarket, that it is unfair to criticise singers so situated. No music, earlier hours, and better scenery,—and the Haymarket would be the pleasantest theatre in London.

VARIETIES.

Gas-Lighting in Egypt.—The Viceroy of Egypt is about to make an arrangement with an English company for lighting Cairo and Alexandria. He has already made an experiment at a palace of his own near Cairo, and is said to have been much delighted with the effect produced.

Climbing-Boys.—A philanthropic society has just been formed at Paris, for the purpose of ameliorating the condition of the numbers of children formerly seen in the streets, who gained but a scanty subsistence by sweeping chimneys. The plan of the society is, to get together a number of these young chimney-sweepers, and to put the amount of their labour into one common purse. In order to provide them lodging, clothing, religious instruction, and education; and even, if possible, to procure for them another trade, and to send them back to their parents. This society seems to be highly deserving of the public patronage, as it supports itself without soliciting charitable contributions. A regular table of prices has been made out, so that no inconvenience can arise in this respect. The charge for sweeping a first-floor chimney is about three-pence; and the scale rises at the rate of about a halfpenny more for each floor. About eight-pence is charged for sweeping a kitchen chimney; and persons who like to subscribe, may have their chimneys swept about five-and-twenty per cent cheaper.

Lusus Naturæ.—At one of the recent meetings of the Academy of Sciences in Paris, M. Geoffrey St. Hilaire presented a drawing of a living girl having two heads and two busts. She was born at Sassari in Sardinia, in March last, and is now exhibiting at Turin, from whence she will be brought if possible to Paris. This extraordinary production of nature was baptized by two names, Ritta and Christina. Her size at the time of the birth was that of a

fully-formed infant: Ritta, it is stated, appears to suffer; but Christina has good health. The description of this double child, which was necessarily imperfect, from the want of good information to M. Geoffrey St. Hilaire, led to a long conversation, in which three or four instances of living children with two heads and bodies were mentioned. Among others alluded to, was that of the twin female in England; and another of an individual with two heads, who lived twenty-eight years.

Liberia.—The new establishment of Millsburg, in the American colony of Liberia, in Africa, is in the most flourishing state. Every colonist has a fine farm, well stocked, and the building of the houses is almost finished. It is the same with the two other establishments of Caldwell and Halfway Farms. The missionaries, who had all been ill, are out of danger. They are also about to build at Millsburg a sufficient number of houses to receive a reinforcement of between a hundred and fifty and two hundred additional emigrants.

Civilisation of Africa.—One of the chiefs of the town of Usu, near the Danish fortress of Christianbourg, on the coast of Guinea, sent, in the year 1826, into Denmark his son, Noi-Davanna, sixteen years of age, to receive a European education. The king especially intrusted M. d'Abrahamson, his aide-de-camp, with the charge of this youth, who had masters of every description. After having accepted with pleasure the religious instruction offered him, he consented, with lively demonstrations of gratitude, to be baptized. The king was his godfather. In August, 1828, Frederick Davanna returned to his country, accompanied by four young priests, to whom had previously been communicated all the information and materials necessary for the purpose of diffusing religious and other knowledge by the means of mutual instruction.

Hint for a little Drama.—Near Fort Hardy, in North America, celebrated for being the place at which General Burgoyne surrendered to General Gates, is the following simple inscription, cut in the bark of a yellow pine—"Jane M'Crea, 1777." This young American female, at the moment at which she was about to be married to an officer of General Burgoyne's army, saw her lover compelled to depart, in the conduct of the troops whom he commanded, on their retreat before the American army. Retained by his duty, the young soldier sent for his bride an escort of Indians, who followed the English as auxiliaries. Animated by joy and hope, Miss M'Crea accompanied them without distrust. They massacred her; and when her lover hastened to meet her, an Indian presented him with her bleeding scalp!—*Milbert's Itinéraire Pittoresque du Fleuve Hudson, &c.*

The Heart.—M. Martini, Professor of Physiology at Turin, has published a curious and interesting work on the heart, its passions, and feelings. M. Martini does not agree with those physiologists who, like Bichat, refer them all to organic life; or, like Cabanis, impute them to the state of various viscera; or, like Gall and Spurzheim, fix their seat in the cerebral organs. He thinks they depend on the general organisation, influenced by climate, temperament, constitution, age, sex, imagination, education, health, and a thousand other physical and moral causes; and he allows to particular organs only an operation, more or less direct, on their development and modification. Self-love, the primordial instinct from which all the other instincts proceed, is, according to M. Martini, the impulse and the object of all

the passions. In conclusion, he endeavours to shew how each of them may receive a direction leading to happiness.

Tunbridge Wells.—The Messrs. Bramah (so universally known for their many ingenious inventions and useful and scientific improvements) have, we observe from a circular letter, undertaken to extend and increase the attractions and accommodations of Tunbridge Wells. Long a favourite resort of ours, we are glad to see this necessary task undertaken by such competent and able parties.

A French paper says, "The system employed throughout Austria for spreading instruction among the lower orders is attended with great success. In each village are schools, of which the masters are paid by government. No one is allowed to marry who cannot read, write, and shew some acquaintance with arithmetic; and, under a penalty, no master can employ a workman who is not able to read and write. Small works on moral subjects, written with great care, are circulated among the lower classes. Hence crimes are extremely rare; and in the course of a twelvemonth scarcely two executions take place at Vienna."

From a table published by the *Gazette des Cultes*, it appears that the bequests made to the clergy and ecclesiastical establishments of France, in real and personal property, during the four years, 1825, 1826, 1827, and 1828, amounted to 20,750,984 francs, of which 67,547 francs only were made to non-catholic establishments. During these four years the bequests to hospitals amounted to 17,263,505 francs; to communes, 2,966,833 francs; to the fine arts, 32,276 francs; to monts de piété, 9,300 francs. The department of the Seine alone figures for the clergy 2,488,257 francs; and for communes, 71,852 francs. It is shewn that in the departments which were the seats of the principal establishments of the Jesuits, the bequests were in an exorbitant proportion. Thus in those of the Somme and Vienne, where St. Acheul and Montmorillon are situated, the bequests during 1827 and 1828 were, in the former, 467,238 francs; and in the latter, 600,053 francs.

A tragedy, entitled *Marino Faliero*, by Thomas Zanli Sajani, has recently been published at Bastia in Corsica. It is in most parts similar to the *Marino Faliero* of Lord Byron, but differs in the catastrophe.

It is stated in a French paper, that the King of France, the Duke of Bourdeaux, and the Dauphin, have between them more than one hundred aides-de-camp, who receive pay as such; whereas the King of England has only two aides-de-camp, the King of Prussia, and the Emperor of Austria, one each.

Bavarian Silk.—Last year's cultivation of this material in Bavaria produced 366 pounds weight of cocoons, and thirty pounds of spun silk. For the support of the worms, 82,844 old mulberry trees are at hand, and 1,500,000 young plants in a thriving state.

Human Merit: Epigram.

With some their merit lies in what they've done;
With some that what they've done they have re-
pent;
But the chief merit of a thousand to one
(Having none other, and, too, wishing none)
Is, that they are contented. S. W.

The Week.—The French Theatre ended its campaign on Friday the 19th, and we are sorry to learn that it has not been very successful. Perhaps greater variety was required—vaudevilles and light pieces—and the regular drama only when a more powerful and efficient company could be mustered.—Among the dramatic news, we are sorry to have to record the death

of poor Terry, on Tuesday last. He had been long a severe sufferer, and fell at last before a fatal attack of paralysis. The better portion of Mr. T.'s life was spent in Scotland, where he married Miss Nasmyth, the daughter and sister of the celebrated artist, and herself eminent as a landscape-painter. He was much esteemed, and long enjoyed the intimacy of Sir Walter Scott and the leading literati of that country.—Among our periodical contemporaries some changes are announced. The London Magazine has been bought by, for incorporation with, the New Monthly.—A sweet portrait of Mrs. Arbuthnot, engraved by Giller, after Lawrence, is already in our hands: it is to adorn the next Belle Assemblée.—Captain Ross sailed on the 13th from Stranraer, in his steamer; leaving behind him, however, the vessel which was intended to carry stores, provisions, &c.—A fine etching, by Burnet, of Wilkie's Chelsea Pensioners, was shewn by the Duke of Wellington to the company which his Grace entertained on the anniversary of Waterloo. This engraving promises to be a *chef d'œuvre*.—The Horticultural Fête of to-day, clouds and atmosphere favouring, bids fair to be a fine entertainment, as indeed it ought to be, agreeably to the prices paid. We are not of the grumbling class, nor much inclined to find fault with the doings of the world; but the means by which the cost of the tickets for this show has been doubled, seem to us very unworthy of a respectable Society. Unintentionally, no doubt, looking at the character of the managers, the vouchers for tickets to members were so inexplicit and so loosely worded, that many, to these in their possession, were not aware the limit of time applied not to their sending in their requests, but to the future exchange of one sort of cards for another. To their surprise, when they came to understand this, they found, that for the pleasure of having kept half a dozen tickets (called orders for delivery of the other tickets of admission) in their pocket a few days, they were charged *two* guineas instead of *one*!! Such an imposition on the members for such a mistake, arising out of the committee's own want of plain-dealing, must, we fear, excite feelings very injurious to the Institution, both with regard to its fêtes and to its general interests.—The meeting of the Melodists on Thursday (the last but one of the season), was well attended, and went off with great éclat. Braham was encoined in one of his songs; and Nicholson's flute was another of the lions of the evening.—Mr. Jefferey's editorship of the Edinburgh Review ceases, we hear, with No. 98, when Mr. Macony Napier takes up the task.

LITERARY NOVELTIES.

St. Walter Scott.—A review in *Le Globe* of a work recently published under the title of "Soirées de Walter Scott à Paris, recueillies et publiées par M. P. L. Jacob," commences in the following lively manner:—"They who are not engaged in literary commerce are not aware how important it is to the success of a work that its title should be striking, new, and well-chosen. Many a clever work has been sacrificed by a bad title; and many a stupid work has a good title saved. Publishers have a marvellous talent in this respect. Even the typographical composition of the title is occasionally full of skill. For instance, is some old translation reprinted, to which a learned man of the present day has merely added a few brief notes?—the name of the translator disappears in imperceptible characters, while that of the annotator glares in magnificent capitals. A man of talents, enmeshed with our elder language, and who loves to clothe his thoughts in the phraseology of Marot and Rabelais,—who delights in the freedom of our ancient fabulists, and whose pen is not prudish, throws on paper various whims of his fancy. These essays he wishes to publish. A bookseller soon forms of them a thin octavo. But a title is requisite:—a title that is not common. So many 'Historical and Dramatic Sketches' have appeared, that the public are quite tired of them. Of Walter Scott

alone they are not yet tired. The author must therefore put the name of Walter Scott to his book. How is this to be done? The purchaser sees on the back of the binding, 'Walter Scott à Paris.' That excites his curiosity. He reads in the false title, 'Soirées de Walter Scott.' Where did they take place? At Paris or at Abbeville? That fidgets him. Then he reads in the title itself, 'Soirées de Walter Scott à Paris.' Mind how the insignificant gradually advances!—and, after all, is it not delightful to find that there is not a single word about Walter Scott in the whole volume!"

Mr. Sharpe's new periodical work, under the title of the Three Chapters, is about to issue from the press, containing, besides essays, criticism, biography, and a picture of manners and society, a portion of the Anniversary, together with one of the plates, so as to form the work complete at the end of a year as a Midsummer annual: this constitutes one of the Chapters. The second and third, in a similar manner, are to form two separate volumes at the same period.

The Life of Dr. Richard Bentley, by Dr. Monk, Dean of Peterborough, is expected next season; and is reported to contain much literary information, collected from original sources, so as to form a history of the University of Cambridge for a period of forty years.

The eleventh volume of the Works of Lord Bacon, edited by Mr. Basil Montagu, is on the eve of publication. In the Press.—A revised edition of the Life and Works of Richard Hooker; with an Introduction, additional Notes, and portrait engraved by E. Finden, after Hollar. —The second volume of the Extractor.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

The Belzoni Family.—The deep interest we always took in the fate of Belzoni induces us to publish the following extract from the letter of a distinguished literary character, respecting his remaining relatives—in the hope that it may interest the humane and charitable:—"The unhappy mother of the celebrated traveller Giovanni Belzoni, not yet recovered from the sorrow which she felt for his death, in Africa, in the year 1823, has very recently lost her two surviving sons—Domenico, who died on the 9th, and Francesco, who died on the 12th of January, 1829. The distress of three young children and the widow, left by Domenico, has placed the grandmother in the greatest affliction, who, herself nearly eighty years of age, has no means of relieving them. This grandmother now humbly and earnestly begs, on account of her grandchildren, the assistance of that generous and humane people who so nobly patronised her son in all his attempts to make useful discoveries." To this we have only to add, that Mr. Murray, of Albemarle Street, has kindly volunteered to receive subscriptions, and to pass them to the persons for whom they are intended.

Mr. Fenton's poem is of too religious a cast for our miscellaneous pages.

* * * * * Though we have given so much of our Review in this Gazette to fresh and striking novelties, we have been compelled to postpone others equally interesting. We have the pleasure to say that "the Subaltern's" Chelsea Pensioners (which we noticed weeks ago, has, after too long delay, appeared, and is now gratifying the public generally. The first Part of Dr. Richardson's Fauna Boreali-Americana is also in our hands;—an able and pleasing production. Lieutenant Maw's Passage from the Pacific to the Atlantic down the Amazon River, is another new book, full of curious matter; and Everett's Norway, &c. worthy of our early attention.

ADDENDUM.—Of the officers alluded to in our notice of Captain Owen's African expedition, Mr. Vidal is now Captain Vidal, on half pay; Captain Lechnere, who served as a volunteer, died of fever at Delagoa, in November 1822; Watkins, a midshipman, died of fever, December 1822, at Delagoa; Rogier, at present at Fernando Po, with Captain Owen; Williams, a midshipman, died at Mahé, one of the Seychelles, January 1823; Mr. Forbes, a botanist attached to the expedition, died at Senne, September 1823.

THE WESTMINSTER REVIEW,
No. XXI. will be published on the 30th of June, containing the following Articles:—1. Corn Laws—2. Life and Writings of P. L. Courier—3. Living Poets of Hungary—4. Last of the Plantagenets—5. Cobden's Career—6. Discoveries in the Interior of Africa—7. The Village Patriarch—8. Physiology of Trees and Ornamental Planting—9. Modern Italy—10. Civil Government of Canada—11. Vidocq's Memoirs—12. I. Taylor's Translation of Herodotus—13. Southey's Colloquies on the Progress and Prospects of Society—14. Anne of Gelestein—15. Historical Records of the Peruvian Indians—16. Greatest Happiness Principle, and the Edinburgh Review.

No. XXII. will be published on the 30th September.
Office of the Westminster Review, No. 2, Wellington Street, Strand.

Works published during the week by Longman, Rees, Orme, Brown, and Green.

MEMOIRS of the ADMINISTRATION
of the Right Hon. HENRY PELHAM; collected from the Family Papers, and other authentic Documents, and illustrated with Original Correspondence, never before published. By the Rev. W. COLE, M.A. F.R.S. F.R.A. Archdeacon of Wilts.

In 9 vols. 4to. with Portraits from Original Paintings in the possession of His Grace the Duke of Newcastle, price 6l. 5s. A few Copies are printed on large paper, uniform with the Author's preceding Works, price 12l. 10s.

An Encyclopedia of Plants, comprising every desirable particular respecting all the Plants indigenous, cultivated in, or introduced to Britain. Edited by J. C. Loudon, F.L.S. H.S. &c.

The Specific Characters, &c. by John Lindley, F.R.S. L.S. and G.S. &c.

The Drawings by J. D. C. Sowerby, F.L.S.; and the Engravings by R. Brannan.

Complete in 1 large vol. 8vo. with nearly Ten Thousand Engravings on Wood, price 4l. 14s. 6d.

Part I. to be continued every Two Months, 10s. 6d. each: No. I. to be continued Monthly, 2s. 6d. each.

The Reigns of Edward VI., Mary, and Elizabeth; being the Second Part of the Modern History of England. By Sharon Turner, F.A.S. R.A. S.L. The 3d edition, 5 vols. 8vo. 11. 12s. boards.

The History of Thucydides, newly translated into English, and illustrated with very copious Annotations. With an entirely new Life of Thucydides; and a Memoir on the State of Greece, Civil and Military, at the Commencement of the Peloponnesian War. By the Rev. S. T. Isaac, D.D. F.R.S. of Sidney College, Cambridge; Vicar of Highbrook, in Rutland, &c. In 2 vols. 8vo. with Maps, price 3l. 5s.

The History of the Rise of the Mahomedan Power in India, till the year A.D. 1012. Translated from the Persian of Mahomed Kasim Ferishta, by John Briggs, M.R.A.S. Lieut.-Col. in the Madras Army. In 4 vols. 8vo. price 4l. 4s.

Tales of our Times. By the Author of "Recollections of the Peninsula," &c. In 3 vols. post 8vo. price 3l. 10s. boards.

The Principles of Christian Philosophy, containing the Doctrines, Duties, Admonitions, and Consolations of the Christian Religion. By John Barnes, M.D. Regius Professor of Sermon in the University of Glasgow, &c. In 12mo. price 7s. boards.

Transactions of the Medical and Chirurgical Society of London. Vol. XV. Part I. In 8vo. price 10s. 6d.

By an arrangement made with the Council, the Publishers will supply such Members of the Society as may be desirous of completing their Sets of the Society's Transactions, at a Scale of prices which may be had of Longman and Co. or any of their Correspondents.

Hints for the Examination of Medical Witnesses. By John Gordon Smith, M.D. M.R.S.L. Professor of Medical Jurisprudence in the University of London. Folscep 8vo. price 5s. boards.

A System of Geography, by M. Malte Brun, price 7s. 6d. Vol. VII. Part II.

Vol. VIII. which will complete the Work, is in the press.

Poems, original and translated, by the Rev. W. Shepherd, Author of the "Life of Poggio Bracciolini," &c. In folscep 8vo. price 6s. boards.

Leonora; or, the Presentation at Court; by Mrs. Lechins, late Miss Appleton, Author of "Private Education," the "Poet Girl's Story," &c. &c. In 2 vols. price 18s.

A Synopsis of the British Flora, arranged according to the Natural Orders; containing Vascular, or Flowering Plants. By John Lindley, F.R.S. L.S. and G.S. In 12mo. 10s. 6d. boards.

The English Flora, by Sir James E. Smith, F.R.S. &c. A new edition, in 4 vols. 8vo. 3l. 5s. boards.

An Introduction to Entomology; or, Elements of the Natural History of Insects. By William Kirby, M.A. F.R.S. and L.S. and William Spence, Esq. F.L.S. &c. 4 vols. 8vo. with Plates and Portraits of the Authors, 5th edit. price 4l.

A Scientific Index to former editions may be had, price 2s.

The History and Antiquities of the Abbey and Cathedral Church of Gloucester, by John Britton, F.S.A. &c. Illustrated by 23 Engravings by J. Le Keux, Esq. and two Woodcuts. Price 2l. 10s. medium 4to.; and 4l. 4s. imp. 4to.

By the same Author,
Nov. I. II. III. price 1l. 4s. each, medium 4to.; and 2l. imperial 4to.

The Picturesque Antiquities of the English Cities, containing 80 Engravings by Le Keux, Varral, Redway, &c. and 14 Woodcuts by Williams, Evans, and Wright, &c. "The Plates are all more or less beautiful. The interest and the variety of the subjects which this work will comprehend, and the moderate price at which it is brought out, must secure it a very extensive sale."—Literary Gazette, Oct. 4, 1828.

The Gardener's Magazine, and Register of

Rural and Domestic Improvement. Conducted by J. C. Loudon, F.L.S. H.S. &c.; Corresponding Member of the Agricultural and Horticultural Societies of Arts, of the Horticultural Society of Berlin, and Honorary Member of the Horticultural Society of New York. In 8vo. No. XX. (to be continued every Two Months, alternately with the "Magazine of Natural History"), price 2s. 6d.

Also may be had,
Vols. I. to IV. price 2l. 19s. 6d. boards.

A New General Atlas, with the Divisions and Boundaries carefully coloured; constructed entirely from New Drawings, and engraved by Sidney Hall. Part XIV. printed on elephant paper, price 10s. 6d. To be completed in Seventeen Parts.

Contents:—Eastern Hemisphere—Portugal—Northern Africa.

Also may be had,
Parts I. to XIII. price 10s. 6d. each.

The Edinburgh Review; or, Critical Journal. No. 97, price 6d.

Contents:—Census of the Population; Law of Mortality, &c.—Œuvres de Courier; Recent State of France—the Game Laws—Stewart's Planter's Guide—Interior of Africa—Library of Entertaining Knowledge—Mill's Essay on Government: Utilitarian Logic and Politics—of Legitimacy—the Last of the Catholic Question; its Principle, History, and Effects, &c. &c.

8, New Burlington Street.
Mr. Colburn has just published the following new Novels:
In 2 vols. post 8vo. 11. 11s. 6d.

THE CHELSEA PENSIONERS.

By the Author of the "Subaltern."

2. The Adventures of a King's Page, 3 vols. post 8vo. 11. 11s. 6d.

3. Waldegrave; a Novel. 3 vols. post 8vo.

4. Geraldine of Desmond; or, Ireland in the Reign of Elizabeth. In 3 vols. post 8vo.

5. Rybrent de Cruce, a Novel. In 3 vols. post 8vo.

6. Richelieu; a Tale of France. In 3 vols. post 8vo. 11. 11s. 6d.

7. Traits of Travel; or, Tales of Men and Cities. By the Author of "Highways and Byways." In 3 vols. post 8vo. 3l. 6d.

8. The School of Fashion. 3 vols. post 8vo.

9. Romances of Real Life, by the Authoress of "Hungarian Tales." In 2 vols. post 8vo. 11. 11s. 6d.

10. Stratton Hill; a Tale of the Civil War. By the Author of "Letters from the East," "Tales of the West of England," &c. In 2 vols. post 8vo.

11. The Sectarian; or, the Church and the Meeting-House. A Novel. In 3 vols. post 8vo. 3l. 7s.

Also, nearly ready,

12. Devereux; by the Author of "Pelham," and the "Disowned." In 3 vols.

13. The New Forest; a Novel. By the Author of "Brambletye House," &c. In 3 vols. post 8vo.

14. Sir Philip Gasteneyre, a Minor. By Sir Roger Gresley, Bart. In post 8vo. 3l. 6d.

15. The Exclusives; a Novel. In 3 vols. post 8vo.

16. Old Court; a Novel. In 3 vols. post 8vo.

17. Tales of my Time. By the Author of "Blue Stocking Hall." In 2 vols. post 8vo.

18. The Davenels; or, a Campaign of Fashion in Dublin. In 2 vols. post 8vo. 18s.

THE FIRST No. of the NEW VOL. of the MONTHLY MAGAZINE, price Half-a-Crown, for July, will contain:—I. Irish Parliaments and Forty-Shilling Freeholders—II. Highways and Byways, or the Autobiography of Mr. Jonathan Wild the Younger—VI. The Bridges of London—VII. Walks in Ireland, No. 2; the Murderer's Death—VIII. The Life and Services of Capt. Beaver—IX. Theatrical Matters—X. Notes of the Month, on Affairs in General—Reviews of New Publications—Fine Arts—List of Works published and in preparation—Scientific and Literary Varieties—Obituary of distinguished Persons—List of Patents lately granted and lately expired—Bankrupts—Agricultural and Commercial Reports—Provincial Intelligence—Births, Marriages, Deaths, &c. &c. &c.

Published by Whitaker and Co. London: Waugh and Innes, Edinburgh; and to be had of all Booksellers in England and Ireland.

In 8vo. on superfine laid paper, price 14s. cloth boards.

JOHNSON'S ENGLISH DICTIONARY, in which is embodied Walker's Pronunciation, revised, corrected, and enlarged, with the addition of several thousand Words in the Arts and Sciences.

By ROBERT B. JAMESON, Esq. Barrister at Law.

In this Dictionary the labours of Johnson and Walker are concentrated, and the greatest advantage is gained by marking the different sounds of the words by the points instead of the figures, on an entirely new plan, adopted for the first time in the present work. It will be found one of the most complete and useful vocabularies of the English language ever published.

Printed for William Pickering, 57, Chancery Lane; and Cowie and Co. Fenchurch.

Four Laws.—Price 2s.

PLEA for the ABOLITION of SLAVERY in ENGLAND, as produced by an illegal Abuse of the Poor Law, common in the Southern Counties.

By G. POULETT SCROPE, Esq. F.R.S. &c.

One of His Majesty's Justices of the Peace for the County

Published by James Ridgway, 139, Piccadilly; and, by order, of every Bookseller.

Companion to the "Pioneer," "Last of the Mohicans," &c.

In 2 vols. 12mo. price 16s. 6d.

THE INDIAN CHIEF; or, Tokenah and the White Rose. A Tale of the Indians and the Whites.

Philadelphia: Carey, Lea, and Carey.

London: A. E. Newman and Co.

The following Romances and Novels will be published this Summer:

Freebooter's Bride; or, the Black Pirate of the Mediterranean. In 4 vols.

The Blandfords. By Henrietta Rouviere Moss. In 4 vols.

New ready, 1 vol. Folscep.

CONSTANTINOPLE in 1828.

By CHALES MACPARIAN, Esq.

"This very interesting and important work contains the latest observations made in Turkey by two or three years."—*Courier.*

"The details which the writer gives cannot fail to be read with peculiar interest at the present moment."—*Times.*

"Mr. Macparian is an acute, discriminating traveller, and seems to have been exceedingly diligent in pursuing his inquiries into the condition and resources of Turkey."—*Evening Chronicle.*

"We have here a simple and faithful record of the author's impressions, just as they were made upon his own mind; the volume abounds with anecdotal and pleasant details, which readily assist our judgment upon the existing situation and probable future destinies of this remarkable empire and curious people."—*Literary Gazette.*

In 8vo. price 6s.

FIRST REPORT of the COMMISSIONERS appointed to inquire into the LAW of ENGLAND respecting REAL PROPERTY, ordered by the House of Commons to be printed, May 30, 1828.

Printed for J. and W. T. Clapton, Law Booksellers, Foregate Street, Lincoln's Inn.

In 2 vols. 8vo. 11. 3s. boards.

THE HISTORY of the CRUSADES for the RECOVERY and POSSESSION of the HOLY LAND. By CHARLES MILLS, Esq.

Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author,

The History of Chivalry; or, Knighthood and its Times. 2d edition, in 2 vols. 8vo. 11. 4s. boards.

The Travels of Theodore Ducis in Italy, at the Revival of Letters and Art. In 2 vols. 8vo. 11. 4s. boards.

8, New Burlington Street.

Mr. Colburn has just published the following interesting Works:

In 1 vol. 8vo. with Portrait.

LIFE of JOHN LOCKE. With Extracts from his Correspondence, Journals, and Common-place Books.

By LORD KING.

No. 650.

SATURDAY, JULY 4, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Journal of a Passage from the Pacific to the Atlantic, crossing the Andes in the Northern Provinces of Peru, and descending the River Marañon, or Amazon. By H. Lister Maw. Lieut. R.N. 8vo. pp. 486. London, 1829. J. Murray.

WHEN we look upon the great globe which we inhabit, and ponder over its form and features, there is no part of the stupendous structure that more attracts our interest and excites our admiration, than those mighty streams which, like veins and arteries, pervade its surface, and carry life, motion, and fertility, throughout the system. To have followed the course of the largest of these prodigious veins that circulate over our earth, is indeed a memorable achievement; and we rejoice that it has first been accomplished by an officer of the British navy. It is worthy of the profession and of the country to which he belongs!

The wonderful confluence of waters* thus explored, need we remind our readers, traverses the broadest region of South America, from the Peruvian Andes to the Atlantic, where, after a winding career of from four to five thousand miles,† it pours its flood into the ocean, by a mouth of a hundred and eighty miles in width, and in such a mass, that the salt-sea brine is displaced to the distance of four hundred miles!! We have now to trace this splendid enterprise.

Towards the close of 1827, Lieut. Maw, being at Lima, on the eve of returning to England, resolved on taking the route across Peru and down the Marañon, to examine these imperfectly known regions, and to supply that information respecting the interior, so much desired for the purposes of commerce and the advancement of science. We pass over the preliminary steps and preparations. From Lima he went to Truxillo, (where a Mr. Hinde joined him in the adventure), and thence to Chicama, and ascended the Andes towards Casca. Surmounting the first and second Cordilleras, (by Caxamarca and Selendin), our travellers saw the Marañon pursuing its path between the mountain ridges, from its parent lake at Huannuco, and crossed it at Balas. They then climbed the third Cordillera, stopped at Chachapayas, Toulea, Moyobamba, and thence finally journeyed five days on foot to Balsa Puerto, where, on the 15th of January, 1828, they embarked in two canoes, and paddled down the river Cachi Yaco, which runs into the Guallaga, which, again, bears the voyager into the Marañon, near Ourarinas, not far below where it becomes navigable. The journal hitherto occupies 165 pages of the volume. The junction of other rivers with that moving sea on which they were now floating; the Ucayali, Madeira, Tapajos, Xingu, Tocantins, &c. from the south; the Japura, Negro, &c.

* It is computed that about two hundred rivers contribute to swell the Amazon on its way.
† Probably in length a fifth of the earth's circumference. The author descended about 3000 miles.

from the north, furnish topics of much interest, as progress is made to the final port of Para. Before leaving Peru, we learn with sorrow that the upper portion of the westernmost branch of the Marañon has been sadly oppressed.

"It is, (says Mr. Maw), I believe, but too well ascertained, that the Spaniards, having driven the Indians from this and other agricultural districts to work in the mines, reduced the population of Peru from about ten millions, which it is supposed to have been at the time of the conquest, to its present estimate of two millions."

The earliest view of the river, from the top of the second Cordillera, also deserves quotation.

"We reached the top of the rugged ridge a little before sunset; and it was from this point we first got sight of the Marañon. I cannot conceive that any thing on earth or water could exceed the grandeur of the scenery, nor do I believe any person capable of describing it justly. The rain was clearing off, whilst a perfect and brilliant rainbow was extended across the river, which, about sixty yards in breadth, rushed between mountains whose summits, on both sides, were hid in the clouds, on which the extremes of the rainbow rested."

This is picturesque. The author continues: "The Marañon is not navigable in this part. A little above the ferry it descends over a sloping bed of large gravel; and at a short distance below, it is said to be fordable on horseback. Further down, there are reported to be cataracts. The valley is extremely narrow in some parts, barely affording sufficient breadth for the river. Abreast the ferry there are small banks, on which the most luxuriant verdure is produced. A variety of fruits are raised in great perfection, with plantains of a remarkable size."

From this point (Mr. M. observes, at the conclusion of his long journey) "we, step by step, receded from the light of civilisation, passing towards people little advanced from a state of savage wildness; amongst whom the utensils they needed, or the ornaments they admired, were received in payment for natural productions, or for personal services—whose vices were those only of savages. Continuing our route, we reached marks of—not European civilisation—but of European demoralisation. The uneducated, unenlightened branco, finding himself unchecked by those laws and authorities that existed in the country he has left—finding himself amongst a people inferior to his countrymen, and not comprehending the advantage or necessity of restraining his inclinations, assumes arbitrary power, and commits uncontrolled enormities; whilst the unfortunate wretches amongst whom he fixes, suffer from his tyranny, and acquire his vices. It is perhaps not possible to behold human nature more degraded; and with just retribution the evil recoils on the offender, if not in his own time, in that of his descendants,

who, following his example, either compel the Indians to fly from oppression, or destroy them by its effects. Slowly, and with difficulty, we passed through this state of things, until we again met with a general commerce, which, in such cases, may be said 'to bring healing on its wings,' by importing true civilisation, and proving the necessity of just laws, and well-regulated authority. Returning to the figure of light, it can scarcely be conceived the glare that bursts forth on first arriving in a highly civilised country, after being long immersed in so deep a gloom; indeed, on being beheld, it can scarcely be comprehended. What a population of brancos, few of whom are not superior to the lords of the land passed through! What buildings—what wealth—what power—what an excessive cultivation, and what an extraordinary value of the soil!—the price of districts being incalculable, which in the country left might have been had by occupation."

"On the river, Fahrenheit's thermometer stood at eighty degrees nearly the whole way down. The climate became more moist as we entered Brazil, and was excessively damp at Para, but it was the rainy season. Respecting the source of the Marañon, or as to which branch is best entitled to be considered the head of the river, different opinions have existed and have been vehemently opposed to each other. I do not, however, conceive that the branch which bears the name of Marañon, and continues the furthest in an east and west direction, is, as it has been sometimes represented, much inferior to the Ucayali. Taking the junction of the two rivers as a centre from which to measure, I think it probable that the western branch will be found the most considerable at the greater distance, although some of the small streams that form the Ucayali exceed it in extreme length: moreover, the Ucayali and other branches appear rather to be formed by a collection of streams, whilst the Marañon flows throughout from between the Cordilleras as a main channel. These remarks, of course, do not affect the communication with Lima, some of the streams that form the Ucayali flowing more immediately from the direction of that city. On the passage, I inquired what was the meaning of the name Marañon, and was told that it was a compound word, signifying 'not the sea.'"

But that we may, obeying in criticism the law of nature, go regularly with the stream to the main, we shall replace ourselves at the upper region of the Andes, and descend with our author from Balsa Puerto, noting, as examples of his journal, the most curious particulars which have struck us on the way. At Toulea, Mr. Maw relates:

"Mr. Hinde mentioned to me a curious anecdote, with which he had become acquainted respecting the watch-dogs. It was, that these dogs, when young, are taught to suck the flock to which they are afterwards to belong as guardians; and being brought up in this manner, when grown to full size, they continue to attend the flocks; going out with them in the

morning, remaining during the day, and bringing them home in the evening, without the necessity of herdsman. He said also, that some English spaniels had been sent out to the British merchants resident in Truxillo; and being much admired, puppies were distributed as presents to some of the principal natives; amongst others, one was given to the prefect, who, being desirous that it should be trained in a particular manner, and become attached to him and his people, sent it up to his 'hacienda' (estate). When full grown, it was brought down to Truxillo, but it did not remain long in the city before it began to find out that the British residents were its countrymen, and, in common with other puppies that had been similarly distributed, deserted its master, to seek quarters in the merchants' houses. Mr. Hinde said, that these dogs would even know an Englishman in the street, and join company, when walking, to the annoyance of their masters. It certainly was the case that, when I arrived at Truxillo, the mother spaniel thought proper to acknowledge me as a countryman, in a manner that was not agreeable, inasmuch as, from her lying constantly at my feet, numerous fleas, with which the coast of Peru naturally abounds, migrated from her fur to my clothes. A peculiarity of the South American, at least the Peruvian dogs, is, that they generally attack in packs of two or three together. Their manner of biting also is different from other dogs. If an unfortunate stranger (dog) makes his appearance, the packs of two or three neighbouring ranchos will unite, and the visitor comes badly off. Individually they are not powerful, but from their offensive alliances, it is not altogether agreeable going near the ranchos unarmed after dark. Mr. Hinde was nearly suffering on one occasion. The Toulea dogs were so poor that their bones might almost be counted through their skins. Yet their tastes and appetites were so accommodating, that there were few things they would not eat,—for instance beans, such as are given to horses."

The overland, montana, travelling is described as full of inconveniences and perils; but these have frequently been told by South American adventurers; and we are at Moyobamba, where, says Mr. M., "we dined with the intendente, when we learnt that neither Mons. Du Bayle nor ourselves were the first European visitors to Moyobamba. An English, at least a British, sailor, named Michael Ramsay, or, as he was there called, 'Miguel Ramos,' had by some means found his way there from the coast, and had displayed his salt-water manoeuvres to such effect, that the Moyobambians appeared somewhat at a loss whether to be most surprised, amused, or afraid of him. He had married, and remained for some time, until, getting tired, he went off and left his wife. On the whole, he had not produced a favourable impression on the minds of the natives. We occasionally heard of this man afterwards, where he had made his appearance in an extraordinary manner. A padre, who had seen him, told us that he, the padre, had asked him why he did not work, as he was very strong. His answer was, No; he liked to order better."

What a savage!! Nobody exists of such a disposition in England, or other civilised countries?

On the Cachi Yaco, the first tributary river which received our countrymen, we have a good picture of the natives.

"The manner of building the ranchos at Balsa Puerto is entirely different from that of

the coast. With the exception of the church, and the governor's and curate's houses, which were plastered, and the latter divided into apartments, the ranchos of Balsa Puerto consist each of a single room, from twenty to thirty yards long, and about a third of the length in breadth. The sides are made of small bamboos, six or seven feet long, placed vertically, and close together; but, from their inequalities, admitting light and air. The roofs are made of the leaves or branches of palms, the leaves on one side of the stem being turned back, so as to make them double. . . . The roofs are supported

by piles driven into the ground, with poles lashed to them, and sloping upwards, so that the ranchos are some of them twenty or thirty feet high in the middle part of the roof, whilst the sides are not more than six or seven. The roofs require renewing every three or four years, and are not entirely water-proof during heavy rain. There are no windows, the inequalities of the bamboos that form the walls admitting sufficient light and air. The doors are made of bamboos tied together, instead of being fixed into the ground. These ranchos have a neat appearance outside; and the interior of those we looked into was clean. They contain little furniture beyond a few cooking utensils and straw hammocks; and four or five married couples live in each rancho. We followed a path a short distance beyond the pueblo, and found the country was not entirely covered with wood. Some cattle, which we afterwards understood to belong to the former governor, were feeding, and were in fine condition. Being near sunset, we met several Indians returning from their chacras. The men had their pucunas (tubes for shooting poisoned arrows) in their hands, and netted bags filled with fruit, &c., slung across their backs. Most of them had also different-coloured feathers, red and yellow, suspended from their necks. The women carried cargoes that appeared to be heavier than the bags and pucunas of the men. Both sexes had their faces and various parts of their bodies stained with red and purple dyes; which, added to their figures not being good, their dark complexion, and the long black hair of the men, as well as women, gave them a barbarous appearance; but they were peaceable in their manners, and most of them saluted us as we passed.

"Sunday being here kept as a day of suspension from duty, the Indians were all painted in their best style, dressed in clean white or blue frocks and trousers, and their hair ornamented with a few red and yellow feathers tied to tails behind. They collected at an early hour, and went quietly and respectfully to the church, where they remained about half an hour, although there was no clergyman to officiate. Having returned in a similar manner, the day's amusements commenced, the most favourite of which appeared to be dancing to the music of drums and fifes made of bones; whilst they occasionally partook freely of chewed yucachicha. The dyes with which they stained themselves were evidently considered first-rate ornaments: some had red stripes or diamonds on their forehead; others a red stripe downwards under each eye; and several were rouged; a purple dye was applied as a substitute for whiskers, beards, and mustachios; whilst some of the females had supplied themselves with boots of the same material. A tall, stout deputy of the curaca, who appeared to be considered one of the most fashionable of the party, had a red stripe under

each eye, and red or yellow feathers in his hair. There were several deputies to the curaca, their badge of office being a small supple stick, with which they inflict punishment on their fellow Indians whenever the curaca deems it necessary. The deputies did not consider it beneath their dignity to join in the general amusements; but, on the contrary, were the musicians, going about from rancho to rancho playing most cheerfully, until towards the evening, when the chicha produced an effect, and several, not excepting females, were intoxicated. . . . On

Monday morning all the women of the pueblo mustered in the plaza to know what work they were to perform,—there being a law which obliges them to labour for a certain time during the first three days of each week, in keeping the pueblo clean, or otherwise, as the governor may direct. We were employed during the day in airing such of our clothes, &c., as had been damaged by the Indians in wading, and in endeavouring to get an account of some seeds I had picked up on the walk from Moyobamba. We found the natives far from intelligent; several of the seeds were not known; and although the district we had passed through abounded with the trees from which cascarrilla is produced, I had not been able to learn which was it.

"Early on the 15th we went to the governor's house, when I got from him what information I could relative to the productions of the country, and bought a few specimens, with some provisions for our passage: amongst the latter were some dried monkeys, recommended for our own private stock, they being considered greater delicacies than the dried wild boars, with which we were to feed the Indians."

Thus provisioned, they embarked with seven Indians in their two canoes, each about 20 feet long, and protected by palm-thatched awnings, under which they could sit upright. But we must remain at anchor for a whole week.

The Brunswick: a Poem. In Three Cantos. 8vo. pp. 108. London, 1829. W. Marsh.

"I AM quite pleased with the resemblance between my two niggers Caesar and Pompey (said a Virginian planter), they are so very like each other—"specially Pompey?"!—and so may we express ourselves in compliment to our present author, he is so 'specially like Byron.' Indeed, there is so much of talent in his poem, that though perhaps he never would have written it had not his noble prototype written Juan, we cannot find in our hearts to give it the depreciating name of an imitation. On the contrary, in spite of its taking up one of the most untoward subjects which could, we think, have been chosen—the catastrophe of the Brunswick Theatre—it is a very happy exhibition both of the comic and the philosophic that characterises the order to which it belongs. The playful touch alternates with the acute and sarcastic remark; or the pathetic, not carried too far, blends gently into the terse reflection and sometimes ludicrous picture of affected sentiment. Being thus impressed with a high opinion of the author's capabilities, we trust he will receive that encouragement which will lead him on to apply them to a long course of successful writing, and to the choice of better themes. In the meantime we shall lend him a page to make his present merits known. The Brunswick, we are told—

"—was reared amidst a world of cares,
Where all unsightly things the ways were stopping:
It stood 'midst warehouses, and wharfs, and wares,
'Midst scenes of trading, trafficking, and shopping,

Haunts which the river with the city shares,
A dingy land, half Birmingham, half Wapping,
Quite out of Pleasure's way, you would suppose,—
But she into strange holes and corners goes—

There was a general fear
Last fire should lay this ill-star'd building low;
And so all arts were tried the house to clear,
And patent pipes sent water from below;
And it might seem perhaps a little queer,
(If any thing in this world could seem so),
That they should aim their efforts one and all
Against a fire, but none against a fall.

We shun one evil while another kills:
None saw the danger of the coming morn.
And oh! how Destiny, as she fulfils
The fates of men, must laugh their ways to scorn,
Seeing them guard against all other ills,
All save th' appolated one to which they're born;
While that, fast held within her mighty grasp,
They ne'er elude, but almost seem to clasp!

Its opening.

"The ev'ning came—all ev'nings will at last,
If you'll but wait—a fact which they should know
Whose young hearts bent on pleasure beat too fast,—
And being come, they will as surely go.
The parts were ready, just as they were cast,
The house was crowded to an overflow,
The lamps shone out, so did the fiddlers too,
Tinkled the bell, and up the curtain flew!
And the stage-manager poured forth his strain
Of admiration (a whole hecatomb),
Love, and respect, and honour, such as men
Must feel for some two thousand others, whom
They never saw before, or may again,
Wishing a thousand years might be their doom,
And hoping they would only please to smile,
And patronise the Brunswick all the while;
And promising them his perpetual care
To study objects worthy of their taste—
Their taste! the thing with which that compound rare
A British public is supremely graced,
So much so they quite breathe it like their air.
Wishing all this, while in his reach were placed
But two small days—a thing to make one ponder
On human wishes—but I must not wander."

The next day's rehearsal.

"One moment, and you might have witnessed here
Music and mirth, and all the charms they gave;
Another changed and checked that bright career,
And shrieks were heard, but there was none to save;
All was despair—they had no time for fear,
With but one step from pleasure to the grave.
Death was above them, round them, and beneath,
And all they felt, and heard, and saw, was death.
So fares it with the projects of this earth;
Years bring to pass an instant may destroy.
With trembling, anxious hearts we watch their birth,
And while hope glittering glides the beautiful toy,
E'en in the moment when we count its worth,
Comes the dread fiend that mocks at human joy,
Add stamps at once his sport as well as spoil,
Man and his work, the toiler and the toll!"

The fall brings on a recollection of the burn-
ing of old Drury, when—

"For many a league—the season (midnight) heightened
The horror that was everywhere installed,
And gentle ladies on that night were frightened,
And found their maids (by courtesy so called)
With faces pale as if they had been whitened,
Preparing for that final blast and scald
Which will be—here without a moment's warning—
And won't be—in the papers the next morning."

There are some fine reflections on favourite
actors who have passed away—

"Truly it's
A sad thing to remember in one's day
Some five-and-twenty Romeos and Julietes;
And all their stalling, swearing, poisoning, loving,
Seen for the hundredth time, is far less moving.
Another thought, too, in that brilliant sphere
Will sometimes operate our mirth to mar—
To see how changed from many a former year,
When they and we were younger than we are,
The first companions of our lives appear—
It gives one's pleasant thoughts a frightful jar;
An early friend whose eye has lost its glimmer,
Reminds us that our own are somewhat dimmer."

Beside some mansion tottering to its fall,
That once bore witness to their ancient ways,
Or by some ruined arch or crumbling wall,
We seem to see the actors of past days;
While mellowing distance throws her dim gray pall
O'er all their doubtful deeds of blame or praise,
And almost consecrates the very crimes,
Whose action bears the stamp of other times.
The past! What is it on this peopled earth
That makes us dwell so fondly on the past?
Men see the future, like a mine of worth,
Unfold its treasures beautiful and vast,
And scarce the present joy survives its birth,
Lost in the haze which those visions cast;

But wherefore with such deep emotion pore
On men and scenes that shall return no more?

'Tis for that self-same reason that we gase
So fondly, that they never shall return;
They had their past and future, nights and days,
Cares to feel, hopes to cherish, griefs to mourn;
They wandered, as we wander, through the maze
Of man's existence to his final bourn;
And we, exhaled this petty, paltry breath,
From the same life shall sink to the same death—
Leaving of our existence scarce a trace."

The foregoing extracts are from the first
canto of only sixty-nine stanzas, and, we trust,
fully justify our praise of the author:—but we
proceed to further proof, only apologising for
its want of connexion, as we do not think it
necessary to follow the narrative.

"The 'good old people' of the 'good old days,'
Who hail no innovations with respect,
But lavish on the past their piteous praise,
Ascribed it to the march of Intellect:
'If such new-fangled structures you will raise,
They must come down, what else can you expect?—
On your own heads,' said Bigot, 'be the blame!'
And he was right—for on their heads it came.
Some people on the architect cried shame—
Some on the managers their strictures passed—
Some 'gainst the public folly did exclaim,
For hurrying there with such an eager haste.
Whom misery befalls men always blame
In this strange world in which our lot is cast;
The cup of woe, when once begun, soon fills—
Misfortune is a magnet to all ills."

The days we live in, are they not the date
Of steam, and gas, and tunnels? though the first
Leads sometimes to a fire-and-water fate,
The next explodes, the last are apt to burst;
Likewise of stomach-pumps, which, when you've ate
And drank, restore your hunger and your thirst?
Whereby, in fact, you eat and drink for ever,
Which must extremely tantalise the liver."

Have we not been long since a ruin'd nation?
First by the war, which laid the tax on;
Then by the peace, our trade's annihilation;
Then by the paper currency, since gone;
Then by the mines and mining speculation;
Then by the panic, which produced a run
Upon our banks; and now, to quench all hope,
Are we not being ruin'd by the Pope?

Yet, after all this ruin, here we are,
A jolly, thriving, paying, gambling people:
The tide of wealth still flows through Temple Bar,
The joyous bells ring out from many a sleaze,
Exulting Pleasure sits in Fashion's car;
And if at times our debts should make us sleep ill,
We pay a part; and, having done our best,
Like our good government, we owe the rest.
Such are the wonders of our age and clime,
Surpassing all the ancients ever knew;
But then the people of the olden time
In miracles the moderns much outdo;
And strange it seems (I wish 'twould also rhyme),
That while some certain volumes, old and new,
Contain of miracles some thousand entries,
We should not have had one in eighteen cent'ries."

The Brunswick!—ay, the Brunswick!—we were there;
No, we were not—we are much better here;
But we were there in the mind's eye to stare
With horror at the rude untimely bier
Of men who little dream'd how they should fare
That morn'—'twas strange—but now without a fear,
Now dead!—And yet compare this mode of dying
With fling'ring long on splendid couches lying.

What though attendants, when you groan'd or cough'd
on,

Were near to smooth the pillow where you lay,
With all appliances your fate to ease,
Kind looks that can do all but pain allay;
Physicians calling in, God knows how often!
To take their fee, look solemn, and away!—
And then to die after six months in bed,
I'd rather have the Brunswick on my head.

One good in dying thus we may discover,
That people may repent—but then they won't;
They still keep hoping that they shall recover,
And put it off until they find they don't;
And thus their trifle on till all is over.
It grieves me much, and I've thought much upon 't:
But 'while there's life there's hope,' 'tis an old sentence,
And while there's hope there is not much repentance."

The crowd comes—

"And first the gen'ral impulse was to save—
In human breasts that impulse is the strongest;
Of all the sympathies which Nature gave,
'Tis that which earliest wakes and lasts the longest.
All enmities are buried in the grave,
And stry;—if thou doubtest it, thou wrongest
Our nature, which can ruin, injure, hate,
But not 'er'guish men makes common cause with Fate."

Canto III, commences thus:

"Hope still deceived is still before our eyes,
Queen of the sanguine heart and youthful brain;
Her visions fade—she bids new visions rise—
On, on they come, still beautiful and still vain,
Dancing and sparkling with a thousand dyes,
Till Mem'ry adds them to her motley train;
Like brightest streams ordain'd their course to take,
Till swallow'd in the mass of some dull lake.
Eternal charm of Hope! behold her bless
Each man according to his different part;
Warriors with glory, lovers with success,
The artist with the guerdon of his art,—
All with their pictur'd forms of happiness:
Oh! who would break the bubble to man's heart,
Light though it were, and thin as airy dream,
That bears him along life's hurrying stream?
And there, ev'n there, that dreary dome within,
'Mid relatives with breaking hearts, who came
To seek their bleeding and their mangled kin—
If they but found one spark of vital flame,
The light of Hope broke in upon the scene—
She was at hand her wonted pow'r to claim—
O'erleapt the present, whisper'd health and home,
And peaceful days and happiness to come."

Now was the saddest task of all the day,
The wounded from the dead to separate;
Those o'er whose features life yet seem'd to play,
From those that had no more to fear from fate;
And men were marshall'd forth to bear away
Upon their shoulders that disastrous weight."
Digression on our humanity, a digression upon
our other national characteristics relieves the
sad spectacle.

"We're now the greatest people upon earth,
As all must know who've thought at all about it;
We have been taught so from our earliest birth
By all around us, and we cannot doubt it;
Our loyal papers all proclaim our worth,
Our playmen rant it, and our people about it;
For various things we're famous—but the chief
Is our great bullshiness and love of beef.
In the first place John Bull the nation's nam'd;
The name of beef-eaters our yeomen take;
Throughout the world our prowess is proclaim'd
For cooking and for eating a beef-steak;
Beef makes our warriors and prize-fighters famed,
Who fight for beef, and call it glory's sake;
And when our happiness is past control,
We always kill an ox and roast him whole."

The rage for witnessing trials, executions,
accidents, and other painful sights, is well
ridiculed.

"I deprecate all pleasures of this sort.
But most my female readers I advise
To shun, not seek, the crowded anxious court,
Nor on the trembling culprit fix their eyes;
It is to make another's woe their sport.
Domitian began by teasing flies,
But came to smothering wretches for his pleasure,
And other cruelties beyond all measure.
Full well I know, my readers fair, that you
Must, being human, some excitement find;
Some take to literature, and turn blue—
Some with accomplishments amuse the mind—
Some choose religion—I know one or two
Extraordinary cases of the kind—
Some find their husbands' friends extremely handy—
Some take to metaphysics;—some to brandy—
In short, a thousand methods are pursued
To cheat the dull vacuity of living;
But that which does most evil and least good,
Is this persecution of another's grieving;
A taste which cannot be too soon subdued!—
Pray, gentle ladies, take the hint I'm giving;
I seldom moralise, and never preach
But when I really have some good to teach.
The two great passions of the English nation
Are curiosity and love of scandal;
The first picks up materials for narration,
And to the second is a sort of bangle;
It was the first which brought on this occasion
So many people to the Brunswick; and all
For what?—the sufferers wanted air and space—
They spilt the air and chok'd up all the place."

Among others was a dandy, painted at a
touch.

"A cane was in his hand, upon whose tip
An eye-glass shone, which would have marr'd his
sight.
If used; he daintily contrived to sip
Both a cigar and snuff, and thus emits
The two tobaccos on his upper lip;
He was to all exceedingly polite,
And only begg'd the people not to smear him
With those unseemly things they brought so near him."

We are sorry to pass an admirable sketch of
susceptibility; but we can only give the last
stanza.

"Such is it—such its pow'r is ever lightning
Across the path of those who feel its sway,
All pangs that dwell in human bosoms heightening,
As hate, love, fear, joy, sorrow, will have way,
Blackening each sable hue, each gay one brightening;
Thus it anticipates thy touch, Decay!
And leaves us blighted, blasted, at the time
When men of calmer mould are in their prime."

We have to censure a sort of poetical confession of faith—the subject of religious belief is out of place;—yet it is not profanely done, it is only a want of good taste in *loco*; and the following arguments for the immortality of the soul are worthy of the bard.

"Why do we gaze upon the lonely beach
And broken cliff we never saw before,
And feel a joy beyond the pow'r of speech
In the wild sands and on the summit hoar?
Why does the vast, th' eternal ocean teach
Deep lessons, which with Heav'n unite us more
Than all the world's temptation and its pow'r
Can work upon us in their happiest hour?
Nor let external nature bound thy range;
Look how the soul of man hath been endued;
The sympathy which binds in union strange
Congenial souls, the links of gratitude,
Of mutual minds the blissful interchange,
The pow'r of saving, joy of doing good,
The solemn farewell, the sweet recognition,
And all the nobler types of man's condition.
But, oh! beyond all these, if thou hast known
What 'tis to have thy heart's affections placed
On some fond being, whom thou lovest alone
With tender ardour, passionate yet chaste,
Whose love to thee is dearer than a throne;
If e'er the look of rapture thou hast traced
In th' all-confiding, happy, conscious eye—
Think, think of these, and yet thou canst not die!"

And with this fine stanza we close:—the extent of our Review of so short a production may be received as a testimony of our admiration. The author's name is, we believe, Charles Thomson; and we hail him as a very clever fellow.

The New Forest. By the Author of "Brambletye House," &c. 12mo. 3 vols. London, 1829. Colburn.

Of the contents of these volumes we shall only give our readers a hurried glance, without entering into aught of critical examination. The popular author of the "Rejected Addresses" has taken a completely new path: in the times of Henry VIII. his accuracy was such, that he seemed to have feasted with the merry monarch; and as to Jerusalem, if he had been a Jew he could not have been better acquainted with his native city. But the present work is of a time only just anterior to our own; we have plain misters and mistresses, as vain and as foolish as if they were our own particular acquaintance; and a story of love, danger, and mystery, which we sympathise too much with our young lady readers to unfold. The following is one of the most striking scenes: it relates to a youth who, with manners and appearance far above his condition, has joined a band of smugglers, whose captain has, we must premise, a very lovely daughter:—

"In his attempt to screen the captain, he had received a ball which had broken the bone of his leg, notwithstanding which he had contrived to scramble some little distance along the shore, and, favoured by the darkness, threw himself down beneath a crag, which had been detached from the cliff, and lay near the water's edge. In this situation he remained, propping himself against the crag, and groaning with torture, until the morning broke, when, upon casting his eyes to the sea, he could just recognise the cutter scudding away to the south, and chased by the revenue vessel, though far a-head of her. No other vessel was in sight; he was hidden from the beach; he could hear no sound of voices; all was silent where but lately all had been clamour and

tumult. Ignorant of his fate, his comrades had probably left the shore; it was not impossible, however, that some of them might still be lurking under the cliff, waiting for day-light to look out for him; and in order to avail himself of their services, it was necessary that he should render himself visible by climbing to the top of the crag. Easy as it appeared, he found it impossible to carry this design into execution. Sick, dizzy, faint with fatigue and the loss of blood, he found that his powerless limbs refused to obey him, and, after several ineffectual efforts, which only aggravated his sufferings, he fell back into his former position, and resolved to abandon the attempt. Almost at the same moment, he made the appalling discovery that he had crawled beneath this fatal rock at low water, and that the flowing tide, which now nearly touched his extended feet, threatened speedily to overwhelm and destroy him! At the first conviction of this inevitable fate, the perspiration started in large beads from his forehead, a sudden and deep flush overspread his features, which, almost immediately resuming their ghastly paleness, wore an expression of mingled agony and horror. He was naturally of a resolute and almost undauntable spirit, but the hopelessness of all succour or escape now inspired him with gloomy despair. Life, however, had long been a burden to him, and now that he could no longer retain it without the probability of his being made a prisoner, and exposed to public shame, or the certainty that, even if he were rescued by his comrades, he must undergo some painful operation for his broken leg, perhaps after all to die in miserable anguish, he became in some degree reconciled to his fate, and resolved to encounter his approaching death without flinching; and, if possible, without even a regret. Fixing his eyes therefore upon the advancing waters with a stern composure, his thoughts reverted to all the faults, follies, and crimes of his past life, a retrospect that filled him with compunction and remorse; while the hopelessness of the future, even if he could escape his doom, left him little to bewail in dying. A pang, indeed, shot through his heart as the image of Mary passed athwart his mind, and he murmured her name with a deep sigh; but such was the cruel waywardness of his lot, that even this, his last, his only chance of happiness upon earth, was rendered unattainable by insuperable impediments. Conscious that his end was approaching, he withdrew his thoughts from all worldly objects, and determining to employ the short space that was yet to be allowed him in imploring forgiveness of his offences, he fixed his haggard looks upon the sky, and remained absorbed in penitent and fervent prayer. Not so completely, however, could he abstract his thoughts from the earth, but that he felt an involuntary shudder as the waters flowed over his legs, while he imagined that he heard his death-knell ringing with a terrific loudness in his ears as the waves broke with a splash against the crag. Every succeeding surge rose higher and higher, sending a more icy chill to his heart; and as he mentally calculated to what part of his frame the next would reach, and how long it might be before his sufferings would terminate, nature recoiled from a death so appallingly slow and protracted, and yet apparently so inevitable. While thus gloomily meditating, he felt the buoyancy of the element which had already begun to enwrap his body, and a sudden flash of hope shot like lightning through his mind. By the assistance of the rising waters he might perhaps lift himself to the top of the little crag.

This too, he was well aware, must be speedily overflowed by the tide, and in that case he would only have deferred his wretched fate; but in the short interval he might be seen by some of the comrades, he might be saved! Life is sweet even to the most miserable: his despair was momentarily chased away; a new hope inspired him with fresh energy; instead of contemplating the waves as his fell, inexorable executioners, he hailed them as his guardian angels, his preservers; and buoying himself as well as he could upon their surface, he succeeded, after the most painful and convulsive efforts, in dragging himself to the top of the crag, so weak and exhausted that he lay outstretched upon its summit, just able to raise up and wave his right arm as a signal. At this critical moment, Mary, having reached the summit of the cliff above, threw her anxious eyes along the beach in the direction of the Isle of Wight, over the hills of which the sun had just risen, throwing broad shadows from its shores, and tipping with a crown of light the summits of the Needle Rocks. She could perceive no moving object except some distant fishing-boats; but as her looks wandered in another direction, she discerned something moving upon the crag. At first she imagined it to be sea-weed, blown up by the wind; but on viewing it more intently, she discovered that it was a human being; and the instant suspicion of the truth sent an electrical shock through her whole frame. It might be, it must be George, rendered helpless by his wound, and left thus miserably to perish! Be it whom it might, not a single second would her generous heart pause to deliberate. She leapt from her horse, ran like an antelope down the precipitous gap, plunged into the waves, hurried to the crag, and uttering a piercing shriek as she recognised the agonised features of George, she fell upon the rock beside him. Conscious, however, that not a moment was to be lost, she instantly recovered herself and started up, intending to support and assist him to the shore; but his blood-shot eyes, his death-like countenance, his faltering, gasping voice, his wounded leg, which had dyed the crag with gore, superadded to her fatigues during a sleepless night, and the shock of violently contending emotions, were altogether too much for her. Her's was a courageous heart, but after all it was a woman's; nature was unequal to the struggle she had previously undergone, and the hideous, the withering spectacle on which she was now gazing with looks of horror. The scene floated dimly before her eyes, a hollow noise rung in her ears, she murmured a few inarticulate sounds, and slipped fainting from the crag. George had convulsively grasped her hand, but totally powerless to raise her from the sea, he was doomed to the unutterable anguish of seeing her sink into the waters beside him. Her dishevelled tresses floated around her head; once—twice—thrice did the waves flow over her pale, lifeless face, as she lay extended like a beautiful marble statue. He could no longer bear the heart-rending sight, but with a deep groan sunk down insensible upon the hand which he still retained in his unconscious grasp."

Among the most amusing characters introduced are, Penguin, a retired tradesman turned geologist *faute de mieux*, and who submits to not a little dogmatism from his wife for the sake of "drawing out her character;"—Pompey, a negro, whose ejaculation, when, with all the cunning of folly, he has hit on some weak point of his auditor, is, "Ah,

massa, dere is de hiccory nut for you to crack ;"—and we must not forget the hero himself, a young Malthusian, who argues on marriage in a style to delight the Westminster Review, and answers a challenge to point out two grammatical errors in its wording: but these instances are amply sufficient to shew how completely different these volumes are to their predecessors from the same source.

Devereux. By the Author of "Pelham."

(Second Notice.)

WE regret that our limits will only permit us to give a meagre outline of what is a finished portrait; but as, according to the old proverb, "much would have more," those whose curiosity is stimulated by our selected traits, will rather rejoice that our few columns are only a small part of three volumes, and three volumes of a sufficient variety to gratify, we think, the taste of every reader. The character of Lord Bolingbroke is a new and bold attempt in novel-writing. In the various memoirs, &c. of the times, our author has sought for all that could give historical accuracy; he has studied his hero's character in his works, both in the more elaborate, where the mind holds forth its own *beau idéal*—and in the familiar letters, where it betrays so much of its reality; but, above all, he has drawn the picture in the spirit of one fine mind entering into and appreciating another. We shall best express our opinion of its excellence by likening it to some of the living sketches which make the glory of old classical writers: but let the following extracts speak for themselves:—

"He was in the very prime of life, about the middle height, and of a mien and air so strikingly noble, that it was some time before you recognised the general effect of his person sufficiently to examine its peculiar claims to admiration. He lost, however, nothing by a farther survey: he possessed not only an eminently handsome, but a very extraordinary countenance. Through an air of nonchalance, and even something of lassitude, through an ease of manners sometimes sinking into effeminate softness, sometimes bordering upon licentious effrontery, his eye thoughtful, yet wandering, seemed to announce that the mind partook but little of the whim of the moment, or of those levities of ordinary life over which the grace of his manner threw so peculiar a charm. His brow was, perhaps, rather too large and thick for the exactness of perfect symmetry; but it had an expression of great mental power and determination. His features were high, yet delicate; and his mouth, which, when closed, assumed a firm and rather severe expression, softened, when speaking, into a smile of almost magical enchantment. Richly, but not extravagantly dressed, he seemed to cultivate rather than disdain the ornaments of outward appearance; and whatever can fascinate or attract seemed so inherent in this singular man, that all which in others would have been most artificial, was in him most natural: so that it is no exaggeration to add, that to be well dressed seemed to the elegance of his person, not so much the result of art, as of a property innate and peculiar to himself.

"I was roused by a gentle touch upon my shoulder; I looked up, and saw St. John. 'Pardon me, count,' said he, smiling; 'I should not have disturbed your reflections, had not your neglect of an old friend emboldened me to address you upon his behalf.' And St. John pointed to the volume of Cowley which he had taken up without my perceiving it. 'Well,' added he, seating himself on the turf

beside me, 'in my younger days, poetry and I were better friends than we are now. And if I had had Cowley as a companion, I should not have parted with him as you have done, even for my own reflections.' 'You admire him, then?' said I. 'Why, that is too general a question. I admire what is fine in him, as in every one else; but I do not love him the better for his points and his conceits. He reminds me of what Cardinal Pallavicino said of Seneca, viz. that he 'perfumes his conceits with civet and ambergris.' However, count, I have opened upon a beautiful motto for you:

'Here let me, careless and unthoughtful lying,
Hear the soft winds above me flying,
With all their wanton boughs dispute,
And the more tuneful birds to both replying,
Nor be myself too mute.'

What say you to that wish? If you have a grain of poetry in you, such verse ought to bring it into flower.' 'Ay,' answered I, though not exactly in accordance with the truth; 'but I have not the germ. I destroyed it four years ago. Reading the dedication of poets cured me of the love for poetry. What a pity that the divine inspiration should have for its oracles such mean souls!' 'Yes, and how industrious the good gentlemen are in debasing themselves. Their ingenuity is never half so much shewn in a simile as in a compliment; and I know not which to admire the most in Dryden, his translating the *Æneid*, or his ordering the engravers of his frontispiece (upon the accession of King William) to give poor *Æneas an enormous nose*.' I smiled at the anecdote; and St. John continued in a graver tone: 'I know nothing in nature more melancholy than the discovery of any meanness in a great man. There is so little to redeem the dry mass of follies and errors from which the materials of this life are composed, that any thing to love or to reverence becomes as it were the sabbath for the mind. It is bitter to feel, as we grow older, how the respite is abridged, and how the few objects left to our admiration are abased. What a foe, not only to life, but to all that dignifies and ennobles it, is Time! Our affections and our pleasures resemble those fabulous trees described by St. Omer—the fruits which they bring forth are no sooner ripened into maturity, than they are transformed into birds, and fly away. But these reflections cannot yet be familiar to you. Let us return to Cowley. Do you feel any sympathy with his prose writings? For some minds they have a great attraction.' 'They have for mine,' answered I; 'but then I am naturally a dreamer; and a contemplative egotist is always to me a mirror in which I behold myself.' 'The world,' answered St. John, with a melancholy smile, 'will soon dissolve, or for ever confirm your humour for dreaming; in either case Cowley will not be less a favourite. But you must, like me, have long toiled in the heat and travail of business, or of pleasure, which is more wearisome still, in order fully to sympathise with those beautiful panegyrics upon solitude, which make, perhaps, the finest passages in Cowley. I have often thought that he whom God hath gifted with a love of retirement, possesses as it were an extra sense. And among what our poet so eloquently calls 'the vast and noble scenes of nature,' we find the balm for the wounds we have sustained among the 'pitiful shifts of policy;' for the attachment to solitude is the surest preservative from the ills of life: and I know not if the Romans ever instilled, under allegory, a sublimer truth than when they inculcated the belief, that those inspired by *Feronia*, the goddess of woods and forests, could walk barefoot and uninjured over

burning coals.' At this part of our conference, the bell swinging hoarsely through the long avenues and over the silent water, summoned us to the grand occupation of civilised life: we rose and walked slowly towards the house. 'Do not,' said I, 'these regular routines of petty occurrences—this periodical solemnity of trifles, weary and disgust you? For my part, I almost long for the old days of knight errantry, and would rather be knocked on the head by a giant, or carried through the air by a flying griffin, than live in this circle of dull regularities—the brute at the mill.' 'You may live even in these days,' answered St. John, 'without too tame a regularity. Women and politics furnish ample food for adventure; and you must not judge of all life by country life.' 'Nor of all conversation,' said I, with a look which implied a compliment, 'by the insipid idlers who fill our saloons. Behold them now, gathered by the oriel window, yonder; precious distillers of talk—sentinels of society, with certain set phrases as watchwords, which they never exceed; sages, who follow *Face's* advice to Dapper—

'Hum thrice, and buzz as often.'"

"The queen died—and a cloud already began to look menacing to the eyes of the Viscount Bolingbroke, and therefore to those of the Count Devereux. 'We will weather out the shower,' said Bolingbroke. 'Could not you,' said I, 'make our friend Oxford the talapat?' and Bolingbroke laughed. All men find wit in the jests broken on their enemies! One morning, however, I received a laconic note from him, which, notwithstanding its shortness and seeming gaiety, I knew well signified that something not calculated for laughter had occurred. I went, and found that his new majesty had deprived him of the seals, and secured his papers. We looked very blank at each other. At last Bolingbroke smiled. I must say, that, culpable as he was in some points as a politician—culpable, not from being ambitious (for I would not give much for the statesman who is otherwise), but from not having inseparably linked his ambition to the welfare of his country, rather than to that of a party—for, despite of what has been said of him, his ambition was never selfish—culpable as he was when glory allured him, he was most admirable when danger assailed him! and, by the shade of that Tully whom he so idolised, his philosophy was the most conveniently worn of any person's I ever met. When it would have been in the way—at the supper of an actress—in the levées of a court—in the *boudoir* of a beauty—in the arena of the senate—in the intrigue of the cabinet—you would not have seen, no! not a seam of the good old garment. But directly it was wanted—in the hour of pain—in the day of peril—in the suspense of exile—in (worst of all) the torpor of tranquillity, my extraordinary friend unfolded it piece by piece—wrapped himself up in it—sat down—defied the world, and uttered the most beautiful sentiments upon the comfort and luxury of his raiment, that can possibly be imagined. It used to remind me, that same philosophy of his, of the enchanted tent in the Arabian tale, which one moment lay wrapped in a nut-shell, and the next covered an army. Bolingbroke smiled, and quoted Cicero; and after an hour's conversation, which on his part was by no means like that of a person whose very head was in no enviable state of safety, he slid at once from a sarcasm upon Steele into a dis-

"A thing used by the Spaniards for the same purpose now use the umbrella."

ousion as to the best measures to be adopted. Let me be brief on this point! Throughout the whole of that short session he behaved in a manner more delicately and profoundly wise than I think the whole of his previous administration can equal. He sustained with the most unflagging, the most unwearied dexterity, the sinking spirits of his associates. Without an act, or the shadow of an act, that could be called time-serving, he laid himself out to conciliate the king and to propitiate parliament;—with a dignified prudence, which, while it seemed above petty pique, was well calculated to remove the appearance of that disaffection with which he was charged, and discriminated justly between the king and the new administration, he lent his talents to the assistance of the monarch, by whom his impeachment was already resolved on, and aided in the settlement of the civil list, while he was in full expectation of a criminal accusation."

"There are some men whom one never really sees in capitals; one sees their masks, not themselves: Bolingbroke was one. It was in retirement, however brief it might be, that his true nature expanded itself; and weary of being admired, he allowed me to love and, even in the wildest course of his earlier excesses, to respect him. My visit was limited to a few hours, but it made an indelible impression on me. 'Once more,' I said, as we walked to and fro in the garden of his temporary retreat,—'once more you are in your element—minister and statesman of a prince, and chief supporter of the great plans which are to restore him to his throne.' A slight shade passed over Bolingbroke's fine brow. 'To you, my constant friend,' said he, 'to you,—who of all my friends alone remained true in exile, and unshaken by misfortune,—to you I will confide a secret that I would intrust to no other. I repent me already of having espoused this cause. I did so while yet the disgrace of an unmerited attainder tingled in my veins; while I was in the full tide of those violent and warm passions which have so often misled me. Myself attained—the best-beloved of my associates in danger—my party deserted, and seemingly lost, but for some bold measure such as then offered: these were all that I saw. I listened eagerly to representations I now find untrue; and I accepted that rank and power from one prince which were so rudely and gallingly torn from me by another. I perceive that I have acted imprudently—but what is done is done; no private scruples, no private interest, shall make me waver in a cause that I have once pledged myself to serve; and if I can do ought to make a weak cause powerful, and a divided party successful, I will:—but, Devereux, you are wrong, this is *not* my element. Ever in the paths of strife, I have sighed for quiet; and while most eager in pursuit of ambition, I have languished the most fondly for content. The littleness of intrigue disgusts me; and while the *branches* of my power soared the highest, and spread with the most luxuriance, it galled me to think of the miry soil in which that power was condemned to strike the *roots* upon which it stood, and by which it must be nourished.' I answered Bolingbroke as men are wont to answer statesmen who complain of their *métier*—half in compliment, half in contradiction; but he replied, with unusual seriousness,—'Do not think I affect to speak thus: you know how eagerly I snatch any respite from state, and how unmovedly I have borne the loss of prosperity and of power. You are now about to enter those perilous

paths which I have trod for years. Your passions, like mine, are strong! Beware, O beware, how you indulge them without restraint! They are the fires which should warm: let them not be the fires which destroy.' Bolingbroke paused in evident and great agitation—he resumed: 'I speak strongly, for I speak in bitterness; I was thrown early into the world: my whole education had been framed to make me ambitious: it succeeded in its end. I was ambitious, and of all success—success in pleasure, success in fame. To wean me from the former, my friends persuaded me to marry—they chose my wife for her connexions and her fortune, and I gained those advantages at the expense of what was better than either—happiness! You know how unfortunate has been that marriage, and how young I was when it was contracted. Can you wonder that it failed in the desired effect? Every one courted me, every temptation assailed me; pleasure even became more alluring abroad—when at home I had no longer the hope of peace: the indulgence of one passion begat the indulgence of another; and though my better sense prompted all my actions, it never restrained them to a proper limit. Thus the commencement of my actions has been generally prudent, and their continuation has deviated into rashness, or plunged into excess. Devereux, I have paid the forfeit of my errors with a terrible interest: when my motives have been pure, men have seen a fault in the conduct, and calumniated the motives; when my conduct has been blameless, men have remembered its former errors, and asserted that its present goodness only arose from some sinister intention: thus, I have been termed crafty, when I was in reality rash; and that was called the inconsistency of interest, which in reality was the inconstancy of passion. I have reason, therefore, to warn you how you suffer your subjects to become your tyrants; and, believe me, no experience is so deep as that of one who has committed faults, and who has discovered their causes.'

"I was informed that Lord Bolingbroke was at his farm. Farm? how oddly did that word sound in my ear, coupled as it was with the name of one so brilliant and so restless! I asked the servant to direct me where I should find him; and, following the directions, I proceeded to the search alone. It was a day towards the close of autumn, bright, soft, clear, and calm as the decline of a vigorous and genial age. I walked slowly through a field robbed of its golden grain; and as I entered another, I saw the object of my search. He had seemingly just given some orders to a person in a labourer's dress, who was quitting him; and with downcast eyes he was approaching towards me. I noted how slow and even was the pace which, once stately, yet rapid and irregular, had betrayed the haughty but wild character of his mind. He paused often, as if in thought; and I observed that once he stopped longer than usual, and seemed to gaze wistfully on the ground. Afterwards (when I had joined him) we passed that spot, and I remarked, with a secret smile, that it contained one of those little mounds in which that busy and herded tribe of the insect race, which have been held out to man's social state at once as a mockery and a model, held their populous home. There seemed a latent moral in the pause and watch of the disappointed statesman by that mound, which afforded a clue to the nature of his reflections.

"The last time I saw you," said he, "how widely did our hopes and objects differ,—yours

from my own: you, seemingly, had the vantage-ground; but it was an artificial eminence, and my level state, though it appeared less tempting, was more secure. I had just been disgraced by a misguided and ungrateful prince. I had already gone into a retirement, where my only honours were proportioned to my fortitude in bearing condemnation; and my only flatterer was the hope of finding a companion and a Mentor in myself. You, my friend, parted with life before you, and you only relinquished the pursuit of fortune at one court, to meet her advances at another. Nearly ten years have flown since that time; my situation is but little changed; I am returned, it is true, to my native soil, but not to a soil more indulgent to ambition and exertion than the scene of my exile. My sphere of action is still shut from me; *my mind is still banished*. You return young in years, but full of successes. Have they brought you happiness, Devereux? or have you yet a temper to envy my content?' 'Alas!' said I, 'who can bear too close a search beneath the mask and robe? Talk not of me now. It is ungracious for the fortunate to repine; and I reserve whatever may disquiet me within, for your future consolation and advice. At present speak to me of yourself: you are happy, then?' 'I am,' said Bolingbroke, emphatically. 'Life seems to me to possess two treasures: one glittering and precarious; the other of less rich a show, but of a more solid value. The one is power, the other virtue; and there is this main difference between the two. Power is intrusted to us as a *loan*, ever required again, and with a terrible arrear of interest. Virtue obtained by us as a *boom*, which we can only lose through our own folly, when once it is acquired. In my youth I was caught by the former—hence my errors and my misfortunes! In my declining years I have sought the latter—hence my palliatives and my consolation! But you have not seen my home, and *all* its attractions,' added Bolingbroke, with a smile, which reminded me of his former self: 'I will shew them to you.' And we turned our steps to the house. As we walked thither, I wondered to find how little melancholy was the change Bolingbroke had undergone. Ten years, which bring a man from his prime to his decay, had indeed left a potent trace upon his stately form and the still unrivalled beauty of his noble features; but the manner gained all that the form had lost. In his days of more noisy greatness, there had been something artificial and unquiet in the sparkling alternations he had loved to assume. He had been too fond of changing wisdom by a quick turn into wit—too fond of the affectation of bordering the serious with the gay—the business with the pleasure. If this had not taken from the polish of his manners, it had diminished his dignity, and given it the air of being assumed and insincere. Now all was quiet, earnest, and impressive; there was tenderness even in what was melancholy; and if there yet lingered the affectation of blending the classic character with his own, the character was more noble, and the affectation more unseen. But this manner was only the faint mirror of a mind which, retaining much of its former mould, had been embellished and exalted by adversity, and which, if it banished not its former frailties, had acquired a thousand new virtues to redeem them. 'You see,' said my companion, pointing to the walls of the hall, which we had now entered, 'the subject which at present occupies the greater part of my attention. I am meditating how to make the hall most illustrative of its owner's pur-

suits. You see the desire of improving, of creating, and of associating the improvement and the creation with ourselves, follows us banished men even to our seclusion. I think of having those walls painted with the implements of husbandry, and through pictures of spades and ploughshares to express my employments, and testify my content in them.' 'Cincinnatus is a better model than Aristippus—confess it,' said I, smiling: 'but if the senators come hither to summon you to power, will you resemble the Roman, not only in being found at your plough, but in your reluctance to leave it, and your eagerness to return?' 'What shall I say to you?' replied Bolingbroke: 'will you play the cynic if I answer no? We should not boast of despising power, when of use to others, but of being contented to live without it. This is the end of my philosophy! But let me present you to one whom I value more than I valued power at any time.' As he said this, Bolingbroke threw open the door of an apartment, and introduced me to a lady with whom he had found that domestic happiness denied him in his first marriage—the niece of Madame de Maintenon. This most charming woman possessed all her aunt's wit, and far more than all her aunt's beauty: she was in weak health; but her vivacity was extreme, and her conversation just what should be the conversation of a woman who shines without striving for it. . . . I took the opportunity to remark, that I was rejoiced to find him so happy, and with such just cause for happiness. 'He is happy, though, at times, he is restless. How, chained to this oar, can he be otherwise?' answered Lady Bolingbroke, with a sigh: 'but his friends,' she added, 'who most enjoy his retirement, must yet lament it. His genius is not wasted here, it is true: where could it be wasted? But who does not feel that it is employed in too confined a sphere? And yet?'—and I saw a tear start to her eye—'I, at least, ought not to repine; I should lose the best part of my happiness if there was nothing I could console him for.' 'Believe me,' said I, 'I have known Bolingbroke in the zenith of his success; but never knew him so worthy of congratulation as now.' 'Is that flattery to him or to me?' said Lady Bolingbroke, smiling archly; for her smiles were quick successors to her tears. 'Detur digniori!' answered I; 'but you must allow that, though it is a fine thing to have all that the world can give, it is still better to gain something that the world cannot take away?' 'Et vous aussi êtes philosophe!' cried Lady Bolingbroke, gaily. 'Ah, poor me! in my youth, my portion was the cloister; in my later years I am banished to the porch! You have no conception, Monsieur Devereux, what wise faces and profound maxims we have here; especially as all who come to visit my lord, think it necessary to quote Tully, and talk of solitude as if it were a heaven! *Les pauvres bons gens!* they seem a little surprised when Henry receives them smilingly, begs them to construe the Latin, gives them good wine, and sends them back to London with faces half the length they were on their arrival. *Mais voici, Monsieur, le fermier philosophe.*' And Bolingbroke entering, I took my leave of this lively and interesting lady, and stepped into his carriage."

We have said there is sufficient variety for every reader in these volumes; and we repeat it: the historian may read them for their accurate and animated social painting, the philosopher for their acute and enlightened views, the man of the world for their keen and lively sarcasm, while the poet will no less enjoy the

imagination which sheds over parts a beauty of a superior order. A second perusal has only raised our first estimate of this interesting story; and if we said, in our introductory remarks, that a first-rate novel was now the production of a first-rate mind, we have no hesitation in avowing, such is the work to which we now accord this pre-eminent praise.

Lord King's Life of Locke, &c.

IN our last we sufficiently introduced this valuable book to the notice of our readers; and as it is one, the merits and interest belonging to which need only be known to insure its extensive circulation, we shall abstain from filling our columns with more of its contents than seem to be absolutely necessary as illustrations of its character. We are perhaps more susceptible of the hard-hitting points in the drawing of such a portrait as the following than the generality of the world—for we are often brought into contact with the order to which the individual belongs. The party in question was met by Locke at Cleves, and is distinctly one of those whom a pleasant friend of ours calls a *bore jure*, or sworn bore; and it is some consolation to us to find that the class existed above a century and a half ago, was to be found in foreign lands as well as at home, and had the power of infesting great literary personages then and there just as they may now do us!!

"I was no sooner rid of a divinity disputation (says our immortal philosopher, in a sportive letter to a friend) but I found myself up to the ears in poetry, and overwhelmed in Helicon. I had almost or rather have been soused in the Reyne, as frozen as it was, for it could not have been more cold and intolerable than the poetry I met with. The remembrance of it puts me in a chill sweat; and were it not that I am obliged to recount all particulars, being under the laws of an historian, I should find it very difficult to recall to mind this part of my story: but having armed myself with a good piece of bag pudding, which bears a mighty antipathy to poetry, and having added thereto half-a-dozen glasses of daring wine, I thus proceed:—My invisible master, therefore, having mounted me, rode me out to a place, where I must needs meet a learned bard in a threadbare coat, and a hat, that though in its younger days it had been black, yet it was grown gray with the labour of its master's brains, and his hard study or time had changed the colour of that as well as his master's hair. His breeches had the marks of antiquity upon them, were borne, I believe, in the heroic times, and retained still the gallantry of that age, and had an antipathy to base pelf. Stockings I know not whether he had any, but I am sure his two shoes had but one heel, which made his own foot go as uneven as those of his verses. He was so poor, that he had not so much as a rich face, nor the promise of a carbuncle in it; so that I must needs say that his outside was poet enough. After a little discourse, wherein he sprinkled some bays on our British Druid Owen, out he drew from under his coat a folio of verses; and that you may be sure they were excellent, I must tell you that they were acrostics upon the name and titles of the Elector of Brandenburg. I could not escape reading of them: when I had done, I endeavoured to play the poet a little in commending them, but in that he outdid me clearly, praised farther than I could, preferred them to Lucan and Virgil, shewed me where his muse flew high, squeezed out all the verjuice of all his conceits; and there was not a secret

conundrum which he laid not open to me; and in that little talk I had with him afterwards, he quoted his own verses a dozen times, and gloried in his works. The poem was designed as a present to the elector; but I being Owen's countryman had the honour to see them before the elector, which he made me understand was a singular courtesy, though I believe one hundred others had been equally favoured. I told him the elector must needs give him a considerable reward; he seemed angry at the mention of it, and told me he had only a design to shew his affection and parts, and spoke as if he thought himself fitter to give than to receive any thing from the elector, and that he was the greater person of the two; and indeed, what need had he of any gift, who had all Tagus and Pactolus in his possession? could make himself a Tempe when he pleased, and create as many Elysiums as he had a mind to. I applauded his generosity and great mind, thanked him for the favour he had done me, and at last got out of his hands."

We before alluded to, and expressed our regret, that from among the notes and dissertations interspersed in Locke's journals, we could not (on account of their length) extract two admirable articles on *Error* and on *Study* (pp. 90 and 281): these, and others, are replete with the finest examples of a high reasoning faculty applied in the most captivating and convincing manner. We cannot, however, resist the gratification of selecting a scrap or two, as specimens of the whole.

"May 16th, 1681.—The three great things that govern mankind are, reason, passion, and superstition; the first governs a few, the two last share the bulk of mankind, and possess them in their turns; but superstition is most powerful, and produces the greatest mischiefs."

"The usual physical proof (if I may so call it) of the immortality of the soul is this: matter cannot think, *ergo*, the soul is immaterial; nothing can really destroy an immaterial thing, *ergo*, the soul is really immaterial. . . .

"*Enthusiasm* is a fault in the mind opposite to brutish sensuality; as far in the other extreme exceeding the just measure of reason, as thoughts grovelling only in matter, and things of sense, come short of it. . . .

"*Opinion*.—A thinking and considerate man cannot believe any thing with a firmer assent than is due to the evidence and validity of those reasons on which it is founded; yet the greatest part of men, not examining the probability of things in their own nature, nor the testimony of those who are their vouchers, take the common belief or opinion of those of their country, neighbourhood, or party, to be proof enough, and so believe, as well as live, by fashion and example; and these men are zealous Turks as well as Christians. . . .

"The old opinion, that every man had his particular genius that ruled and directed his course of life, hath made me sometimes laugh to think what a pleasant thing it would be if we could see little sprights bestride men (as plainly as I see here women bestride horses), ride them about, and spur them on in that way which they ignorantly think they choose themselves. And would you not smile to observe that they make use of us as we do of our palfreys, to trot up and down for their pleasure and not our own?"

The following are miscellaneous curiosities:—

"1681, March 1st.—This day I saw Alice George, a woman, as she said, of 108 years old at Allhallow-tide last: she lived in St. Giles's parish, Oxford, and has lived in and about

Oxford since she was a young woman: she was born at Saltwyck, in Worcestershire; her father lived to eighty-three, her mother to ninety-six, and her mother's mother to 111. When she was young she was neither fat nor lean, but very slender in the waist; for her size she was to be reckoned rather amongst the tall than the short women; her condition was but mean, and her maintenance her labour. She said she was able to have reaped as much in a day as a man, and had as much wages. She was married at thirty, and had fifteen children; viz. ten sons and five daughters, besides five miscarriages; she has three sons still alive, her eldest, John, living next door to her, seventy-seven years old the 25th of this month. She goes upright with a staff in one hand; but I saw her stoop twice without resting upon any thing, taking up once a pot, and at another time her glove, from the ground. Her hearing is very good, and her smelling so quick, that as soon as she came near me, she said I smelt very sweet, I having a pair of new gloves on that were not strong scented. Her eyes she complains of as failing her since her last sickness, which was an ague that seized her about two years since, and held her about a year; and yet she made a shift to thread a needle before us, though she seemed not to see the end of the thread very perfectly. She has as comely a face as ever I saw any old woman have, and age has neither made her deformed nor decrepit. The greatest part of her food now is bread and cheese, or bread and butter, and ale. Sack revives her when she can get it; for flesh she cannot now eat, unless it be roasting pig, which she loves. She had, she said, in her years a good stomach, and ate what came in her way, oftener wanting victuals than a stomach. Her memory and understanding perfectly good and quick. Amongst a great deal of discourse we had with her, and stories she told, she spoke not one idle or impertinent word. Before this last ague she used to go to church constantly, Sundays, Wednesdays, and Saturdays; since that she walks not beyond her little garden: she has been ever since her being married troubled sometimes with vapours, and so is still, but never took any physic but once, about forty years since. She said she was sixteen in 1688, and went then to Worcester to see Queen Elizabeth, but came an hour too late; which agrees with her account of her age.*

At Amsterdam (1684) "M. Bremen shewed us, at Dr. Sibilius's, the way of making thé, in use amongst the Japanese, where he lived eight years. He beat the yolks of eggs with sugar-candy in a basin, pouring on them the hot infusion of thé by degrees, always stirring it."

"The Essay on Human Understanding, which had been finished during the author's retirement in Holland, and the English version of the Letter on Toleration, were published on his return to his native country (in 1689*)." "

* He received £30 for the copyright of the first edition; and "by agreement, made several years afterwards, the bookseller was to deliver six books well bound for every subsequent edition, and also to pay ten shillings for each additional sheet. For the Reasonableness of Christianity, the price was ten shillings each sheet. For the copy of several other books, which I believe to be the Consideration of raising the Value, or lowering the Interest of Money, the Reasonableness of Christianity, and vindication of the same, the sum received was '44*l*. 1*s*." For the Treatise on Education, 3*l*. for every impression, and twenty-five books bound in calf. Of this book Mr. Clive, the celebrated surgeon, said that it had contributed more to the general health of the higher classes of society, by one rule which the author lays down, than any other book he had ever read. 1690. My Reply to the Bishop of Worcester's second answer 14*l*. 10*s*.

"During the last four years of his life, increasing infirmities confined him to the retirement he had chosen at Oates, near High Laver, in Essex; and, although labouring under an incurable disorder, he was cheerful to the last, constantly interested in the welfare of his friends, and at the same time perfectly resigned to his own fate. His literary occupation at that time was the study of and Commentary on St. Paul's Epistles, published amongst his posthumous works. In October 1704, his disorder greatly increased: on the 27th of that month Lady Masham not finding him in his study as usual, went to his bedside, when he told her that the fatigue of getting up the day before had been too much for his strength, and that he never expected to rise again from his bed. He said that he had now finished his career in this world, and that in all probability he should not outlive the night—certainly not to be able to survive beyond the next day or two. After taking some refreshment, he said to those present that he wished them all happiness after he was gone. To Lady Masham, who remained with him, he said that he thanked God he had passed a happy life, but that now he found that all was vanity, and exhorted her to consider this world only as a preparation for a better state hereafter. He would not suffer her to sit up with him, saying, that perhaps he might be able to sleep, but if any change should happen he would send for her. Having no sleep in the night, he was taken out of bed and carried into his study, where he slept for some time in his chair: after waking, he desired to be dressed, and then heard Lady Masham read the Psalms, apparently with great attention, until perceiving his end to draw near, he stopped her, and expired a very few minutes afterwards, about three o'clock in the evening of the 28th October, in his seventy-third year."

To this we shall only subjoin, that the letters during Locke's residence in Holland are very interesting, and that the other correspondence embraces remarkable epistles from Newton and other of the most eminent men of the age, to beyond the close of the 17th century.

The Lives of the most eminent British Painters, Sculptors, and Architects. By Allan Cunningham. Vol. I. (being No. IV. of *The Family Library*), with twelve Engravings. pp. 347. London. 1829. Murray.

"It was not without diffidence," says Mr. Cunningham, "that I undertook this work; nor have I forgotten the satiric remark of my countryman, — 'Will no one write a book on what he understands?' This apology will be considered as superfluous by those who are at all acquainted with the personal history, as well as the previous works, of the author. Allan Cunningham is, it is true, known, as a poet, chiefly and most advantageously for productions composed in the spirit of the old rustic Muse of Scotland; but it is not the less true, that he has been for more than a dozen years the chief assistant and constant companion of one of the most elegant, as well as original, of modern sculptors: and he who in his early and untutored days could lay aside the tools of a stone-mason to indite such ballads as "Bonnie Anne," is not likely to have spent the vigour of his manhood at the elbow of Chantry without having acquired every title to respectful audience when he undertakes to speak of British art. His habits and occupations have naturally thrown him continually

Fourth edition of my Education, 3*l*. 1699, Third Letter to the Bishop of Worcester, 14*l*. — *Locke's Account Books*."

into the society of the brethren of the brush and the chisel, as well as of "the sweet singers of Israel;" and it would have been strange, if any thing worth either hearing or reading, on the subjects which he has now taken in hand, had escaped a man of such powerful faculties, so advantageously circumstanced. So much for technicalities,—which, after all, we confess we consider as the secondary matter here. Allan Cunningham is a man of strong masculine sense, as well as deep poetical sensibility. He has had his ups and downs in this world,—and, honourable as is the station to which he has at length attained by his own exertions, no one knows better

"How hard it is to climb
The height where Fame's proud temple shines afar;"

how many fail that deserve better things—and to what accidents the most deserving are often beholden for their substantial success,—what months and years of doubt and hope deferred sicken the heart of almost all who aspire to the fame of poets or painters, before any of their visions are realised,—how difficult it is for these delicate spirits to endure their sure probation of adversity,—how infinitely more difficult for them to hold the long-promised cup of prosperity with a steady hand—if it at last reach their grasp. We know no living man, whom *a priori* we should have believed to have studied the biography of genius with livelier and more intelligent sympathy than Allan Cunningham. Nor has this volume (the first of a series of three) at all disappointed us; on the contrary, we rise from its perusal with our opinion of the author's heart as it was,—with our opinion of the stories, and strength of his head, not a little elevated. The book is a learned one, though "wide as the poles asunder" from any thing like pedantry. Whatever previous critics had set down about the rise and progress and future prospects of English art, has evidently been digested thoroughly; and the result—the decisions of the author himself—are commonly in accordance with what had been ruled by antecedent judges, though illustrated by a mind overflowing with its own thoughts and images, and embodied in a style quite original, and (what many readers may not be so well prepared to expect) singularly compact. To say the truth, the narrative of Mr. C.'s romances was culpably diffuse throughout,—he seemed never to know when to stop,—"*manum, quod aiunt, à tabulâ*." But he appears to have profited by the hints which that defect called forth from ourselves and others; and in this volume we certainly find very little room to complain either of tautology or of verbosity, or of that besetting sin of prose-writing poets, over-ornament. Perhaps the sense that he was writing for the people—for those whose time is scarce, as well as their money,—has had a favourable influence on his pen. And surely, of all faults, those to which we have been alluding are the last that ought to find tolerance in a contributor to such a series as *The Family Library*, of which series we venture to say this volume will be at least as extensively a favourite as any that have gone before it. It is even more lavishly illustrated than either of the volumes of Mr. Murray's "Napoleon," and we suspect more judiciously. There are fine (autograph) portraits, on steel, of Reynolds and Hogarth, and no fewer than ten engravings on wood. There can be no question that one-half of the twelve embellishments of the volume would be cheap at the price asked for all the dozen, over and above Mr. Allan Cunningham's 347 pages of flowing

narrative, skilful observation, and most of all, criticism,—for any examples of which we cannot now find room.

SIGHTS OF BOOKS.

The Library of Entertaining Knowledge. Vol. I. Part II. The Menageries: Quadrupeds, described and drawn from Living Subjects. London, C. Knight; Longman and Co.

THIS, the third Part of the miscellany published under the superintendence of the Society for the Diffusion of Useful Knowledge, returns to the subject with which its first Part commenced, and is an excellent sequel to that introduction of the work. The editor has collected the latest information from every source, and has placed it before us in a shape well calculated to render his performance generally popular. The habits of animals, anecdotes of their wonderful instincts and acts, stories, reflections, &c. &c., all produced in a clear and pleasing manner, must make an amusing and a useful volume; and such is this.

The Three Chapters, for July 1829. J. Sharpe. HAVING adequately noticed the approaching rise of this our new contemporary, we have only occasion to state, at present, that it has appeared—No. I.—as expected from previous descriptions. There is a fine engraving, by H. Rolls, from Wilkie's characteristic picture of the Calabrian Shepherds hymning to the Virgin; and illustrated by a beautiful hymn, the words by L. E. L. Besides this sweet poem, there are two by Southey, and one by G. Darley—a prose sketch by Allan Cunningham—and a pleasant picture of life, called the Splendid Annual, to wit, a Lord Mayor of London, by Hook. These fill the first division, of "poetry and romance;" the second consists of essays, criticisms, &c.; and the third and last, of the Monthly Club, under which title the prevailing subjects of the day are discussed in the form of dialogue by all the letters of the alphabet. The novelty of the design seems to have caught the public; but we will give no opinion on so slight an acquaintance with our brother periodical, except to say that we view him with a favourable eye and kindly feeling. He offers us no opportunity for quotation but in L. E. L. and Darley's short poems; and even for these we cannot, this week, find space.

Days Departed; or, Banwell Hill. By the Rev. W. L. Bowles. 12mo. pp. 205. 3d edition. J. Murray.

WE hail with pleasure a third impression of Mr. Bowles's evidently popular poem. It has, however, nothing new to claim remark from us, except that the amiable author has found it again necessary to disclaim personal allusions in any of his descriptions.

ARTS AND SCIENCES.

COLLEGE OF PHYSICIANS.

AT four o'clock in the afternoon of Thursday, last week, the oration in honour of the celebrated Dr. Harvey was delivered by Dr. Hue before a pretty full meeting of the College. The learned Dr. took a general view of the state of medicine, commencing with the knowledge possessed by the ancients, passing on to the period when the store of information became so much extended by the discovery of the circulation of the blood, and arriving at the improvements in medical practice as resulting from the experience of those

eminent in modern times. The oration was, as usual, delivered in the Roman language, and displayed an extensive acquaintance with the older authors, whilst the correctness of style evinced high classical attainments. The compliment paid to Sir Henry Hallford, who presided, was extremely neat and appropriate, and seemed to be cordially acquiesced in by all present. After enumerating the early benefactors of the College, he dwelt particularly on the loss it had recently sustained in the death of Drs. Wollaston, Young, and Ash, all Fellows of the College. The orator paid a just eulogium to the memory of these distinguished individuals, and especially recounted the various discoveries for which science is indebted to the great talents and sagacity of Dr. Wollaston. The Fellows present at the delivery of the oration wore the doctors' robes of the English universities. At the conclusion, the following gentlemen were introduced as members of the College, namely,—Wm. Crobie Mair, M.B., Wm. Joseph Boyne, M.B., Nicholas F. Davison, M.B., James Dunlap, M.D., Wm. Beattie, M.D., and Tweedy John Todd, M.D.

In the evening, the last of the pleasing and instructive conversations for the season was held: soon after nine o'clock Sir Henry Hallford, Bart., took the chair. On the various tables of the Hall were placed, through the kindness of Mr. Iliff, the whole of the plants in the materia medica at present in flower, about 40 or 50 in number. A paper was read on the origin of the late epidemic fever at Gibraltar. The inquiry embraced two points; the first was, how the disease originated: on this point the board that carried on the investigation came to the decision, that the disease had been imported by infection in a Swedish ship from Havannah. The next point of inquiry was a very important one, viz., whether a person can suffer an attack of this disease twice: the gentlemen who conducted this part of the inquiry consisted of thirteen, eleven of whom were decidedly of opinion, that one attack of the fever confers an immunity from a second, nearly if not altogether as great as in the small-pox: the name given to the disease was that of the yellow bulam, or black-vomit fever, well known in America and the West Indies. It ought to be observed, however, that from both of these opinions there were some dissentient voices; and they are only to be considered as those of the majority of both the boards. It seems that the College of Physicians was consulted by government in the year 1815, upon the point of the non-recurrence of this particular fever in the same individual; and that at that time the College gave a very cautious opinion: in fact the matter still appears to be involved in some uncertainty.

This being the concluding meeting of the season, it was very numerously attended, the spacious library being well filled; and we cannot help looking with satisfaction to these meetings as productive of the greatest benefit; one of their chief objects being, to bring the respectable portion of the medical practitioners of the metropolis, as well as the learned in general, together. The utility of such meetings was feelingly touched on by Dr. Hue in the Harveian Oration. The only donation of the evening was a New Zealander's head, in a good state of preservation, by Dr. Dunlap, illustrative of the practice of tattooing.

PHRENOLOGICAL SOCIETY.

MONDAY, June 15th.—Joseph Moore, M.D. President, in the chair. A paper was read by

Thomas Alcock, Esq. on the various modes of taking admeasurements of the head for phrenological purposes; illustrated by numerous crania, drawings, and models of the brain. Mr. Hawkins also explained the use of his new craniometrical instrument, and exhibited an improved method of taking plaster-casts, whereby the unpleasant position of lying on the back may be avoided, the person sitting in an erect posture, and the distortion of the features, so generally seen in casts, being obviated. A cast of the head of Thomas Baker, an idiot, aged thirty-three years, was presented by Edward Lance, Esq. of Lewisham; in which the narrowness and retreating of the forehead shewed great deficiency of the anterior portion of the brain. A mask of Earl Grey was presented by Mr. Henry Behnes, and the development of the forehead was commented upon, as forming a striking contrast with the wretched organisation of the idiot. It was announced that thirty casts of the natives of various nations had been received from the Edinburgh Phrenological Society. The Society then adjourned until the first Monday in November.

LITERARY AND LEARNED.

OXFORD, June 27th.—The following subjects are proposed for the Chancellor's prizes for the ensuing year, viz. For Latin verse—*Tyrus*.

For an English essay—*The Character of Socrates, as described by his disciples Xenophon and Plato under the different points of view in which it is contemplated by each of them.*

For a Latin essay—*Utrum apud Græcos an apud Romanos magis exulta fuerit civitas Scientia?*

Sir Roger Newdigate's prize for the best composition in English verse, not limited to fifty lines, by any Undergraduate who on the day above specified shall not have exceeded four years from the time of his matriculation—*The African Desert.*

Theological prize, instituted June 2, 1825.—*Whether the doctrine of One God, differing in his nature from all other beings, was held by any heathen nation or sect of philosophers before the birth of Christ?*

Thursday last the following degrees were conferred: Bachelor in Divinity.—The Rev. E. Jacob, late Fellow of C. C. C. President of King's College, New Brunswick. Bachelor in Medicine (with license to practice).—T. D. Davidson, Worcester College.

Masters of Arts.—D. V. Durell, Christ Church, Grand Compounder; Rev. D. S. Stone, Exeter College, Grand Compounder; J. Aldridge, Christ Church; W. Lodge, Queen's College; Rev. J. Nixon, Lincoln College; Rev. J. A. Gower, Chaplain of Magdalen College; H. E. Freyer, Pembroke College; P. S. Carey, Rev. W. D. Johnston, St. John's College; Rev. P. J. Ferrers, Rev. R. Kilvert, Oriel College.

Bachelors of Arts.—W. Gray, Magdalen College, C. Sergeant, Brasenose College, H. W. Wiseman, Balliol College, Grand Compounders; A. Murray, Magdalen Hall; J. Procter, Brasenose College; W. C. Davies, Jesus College; J. H. Barker, Christ Church; R. W. P. Davies, Worcester College; T. S. Lightfoot, Exeter College; H. H. Way, E. C. Brown, Postmasters of Merton College; J. H. Ensell, Queen's College; H. B. Snook, Pembroke College; W. Nicholson, Trinity College.

In a convocation holden on Thursday, the Marquess of Bute, M.A. of Christ's College, Cambridge, was admitted *ad eundem*.

CAMBRIDGE, June 26th.—Sir William Browne's three medals for the present year have been awarded as follows: Greek Ode.—C. R. Kennedy, Trinity College. Latin Ode.—Epigrams.—C. Merivale, St. John's College.

The following are the respective subjects:

Greek Ode.—*ἡνερ, Ἀργαῖν ἔρατ' ἐν δὲλ' ἀνδράσιν.* Latin Ode.—*Cæsar, consecutus cohortes ad Rubiconem flumen, qui provincie ejus finis erat, paulum constitit.*

Greek Epigram.—*ἐνερὸν δεξιῶν.*

Latin Epigram.—*Splendide mendas.*

The Members' prizes of fifteen guineas each, to two Bachelors of Arts, for the encouragement of Latin prose composition, were on Saturday last adjudged to G. Langshaw, of St. John's College.—Subject, *An putandum sit posthac fore ut gentes Meridionales sub Septentrionalium viribus iterum succumbant?* Under-graduates.—N prize adjudged.

IMPORTANT EGYPTIAN ANTIQUITY.

[All the literati of Europe are aware of the vast importance of the celebrated Rosetta Stone in the British Museum, as a key to the interpretation of those lost records which are veiled under the form of Egyptian hieroglyphics. It appears from the following com-

munication from Cairo, which has just reached us, that a memoria of similar kind has been the subject of contention between the English and French collectors; and that the latter (by the means described) have become the possessors of this inscription, in which three languages are employed,—furnishing through the Greek a guide to the unknown enchorial and hieroglyphic. Mutilated and imperfect as it is, the *Mosque Stone* must possess great value; and we cannot but regret that it has been lost to England, through practices certainly not creditable to the parties concerned, and savouring more of the school of Napoleon than of the friendly and liberal relation in which we stand with the Bourbon government of France. We annex the statement precisely as it has come to our hands, leaving its facts to the consideration of the learned and scientific world; and its contradiction, if possible, to MM. Champollion and Drovetti. When the perfect transcript arrives, we shall, if within the power of lithography, and the form of the *Literary Gazette*, give the fruits of our countryman's discovery first, as of right belongs to us, to the public.]

ADVICES from Mr. James Burton, dated Cairo, April 17th, state that the *Trilingual Stone* which he discovered in 1826, in the ruinous part of a mosque, has been given to the French, after having been refused repeatedly to the urgent applications of Mr. Salt, Mr. Barker, and Colonel Cradock, made on behalf, and at the desire, of the English government. The reason assigned for these refusals has always been the sanctity of the place in which the stone was placed; but after reading the letter of Colonel Cradock to M. Abou, dated March 1st, 1828, it is difficult to suppose this the real ground. Mr. Burton has uniformly believed that the true cause of failure was the jealous interference of a French party; and, never despairing of eventual success, he kept till lately as secret as possible the knowledge of the spot in which his discovery took place. On the arrival of M. Champollion in Egypt, however, his respect for so distinguished a writer induced him to lay aside, in regard to him, this cautious demeanour: at the request of Lord Prudhoe he conducted him to the mosque, and gave him an opportunity of examining the Stone, which he did with apparent indifference. Soon afterwards, M. Linant, a French artist, formerly in the employment of Mr. Banks, and subsequently of the African Society, received a letter from M. Drovetti, the French consul, written at the instigation of M. Champollion, inviting him to assist them in their endeavours to prevent this tablet from falling, as the Rosetta tablet had done, into the hands of the English, and to secure it for his own country. M. Linant, indignant at this proposal, being aware that, by the custom of the country, the discoverer of any article of antiquity became the proprietor, communicated it immediately to Mr. Burton. An interview took place in consequence between Mr. B. and M. Drovetti, in which the latter stated, that if the prior claim could be got rid of, such was the influence which he (Drovetti) had over Ibrahim Pasha, the stone would no doubt be granted to him; he earnestly requested, therefore, that Mr. Burton would waive his claim, assuring him, that if it was so granted, the stone should immediately come to him *par amour*. This Mr. Burton declined; saying that, independently of personal considerations, he had a duty to perform to the English government. M. Drovetti then begged to be made acquainted with the site of the stone—a request which was not complied with. After this interview Mr. Burton considered it expedient that a new application should be made to the viceroy; but it was made too late. Ibrahim Pasha, ignorant of all that had taken place upon the subject, had already conceded the stone, off-hand, to M. Drovetti. On receiving this intelligence, Mr. Burton, at all risks, had the stone taken up and deposited at the English consulate, where

it remained two days undiscovered, during which time he was assiduously employed in copying off the inscriptions. The stone was then demanded and delivered up; for the Pasha, notwithstanding the remonstrances of Mr. Barker, confirmed the grant—directing, however, at the same time, in consideration of the circumstances of the case, that Mr. Burton should be allowed the use of the stone four days longer, before it finally passed into the possession of M. Drovetti. The value of the object could not be ascertained before it was taken up, and turns out to be less than was anticipated; for it is only a fragment one-half its original size. On it is represented a procession in bas-relief—beneath this there are twenty-nine or thirty lines of hieroglyphic characters, twenty-seven of enchorial, and seventy-four of Greek; but from the mutilation just mentioned, there remains only the half of every line: add to this, that many of the characters are effaced—some can be determined only by being of a lighter shade when wet than the smooth-worn surface, or by getting the light to fall upon them in a particular direction.

Notwithstanding the short period of time allowed, and the difficulty of the task, Mr. Burton has, with the assistance of Mr. Wilkinson, succeeded in making a copy of all the inscriptions, and has since lithographed the Greek and hieroglyphic part. Two impressions of these have been received: they were sent off in haste, before the enchorial part, which is the least injured, could be got ready; but this will follow shortly, together with a larger copy of the whole tablet, and a cast of it in plaster. The subject seems to refer to the daughter of Auletes: the name of Berenice occurs in the hieroglyphics.

Society of the Bulletin Universel, for the Diffusion of Knowledge in the Arts and Sciences.

SOMEWHAT more than five years ago, a periodical publication was commenced at Paris, under the title of "*Bulletin Universel des Sciences et de l'Industrie*;" the objects of which were,—“to create a sure medium of correspondence, and establish a mutual and rapid exchange of communications and discoveries among all the promoters of the arts and sciences; to bring into common use in the republic of letters, all the facts, the useful truths, the celebrated names and titles of national glory, which had hitherto circulated with such difficulty beyond the narrow limits of their particular circles over the civilised world; to notice each new discovery on its appearance, every practical application made by genius or patient observation; and to enable all men of science, as well as society at large, to profit by them; to announce on their appearance all the new works that have any interest for the arts and sciences, and thereby to supply the bookseller with a means of sale hitherto denied to him; to diffuse over all countries the particular lights of each; to scatter every where the seeds of prosperity, order, and peace—blessings that are created and diffused by the arts and sciences; to establish by these means a common bond of feeling and interests among the enlightened men of all nations; to excite the efforts of the human mind by the periodical view of the progress it has already made, and ought still to attempt, in every branch of knowledge; to aid the general progress by ever holding up sound principles and the maxims of science to such as depart from them; to form an undisputed, impartial, and constant

repertory, without regard to country, party, or system; to respect all social arrangements, and entirely to discard all reference to the speculations or movements of politics.”

For the purpose of accommodating the various classes of readers, the work was divided into eight sections; viz. 1. Mathematical and Physical Sciences, and Chemistry; 2. Natural History and Geology; 3. Medical Sciences; 4. Agriculture, Horticulture, Fishing, and Hunting; 5. Technology; 6. Geography, Statistics, Political Economy, and Voyages and Travels; 7. History, Antiquities, and Philology; and 8. Art of War. Each section was placed under a distinct editor, assisted by numerous colleagues; and the whole work under the direction of the Baron de Férussac.

It is evident that the organisation of so multifarious a publication must have been attended with difficulties of no ordinary magnitude:—“an extensive correspondence was to be opened up with the learned societies, and the principal individuals of each country who protect and encourage public opinion; a knowledge of all the periodical works that are published was to be obtained; it was necessary to find the means of collecting them, in order afterwards to present their substance to the public in a regular and complete manner; to accustom authors and editors to transmit their works for announcement; and, above all, to unite in the service of the '*Bulletin*,' a number of zealous collaborators, versed in every branch of science and the useful arts, and who, possessing the necessary knowledge, might be able to peruse such a vast mass of materials in both the living and the dead languages. It was also necessary to accustom their numerous and distinguished correspondents (differing so in character and feelings) to a uniform tone of wisdom and discretion; to maintain their disinterested zeal and indispensable activity in accomplishing the monthly analysis of nearly fourteen hundred works or memoirs, and the periodical and regular publication of eight distinct collections, forming each month a volume in octavo, of from six hundred to seven hundred pages.”

M. de Férussac, in an address to the public, states, that, by diligence and perseverance, the obstacles which presented themselves to the progress and success of the "*Bulletin*" had been overcome; but that he, and those who were associated with him in the undertaking, in order to give it the means of improvement, extension, and permanence, became anxious to raise it to the importance of an institution, and to place it under the protection of a Society of men of all countries, “distinguished for their rank, talents, and fortune; their elevation of character, and their love for the arts and sciences.” Of that Society, which was last year established by royal charter, the Dauphin graciously condescended to become the patron; and it already boasts among its members many of the most eminent names in France. The Baron de Férussac is at present in this country; with a view of obtaining the co-operation of our learned Societies, as well as of the private friends of science and the useful arts; and we strongly recommend to our readers the perusal of the various tracts which he is circulating on the subject; especially his exceedingly able and interesting “*Discours prononcé à la séance annuelle de la Société créée pour la propagation des connaissances scientifiques et industrielles, le 1^{er} Mai, 1829.*”

ROYAL SOCIETY.

MAY 29, 1829.—A paper was read on the Nerves of the Face; being a second paper

on that subject, by Charles Bell, Esq. After recapitulating the contents of his former paper, the author cited cases which have occurred since its publication in support of his doctrine; 1st. That the sensibility of the head and face depends on the fifth pair of nerves; 2dly. That the muscular branches of that pair are subservient to mastication; and 3dly. That the *portio dura* of the seventh pair controls those motions of the parts of the face, whether voluntary or involuntary, which are connected with respiration. Instances are given of lesions of the *portio dura*, from accident or from disease, followed by paralysis of the muscles on the same side of the face, while the sensibility remained. On the other hand, cases are related of injury to the fifth pair being attended with loss of sensibility in all the parts receiving branches from the injured nerve, while the power of motion continued unimpaired. In one case of this description, where one half of the under lip had become insensible, on a tumbler being applied to the mouth, the patient imagined it was a broken glass that he touched. A similar delusion was experienced by another patient, in whom the half of the upper lip had been deprived of sensation by an injury to the suborbital branch on the same side. From these facts the author deduces the absurdity of the practice of cutting the *portio dura* for the relief of tic douloureux. He next enters into an anatomical description of the course of that division of the fifth pair of nerves which is unconnected with the Gasserian ganglion, and passes under it, and which he considers the motor or manducatory portion of the fifth, being distributed to the temporal, masseter, pterygoid, and buccinator muscles: some branches of it supplying the muscles of the lips, and also the mylo-hyoideus and anterior belly of the digastricus, the action of which is to repress the jaw. In proof that this nerve is destined to mastication, the root of the fifth pair in an ass being exposed and irritated, the jaws closed with a snap; and, on its being divided, the jaw fell relaxed and powerless. The author next endeavours to shew the necessity of an accordance between the motions of the lower jaw and those of the cheeks during mastication, and the probability that this connexion of motions is brought about by means of the connexions which exist among their respective nerves, and between which a sympathy may in consequence be established. In one case violent spasms took place in the masseter and temporal muscles, while the motions of the features were free and unconstrained; and in another the muscles of the jaw on one side were paralysed, with loss of sensibility on that side of the face. On the other hand, when the *portio dura* was paralysed, all the muscles of the face waste, except those supplied by the fifth pair.*

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Eighth notice: conclusion.]

No. 1171. *A Monument, in marble.* E. H. Baily, R.A.—We presume that this monument is to be placed in an elevated situation; in which case the simple elegance of the attitude, and the gentle appeal of the action, will appear to great advantage.

No. 1160. *The Rape of Proserpine.* W. Pitts. — Mr. Pitt's extraordinary performance last

year, "The Shield of Æneas," cannot be obliterated from the memory of those who saw it. His present work is thrust into a corner, in which, whatever may be its merits (and we have no doubt they are great), those merits are scarcely distinguishable.

No. 1200. *Girl with a Fawn, a group in marble.* R. Westmacott, jun.—A very animated and pleasing performance.

No. 1219. *Boy and Tortoise, in marble.* R. W. Sievier.—At once playful and elegant.

No. 1162. *A monumental Figure, to be executed in marble.* T. Denman.—This is a well-designed and very appropriate figure.

No. 1221. *A marble Column to receive a Sundial, to be erected by public subscription in the Dant John Field, Canterbury.* H. Weekes.—We like the design and character of this column, and hope that its situation may be such as to secure it from the hand of the spoiler. Were such an ornament in any approachable spot in or about London, it would not remain an hour undefaced; otherwise, good sense and good taste could not suggest any thing better than that our places of public resort should thus afford suitable employment for the taste and talent of the sculptor.

No. 140. *Model for a bronze Equestrian Statue of his late Royal Highness the Duke of York.* C. Garrard.—In this model the artist has shewn both judgment and courage in departing from the common-place character and costume of what is called the "classical." He has given a very easy and natural grace to the figure of his Royal Highness.

The busts in the Sculpture-room, like the portraits above stairs, derive a considerable portion of their attraction from the character and importance of the individuals whom they represent, as well as from the talents and reputation of the artists by whom they have been wrought; and are seldom subjects for particular remark, except when some striking expression, or beauty of feature, rivets the attention of the spectator. Such exceptions, for instance, are No. 1214, *Marble bust of Lady Elizabeth Gower*; and No. 1216, *Marble bust of H. R. H. the Princess Victoria*; both by W. Behnes. These effigies of innocence and loveliness would be contemplated with delight, under whatever name, or in whatever circumstances, they might appear. They are very advantageously placed by the side of the manly bust of H. R. H. the Duke of Cumberland, No. 1215, by the same artist. Among other busts, interesting in themselves, and of admirable execution, are No. 1205, *Marble bust of Donna Maria II. Queen of Portugal*, P. Turnerelli; No. 1182, *Marble bust of H. R. H. Prince George*, W. Behnes; No. 1203, *Bust of the Marquess of Stafford*, F. Chantrey, R.A.; No. 1183, *Marble bust of Lord Holland*, J. Francis; No. 1198, *Marble bust of the late Thomas Rawson, Esq. of Sheffield*, E. Law; No. 1194, *Bust in marble of Armour Donkin, Esq.*, E. H. Baily, R.A.; No. 1195, *Bust in marble of Sir Richard Carr Glyn*, E. H. Baily, R.A.; No. 1176, *Marble bust of the Countess of Sheffield*, R. W. Sievier; No. 1177, *Bust of Admiral Sir Sydney Smith*, K.C.B. G.C.B. &c. R. Westmacott, jun.; and Nos. 1169, and 1168, *Marble busts of Sir Aspley and Lady Cooper*, Biehnaine.

NEW PUBLICATIONS.

Illustrations of Natural History. Conducted by J. Le Keux, who, with R. Sands, will execute the Engravings. Part I. Longman and Co., Jennings, Rodwell, &c.

A work calculated to diffuse, in a cheap form,

much useful and entertaining knowledge. The present Number contains six plates, representing twelve varieties of the horse. A Number will be published every two months; and there is an octavo edition of the work, with half the number of plates, which will be published monthly. As a specimen of the style of the descriptions, we quote the following curious anecdote:

"A nobleman, in the early part of the reign of Louis XV., having a very vicious horse, which none of the grooms or servants would ride,—several of them having been thrown, and one killed,—asked leave of his majesty to have him turned loose into the menagerie, against one of the largest lions. The king readily consented, and the animal, on a certain day, was conducted there [thither]. Soon after the arrival of the horse, the door of the den was drawn up, and the lion, with great state and majesty, marched slowly to the mouth of it, when, seeing his antagonist, he set up a tremendous roar. The horse immediately startled and fell back; his ears were erected, his mane was raised, his eyes sparkled, and something like a general convulsion seemed to agitate his whole frame. After the first emotions of fear had subsided, the horse retired to a corner of the menagerie, where, having directed his heels towards the lion, and having reared his head over his left shoulder, he watched with extreme eagerness the motions of his enemy. The lion, who presently quitted the den, sidled about for more than a minute, as if meditating the mode of attack, when, having sufficiently prepared himself for the combat, he made a sudden spring at the horse, which defended itself by striking his adversary a most violent blow on the chest. The lion instantly retreated, groaned, and seemed for several minutes inclined to give up the contest, when, recovering from the painful effects of the blow, he returned to the charge with unabated violence. The mode of preparation for this second attack was the same as the first. He sidled from one side of the menagerie to the other for a considerable time, seeking a favourable opportunity to seize his prey; during all which time the horse still preserved the same posture, and still kept his head erect and turned over his shoulder. The lion at length gave a second spring, with all the strength and velocity he could exercise, when the horse caught him with his hoof on the under jaw, which he fractured. Having sustained a second and more severe repulse than the former, the lion retreated to his den as well as he was able, apparently in the greatest agony, moaning all the way in a most lamentable manner. The horse was soon obliged to be shot, as no one ever dared to approach the ground where he was kept."

SCULPTURE: MR. LOUGH.

We have again been most highly delighted by a view of the works, in progress, by this extraordinary artist, whose earliest efforts excited so much of wonder and admiration. His great promise is now being more than realised. A group of twelve warriors contending for a standard is one of the boldest and noblest productions that ever the art of sculpture attempted, and worthy of the proudest epoch of ancient Greece. Man and horse mingled in mortal struggle, evince conceptions, powers, combinations, and genius, of the most splendid order. This work is for the Duke of Northumberland, the model about half the life-size,—and the effect so truly spirited and grand that words can convey no notion of its vigour.

* Although our reports have not appeared always in strict chronological order, yet, at the close of the session, we may mention that the series is complete.

Mr. Lough's *attelier* also boasts of productions of another description: a monument to Bishop Middleton, for St. Paul's, representing that distinguished prelate in the Christian act of confirming two Hindoos; and a Cupid singing to the lyre,—shew that he can master and be equally successful with the calm and the poetical, as with the stormy and heroic. We advise the lovers of native talent to see these works.

ORIGINAL POETRY.

DREAMS OF THEE.

MIDNIGHT!—the stars are bright,
And the pale moon shines coldly pure in heaven,
And the thin vapoury clouds, tinged by her light,

Like passing thoughts across her face are driven.

Midnight! the hour for rest—

The time, the dearest of all times to me,
When cometh slumber o'er my fevered breast,
And I can dream—ay, fondly dream of thee.

Yes—it is all of joy

Left to my blighted heart and burning brain—

The one pure pleasure that can never cloy—
The rainbow that my clouds of life sustain.

I wander all the day,
Like something scarcely of reality,
Careless of what I do or what I say,
And looking forward to my dreams of thee.

Ay—nought but dreams are mine:

I touch thy living hand, and dare not press it;

I gaze upon that deep blue eye of thine,

And my heart longs—my lips refuse—to bless it.

'Tis only in my sleep

I look upon thee firm, my heart quakes free,

And pour in burning words my passion deep:

—I would not lose for worlds my dreams of thee.

The day and night seem changed:

I think of trees, and flowers, and falling streams,

As things from which my spirit is estranged,

As once, in happier years, I thought of dreams.

My visions, like intense

And vivid truths, my slumbering eye can see;

And when a trance is on each outward sense,

My soul awakens in its dreams of thee.

And various are the forms

My thoughts assume in that deep solemn hour:

Sometimes thou lookst on me in clouds and storms,

And sometimes as a soft and gentle power:

But be they as they will,

Thou the one fond idea still must be—

Like sun-light over changeful clouds, thou still

Art light and glory in my dreams of thee.

Yet let me still dream on,

And in the realms of fantasie be blest,

And feel at morn, when the enchantment's gone,

'Tis my excited spirit's turn to rest.

And when the slumber deep

Of death at last is falling upon me,

I'll only mourn because a dreamless sleep

It is, and I shall cease to dream of thee!

MARY ANN BROWNE.

MUSIC.

INVENTION OF MUSICAL INSTRUMENTS.

"This is the patent age for new inventions."—*Byron.*

OUR No. 648, recorded the inventions of two new musical instruments recently produced on the continent. The one is termed a "trumpet-flute," invented by a Signor Canzi of Naples; and the other an immense bass, which requires its bow to be moved by machinery, lately produced at Milan. We have since seen a plan of a double bass of extraordinary dimensions, the

invention of an English gentleman, Mr. D. C. Hewitt, author of a truly interesting and erudite work* recently published upon the theory of music. From all we can collect from the description of both instruments, the bass of Mr. Hewitt possesses many advantages over that produced by the Milanese inventor. The particulars of this instrument are as follow:—That it is to be played on by means of keys; and that two parts may be performed at the same time, one by the right hand, and the other by the left. That it is to possess but four strings, of extraordinary length and thickness; and that the lowest note of each string is to be C on the ninth ledger line below the bass staff,† that is, twenty-one semitones below the lowest note on the double-bass now in use. That the motion of the bow is to be communicated by means of machinery connected with two pedals for the feet; but that the action of the bow upon the string will depend upon the pressure of the finger upon the key. That when both hands are employed upon the keys, all four strings will be acted on at the same time. That the quality of the tone produced by the action of the right hand will differ from that produced by the left. That it will admit of any desirable degree of execution, and far beyond that of the double bass. That though two parts, or melodies, can be only produced at the same time, the effect of a full harmony may be obtained by taking the notes of chords in succession in the way of arpeggios, as must be evident to every musician. And finally, that the instrument will be extremely elegant and magnificent in its structure and appearance.

We can, however, hardly make this invention intelligible without a model or drawing of the instrument; and we could wish the ingenious projector of it were patronised as his great musical skill deserves, so as to enable him to bring it and other valuable designs to perfection.

NEW PUBLICATIONS.

Lays and Legends of the Rhine. The Poetry by J. R. Planché; the Music by H. Bishop. Vol. III.

THIS volume, like its predecessors, is indeed a very interesting work. All the songs are beautiful and characteristic, and we especially admire the "Pilgrims," the "Serenade," and the "Drinking Song of the Men of Beale," which latter is particularly spirited and sweet. We shall take an opportunity of further illustrating these very favourable opinions.

DRAMA.

HAYMARKET THEATRE.

A GREAT hit was made here by a lively one-act piece on Wednesday, called *Manœuvring*; it is from the French, and most cleverly adapted; being smart in dialogue, good in situation, and amusing and humorous throughout. It was, besides, capital acted; and is just "the sort of thing" for a pleasant little summer theatre.

ENGLISH OPERA.

THIS popular establishment commenced its summer season on Saturday last, with the English version of *Cost Jan Tuttle*, a new one-act piece by Peake, and the operetta of *The Quartette*. The opera introduced to an English audience M^{de}. Cellini—that is, as an

* New Analysis of Music, susceptible of rigid mathematical demonstration.

† From this the compass will extend thirty-six semitones upwards, to C on the second space in the bass.

actress, the lady having sung at the oratorios, and made a favourable impression. She has a great deal to learn before she can be called an actress; but we think there are the capabilities; and, possessing a pleasing person, a good voice, and a fair proportion of science, she cannot fail to be a useful member of the company. The other characters were supported as usual, and with undiminished effect. The new piece, we suspect, is but a re-cast of one by the same author, called *My own Man*, and produced some seasons back at Covent Garden, in which we remember distinguishing Keeley's capers as a dancsomanical hair-dresser. It is much better in its altered state; and if Mr. Peake must borrow, he can scarcely find any body's materials more laughable than his own. Mrs. Keeley, late Miss Goward, played and sang to admiration; and was received with enthusiastic plaudits upon her entrance, being her first public appearance in a matrimonial character. The tribute was as honourable to the feelings of the audience as to the merits of the lady. May the days of the worthy and comical little pair pass as merrily as they have so frequently made our evenings do! We are sure they will be perfectly satisfied.

A new melodrama by Mr. Baynm, called *The Sister of Charity*, was produced on Thursday evening with success. Miss Kelly made her first appearance this season, as *St. Ursula, the Sister of Charity*; and by her magnificent acting insured its triumph. We are glad to perceive that clever actress Mrs. C. Jones at this theatre. She is a valuable acquisition.

VARIETIES.

Machines for Distorted Spine.—We have upon our table an etching of the above, invented by Mr. Hare, a surgeon of Leeds. By means of straps and weights, any curvature of the spine is gradually diminished; and, as far as we are acquainted with inventions of this kind, we are not aware of any one more likely to produce good effects. Certainly not one where the patient could enjoy so much comfort, from having the power of relieving himself *ad libitum* from constraint and pressure.

Expedition: Captain Ross.—We are sorry to learn that an *explosion* and a *mutiny* took place on board Captain Ross's steamer, the *Victory*. The machinery, we understand, got out of order, and the engineer was so severely hurt by the "explosion," that he has lost his leg. Ross, in consequence of this accident, put into Loch Ryan, (not far from Port Patrick, on the western coast of Scotland), and we presume had the machinery made good by workmen from Glasgow, as the vessel sailed again for the polar regions on the 15th of June. The "mutiny" was nothing worse, we are informed, than the disorder of half-a-dozen of the crew going ashore and getting drunk.

Horticultural Fête.—Horticultural fêtes do not suit our English gardens and climate; and nothing could be more incongenial than the experiment of Saturday. Rain throughout, plashy grass meadows, gravel and mud walks above ankle deep, tents dripping, and too few to shelter the company from the pitiless weather; a rather inferior order of visitors, but these exceedingly well wet; a scramble for provisions (though there was plenty); a fight for carriages; and a general experience of utter discomfort, promising diseases and death to many of the fair sufferers,—were the pleasures of this unfortunate day. We presume the

failure will preclude such attempts in future, and that the space within four walls will be preferred to such absurd speculations, which, however productive they may be made to the Society (by such means as we referred to in our last), ought not to be persevered in at the public expense, and when found to be so prejudicial to the health and safety of its best friends.

Fossil Remains.—M. Destrem, on exploring the fossil remains found in the caves of Bire, states, that he met with human bones in these caves, but that they were in different strata from that which contains true fossil remains.

The handsome Assassin.—In the most turbulent period of the French revolution, one of the most fashionable men in Paris was a M. de Ribbing, who was generally known only by the name of "the handsome assassin;" because it was believed that he had been one of the murderers of the unfortunate King of Sweden. At a time when all kings were regarded as tyrants, to destroy them was, in the eyes of the republicans, the noblest action of man. M. de Ribbing accordingly was received with eagerness into the most distinguished circles, the ladies especially disputed the honour of pleasing him; and he appeared on the public walks, at the theatres, &c. always under the title of "the handsome assassin."—*Mémoires sur Joséphine*, tome iii.

Greece.—Extract of a letter from a member of the scientific commission sent to the Morea, dated Ægina, 25th of April:—"On board a Greek bark I entered the Piræus, and from thence reached Athens. My object was to ascertain the state of the ancient monuments since the place has been each day more closely invested. I have the satisfaction to announce that, in general, they have suffered very little. The Temple of Theseus has completely resisted the cannon balls. It appears that the greater part of these monuments had been isolated from the modern erection, by the Franks before their departure; and this it is which has saved them,—for the city is now only a heap of ruins: among which may be seen a few palm-trees, and the temples of the ancient Greeks. I found it impossible to penetrate to the Acropolis. The Parthenon still presents some admirable masses; but I was unable to ascertain minutely the injuries it has sustained."

Curious Statistics.—A French doctor, Falret, has recently received a prize from the Paris Academy of Sciences for a statistical table of suicides, &c. in the French capital. The doctor, in the course of his work, states, that among men the greatest number of suicides is between the ages of thirty-five and forty-five; and among women, between twenty-five and thirty-five; but that there are twice as many suicides among young girls under fifteen years of age as among boys of the same age. He calculates, that the influence of disappointed love, and of jealousy, is in the proportion of 2½ among women to 1 in men; that reverses of fortune produce as 3 in men to 1 in women; and that the influence of baffled ambition is as 5 to 1. Actual misery, however, is stated to have an equal effect on both sexes. Alluding to the number of deaths by apoplexy, the doctor estimates that they were in Paris from 1794 to 1804, 399; from 1804 to 1814, 979; and from 1814 to 1824, 919. There are nearly three times more apoplexies among men than women.

Vaccination.—M. Numan, a veterinary surgeon at Utrecht, has recently made several experiments with the vaccine matter upon the following animals—the cow, the bull, the horse,

the ass, the camel, the goat, the sheep, the pig, the ape, the dog, and the rabbit. He states, as the result of these, that the vaccine virus taken from man reproduces the original effect when applied to the cow and the bull; but that the action of the virus so applied to these animals is only for a single time: on the horse and the ass it produces pustules; and when applied from them to the cow, its action is more intense than that of the primitive virus. The camel receives it easily by inoculation; but when taken again from the camel and applied to the cow, it produces little effect;—applied, however, from that animal to the goat it is quite efficacious; but both the goat and the camel are susceptible of its effects only once. The sheep does not yield readily to its influence; and the virus from this animal has no effect upon any other: on the ape the effect is nearly the same as upon man. The pig may be vaccinated, but the virus cannot be subsequently propagated. The dog is more difficult than the sheep; and the rabbit is quite inaccessible to the influence of the vaccine matter.

Laurel.—The butchers of Geneva have a singular mode of preventing flies from attacking the meat in their shops. They rub the walls and boards upon which the meat is placed with the essential oil of laurel; the smell of which keeps away this troublesome insect.

A Wonderful Hog.—On the authority of a professor of physiology, it is gravely stated in the Italian Anthology, printed at Florence, that a hog was some time ago killed in the neighbourhood of Bologna, on one of the intestines of which the words "*lansa guida da*," in black and permanent characters, were distinctly visible!

The Cat.—The publication has been gravely announced at Paris, of a "Traité raisonné on the education of the domestic cat, preceded by its philosophical and political history, and followed by the treatment of its disorders"! The name of the author is very characteristic—M. RATON.

A countryman in one of the western states, with a load of meal, drove up to a lady's door, when the following brief conversation took place:—"Do you want to buy any meal?" "What do you ask for a bushel?" "Ten cents, ma'am; prime!" "Oh! I can get it for a fig." (In a despairing voice) "*Dear lady!* will you take a bushel for nothing?" "Is it sifted?"—*American Paper.*

Odes upon Corns.—In reviewing Moore's "Odes upon Cash, Corn, Catholics, &c.," a Parisian journal prints the title, "Odes upon Cash, Corns, Catholics, &c."

The Week.—The King has graciously been pleased to place two gold medals, of the value of twenty-five guineas each, at the annual disposal of the Royal Asiatic Society.—*Swan River Settlement:* By letters from the Cape, it appears that Captain Stirling, with the expedition for settling on the Swan River, was, all well, at the Cape of Good Hope at the end of April.—*Commodore Owen* has gone to Fernando Po from Sierra Leone: we believe the gallant and able officer will shortly return home.—*Thames Tunnel:* The result of a meeting of the parties interested in this undertaking, on Tuesday, seems to be, that a Mr. Vignolles will be employed to complete the work, instead of the original projector of it, Mr. Brunel. Mr. V., it appears, has proposed to execute it at far less expense; and hopes are entertained that government will consequently advance the needful funds.—We warned Malibran not to be so violent in her action; if she had

taken our advice, she would not, in the gentle Romeo, have thrown herself down so recklessly as to break her elbow, and be unable to sing for a week! Why is sound criticism disregarded in this fashion?—There is, we hear, another distribution of premiums at the London University on Thursday: the last, which was very interesting, related to the *medical* classes only—the next is *general*.—Apropos: we have seen the letter in the *Times* about our puffing Mr. Williams, and being unfriendly to the London University; but we have not time to notice such silly stuff. As for puffing, we should like to see the party who could manage to get a syllable of undue praise into the *Literary Gazette* (for they must be confoundedly 'cute); and as for the London University, though not in long articles, which its own publicity rendered needless, it has always had our ready and cordial support.

LITERARY NOVELTIES.

Heraldry: Antiquities.—A proposal has been issued for publishing "the *Scrope and Grosvenor Roll*;" the Proceedings in the Cause between Sir Richard Le Scrope and Sir Robert Grosvenor," in the reign of Richard the Second. This cause, relative to the coat armour of the parties above named, so remarkable in the annals of heraldry, lasted four years, and was tried before the lord high constable. The record abounds in valuable illustrations of history, and throws a strong light on the general state of society in the fourteenth century. Upwards of three hundred persons were examined on the question, who were either peers, bannerets, knights, or esquires, or abbots, priors, or other clergy; and as each of the peers, knights, and esquires, deposes to his age, the battle or siege at which he commenced his military career, the number of years, and the occasions on which he had borne arms, and to circumstances connected with his services or the services of his ancestors; and as the clergy allude to manuscripts and monuments in their respective abbeys and churches,—this trial is rich beyond example in historical, biographical, and topographical facts. It is intended to print the Roll in one volume, to be illustrated by an Historical Preface and Notes by Mr. Nicolas; and a subscription of five guineas from sixty persons was called for, in order to set the work in motion and insure its completion—which number was speedily filled up by distinguished literary subscribers. Convinced of its curious matter, as well as its great interest and importance, from the parts we have read, we cordially recommend this design to the public.

The *Looseley Papers*; a collection of original Letters and other MS. documents, chiefly of the sixteenth and seventeenth centuries, preserved at the ancient seat of the More family at Looseley, in Surrey; edited, with connective and incidental notes, is announced by that valuable contributor to our ancient lore, Mr. A. J. Kempe. This work contains curious documents relative to the period of Henry VIII.

Mr. E. H. Barker, editor of the English edition of Professor Anthon's improved *Lempriere*, announces his intention to reprint in Paris, at stated periods, Dr. Webster's *American Dictionary of the English Language*.

Mrs. Heber is occupied in arranging the Correspondence of the late Bishop of Calcutta for publication, interspersed with Memoirs of his Life.

In the Press.—The second volume of Lieut.-Col. Napier's *History of the War in the Peninsula*.

LIST OF NEW BOOKS.

Chalmers's *Christian Defence*, 34mo. 3s. 6d. bds.—Robertson's *History of Ancient Greece*, 12mo. 7s. bds.—Howe's *Living Temple*, 12mo. 3s. 6d. bds.—Taylor's *German Poetry*, Vol. 11. 8vo. 15s. bds.—Ventouillac's *French Librarian*, 8vo. 10s. bds.—Scott's *Continuation of Church History*, Vol. 11. Part II. 8vo. 5s. bds.—The *Commandment with Promises*, 18mo. 2s. hf.-bd.—The *New Forest*, 3 vols. post 8vo. 11. 11s. 6d. bds.—*Love's of the Poets*, 9 vols. post 8vo. 11. 12s. bds.—*Old Court*, 3 vols. post 8vo. 11. 11s. 6d. bds.—Sir Philip Gaetano's, post 8vo. 8s. 6d. bds.—Josephine's *Memoirs*, Vol. III. post 8vo. 10s. 6d. bds.—Perceval's *Peace-Offering*, 12mo. 4s. bds.—Baker's *German Pulpit*, 8vo. 10s. 6d. bds.

TO CORRESPONDENTS.

We are much obliged to Shenstone: his communications are extremely welcome.

To G. D. "no"—but not without thanks. We cannot, on the instant, lay our hands on C. L.'s farewell. It is contrary to our rule to publish such a paper as that on the Grecian temple at Exmouth.

Cocquilla and Cocoa-Nut Ornaments.—Our old client, Coniglio, reminds us, in a letter which would do equal honour to English and Italian literature, that we promised further to patronise his very cheap and pretty ornaments. His illad certainly lies in a nut-shell, and we cannot disappoint such a correspondent: therefore, ladies, before you leave town, we, as lovers of the embellishing and inventive arts, advise you to lay in as much of the nut-work as will render the country tolerable.

ADVERTISEMENTS

Connected with Literature and the Arts.

SUFFOLK STREET GALLERY.

SOCIETY OF BRITISH ARTISTS.
The Sixth Annual Exhibition for the Sale of Works of Art by living British Artists, is open to the Public every Day from Nine to Six.
Admission, One Shilling.—Catalogue, One Shilling.
T. C. HOPLAND, Secretary.
Suffolk Street, Pall Mall East.

THE EXHIBITION of LODGE'S

PORTRAITS of the MOST ILLUSTRIOUS PERSONAGES of GREAT BRITAIN, from the Galleries of His Majesty, the Nobility, and from Public Collections, is open daily, from Nine till Six, at Messrs. Harding and Leppard's, No. 4, Pall Mall East, Corner of St. James's Street.
Admission by Tickets only, which may be had free of expense, on application to Messrs. Harding and Leppard.

EXHIBITION of DRAWINGS, by

J. M. W. TURNER, Esq., R.A. consisting of Views in England and Wales, executed for a Work now in course of Publication, at the large Gallery, Egyptian Hall, Piccadilly.
Admission, by Tickets only, which may be obtained (gratis) of the Publisher, Mr. Jennings, 5, Poultry, and 235, Oxford Street. Open from Ten till Six.
Subscribers' Names received at the Gallery.

PRIVATE TUITION. A Clergyman

residing in a beautiful and healthy situation, within 30 miles of London, is desirous of superintending the education of Two Young Gentlemen, previously to their entering either of the Public Schools, with the different systems of which he is thoroughly acquainted. Instruction will also be given in German and French, if required.
Address to M.A., care of Messrs. T. and G. Underwood, Book-sellers, Fleet Street, from whom all particulars may be had.

MRS. ARBUTHNOT'S PORTRAIT.

from the Painting by Sir Thomas Lawrence, P.R.A. embellishes the July Number of "La Belle Assemblée," which also contains Four Engravings of English and French Fashions, with accurate Descriptions, and the usual Proportion of Letter-press. Price 8s. 6d.

The volume just completed contains Portraits of the following distinguished Persons:—The Duchess of Northumberland—Marchioness Wellesley—Hon. Mrs. C. Lindsay—Viscountess Barrington—Viscountess Kirkwall—and Lady Ellenborough. The Portraits in preparation are those of Lady Charlotte Bury, by Sir Thomas Lawrence; Lady Belsham, Lady Anne Beckett, Lady Normanby, Viscountess Eastnor, Lady Anne Ramsey, Lady Sophia Grey, &c. &c. &c.

Proofs of the Portraits to be had of Mr. Colnaghi, 35, Cockspur Street.
A few perfect Sets may still be had, in 3 vols. Published by Whittaker and Co. London; Waugh and Innes, Edinburgh; and Curry and Co. Dublin; and may be ordered of all Booksellers in the Kingdom.

June 1850, No. 55, Cockspur Street, Charing Cross.
Portraits of His Most Gracious Majesty the King.
In a few days will be published, by subscription, a most admirable

PORTRAIT of HIS MAJESTY in the

ROBES of the GARTER, from the Original Picture by Sir Thomas Lawrence, P.R.A. principal Painter in Ordinary to His Majesty.
This Print, an extraordinary chef-d'œuvre of Engraving, executed in Mezzotint on Steel, by Mr. Hodgkins, is from the magnificent Picture presented by His Majesty to the City of Dublin. It represents His Majesty at his most favourable period; and it is scarcely possible to imagine a Work of Art more characteristic of dignity and splendour of personal appearance, or more worthy of being handed down to posterity as an Historical Portrait of the King.

To subscribers the price will be as follows: Prints 5s. 12s. 6d.; proofs 4s. 6s.; India proofs 5s. 6s.; first proofs, before the letters, 7s. 7d.

A Book to receive Names of Subscribers, to whom the Impressions will be delivered in the order of insertion, is open at the Publisher's, Mr. Colnaghi, 35, Cockspur Street, Charing Cross, where the Engraving may be seen. Names are also received at the Exhibition of the Royal Hibernian Academy; at the Pelican Office, Abbey Street; and by Messrs. Allen, Dame Street, Dublin; and by the principal Book and Print-sellers in the United Kingdom.

Repetitions of this very favourite Portrait have in like manner been transmitted to the principal Crowded Hands, to His Majesty's Ambassadors, to Governors General, to the University of Oxford, and to the late Pope; it may, consequently, be considered the Official and most approved Portrait of our Sovereign.

MUSIC.

This Day, price 3s.

THE HARMONICON; a Popular Journal of Music.

Contents of this Month's Number:—Part I. Music.—Song, (MS.); F. W. Hornsby—5. Romance; F. Herold—3. Song; Dobbins—4. Duet; Harry Carey—5. Tema and Variations, for Piano-forte and Flute; Beethoven—6. Andante; Herold—7. Cossack; Stetbel.

Part II. Musical Literature.—1. On Musical Notation—5. Unpublished Letter of Mozart—5. Observations on Song—A. C. M. von Weber's Posthumous Words (concluded)—5. On the Sounds of the Musical Scale—6. Boileau's New Opera, "Les Deux Nuits"—7. Organs in Scottish Churches—8. Mr. James and M. Telen—9. Review of New Music—10. Extracts from the Diary of a Dilettante—11. Foreign Musical Report—12. Concerts—12. The Drama.

LONDON: Published by Samuel Leigh, No. 18, Strand; and sold by all Booksellers, Musicians, and Teachers, in Town and Country.

BOOKS PUBLISHED THIS DAY.

JOURNAL of a PASSAGE from the PACIFIC to the ATLANTIC, crossing the Andes in the Northern Provinces of Peru, and descending the River Marañon, or Amazon.
By HENRY LISTER MAW, Lieut. R.N.
John Murray, Albemarle Street.

THE MIRROR of LITERATURE, AMUSEMENT, and INSTRUCTION, Vol. XIII. price 6s. 6d. with a Portrait of the late Sir H. Davy, Bart. and 40 other Engravings.
"The Mirror, with its choice engravings and inexhaustible varieties, is the most recent and most entertaining publication of the day."—*Atlas*, July 15, 1850.
"The Mirror is an ingenious and useful publication."—*Times*, 1850.

Twelve Volumes of this highly popular Miscellany contain 5075 closely printed 8vo. pages, 10 Portraits, and 500 other well-executed Engravings of popular interest, for the trifling sum of 81. 5s. boards, or 4s. 6d. half-bound.
J. Limbird, 143, Strand, London; and all Booksellers.

THE ETON COMPARATIVE ATLAS of ANCIENT and MODERN GEOGRAPHY, from original Authorities.

By A. A. ROWSMITH, Hydrographer to the King.
In 63 Plates, royal 4to. for the Use of the Students at Eton College, is just published, 21. 2s. boards, or 11. 15s. full coloured and half-bound.

"It is a work of the most essential service to every man of liberal education, and worthy of introduction into every respectable school in the kingdom. It is far superior to every other publication of the kind, whether as regards its matter or the beautiful style in which it is engraved, that it needs only to be seen to be admired and adopted."—*New Monthly Magazine*.
To be had at the Author's, Soho Square, and at the Eton Warehouse, Red Lion Court, Fleet Street.

Just published, in 8vo. the 3d edition, with additional Cases, price 9s. boards.

A SERIES of OBSERVATIONS on STRUCTURES of the URETHRA; giving an Account of some newly invented Instruments, and of a Method of Treatment by which the most obstinate and aggravated forms of that Complaint have been safely and effectually cured. Illustrated by Cases and a Plate.

By RICHARD ANTHONY STAFFORD, Member of the Royal College of Surgeons, and lately House Surgeon to St. Bartholomew's Hospital.
"The introduction is highly interesting, and Mr. Stafford deserves the thanks of the profession for the ingenuity of his invention."—*Medical and Surgical Journal*, Oct. 1850.
"We think Mr. Stafford's plan ingenious, and he has put it before the public very fairly and impartially."—*London Medical Gazette*, Aug. 2, 1850.
Printed for Longman, Rees, Orme, Brown, and Green, London.

FOREST SCENES and INCIDENTS in the WILDS of NORTH AMERICA.

By GEORGE HEAD, Esq.
John Murray, Albemarle Street.

A New School Book, suitable to all Classes.
In a clear bold type, on fine paper, and handsomely printed, 18mo. price 4s. 6d. neatly bound.

GUY'S GENERAL SCHOOL QUESTION BOOK; in which each Question, in a regular Series, is followed by its appropriate Answer, not only in Ancient and Modern History, in which the whole is arranged in chronological order, but also in Biography, Geography, Astronomy, History, and Natural Science, and in every other branch of interesting variety of miscellaneous subjects, the whole tending to enlarge the boundaries of Juvenile Knowledge, by increasing its stores; and thus, by blending such a course of general information with sound classical or liberal learning, to raise a better superstructure of School Education.

By JOSEPH GUY, Formerly of the Royal Military College, and Author of a Chart of General History, Pocket Cyclopædia, School Geography, Elements of Astronomy, British Spelling Book, &c. &c.
London: Printed for Baldwin and Cradock.

This work has been compiled by the author with unusual care and attention to the wants of Teachers. His long and successful practice in the education of youth must always give him books a decided preference over the generality of School Text-books, had he any other merit; but Mr. Guy's school books possess higher claims; they are more perfect in arrangement, more choice in selection, and more classical in style, than any of the elementary works that have preceded them. Their extensive sale is proof enough of their value perhaps; but, large as it is, the publishers doubt not but every year will add greatly to their circulation; at present the annual sale of the whole is not short of Sixty Thousand! and when the "General School Question Book" has taken its station (where it soon will be) in every respectable school in the empire, the total sale of these admirable School Books must be greatly increased. Teachers will see in this (Mr. Guy's latest and most finished work) his intimate knowledge of the wants of schools; and in the arrangement, the power he possesses of abridging the anxious labours of school business.

Orrell's General Atlas, with an Index of upwards of Fourteen
In royal 4to. with coloured outlines, price 18s. half-bound, or with the Maps full coloured, price 31s.

OSTELL'S NEW GENERAL ATLAS,

Including Maps of Canaan or Judea, ancient Greece, and the Roman Empire. A new edition, on an entirely new Set of Plates, engraved on an enlarged scale, and corrected from the latest and best Authorities, containing Thirty Maps.
Price 9s. To this edition has been added, without any additional charge, a Consulting Index, containing References to every Place laid down in the Maps, with the Latitude and Longitude. The Index comprises upwards of Fourteen Thousand Names, which in Teaching (besides other obvious uses) must answer almost every purpose of a Gazetteer.

LONDON: Printed for Baldwin and Cradock.
N.B. An edition, printed on imperial drawing paper, for Library use, price 17s. 6d. handsomely half-bound.

Twenty-Four Entertaining and instructive Books for Young People.

Done up in fancy Bindings, suitable for Presents and School Prizes.

Printed for Baldwin and Cradock, London.

A DESCRIPTION of more than THREE

HUNDRED ANIMALS, interspersed with Entertaining Anecdotes, and interesting Quotations from Ancient and Modern Authors. To which is added, an Appendix, on Allegorical and Fabulous Animals. The whole illustrated by accurate Figures, finely engraved on wood, after Bewick's designs.
A new edition, revised and much enlarged, with numerous additional Cuts, in 18mo. beautifully printed by Whittingham, on fine paper, price 8s. neatly bound in canvas.

"This work comprises, within a moderate compass, the whole range of natural history, viz. Quadrupeds, Birds, Fishes, Serpents, Reptiles, Insects, Worms, &c."
3. **The Swiss Family Robinson; or, Adventures of a Father and Mother, and Four Sons on a Desert Island.** A new edition, handsomely printed, with 12 Engravings, and a Plan of the Island. 18mo. 7s. 6d.

4. **The History of Sandford and Merton.** A new edition, revised throughout, and embellished with beautiful Cuts, from new Designs, by Harvey. In 1 vol. 18mo. 7s. 6d.

5. **The Stories of Old Daniel, conveying useful Information, in entertaining Tales, chiefly founded on Facts.** A new edition, 18mo. with a Frontispiece and Vignette, price 6s.

6. **Keeper's Travels in Search of his Master.** The 14th edition, enlarged by the Author. 18mo. price 7s.

7. **The Woodland Companion; or, a Brief Description of British Trees, with some Account of their Uses.** By John Alkin, M.D. 2d edition, 18mo. with 38 Plates, 8s.

8. **Natural History of the Year.** By Arthur Alkin, M.D. 4th edition, improved, foolscap 8vo. Plates 3s. 6d.

9. **8. Bingley's Practical Introduction to Botany.** A new edition, by Frost. Plates, 18mo. 4s.; or with the Plates coloured, 7s.

10. **Columbus; or, the Discovery of America,** as related in entertaining Conversations by a Father with his Children, with a Map. By Mrs. Heine. New edition, 18mo. 5s. 6d.

11. **Cortez; or, the Conquest of Mexico.** In Conversations, by the Same. New edition, with a Map, 18mo. 5s. 6d.

Now selling (for ready money) at the Prices affixed, by John Cochran, No. 108, Strand, (Servy's Opposite).

A SYSTEM of GEOGRAPHY, Vol. VII.

Part II. Germany, Switzerland, and Italy.

By M. MALTE-BRUN.
"We think the translators of M. Malte-Brun's Geography have done good service to the public, by rendering so valuable a work accessible to the English reader. If the past which is to treat of the United Kingdom be as well executed as that which treats of the United States of America, it will do something to supply one of the greatest deficiencies in British Literature, and a tolerable account of the British dominions."—*Edinburgh Review*, No. 97.
Adam Black, Edinburgh; and Longman and Co. London.

Guy's Superior Works for Schools.

GUY'S NEW BRITISH EXPOSITOR;
or, Companion to his New British Spelling-Book; containing an Alphabetical Collection of the most useful, usual, and proper Words in the English Language; the whole divided, and properly accounted, and the Meaning given according to the present Definitions, and useful Tables, viz. Words accented differently when used as different Parts of Speech—usual Latin Phrases explained—usual French Phrases Englished—Abbreviations, with their Latin and English Meanings—Explanations of the Names of the Months, Weeks, and Days—Terms of Art and Science explained; also Examples of Synonymous Words properly explained. The whole calculated for the Use of Schools and Families.

By JOSEPH GUY,

Formerly of the Royal Military College.

A new edition, printed on a clear half tone, on fine paper, and neatly bound. 1s. 6d.

* * * The clarity shown by Teachers in immediately adopting this work on its first publication, is the best proof of its use in school teaching.

Guy's new British Primer. New edition, in a neat half-binding, price only 6d.

Guy's British Spelling-Book. The 30th edition, with a fine Steel-plate Frontispiece, and many Cuts. Price 1s. 6d. bound.

* * * This Spelling-Book may now be considered as decidedly the most popular extant. The attention of the author is constantly devoted to its improvement; and that of the publishers, to its accuracy and beauty.

Guy's new British Reader, with 17 Woodcuts. 6th edition, price 3s. 6d. bound.

Guy's General School Question-Book, in Ancient and Modern History, Biography, Geography, Astronomy, and all other Subjects tending to enlarge the Boundaries of Juvenile Knowledge, in a thick vol. 18mo. handsomely printed, price 6s. 6d. bound.

Guy's School Geography, 11th edition, with Seven Maps. Price 3s. bound.

A Key to ditto, 1s. 6d.

Guy's Elements of Astronomy, familiarly explaining the general Phenomena of the Heavenly Bodies, &c. 2d edition, with 18 fine Copper-plates, price 3s. bound.

Guy's Pocket Cyclopaedia, the 9th edition, enlarged and essentially improved, with the addition of numerous appropriate Cuts, in a handsome thick vol. 18mo. price 15s. 6d. boards.

Guy's Chart of General History, on a large Sheet, coloured, 5th edition, price 7s. on rollers, 10s. 6d.

Guy's School Ciphering-Book, on fine post-writing paper, and new script type. 4th edition, price 3s. 6d. half-bound.

Key to ditto, 6d.

N.B. A peculiarity in this very useful work is, that the first question in each rule is worked for the pupil, and expressed in words; thus enabling him to learn a rule without the aid of any teacher.

Guy's Tutor's Assistant; or, Complete Scholar's Arithmetic, with the new Weights and Measures. 5th edition, price 5s. bound and lettered.

A Key to the Arithmetic, with Solutions of the Questions given at length, and in the most approved school form of working, with numerous examining Questions added. Price 6s. 6d. bound in blue and lettered.

THE QUARTERLY JOURNAL OF SCIENCE, LITERATURE, AND ART, No. X. Edited at the Royal Institution.

By W. T. BRANDE, Esq.

No. 651.

SATURDAY, JULY 11, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Mémoires sur l'Impératrice Joséphine, ses Contemporains, la Cour de Navarre et de la Malmaison. Tome III. Paris: et Londres chez Colburn. 1829.

ALTHOUGH the present volume is not so full of lively anecdote as its predecessors, it contains, nevertheless, much interesting matter, consisting principally of letters written by Joséphine at various periods of her eventful life;—when she was the wife of M. de Beauharnais, when she was a widow, when she was married to Buonaparte, and, ultimately, when she was a divorced empress. In her earlier letters, the horrors of the French revolution, of which M. de Beauharnais was one of the victims, are painted with a forcible pencil. We prefer, however, selecting, as specimens of this amiable and extraordinary woman's epistolary powers, three of her letters of subsequent date. The first was addressed to an intimate friend, requesting her advice on the proposal of marriage made to Madame de Beauharnais by Buonaparte, then only a general of brigade. It is exceedingly characteristic, both of the writer and of the individual, afterwards so celebrated, to whom it chiefly relates.

"They wish me to marry again, my dear friend. All my friends advise me, my aunt almost commands me, and my children entreat me, to do so. Why are you not here to give me your opinion in this important affair; to persuade me that I ought not to refuse my consent to a union which will relieve me from the inconveniences of my present situation? Your friendship, from which I have already derived so much benefit, would render you clear-sighted to my interests, and I should decide without hesitation as soon as you had spoken. You have seen General Buonaparte at my house. Well, it is he who wishes to become the father of the orphans of Alexandre de Beauharnais, the husband of his widow. 'Do you love him?' you hasten to ask me. Why—no. 'You dislike him, then?' No; but I am in a lukewarm state, which displeases me; and which devotees consider the most grievous of all in matters of religion. Love being a species of religion, one's feeling with respect to it ought to be very different from mine; and therefore it is that I wish for your counsel, which would fix the perpetual irresolution of my feeble character. To decide upon any thing for myself has always appeared fatiguing to my Creole supineness, which finds it infinitely more convenient to obey the decision of others. I admire the general's courage; the extent of his knowledge on all subjects, upon which he speaks equally well; the promptness of his mind, which enables him to comprehend the thoughts of others almost before they are expressed: but I confess that I am frightened at the authority which he seems to wish to exercise over all who surround him. His scrutinising look has in it something singularly inexplicable, which awes even the Directory; judge if it must not intimidate a woman. In

fine, that which ought to please me, the strength of a passion of which he speaks with an energy which admits no doubt of his sincerity, is precisely that which stops the consent which I am frequently on the point of giving. Being no longer in the prime of youth, can I hope long to retain this violent attachment, which on the part of the general resembles a delirious transport? If when we are united he should cease to love me, will he not reproach me with what he has done for me? Will he not regret that he did not contract a more brilliant marriage? What should I reply? What should I do? I should weep. 'A fine resource!' you exclaim. Mon Dieu, I know that it does no good; but it has been at all times my sole refuge when my poor susceptible heart has been wounded. Write to me immediately, and fear not to scold me if you think I am wrong. You know that coming from you every thing is well received. Barras assures me that if I marry the general he will obtain for him the command in chief of the army of Italy. Yesterday, Buonaparte, talking to me of this favour, at which, although it has not yet been granted, his brethren in arms are already murmuring, said, 'Do they think that I need PROTECTION in order to rise? One day they will all be but too happy if I consent to grant them mine! My sword is by my side; and with it I will make my way in the world.' What say you to this certainty of succeeding? Is it not a proof of a confidence arising out of excessive self-love? A general of brigade protect the chiefs of the government! I do not know how it is, but sometimes this absurd assurance leads me to believe every thing to be possible which this singular man takes it into his head to attempt; and, with his imagination, who can predict what he may not attempt? We are all longing for you; and console ourselves for your prolonged absence only by incessantly talking of you, and tracing your steps in the beautiful country in which you are travelling. If I were sure to find you in Italy, I would marry to-morrow, on condition of accompanying the general. But we should perhaps cross each other on the road; so I consider it more prudent to wait for your answer before I determine. Hasten it, and still more your return. Madame Tallien charges me to tell you that she loves you tenderly. She is still handsome and kind; employing her immense influence only in obtaining favours for the unhappy who apply to her, and imparting to her benefits the air of an obligation conferred upon herself. Her friendship for me is warm and sincere. Mine for her resembles that which I entertain for you; and I cannot give you a better idea of the affection I bear her. Hortense becomes more and more amiable. Her charming shape is developing itself; and if I wished it, I might have a fine opportunity of making disagreeable reflections on this abominable Time, who improves some, only at the expense of others! Happily, I have other things to think of; and I pass lightly over gloomy ideas, to dwell upon the future, which pro-

mises to be happy, since we shall soon be reunited, not again to part. Were it not for this marriage, which teases me, I should be very gay, in spite of every thing; but while that is in suspense I shall torment myself. Once concluded, come what may, I will be resigned. I am accustomed to suffer; and, if I should be destined to new griefs, I think that I could support them, provided that my children, my aunt, and you, remained to me. We have agreed to suppress the ends of letters; adieu, therefore, my friend."

The next letter which we shall quote was written several years after Joséphine's divorce. She had been permitted to visit Bagatelle, in order to meet Napoleon, and to see his infant son; and on the succeeding day she addressed the emperor as follows:—

"Malmaison.

"Sire,—Still agitated by our yesterday's interview, my thoughts entirely occupied by the amiable and beautiful child to whom you introduced me, penetrated with gratitude for the step you took in my favour (of all the inconveniences that may result from which to yourself I am aware), I feel the necessity of conversing with you, in order to speak to you again of a joy too lively to be fully expressed at the first moment. Your heart which, in order to satisfy mine, has incurred the risk of seeing its tranquillity disturbed, will comprehend the desire I entertain to manifest to you all with which the kindness I have experienced has inspired me. It was certainly not curiosity alone which induced me to desire to meet the King of Rome. His features were by no means unknown to me, for I had obtained the most striking resemblances of him. I wished, sire, to study his physiognomy, to hear the sound of his voice (so like yours), to see you embrace this son who fulfils all hopes: in fine, I longed to bestow upon him those caresses which my Eugene has received from you. In reminding you how dear the latter was to you, you will not be surprised at my tenderness for the child of another, since he is your child also; and you will not charge with falsehood or exaggeration sentiments which you can admirably conceive, having felt them yourself. The moment at which I beheld you enter, leading the young Napoleon by the hand, was, without doubt, one of the happiest of my life. It effaced of itself all which preceded it, for never did I receive from you a more touching proof of affection. It was not passionate love which had induced you to grant my wish, it was sincere esteem and attachment. They cannot change; and that idea renders my happiness complete. I could not without shuddering reflect on the dissolution of our marriage, fearing with reason that a wife young, handsome, and full of talents, would make you totally forget her who, destitute of all those advantages, languished far from you. In estimating the qualities of Maria-Louise, I trembled lest I should soon see you become wholly indifferent to me. This was erroneously to appreciate your great and generous soul, which preserves the remembrance of an extreme devo-

tion, and of a tenderness justified in its excess by all those qualities which astonish Europe, which render you beloved by all who approach you, and which compel even your enemies to do you justice. Yes, I confess it, sire, you have again found the means of surprising me—me, so accustomed to admire you; and the perfection of your behaviour towards me, your solicitude to surround me with every mark of respect, and, finally, your proceeding of yesterday, prove to me that you are even superior to the idea, so favourable, which I had of you. With what pleasure I pressed the young prince to my heart! How happy did his countenance, so radiant with health, render me! How I enjoyed seeing you entertained and gratified in looking at us both! In truth, it never occurred to me that I was a stranger to this child; I entirely forgot that I was not his mother; I envied no more the lot of any one; and my own appeared to me to be above the felicity reserved for poor mortals. In quitting you, in tearing myself from this little being whom I scarcely knew, I felt an emotion so violent, that it seemed to comprehend all the griefs of humanity. Did you remark, as I did, the little imperative tone of your son, when he told me that he wished I were with him at the Tuileries? and his little pouting air when, on my saying that that was not possible, he replied: 'Why? since papa and I desire it?' This already shews that he will know how to command, and, far from afflicting ourselves at a character which in a private person might be attended with serious evils, we ought, in my opinion, to rejoice at beholding it in a prince destined to reign at a period so closely following a long and frightful revolution. After a state of anarchy like that which we have witnessed, it is not by mildness and kindness alone that a sovereign can hope to maintain the repose of his kingdom. It is necessary that the people whom he governs, in a land yet hot from the volcano, should be assured that crime will be punished as promptly as it is committed. 'It is not,' as you have a thousand times repeated to me, 'until fear, not of despotism, but of severe justice, has been inspired, that we must seek to render ourselves beloved.' You have frequently availed yourself of the right of pardoning; but you have also frequently proved that you will not tolerate an infraction of the laws prescribed by yourself. It was thus you acquired the means of mastering the jacobins, assuaging the royalists, and satisfying the moderate party. Your son will have you for an example; and, happier than you, he will be able more frequently to shew clemency towards the guilty. I had a conversation with him which manifested all the sensibility of his heart. After having played with my *charivari*, 'that is handsome,' said he to me; 'but if it were given to a poor man he would become rich, would he not, madam?' 'Undoubtedly.' 'Well, I saw one in the wood; do you wish me to send for him? I have no money myself, and he is in want of a good coat.' 'The emperor will be eager to satisfy you on that point; why does not your imperial highness ask him for his purse?' 'That has been already done, madam. He gave it me on leaving Paris; and as you have a very kind look, I thought you would do what it is very natural to do.' I promised to assist this poor man; and I will certainly keep my word. I have given orders to a huntsman to bring him to Malmaison, where we will see what can be done for him. It will be delightful to me to do a good action, to which I have been urged by a child four years of age! Pray, sire, tell him

that his 'poor man' is no longer poor. It occurred to me that you would be glad to have these particulars of a conversation which took place in a low tone of voice, while you were examining an atlas at the end of the saloon. It will prove to you how fortunate the King of Rome is in having a governess who knows how to inspire him with a compassion the more touching, as it is rare among princes, habituated as they are in general to perpetual adulation, which gives them in some sort a right to believe that every thing ought to have a reference to themselves, and that they need not trouble themselves with thinking of other people. Madame Montesquiou's virtues render her worthy of the difficult and painful task which you have confided to her; and the prince's sentiments justify your choice. Could he fail to be benevolent, trained by benevolence itself? I fear that, notwithstanding your orders, his imperial highness will talk of this interview, which ought to remain secret. I recommended to him not to open his mouth about it; assuring him that if it were known that I had visited Bagatelle, it would be impossible for me to see him again there. 'Oh, if that is the case, give yourself no uneasiness, madam; I will not say a word, for I love you. Promise me, if I obey, to come and see me again.' I assured him that I desired it more than he did; and never did I speak more truly. Nevertheless, I perfectly feel, sire, that these meetings, so joyful to me, cannot be frequently repeated; and I will not abuse your complaisance towards me by laying it too often under contribution. The sacrifice which I will make to your domestic peace, will be to you an additional proof of my desire to see you happy. That thought will console me in my regret at not embracing my adopted son. Do you not think this exchange of children very delightful? For my part, sire, I grieve at only being able to give this title to your son, without doing any thing that can be serviceable to him. What a difference between my conduct and yours to Eugene! The more time elapses, the more you do for him, and the less I can manifest to you my gratitude. However, I depend upon the viceroys for consoling you under the annoyances which you suffer from your family. If, unfortunately, your suspicions of the King of Naples should be verified, Eugene will become more necessary to you than ever; and I dare to believe that he will prove himself worthy of you by his military conduct, and worthy of me by his attachment to you. This is a very prolix letter, sire, but I have been led on by the happiness of talking of our two sons; and this motive will be my apology to you for having troubled you so long. As grief needs concentration, so is joy expansive. Behold, sire, the explanation of this volume; which, however, I cannot finish without again declaring to you my respectful gratitude.—JOSEPHINE.

Our last epistolary extract must be a short letter, written by Josephine to the ex-emperor, as soon as she heard that he had been compelled to exchange the crown of France for that of the little island of Elba. It does her infinite credit.

"Malmaison.

"Sire,—It is only to-day that I am enabled to estimate the full extent of the evil of having seen my union with you dissolved by the law; and that I sigh at being to you but a friend, who can do no more than sigh at a misfortune, as great as it was unexpected. It is not for the loss of a throne that I pity you. By my own experience, I know that for such a loss one may be consoled. But I am afflicted at the grief

which you must feel in parting from your old companions in glory. You must regret not only your officers, but the soldiers, whose persons, whose names, whose brilliant deeds of arms, you remember; all of whom you could not recompense, because you said they were too numerous. To leave such heroes, deprived of their chief, who has so often shared their fatigues, must be an insupportable sorrow to you; and it is in that, above all, I participate. You have also had to lament the ingratitude and the desertion of friends, on whom you thought you could rely. Ah! sire, why may I not fly to you, to give you the assurance that exile appeals only vulgar souls; and that, far from diminishing a sincere attachment, misfortune gives it new strength? I have been on the point of quitting France, of following your steps, of consecrating to you the remainder of an existence which you have so long embellished. One single consideration has detained me, and you will guess it. If I learn that, contrary to all appearance, I am the sole being desirous of fulfilling her duty, nothing shall stop me; and I will hasten to the only place in which I can henceforward enjoy happiness; since when you are there, isolated and unfortunate, I may be able to console you. Say one word, and I set off. Adieu, sire. Any thing that I could add would be superfluous. It is no longer by words that one ought to prove to you the feelings which you have inspired; and for actions I require your consent.

"JOSEPHINE.

"Malmaison has been respected: I am there, surrounded by the attentions of the foreign sovereigns; but I have no inclination to remain."

King Alfred's Anglo-Saxon Version of Bede's De Consolatione Philosophiæ. With an English Translation and Notes by J. S. Cardale. 8vo. pp. 426. London, Pickering & Colchester, Combe and Son.

EVERY true Englishman venerates the name of Alfred the Great. Does he admire our free constitution, or know the compass and power of the English language? his attention must be directed to Alfred as the framer of the one, and an able and copious writer in the other. "Our language, our government, and our laws, display our Saxon ancestors in every part: they live not merely in our annals and traditions, but in our civil institutions and perpetual discourse." The greater, and by far the most important, part of our language is of Saxon origin. Dr. Hickes observed, that "of fifty-eight words of which the Lord's Prayer is composed, not more than three words are of Gallo-Norman introduction—the remaining fifty-five are immediately derivable from the Anglo-Saxon." Glad, therefore, are we to see more attention given to Saxon literature. A new and very neat edition of the Will of King Alfred, in the original Saxon, with a literal English version, has recently appeared: it issued from the same press as the well-executed volume before us. Both these works are got up in the first style, and do the greatest credit to the Leicester typographers.

To Mr. Cardale, the learned translator of the present volume, we are much indebted for his accurate Anglo-Saxon text, accompanied with a very faithful literal English version on the opposite page. Thus, those who are but little acquainted with the Anglo-Saxon may easily compare the present English with the original Saxon in King Alfred's days. From the following short extract, it will be evident

that King Alfred translated this book from the original Latin into Saxon:—

"Ælfred, Kuning, was wealhstod thisse bec, and hie of becedene on Englisc wende, swa hio nu is gedon. Hwilum he sette word be worde, hwilum andgit of andgite, swa swa he hit tha sweotolost and andgitfullcost gereccan mihte, for them mistlicum and manigfealdum weoruld bisgum the hine oft segther ge on mode ge lichoman bisgodan."

In this quotation we have a specimen of the pure Saxon, and an account of the state of mind in which the king was when he translated Boethius out of Latin into Anglo-Saxon. He had, doubtless, in his troubles derived great comfort from reading Boethius, which may account for the peculiarity that is evident in this translation. While in the numerous other versions made by him he adheres closely to his text, in his Boethius he aspires to the character of an original writer: he amplifies and adds a variety of remarks and illustrations, or abridges his author according to his own judgment. By examining these variations, we shall see clearly the religious, moral, and intellectual character of Alfred the Great. Much has been done in the History of the Anglo-Saxons by Mr. Turner, chiefly with materials derived from the present work.

Anitius Manlius Severinus Boethius, a Christian philosopher, was descended from a noble family, and was made consul in A.D. 510. He was a profound scholar; but for his zeal in defending a friend, he was sent to prison by Theodoric, king of Italy, where he wrote his immortal book *De Consolatione Philosophiæ*, which was translated into Anglo-Saxon by our illustrious King Alfred, and into English by Chaucer, about 1360. More recent translations have been made from the Latin into English: an edition in 12mo., by Viscount Preston, 1712; another, with good notes and illustrations, in 8vo., by the Rev. P. Riddpath, 1785;—but Mr. Cardale's valuable work is the only translation that has been made from the Saxon.

Rybrant de Cruce. 3 vols. 12mo. H. Colburn. London, 1829.

THIS is a very clever novel, evidently the work of a young author, by the freshness and originality it displays. Its great merit is, a new and very interesting story,—its worst fault is an uncommon one, that of not making sufficient use of its materials: in an experienced hand, Duport would have been more than merely a spirited sketch. To this we must also add, that of making the merit of the book depend too much on the mere pleasure of narrative. A novelist now-a-days, who aspires to any thing more than the circulation of a season, must look far beyond the bare conduct of his story. We ask for beautiful description, for depth of thought, for accurate delineation of character; and we expect that the writer should bring every power of his mind, every acquirement of his study, into action. We could quote passages of very exquisite poetry, and of very true philosophy, from our first-rate romances; and it is these and other such qualities that now constitute their great merit,

and make their principal attraction. To this spirit of the age would we direct the attention of the author of *Rybrant de Cruce*; there is ample talent to justify the expectations we entertain of much future performance. It is difficult, by a single column or so, to give any idea of the merit depending on the progress of a very intricate, though well-developed tale; yet the ensuing is a striking scene, and the curious to know the wherefore, can but refer to the pages themselves. We should observe, that one of the heroines of the story is suddenly missing, under very suspicious circumstances.

"Trefarley's agony of distress, on hearing Geoffrey's intelligence, amounted almost to frenzy; while the steward's disappointment at finding him thus ignorant of the whole transaction, instead of having already pursued and arrested Miss Starinville's enemies (as he had hoped), was not a little severe. Few unnecessary words, however, passed between them. Trefarley, well armed, flung himself on a horse, and, followed by Geoffrey, they crossed the common in silence, and at all the speed they could make, till, overtaking a young farmer, also on horseback, Geoffrey drew up for a moment to explain to him their purpose, and invite his assistance. This was willingly granted, and both proceeded with redoubled speed to rejoin Trefarley, who was already some distance before them. They now descended the hill, and were quickly met in the wood by the two servants. Mr. Drywinkle, shrewd and suspicious even in the midst of his grief, here proposed sending Stephen home with the horses; deeming, that Joe's assistance, though perhaps less powerful, might be better relied on. He therefore took the pistol from Stephen, and bestowed it on his new associate the young farmer, and all three followed Trefarley, who interfered with none of these arrangements (ascertaining only that his attendants were armed), down the steep track which has been before described, and through which he now plunged mid-leg deep in snow, with a desperation and activity that more than once threatened to leave his companions behind. Yet, when they reached the hollow grounds below, it was a considerable time (so changed was the appearance of all around, imbedded, as it was, in snow,) before Trefarley, notwithstanding his maddening anxiety, could discover the course of the little stream, which he knew must direct his path, or perceive among the distant and whitened trees the taller summit which had formerly served as his beacon. At length, however, he traced the rivulet, threading its crooked way between deep banks of snow, and thought he perceived after the lofty tree which was to guide his course. Alas! no wreath of smoke, however faint, curled near it, to indicate that he might find the hut inhabited; and without fire, what human beings could there have passed the night? Trefarley shuddered as he thought of Agatha's sufferings, and strode on in dead and gloomy silence. The rest followed, one by one, forcing their way through brushwood too thick to admit of two abreast. The track, such as it was, now buried in snow, they frequently missed; but Trefarley, keeping by the course of the rivulet, continued ascending, and occasionally beheld the tree, which he felt convinced was the one he sought. At length he arrived at the turn he well remembered, and observed with horror, but in silence, that the bushes were here evidently more bent and displaced than on his former visit, as if more persons than one had passed violently through together. The snow covered all other traces, if such there were; and Trefarley spoke

but to direct his followers in a low whisper to force themselves through the brushwood on both sides, and thus prevent any escape, while he himself pushed up the path which he knew led directly to the hut. Geoffrey would fain have shared this perilous lot, but Trefarley was inflexible, and promising to bring his companions round him by a shout, so soon as he should ascertain that no alarm had as yet caused the ruffians to disperse. They obeyed his injunctions, and he was quickly out of their sight. Several minutes elapsed before any sound reached them, when a low call, rather than a shout, was heard, and each breaking through the brushwood, hastened to the spot. At the door of the hut stood Trefarley alone, his pistol, indeed, in his hand, but in the calm attitude of despair, rather than any gesture of violence. He uttered in a few low tones, 'She is not here—but you will find evil doings yonder!' and he pointed to the hut, into which they all crowded with eager curiosity. There lay outstretched the body of the handsome and youthful Dugavet, new stiff, and as if cemented to the earth in his own coagulated blood. Though the interior of the building was too dim to allow of any very distinct vision, yet all perceived plainly enough that a scene of murder was before them, and a low and broken exclamation of horror burst from each, as they separately entered the hut. Shocked even to agony by the discovery that Miss Starinville was not there, while the broken bushes without, and the murdered man within, manifested but too well that some violent contest had taken place, which he felt a terrified assurance must have been on her account; Trefarley, on discovering the corpse, had stood for some minutes in total and almost distracted silence. But having aroused himself, and brought his followers round him, he now directed them to bring the body out, and prepare to remove it to the house; while he would himself, he said, hasten forward to break the dreadful tale to Clara, and consult on farther means of recovering her unhappy sister. Accordingly, gently lifting the corpse, the men brought it to the door, and laid it on the snow, upon which the risen sun was now glittering. All trace of the stormy passions which, but too often, were wont to agitate the lofty features of the rash and ill-fated Dugavet, had vanished, and his countenance wore the placidity and stillness of death. The ball having entered the back of his head, no stain of blood disfigured his face; which, now disguised no more by the ill-suited head-dress he had so long worn, but bordered only by his own raven locks clustering darkly round his open and noble brow, looked, even in death, transcendently handsome. Trefarley, absorbed as he was in his own deep cares, gazed on it with interest and compassion, mingled with curiosity. Whence came, and who was this noble-looking stranger so foully murdered?"

We have now only to repeat our former commendations, and say that the author of *Rybrant de Cruce* (Miss Head, the sister of two popular authors) is one from whom we expect much future entertainment.

Maw's Passage from the Pacific to the Atlantic. WE beg our readers to follow Mr. Maw and us, without pausing for introductions, *alias* interruptions, from page to page. The journal proceeds—

"About five o'clock, having come five or six leagues from Balsa Puerto, and the obstacles offered by the trees that were grounded not allowing us to proceed at night, we brought-to

a 'playa' (a dry bank of sand), on which we cooked our suppers, and restowed the canoes. The Indians slept on the playa, under small tents made of tucuya, which they suspended to sticks fixed in the sand to keep off musquitoes, and, as we were afterwards told, more formidable wild animals. I cannot answer for the truth, but on our expressing surprise that the Indians should sleep on the playas, to which we were repeatedly told wild beasts came down, and on which we not unfrequently saw traces of recent footsteps, our informers said that if no part of the body, a hand, &c. was exposed from under the canopy, tigers would come down and walk round, without attempting to molest the sleepers; but if a hand or a foot was to make its appearance, the result would probably be otherwise. Mr. Hinde and myself slept in the canoes, partly as considering them the best berths, and partly lest the Indians should attempt any tricks, which we had been told was not improbable; and to be ready to start early in the morning. The Indians appeared satisfied with having had sufficient to eat; and the only disturbance we met with during the night was from a few musquitoes, which had not yet become seriously troublesome."

The canoemen turned out well.

"About noon (says the writer) we stopped to cook, and as our canoemen's manner of making a meal was rather original, I shall endeavour to describe it. The first point was to look out for a playa sufficiently above the level of the river to be quite dry, and, if possible, one on which drift-wood had been left that might serve for fuel. The playa being found, the canoes were hauled close in, and made fast to stakes about the size of boat-hook staves, which were worked into the sand. The Indians then lost no time in jumping out with knives, choppers, &c., and ran in different directions to collect dry sticks and wood. After sufficient fuel was obtained, one took upon himself the office of cook, making the fire, whilst others peeled plantains and yucas, washed the meat, and cut it into pieces three or four inches square. In making a fire they were clever and expeditious. With a flint and steel (which an Indian, who can obtain it, is never without, and always carries with him, generally in a small netted bag slung over his shoulder) a light was struck on tinder made of bark, and kept in a piece of hollow bamboo, or on the pith of an aloe, also kept in a piece of bamboo. Sticks were then placed carefully with the ends together, leaving room for a draught, and logs laid at the sides to support and protect the whole. The small sticks not being dry enough, chips were cut from larger and drier pieces, and in a few minutes they had a blaze. The fire being ready, the provisions which had been prepared were put together into a large earthen pot, and boiled, except some plantains that were roasted, the ripest with their skins on, the unripe ones peeled, as a substitute for bread. We found that the Indians invariably preferred dried monkeys to dried wild boar, always taking the former when allowed to choose, and even stealing the last when only one was left. The yuca is a species of mandioca or casaca root, but it is not poisonous. When boiled, particularly with meat, it has much the flavour of a roasted Spanish chestnut. When the pot had boiled, and the mess was sufficiently cooked, it was taken off the fire, and the Indians squatted round it, sitting on their hams, each helping himself, and gorging as long as any thing eatable was left. All being devoured, they started up, ran into the river to about the

depth of their knees, and again squatting down, threw the water over their heads and backs with their hands. After which they swallowed copious draughts of chicha, made by taking a handful of chewed yucas, which their wives and female friends had been employed in preparing before we started, and which was kept in earthen jars covered with leaves, and mixing it with water in a large calabash by the hand. By the time all was finished, their bodies appeared pretty nearly ready to burst; and being satisfied, they became noisy. They were, however, willing, good-tempered creatures, and gave us no trouble. Preparing and devouring a meal usually took these Indians from an hour to an hour and a half."

The Guallaga, into which a course of about a hundred miles brought the canoes, is far superior to the Cachi Yaco; and Mr. M. states—

"Below the junction of the river from the westward the water deepened to five fathoms when clear of islands, and three and a half abreast of islands. The breadth of the Guallaga was variable; but when clear of islands, I think it was from a third to half a mile. The rate of the current at the time we came down was about four miles per hour; but I suppose this varies according to the season, and even to the daily rains. The trees on the banks were not generally large; we occasionally saw one or two above the rest, and which the Indians said were muenas. Their branches were twisted much like the English oak. Numerous birds, mostly of the parrot species, flew across the river during the early and latter parts of the day; but in the heat of the day all was quiet. At sunset we arrived off the entrance of a small creek, which passes through the eastern bank to the pueblo of Santa Cruz. On entering, the canoemen blew their horn, and we proceeded up. Blowing on a horn, or making a noise on some other instrument, is an old custom amongst the Indians, and signifies a pacific intention. It appeared probable, that in their numerous combats previous to the visits of the missionaries, a strict silence, so as to surprise an enemy, was their principal manoeuvre, whilst a noise was made to announce an approach, and that no hostility was intended. Had we been hostilely inclined, we could scarcely have chosen a worse place to go up than the creek we were now in. Its windings almost equalled those of a labyrinth, and the banks were steep and covered with wood; whilst the breadth, which at the entrance might have been ten or twelve yards, and the depth a fathom to a fathom and a half, decreased, until, some trees having fallen across, and the stumps of others sticking in the channel, it was not easy to get even our small canoes up. After going about a mile we came to a small basin, on the right bank of which, and on a rising ground, stands the pueblo of Santa Cruz. Numbers of dogs gave notice of our arrival, and we landed to seek the governor. We found him sitting on the trunk of a tree that had been felled, smoking a cigar, and dressed in a frock and trowsers made of tucuya. He rose to meet us; and having learnt who we were, very civilly walked with us to his rancho, and offered us a mess of roomsooka for supper. We soon found that this officer's character was that of a complete Nimrod. In answer to our inquiries for information respecting the productions of his district, he said he had no information to give. His district produced nothing; but when roomsookas, sachywakas, and tigers, were mentioned, he entered with rapture on that part of the

subject, and gave us glowing accounts of the Indian manner of hunting, modestly premising, that 'he knew a little about that'; and concluded by expressing his surprise, almost regret, that 'tigers' were becoming scarce in his neighbourhood—(he had told us of the destruction of ten!) Much of the spirit of the governor's description depended on the accompanying manner, which to him was evidently quite natural, particularly where, with a spear in his hand, he described the tiger at bay; any repetition of mine, therefore, must fall far short of the original. Nevertheless, as his account was infinitely superior to any other we received, I endeavour to follow it. Early in the morning the huntmen, accompanied by dogs, go down to the banks of the river; and having found a track on some of the playas leading from the water, they know that the beast has been drinking, and is gone to his den to sleep. The dogs are laid on the scent, followed by the huntmen through the Montaña, until the animal they are in chase of is in sight. Should it be a tiger, the dogs hang back, and the beast turns to defend himself, places himself on his haunches ready to spring, and, in the governor's language, 'roars till the woods tremble.' He is at bay; it is then that the boldest of the party must face him. The huntsman, armed with a short spear, advances directly to the tiger's front. Each is aware of his danger, and each watches for a favourable opportunity. Were the huntsman to rush in and make too strong a thrust, the smoothness of the tiger's fur, and the toughness of his skin, would turn aside the spear, the man lose his balance, and in all probability pay the forfeit of his life for his folly. To prevent or avoid this, the blunt end of the spear is held in the right hand; the left foot a little advanced, and the spear pushed through the hollow of the left hand with a smart, but not too heavy a blow, so as to recover it instantly, or, if the weapon enters, to push it home, if possible, to the tiger's heart. I do not suppose that all the animals killed in this manner are equal to Bengal tigers; but there are some animals in this part of South America coming under the general denomination of 'tiger,' which are very formidable,—at least quite sufficiently so for most men not to feel ambitious of standing before one at bay, armed only with a short spear. After supper the governor shewed us his various sporting implements, as well as weapons for attack and defence. They consisted of two spears for land animals; harpoons and bows and arrows (the heads of the latter separate from the shafts, with lines secured to them) for fish; and a pucuna several feet longer than any other we had seen, the mouth-piece ornamented with tigers' teeth instead of boars' tusks. His dogs were common curs, something resembling the pyars of India. The flesh of the roomsooka, which had been given us for supper, and which was part of the governor's previous day's game, somewhat resembled pork: it was not particularly good, and we were afterwards told is not considered wholesome. Although this animal comes, I believe, under the general denomination of wild boar, of which there are numerous varieties on the Marañon, it has three jointed toes, instead of two horned hoofs, on each foot, and, like the tapir, it goes much into the water. I here got the skin of a tapir from a man who wanted beads, or some other European manufacture for it; but as these were stowed away in the canoes, he was obliged to take money. I also bought the skin of a large red marmot from the governor, and

some beans, of which he did not know the name, but which he said were considered a remedy for the flux. The oil is got by cutting the beans into pieces, boiling them, and taking the scum. A torch made of copal, tied up in a plantain stalk, was burning as a light. The copal is got near the pueblo. We learnt also that some white bees-wax is found, and is there worth six reals a pound. Yucas and plantains were considered as matters of course, being the principal support of the inhabitants. The governor also informed us, that there is a small stream entering the Guallaga about two leagues above Santa Cruz, which communicates with the Ucayali, but is not navigable even for canoes. The pueblo of Santa Cruz was built about fourteen years previous to our arrival. It contained about twenty ranchos, built in a similar manner to those of Balsa Puerto. The present governor had ruled since the foundation of the pueblo, and perhaps managed better than a more polished magistrate, as his prowess in hunting probably tends to maintain his authority. That he entered into the party feelings of his pueblo was evident; for when on our landing we had inquired of him whether it would be safe to leave the canoes with the Indians, without any one to look out on them, he asked where they were from; and being told from Balsa Puerto, he said,—"Yes, they would be safe; the Balsa Puerto Indians were honest men, but all the Laguna people were thieves." We afterwards found there was a feud between the Indians of Santa Cruz and those of Laguna; and when the Laguna Indians were with us, the governor's charge was not proved.†

"We here began to be annoyed by an insect about the size of a small ant, but resembling in appearance the common summer-fly of England. The natives call it pium. It is most troublesome during the day, relieving guard with the musquito, which prefers the night. Whilst biting, it does not smart like the musquito, but fills itself with blood and leaves the pore running, after which a small black mark, about the size of a small pin's head, continues for days, and even weeks, and the part bitten swells. These insects are so innumerable and persevering, that we found it impossible to keep clear of them; and in one part of the passage our hands were so much swelled, that the knuckles were not discernible. . . .

"The Indians of Laguna live principally on fish, plantains, and yucas; they also drink large quantities of chicha, of which they make four kinds, from maize, yucas, plantains, and chuntas, a large red, fleshy palm-nut. The yuca-chica is the best, and is made by boiling the yuca, chewing part, crushing the re-

mainder, and again boiling it: when wanted for use, it is mixed with water by the hand. Maize chicha is made by crushing and boiling the grain, after which a moderate quantity of chewed cumal, a root resembling yuca, or potato, and having a red skin, is added, and the whole boiled again. It will not keep longer than a week. Plantains are taken when very ripe, peeled, bruised, and boiled; after which they are strained through sieves made of rushes, and again boiled. Chuntas are boiled, and the stones taken out, crushed, mixed with water, boiled and strained. This chicha is considered better than the plantain, but not equal to that made from maize or yucas."

It was on the 21st, viz. six days after starting by water, that our travellers arrived at the junction of the Guallaga with the Marañon—where Mr. M. says, "supposing myself to be the first British officer that had ever embarked on the trunk of this the largest river of the world, we drank the health of his royal highness the lord high admiral, and, joined by the Indians, gave three cheers. The junction of the Guallaga with the Marañon has been lavishly described by the missionaries. I can only say it did not produce those impressions on my mind which their description had led me to expect. The basin formed might be about a mile across; but there was a dry bank of sand towards the middle, with a bar at the entrance of the Guallaga, on which I sounded in only one fathom and a half: perhaps we were not in the deepest water."

Descending: "Iquitos is noted for its manufacture of grass hammocks, one of which I got for a knife. As usual, we inquired for other specimens, and, as usual, found it difficult to obtain any. Some monkeys' skins were offered to us, and we got a number of paroquets not much larger than sparrows, and which are common in this part of the country. There was a wild turkey-hen and a peury that belonged to some of the Indians; but we could not get them. A few feathers, some birds badly stuffed, and a bunch of the root with which the Indians stupify fish, were the remainder of our acquisitions. The root is, I understand, a deadly poison, its effects having been tried since our return to England by a scientific gentleman, who, wishing to ascertain whether it was 'narcotic,' bit a small quantity, which was near proving too much."

[Conclusion next week].

CHESTERFIELD'S LETTERS.

[Third Notice; conclusion.]

THE self-drawn portrait of a man of talent, rank, and influence, (for genuine correspondence furnishes all the traits necessary to such a picture) in every relation with society, cannot, at any time, fail of being interesting to the observer of human character, and of the manners and feelings of a people; and no era could surpass that of our second Charles, and few portraits that of the Earl of Chesterfield, for an interest of this sort. His youthful pages are prurient and dissolute; his manhood profligate, yet mixed up with consequence in the serious revolutions which, "handy dandy," transformed the nobleman into the exiled pauper, and raised the soldier of fortune to wealth and luxury; his premature old age exhibits the penalties of the excesses of some quickly-spent years; and the whole is a memorable example of a licentious individual, one, and indicative, of a licentious age. Lord Chesterfield appears to have been among the most devoted to pleasures, and the most clever of his contemporaries; but, with all his follies and

vices (the follies and vices of his day), as a public man faithful to his friends, and honest to his country,—a rare example, when tergiversation and want of principle were monstrously notorious. Consulting his honour (as seems evident) as well as his ease, he frequently declined the foremost official appointments; and in his attachments to sovereigns and statesmen, as well as to principles, he evinces a firmness and sincerity which would reflect a lustre upon the more moral names of our, at least, less openly dissolute times. But we are not going to pen a homily, and therefore hasten to our concluding selections. Our first is a characteristic anecdote. During a severe illness, he tells us, "a surgeon intimated to his lordship that his foot was mortified, and asked if he should amputate the limb. 'To this I answered, that as I was come into the world with two legs, I would go out of the world with two legs, and not have it cut off. But it pleased God that there was no gangreen or mortification.'"

One of the striking features of this age was the excessive courteousness and French style of compliment* which prevailed in all the intercourse of life—gilding even the most flagrant depravity. We cannot cite the strangest instances, but must content ourselves with a letter from this erratic and intriguing nobleman to his wife, in the midst of all his aberrations.

"To my Wife, the Lady Elizabeth Butler, daughter to the Duke of Ormonde, after the death of our Son, and of my Mother's Husband, Mr. Onele. 1660-1."

"My Dear,—Although I am yet hardly at Lester, I can not forbear giving you an account of my thoughts, to let you know how sensible I am of the justice that attends your melancholy. I am now going to a house of mourning, and in your absence (to mee) the pleasingst objects doe appear vailed. But I dare say noe more, since things that come nearest to perfection are taken for their contrarie; the devoutest man is often thought an hypocrit, and the most perfect frindship is judged dissimulation: therefore mine shall now only appear in begging that you will be good to your selfe, and have an equall return of kindness for him who is your, &c."

Be it remarked, that this lady was about twenty, and, as Grammont reports, with a heart always open to tender engagements, neither scrupulous with regard to constancy nor delicate with regard to sincerity!!! Yet the following is another of her faithless lord's letters to her in 1664, the year before her early death:—

"My Dear,—If my messengers were as quick as my thoughts, you would hear from mee every minute, for since fate and my inclinations made me yours, I have constantly thank'd Heaven for that blessing; therefore let us banish all those little storms that commonly attend a married life; for if your kindness can rise to a pitch like mine, our happiness is in-

* Take a well-turned specimen: "It is so natural to be pleased with the praise of great and able men, that tho' we know wee do not deserve it, yet we cannot but hope that it rather proceeds from some mistake occasioned by their partiality or kindness than from the complementary style of this age, which, in my opinion, borders a little too much upon flattery. In your lordship's last letter you are pleased rather to let me see what I should be than what I am; for the favourable character which your lordship has so neatly drawn, and says the world gives me, seems only a fine picture, which doth more shew the skill of him who made it than represent him who it so little resembles. My lord, all I will say on this subject is, that tho' I must yield to most of your friends and servants in merit, yet I will do it to none of them in affection; for I am, with all the zeal imaginable, &c."

† On coming lower down where they were employed, we were told—"Whilst we were with the padre, some Indians came to ask his blessing previous to their leaving the pueblo. We therefore availed ourselves of the opportunity to request, that in giving his benediction to our canoe-men, he would add an injunction for them to behave well whilst with us, and also to explain that they would be supplied with provisions, and that we should endeavour to treat them with justice; only requiring that they would work, and not occasion trouble, as we had not had any with the Balsa Puerto men. Whether it was the padre's injunction that induced them to pay more attention, or their natural character, the manner in which the Laguna canoe-men became acquainted with our habits was surprising. Savages as they were, in the course of a few days they were as well acquainted with us as if we had been together all our lives; and had it been possible for us to have taken them and their canoes the whole way down the Marañon, we might have made the passage in about half the time, and with comparative ease. One of Mr. Hinde's crew was blind; but he was an excellent boatman, cheerful, and seldom at a loss. My coxswain had much the cut and manner of an old quarter-master; and, indeed, on the whole, there are few European boats' crews who would have been superior to our Laguna canoe-men."

cluded in ourselves. I here must make a pause to recover breath, since just now the unexpected newsw of my best freind's having lost his has almost taken mine. The Lord F. is dead, and with him as much worth as fraile man contains. Oh sad condition of mortals, who worship what is past, desire what is to come, and seldom enjoy the present; therefore let misfortunes teach us to be wise, and in the small circles of our lives thank Heaven for all our blessings, and consider how many are in a worse estate than we. Let this make us imbrace our freinds, forgive our enemies, and willingly submit ourselves to his protection, who, I hope, will crown you with glory, and mee with happiness in being yours, &c."

Twenty years later we find the subjoined striking passage in a letter to Mr. Bates:

"We are here told that Sir Thomas Armstrong* died well; which makes mee think that it is easier to die well than to live well. But I have long observed, that few persons doe die timorously on a scaffold, or resolutely on a bed; so that, by the manner of taking leave, nobody can judge the success of the journey."

There are several such pithy sentences in various parts: for example:—"Alas! my lord, ambition, though to empire, is thought vaine; and you know to well, that one halfe hower spent with a prince in some amorous intrige, shall advance a man more than ten years consumed in battels; for courts have ever been the paradise of vice, where 'tis rewarded, and the hell of vertu, where 'tis punished."

The next is a characteristic letter of the same date, though wonderfully applicable to the present, and perhaps to every other epoch.

To Lord Fauconberg.

"London, when he was in Yorkshire, 1684.

"My Lord,—To take noe more notice of a freind in the country than if he were in the grave, is an unpardonable peice of indifference; and, on the other side, to tire them continually with letters, were to disturbe that quiet which, perhaps, they left the town to enjoy. To keepe a meane betweene these extremes is very hard; 'tis enough that wee intend it. This last has been a weeke of great alterations in our court affayres. The Lord Radnor is discharged his attendance as president of the councill; the Lord Rochester is removed from the treasury, and Mr. Godolphin put in his place, whose office of secretary is conferrd on my Lord Middleton. 'Tis an odd daunce among the statemen: few persons yet know who began it, nor who fiddles to it; but 'tis certaine my Lord Rochester has the hardest change in it, who, if he pleases, is designed to succeed my Lord Radnor in the presidentship of the councill. At all these revolutions (as Virgil's shepard says) *non equidem invidio, miror magis*; and I cannot but congratulate the felicity of this age that affords so many persons equally fit for the treasury, secretaries of state, presidents of the councill, or what you please. Formerly, 'twas thought these required different talents, studies, and educations. Methinks it should be comfortable for all that have any pretences at court, to observe these great employments under so swift a rotation, that every man of merit may hope to tast of them in his turne; and I wish, for the publicke as well as myselfe, that some of them may bring your lordship to town this winter. I am, &c."

A letter to the Earl of Arran, descriptive of

the death of "the Merrie Monarch" (1684-5) is of too much historical interest to be omitted.

"My Lord,—I writ the last post, at the king's backstairs, a short letter to the Duke of Ormond, when I had so great a trouble upon mee and such a confusion of mind (by reason of my being surprised with his majesties desperat condition, who wee thought just before out of danger) that I hardly knew then, or doe now remember, what I writ; and, seriously, I am but little better able to doe it now, though I have had much more time to recollect myselfe. My lord, I doe not love to be the first declarer of ill newse, and I am confident your lordship will have heard of the king's death, by an express, long before this paper can come to you; and therefore I will onely say that, as to the manner of it (of which I was a witness, as having watched two whole nights with him and saw him expire), nothing could be greater; and, should I but mention half the remarkable passages that came to my cognisance, they would be much more proper to fill a volume with than a letter; and, therefore, I will onely say, in short, that he died as a good Christian, asking and praying often for God's and Christ's mercy; as a man of great and undaunted courage, in never repining at the loss of life, or for that of three kingdoms; as a good-natured man, in a thousand particulars; for when the queene sent to aske his pardon for any thing that shee had ever done amisse, he answered that shee never had offended him, and therefore needed noe pardon, but that he had need of hers, and did hope that shee would not refuse it him. Hee exprest extraordinary great kindness to the duke his brother, and asked him often forgiveness for any hardships he had ever put upon him, assuring him of the tenderness of his love, and that he willingly left him all he had; desiring him, for his sake, to be kind to his poor children, when he was gon. Lastly, he asked his subjects pardon for any thing that had been neglected, or acted contrary to the best rules of a good government; and told those who stood about his bed, how sorry he was for giving them so much trouble by his being so long a dieing; desiring often death to make more haist to free him from his pain, and the bystanders from their attendance. Your lordship, I am sure, would have thought it very touching to have been a spectator of this dismal scene, and to have seene this brave and worthy prince lye in the horrid agonie of death, with all the paines unimaginable upon him, from six at night till twelve the next day, at which time he died. I confess I could not forbear expressing to effeminat a nature, nor am I able to repeat this now to your lordship without being very sensible of soe generall a losse: and, therefore, I can say noe more but that I am, &c."

The gathering of the clouds which were to end in the ruin of James II. is anticipated with great ability and prescience, in a letter to Lord Halifax, December 10, 1686.

"My Lord,—I received your lordship's of the 5th instant, and am concernd to find, that one who so well understands the misteries of state, and how to weather out a storme, should now despaire of safety. It makes me often think how many blessings must unite to make a kingdom happy; for tho' wee have now a prince whose study is his countries glory, whose courage would give him luster without a throne, whose assiduity in business makes him his own cheif minister, and whose greatest recreations are his fleets and armies; yet heaven, it seems, hath found a way to

make all this more terrible than lovely. Riches, arts, and arms, did never flourish more than now within this ile, where property and lawes are still preserved, tho' many say, 'quid fatis leges, ubi tanta potentia regnat?' For men are generally discontented, and dread the being shewd some other way to heaven. Holland, that sees their own religion extirpated in France, and how subject wee are here to change, trembles at the frowns of two mighty kings, esppecially when they remember the grounds of their misterious union twenty years agoe; and what our ambassador then sayd on that subject to his Catholick majesty. But God is the great ruler of the harts of kings; and tho' the morning is overcast and threatens thunder, yet they and wee may see it change into a glorious day; and, therefore, do not yet despond, nor rack your thoughts to find the deep decrees of fate, but be happy as long as you can, and make me so, in being always kind to, &c."

Though we extract only this document, we ought to say that many of his lordship's letters written about this period, are marked with extraordinary discrimination, and clearly foretell the coming catastrophe. In 1688, he writes, "I do daly receive, my lord, so many marks of your favour and civility, that I despair of deserving them, and must confess that nothing but your kindness could supply my want of merit. The account your lordship gives me of the cabals that are making in the House of Lords against some of our great ministers, is what I have long expected; and I believe that they themselves have little reason to be surprised at it; for those who in a short time get vast estates, high titles of honour, and great offices, by sailing with every wind till the poor bark is almost sinking, must allow those who are in danger of drowning to complain of them who steer the boat. Seriously, since the time of the first Romans, self-interest has been the great disease that has most infected mankind, and I doubt it has destroyd in this kingdom most of those publick spirits, who formerly preferred a generall good before a private advantage: but this is a subject that some of your lordship's freinds, as well as mine, wil not like to heare of, and therefore I do intreat your lordship to burn this paper, and to believe that I am entirely, &c."

The annexed letter from "Mr. John Dryden, the poet," to Lord C., in Feb. 1696, is of too much literary interest to be omitted in the *Literary Gazette*.

"My Lord,—I have hitherto wanted confidence to give your lordship the trouble of a letter, which I design'd almost a year together, and am now forced to take this opportunity or wholly loose it. My translation of Virgil is already in the press, and I can not possibly deferr the publication of it any longer than Midsummer Term at farthest. I have hindered it thus long in hopes of his return, for whom and for my conscience I have suffered, that I might have layd my authour at his feet: but now, finding that God's time for ending our miseries is not yet, I have been advised to make three severall dedications, of the *Eclogues*, the *Georgics*, and the *Eneis*. The *Eclogues* have been desired a year ago by my Lord Clifford, whose father, the treasurer, was my patron; the *Georgics*, by the Marquess of Normanby; and if I must presume so farr, I would humbly offer the *Georgics* to your lordship's patronage. They are not, I confess, the most specious part of Virgil, but, in revenge, they are his masterpieces; in which he has not onely outdone all other poets, but him,

* "Sir Thomas Armstrong was executed on Friday, the 22d of June, 1684, on the attainder of outlawry for treason."

self. Accordingly, I have laboured, and I may say have cultivated the Georgiques with more care than any other part of him; and, as I think myself, with more success. 'Tis suitable to the retired life which you have chosen, and to your studies of philosophy. From the first hour since I have had the happiness of being known to your lordship, I have always preferred you in my poor esteem to any other nobleman; and that in all respects. And you may please to believe me as an honest man, that I have not the least consideration of any profits in this address, but only of honouring myself by dedicating to you. By this time, my lord, you may perceive why I have been solicitous to procure the favour of your being one of the subscribers to this work. And, to return to the beginning of my letter, 'twas upon a just diffidence of my success in this presumption that I have humour'd my natural bashfulness, in not addressing (this) to you sooner. But, as teeming women must speak at last, or lose their longing, so I am constrain'd to beg that I may not miscarry of my translation, who am, with all manner of humility, &c."

In return, the patron seems to have sent the poet a handsome compliment; for in his reply, after the publication, in August of the same year, Dryden says—

"I can not pretend to acknowledg, as I ought, the noble present which I have received from your lordship, any more than I can pretend to have deserv'd it. I will not think that, like Sylla, you rewarded a bad poet, and, at the same time, commended him to write no more; for the greatest value I can put upon my selfe is your favourable opinion of my verses. I am glad that they have pleas'd the world; but I am proud that they have pleas'd your lordship. By the largeness of your present, I must conclude that you considered who gave, and not who was to receive; and I know but one who made this reflection before your lordship, and that was Alexander. I am sure I need not say that I have avoided flattery in my dedication; for your character was established with all who had the honour of knowing you. I have only spread it amongst those who had not that happiness; as being from the bottom of my hart, and without poetry, &c."

With this we conclude; only again remarking, that though some of these letters are comparatively unimportant, and others too strong for the decency of our day, yet they are, with all their faults, extremely curious to the general reader, as historical portraits and sketches of a corrupt age. We regret to cite any instance of the tendency to profaneness which the principal writer exhibits; but, as we cannot copy his amorous offences, we must, to render our review a just one, specify his laxity in the other respect.

"I would sooner (he says in a letter of 1756) have returned you my most humble thanks for your last favour, had I not been tormented by such a cold as I think is attended with a legion of devils; I mean head-ache, tooth-ache, cough, and defunction in my eyes, &c.; which makes me often wish that there were somebody now, as there was formerly, that could send them all into a herd of swine. Seriously, I am not only obliged to keep my chamber, but to be the most part of the day upon my bed, and therefore I know you will not expect a long letter at this time from, &c."

The following, though gay, are rather witty than really objectionable.

"My daughter Betty return'd this day from

Nottingham, where shee met your pious brother, who, shee sayes, looks very ill, and is observed to be grown very melancholy. I hope the thoughts of his going to heaven doe not trouble him; and yet I have often observed that the saint and the sinner are equally unwilling to come to the trial which of them has acted the wisest part."

"The last week, I received a letter from the Speaker of the House of Lords, to command my attendance on the house, or else to send two persons to swear at the bar of the house that I am not able to come. I confess I doe think this very hard; for since a man who is not well does not some times know him self whether he is able to undertake such a journey, how can he honestly send two persons to swear that they beleive he is not in a condition to come up? Besides, this is but a late custom; and when I moved the last session in the house to have it renewed, it was upon a change of government, to oblige all the peers to come and take a new oath to a new master. But now that the kingdom is so well settled, I can not conceive why your lordships should in danger the damning us poor country lords and our servants, by tempting them to forswear themselves. And how can the house expect this obedience from us, who are at a hundred miles distance, when at the same time several of the bishops will neither send nor come?"

Our last quotation adverts to a curious parliamentary practice; and with it we bid adieu to this very entertaining volume.

CAPTAIN BASIL HALL'S AMERICA.

PURSUING our view of these volumes, and endeavouring to afford the public a sufficient idea of their quality, we now transcribe an account of Charleston slave-market. In perambulating that city, Captain Hall says—

"My attention was arrested on the way by a circumstance which I might certainly have expected in Charleston, but somehow had not looked for. On reaching the Exchange, in the centre of which the post-office is placed, I heard the sound of several voices in the street, like those of an auctioneer urging an audience to bid for his goods. I walked to the side of the gallery overlooking a court or square, in which a number of people were collected to purchase slaves and other property. One man was selling a horse on which he was mounted, and riding up and down the streets; another, in the same way, was driving about in a curriole, bawling out to the spectators to make an offer for his carriage and horses. But of course my attention was most taken up with the slave market. A long table was placed in the middle of the street, upon which the negroes were exposed, not one by one, but in families at a time. From this conspicuous station they were shown-off by two auctioneers, one at each end of the table, who called out the biddings, and egged on the purchasers by chanting the praises of their bargains. These parties of slaves varied in number. The first consisted of an old infirm woman, a stout broad-shouldered man, apparently her son, his wife, and two children. The auctioneer, having told the names of each, and described their qualifications, requested the surrounding gentlemen to bid. One hundred dollars for each member of the family, or 500 for the whole party, was the first offer. This gradually rose to 150, at which sum they were finally knocked down; that is to say, 750 dollars for the whole, or about £170. Several other families were then put up in succession, who brought from 250 to 260 dollars each member, including children at the

breast, as well as old people quite incapable of work. The next party was exceedingly interesting. The principal person was a stout well-built man, or, as the auctioneer called him, 'a fellow who was a capital driver.' His wife stood by his side—a tall, finely proportioned, and really handsome woman, though as black as jet. Her left arm encircled a child about six months old, who rested, in the oriental fashion, on the hip bone. To preserve the balance, her body was inclined to the right, where two little urchins clung to her knee, one of whom, evidently much frightened, clasped its mother's hand, and never relinquished it during the sale which followed. The husband looked grave and somewhat sad; but there was a manliness in the expression of his countenance, which appeared strange in a person placed in so degraded a situation. What struck me most, however, was an occasional touch of anxiety about his eye as it glanced from bidder to bidder, when new offers were made. It seemed to imply a perfect acquaintance with the character of the different parties competing for him—and his happiness or misery for life, he might think, turned upon a word! The whole of this pretty group were neatly dressed, and altogether so decorous in their manner, that I felt my interest in them rising at every instant. The two little boys, who appeared to be twins, kept their eyes fixed steadily on their mother's face. At first they were quite terrified, but eventually they became as tranquil as their parents. The struggle amongst the buyers continued for nearly a quarter of an hour, till at length they were knocked down for 290 dollars a-piece, or 1450 dollars for the whole family—about £330 sterling. I learnt from a gentleman afterwards, that the negroes, independently of the important consideration of being purchased by good masters, have a singular species of pride on these occasions in fetching a high price; holding it, amongst themselves, as disgraceful to be sold for a small sum of money. This fact, besides shewing how difficult it is to subdue utterly the love of distinction, may perhaps be useful in teaching us never to take for granted that any one boasting the human form, however degraded in the scale, is without some traces of generous feeling. Indeed, I have frequently heard from judicious and kind-hearted slave-holders—for many such there are in America—that however difficult and thankless it often proves, yet there is always sufficient encouragement—sometimes as a matter of feeling, sometimes as a matter of interest—to treat these poor people not as the inferior animals, with so many of whose attributes we are apt to invest them; but, on the contrary, as men gifted more or less with generous motives, capable of being turned to account."

To this picture of men in the lowest state of degradation, we shall append an example of manners in the upper classes of the same place.

"On the evening of the 29th of February, we attended a ball given in the great rooms belonging to the St. Andrew's Society, to which we had been most kindly invited by the Jockey Club of Charleston. A traveller should speak with great caution—I may say reluctance—of the private manners and customs of foreign countries, since there is almost a universal unwillingness amongst the natives to be commented upon, in these respects, even when nothing is found fault with. Nevertheless, so many characteristic features of every country are displayed in ball-rooms or other public assemblies, that where no personal descriptions

are thought of, or can by any means be made applicable, it may be allowable occasionally to advert to such things for the purpose of illustrating graver matters. If such inferences be drawn with fairness and good-humour, the natives themselves ought, I think, to be rather amused than otherwise, by seeing themselves reflected from the mirror of a stranger's mind. At all events, I am sure, for my own part, I have laughed heartily at the graphic accounts I have read of Edinburgh parties, in more than one American book of travels. The room was large, the ball handsomely got up, and every thing ordered in the best style, with one small exception—the ladies and gentlemen appeared to be entire strangers to one another. The ladies were planted firmly along the walls, in the coldest possible formality, while the gentlemen, who, except during the dance, stood in close column near the door, seemed to have no fellow-feeling, nor any wish to associate with the opposite sex. In the ordinary business of their lives—I mean their busy, money-making, electioneering lives—the Americans have little or no time for companionship, that I could ever see or hear of, with the women, still less for any habitual confidential intercourse. Consequently, when they come together for the express purpose of amusement, those easy and familiar habits which are essential to the cheerfulness of a ball-room, or indeed of any room, are rarely to be found. In place of that unrestrained but innocent freedom of manners which forms one of the highest charms of polished society elsewhere, I must say that I seldom observed anything in America but the most respectful and icy propriety upon all occasions when young people of different sexes were brought together. Positively I never once, during the whole period I was in that country, saw any thing approaching, within many degrees, to what we should call a flirtation: I mean that sedulous and exclusive attention paid to one person above all others, and which may by that person not be unkindly received. Without being called attachment, it often borders so closely upon it, that mere proximity and frequency of intercourse tend to sustain a lambent fire beneath, which may be fanned into flame, or be allowed to expire, according as circumstances, upon further acquaintance, prove suitable or otherwise. This degree of incipient interest, sometimes felt by one, sometimes shared by both, will often admit of ample expression, not only without evil consequences to the young parties themselves, but with eminent advantage both to them and to society. For nothing but good can possibly spring out of a well-regulated exercise of some of the purest and most generous feelings of our nature. I suspect, however, that it is quite essential to the attainment of any high degree of refinement in society, that the practice of expressing such emotions, and many others of a similar character, should be habitual, and not contingent. Such a degree of freedom of manners cannot, I fear, exist in a society like that of America, where, from its very nature, the rules of behaviour cannot yet have become settled."

From civilised, or rather, according to these descriptions, from half-civilised life, our next step shall be to some of the new or projected cities in the wilderness; of some of which it may yet truly be said, by way of pun, *stat nominis umbra*.

"Macon appeared to be in the south, exactly such a town as Utica or Syracuse in the north, or any other of those recently erected towns in the western parts of the state of New York.

It had not the vehement bustle of Rochester, it is true, but it resembled that singular village not a little in its juvenile character, and might have been taken for one of its suburbs. The woods were still growing in some of the streets, and the stumps were not yet grubbed up in others. The houses looked as if they had been put up the day before, so that you smelt the saw-mill every where. The signs and sign-posts were newly painted; the goods exposed before the doors were piled up as if just lifted out of the waggons; the bars at the numberless grocery stores, alias grog-shops, were glittering with new bottles and glasses, barrels of Hollands, whisky, and rum. The inhabitants were unacquainted with one another's residence, and I had to go to eight or ten houses in quest of one gentleman for whom I had a letter. As yet the streets had no names; but they were laid out with perfect regularity, as I could discover by stakes here and there at the corners, and by rows of the pride-of-Indians planted along both sides, in a sort of mockery, as it seemed, of the grim old forest, which was frowning all round on these pigmy works of man. This town of Macon, though founded in 1823, had not yet worked its way to the maps and road-books. At its first establishment, it was thought the navigation of the river Ocmulgee, on which it stands, might be so much improved, that a communication could be opened with the sea-coast of Georgia, and, consequently, that a great portion of the produce of the upper part of that state would find its way to Macon as a dépôt. But these expectations not being realised, the rage for settling there had given place to newer fashions, other situations had been preferred; and this city, which, in the opinion of its founders, was to have been one of the greatest in all the south, it was now feared would soon vanish altogether. In the course of the day's journey, we passed through a place called Dublin, on the banks of the Oconee river. It also had already felt the effect of these withering causes. And we saw several others, the mushroom growth of rapid and unthinking speculation. The inhabitants of some of these juvenile but decaying towns explained to me, that much of the evil which I saw, arose from the unfortunate description of their labouring population."

But we must reserve the conclusion for another *Gazette*.

SIGHTS OF BOOKS.

The Edinburgh Gazetteer, &c. 8vo. pp. 818. London, Longman and Co.; Edinburgh, Adam Black.

IN 818 pages of double columns we have here an admirably complete edition of an excellent *Gazetteer* in one volume. It contains much of late geographical discoveries and information; and is certainly by far the best work of its kind which we have ever consulted. We do not mean to depreciate the *Gazetteer* in six volumes octavo, from which it is evidently compiled; but those who may not need that extensive publication will have little cause to regret the choice of this single volume.

The Loves of the Poets. By the Author of the "Diary of an Ennuyée." 2 vols. 12mo. London, 1829. Colburn.

WE do not like these volumes, and we wish they had never been written,—partly for the sake of their author, and still more for our own. It is said, that a striking title will induce a bookseller to publish any work; and the *Loves of the Poets* was one of great promise. We should be sorry to be called to a critical

account of what we expected—certainly not what we have got: not even a *raffaichissement*, but a compilation of well-known anecdotes respecting Petrarch's Laura, Dante's Beatrice, &c. Still, we could forgive the collecting common-place anecdotes from the works of others—we could forgive the very after-dinner Irish floweriness of language with which they are invested; but what we cannot forgive is, that it should have been done at all: A poet's love is like the veiled statue of Isis—its very divinity is its mystery. Who is there but has some shadowy yet beautiful *idéal* floating in the innermost recesses of his soul—some vague but lovely likeness of those beings whose smile made the inspiration of those poets whose love may have "interpreted his own?" Who can endure to have this Vaucluse of his heart broken in by the broad daylight of dictionary research, and these "fair creatures of the element" ranged in alphabetical order, and Martha Blunt and Lady Mary Wortley Montague *affiché* with the same sentimentality, meant to supply the place of sympathy, with Beatrice and Leonora. Our illusions are like flowers—they will not endure being gathered, tied up in nosegays, and paraded, without fading. We shall conclude with a traveller's story; one who, on arriving at Vaucluse, was directed to a little public house, on whose sign was painted, "entertainment for man and horse, good beer, *et Petrarch et Laure*." We leave the application of the anecdote to our authoress.

Dictionnaire des Verbes Français; or, Dictionary of French Verbs, showing their different Regimen. Second Edition, carefully revised and improved. To which has been prefixed, a concise French Grammar, in which the Accidence relating to each Part of Speech are exhibited, at once under the Tabular form, in which the French Conjugation, arranged on an entirely new Plan, is both much facilitated and simplified. By J. C. Tarver, French Master, Eton College. Longman and Co.; E. Williams; W. Joy; J. Souter; Simpkin and Marshall; Dulau and Co.; and J. Collingwood. 1829.

IN the present day, when French is so universally spoken, every assistance towards vanquishing its difficulties, and acquiring its fluency, must be readily welcomed; and the volume now before us is one well calculated to advance and assist the student. Mr. Tarver has collected and arranged the idioms in a very clear and perspicuous manner; and we must say his method of classifying the verbs is excellent. We also particularly like the plan of the various tables: the benefit is the same as that derived from a well-constructed map, where all the different bearings are seen at a glance:—we, therefore, cordially recommend this work, as a valuable aid to all learners of that necessary language, the French.

ARTS AND SCIENCES.

INEFFICACIOUS POISONS.

ON Tuesday we had an opportunity, at the Argyll Rooms, of witnessing the extraordinary powers possessed by M. Chabert, of resisting the effects of poisons, either internally or externally. M. Chabert is the individual whose equally wonderful capability of withstanding heat has been shown by his remaining shut up in ovens during a long period, and under a degree of temperature far above that which would have destroyed any other living creature. The experiments on the present occasion were exhibited to a private party of some

fifteen persons, including Dr. Gordon Smith, Mr. Titus Bury the surgeon, and other scientific men. Having armed himself by the antidote which he has found to be a guard against animal poisons, M. Chabert swallowed *forty grains of phosphorus*, in the presence of the astonished company. The phosphorus was distinctly put upon his tongue by a gentleman, and beyond all doubt fairly taken into the stomach: nearly, if not quite enough, we presume, to have killed all those who saw this feat done. His next exploit was to sup two spoonful of oil, at 330° by the thermometer—i. e. 120° above the heat of boiling water. This he did without any apparent inconvenience; though the spoon remained for minutes so hot that no one could bear to touch it with his hand. Finally, M. Chabert held his head directly over and in the midst of the fumes of arsenic, which diffusing over a large room speedily became too potent to be inhaled with impunity by any other being who was present. After all this (we add with something like satisfaction at his escape, and at our own good luck in not being accessories to murder or suicide), we had the pleasure to see the performer eat a good dinner and drink his wine, just as if he had taken a ruak and a sip of sherbet by way of whet.

As it may be asked, to what useful purpose can these astonishing proceedings contribute? we should state, that M. Chabert affirms his ability to save the lives of men from every species of poison; and that his antidotes, administered in adequate time after the poison has been swallowed, are as effectual as if previously taken. He farther says, that he has *three* antidotes—one a preservative against vegetable, another against animal, and a third against mineral poisons; so that those of the whole kingdoms may be met and overcome. Even the fatal hydrocyanic, or prussic acid, he professes to take with safety; and from having withstood the bites of vipers and other venomous creatures, he is of opinion that his remedy would be a specific against the bite of mad dogs, and a cure for hydrophobia. Now, without pledging ourselves to unhesitating faith on all these points, we cannot, seeing what we have seen with our own eyes, doubt that M. Chabert's knowledge of antidotes, and experience with respect to poisons, is eminently worthy of medical investigation; and, if he really possess such important secrets, that they ought to be ascertained, and he largely rewarded as a public benefactor. It is for these reasons that we have published this account, and that we invite our physicians, chemists, and other people of scientific intelligence, to inquire into M. Chabert's pretensions, and, if they are sooth, to establish them for the good of mankind.

We may here take the opportunity of mentioning that M. Orfila, the celebrated French chemist, has recently been making a series of experiments with hydrocyanic acid, chiefly for the purpose of ascertaining the proper means of restoring a person to life, where it is practicable, after taking this poison. Hitherto the remedies prescribed have been strong infusions of coffee and oil of turpentine; but seldom with good effect. M. Orfila recommends, first, an emetic; second, the application of ammoniacal or chlorurated water to the nostrils, bleeding from the arm, and the application of leeches behind the ears; third, the affusion of cold water, in the way prescribed by a German physician, M. Erbot. M. Orfila states that these means will restore the patient, unless the quantity of prussic acid taken has

been very great. In order to ascertain the presence of this poison, he recommends the use of nitrate of silver, by which the acid will be precipitated in the form of cyanure of silver. In case of poisoning by opium, he recommends, previous to the administration of emetics, a strong decoction of nutgalls, for the purpose of decomposing the opium.

CAPTAIN ROSS'S EXPEDITION.

[The following extract of a letter, dated Loch Ryan, 14th and 15th June, from Captain Ross, gives the particulars of the accident, and state of matters previous to his sailing, to which we alluded on Saturday. It also contains the latest news of public interest respecting the Expedition.]

"We had the engine working fifty hours, and during that time made a very satisfactory experiment on the paddles:—we found, by drawing up the paddle on the windward side, and leaving the lee one down, with the whole power of the engine on it, she made excellent way against the wind; and she was doing quite well, when a very appalling accident happened to William Hardy, one of the stokers: his foot, while on the side of the engine, slipped, and in attempting to save his fall, his arm got between the guide-wheel and rod of the piston, which shattered it so completely, that I found it necessary to take it off myself, which I did; and also succeeded in taking up the artery, by which his life has been saved. The doctor had not joined, and I of course made way for the nearest port (Logan), and sent him to my house at Stranraer, where he had every possible advice and attention.

"I am happy to say that the vessel is a most excellent sea-boat: in all the storms we have had, we did not take in a drop of water; and she sails fully as well as I expected. But what has given me most satisfaction is the conduct of my crew, who behave in a manner which assures me they will surmount every obstacle, and that ultimate success is certain."

On joining the John (a vessel that was to have accompanied him), Captain Ross found that great discontent prevailed among the crew of that vessel; and upon his going on board, the crew individually refused to heave the anchor. Captain Ross then goes on to state—

"On my saying that my men (i. e. the crew of the Victory) should do it for them, the cowardly vagabonds took to the boats, and landed amidst the hisses and execrations, not only of our gallant crew (who gave three cheers, and said, 'Let us go without them'), but of the villagers, who assembled to witness their landing. A scuffle took place between the captain and the crew; and in their attempting to take one of our boats to escape with, one man was knocked overboard; but no lives were lost. I immediately decided on removing what stores were necessary to complete us from the John, and to proceed without her; which has, I am happy to say, given my brave fellows universal satisfaction. They answered my determination with three cheers, and declared they would follow and stick to me wherever I went.

"We are all in the highest spirits: the wind is fair, the engine, bellows, and boilers, are all in repair, and the anchor is now up.—Farewell!"

AFRICA.

WE have much pleasure in publishing the annexed sketch of a nautical survey of a part of Africa which may be said to be entirely new to European investigation.

The objects of our expedition, co-operating with his Excellency Major-general Turner,

for the abolition of the slave-trade within the British territory on the Sherbro and Boom rivers, being effected by the 21st February, 1826, Captain Owen commenced the survey of the river down to the Leven at its entrance. At this time the chief part of the crews were attacked with the fever (similar to the cholera morbus), which raged to such an extent as to render us unable for several days to weigh anchor, until the wind set in upon the land, when a favourable change took place. Having already made a survey of the coast, only the islands and shoals required further inspection, which we contrived, in our sickly state, faithfully to accomplish by means of assistance from H.M.S. Swinger, Captain Matson, and came to anchor for the night off the fertile little island Bannana, where fresh observations were made, and the island visited throughout. It is situated about a mile from the main, and is about a mile in length: the part toward the sea is a lofty mountain, covered with wood; toward the main it is low, clayey, and rocky land, interspersed with bushes and trees. The town is very clean, and neatly arranged; and much credit is due to Mr. Campbell, commandant of the island, for the civilised manner in which the natives are governed. Here we shot a wild bullock on the mountain, and found it far superior to the stalled beef procured at Sierra Leone. Among the rocks and bushes on the main we caught several kids, which proved a very fine treat. There not being sufficient water in this channel for our ship, we rounded the island, leaving our tender to discover a rock in it upon which one of our boats had struck at low water; and we joined company and sailed down close under the lofty land to Sierra Leone, where we arrived on the 9th of March, several of our seamen being still confined to their hammocks from the ill effects of the Sherbro fever: we made but a dismal approach to anchorage. We now soon learnt from the shore that our anticipations of meeting with those who had, with their governor, shared with us the difficulties of the Bullom warfare, were entirely frustrated: the governor, his aide-de-camp, and the chief of his force, had already fallen victims to the same fever which assailed us after their departure.

At this time there were a great number of ships in the bay, laden with timber for England; and the arrival of H.M.S. Romney, 64, from England, with a reinforcement for the garrison, and other ships of the station, gave a noble appearance to the place; and in the pitch-dark and warm nights of the then approaching season of incessant rains, thunder, and lightning, their ports were open, and the bay presented one grand scene of illumination, which seemed vastly to astonish the simple minds of the natives assembled to witness the strange sight, as they said, "of a vessel on fire." Having supplied ourselves with stores, and disposed of the sick and wounded to Hill's Romney, returning to England, and closed a few lines to relatives and friends, we cheerfully weighed anchor in the midships of the month to complete the survey northward, and sailed out of the bay, followed by our tender and H.M.S. Conflict, 10. Touching at the Isles de Loz, we had the gratification to meet with a ship from Scotland, which had put in here through stress of weather, laden with a variety of European produce for any port on the coast at which she could find the most profitable market. All kinds of European produce, except wine and spirits, being exorbitantly dear at Sierra Leone, we were enabled to provide ourselves with a good stock of potatoes, pickles, porter, whisky,

&c. &c. for our voyage, at a moderate price. This was a great treat, and became of infinite service to us after our late sickness and privations. We remained here but a few hours; and sailing for the islands and shoals off the river Rio Grande the following morning, arrived at the entrance of them on Sunday morning, the 23d of April. With a gentle and favourable breeze we sailed up a fine, broad channel of from sixteen to eighteen fathoms of water, for the distance of two miles from the bar, which, gradually decreasing to eight fathoms, continued two or three miles further, when suddenly each leadman in the chains called *four fathoms*—the boats were immediately lowered and sent off a-head in different directions, waving a flag for each fathom of sounding. At this time, nine a. m., we observed a number of canoes filled with natives, crossing from island to island in the greatest haste, as if alarmed by our approach; but as our ship advanced to shallow water, and was about to tack for the greater depth of soundings, she grounded, and was directly surrounded by a number of canoes, the natives of which held out their poultry, &c. as signs of barter, but were beckoned off. The French chart of the latest survey of these islands and shoals was again consulted; but no fair discovery could be made of the depth of the track we had taken, or of the sand-bank upon which the Leven was now resting her almost worn-out ribs. Immediate recourse was had to whatever means could be suggested to work her off before the neap tides set in. As she lay over on her larboard beam-end upon the sand-bank, with near two fathoms of water on her starboard, the lower deck had so yielded to the strain, as scarcely to admit of any favourable hope of releasing her; and the toll of the bell and preparations for divine service were mingled with confusion and labour. Every possible exertion was now used by the officers and seamen (as if particularly anxious not to rest their bones here, after the difficulties they had already encountered), and made effectual in the last of the spring tides. During the few hours we were on this sand-bank, several visited the extreme ends of it, and collected a quantity of handsome shells; but the natives becoming troublesome and suspicious, they were signalled on board, and the latter ordered off without disposing of their produce: they, however, came again; but from their savage appearance, armed as they were with muskets, spears, and stilettos in cases attached to their bodies, precaution was taken, and only two or three were admitted on board at a time. One young native among them, who could speak a little English, seemed to be acting for all the rest, and a favourable course of barter ensued: during this, those in the canoes were not idle, but devoting themselves to the procuring of what from they could from the vessel's side, and robbing the seamen of tobacco, &c. Upon a young officer's threatening a blow at one of them in the act of theft, he immediately drew his knife from its sheath and made a feint: others were instantly in readiness to fly to his assistance with spears, &c. We had now an opportunity of witnessing the violence of these people, several of whom we observed with deep gashes in their backs, as if speared in the act of retreating from an enemy. Having completed our traffic, they counted the ports, and returned to shore, apparently not well satisfied with the little we had purchased from them; but as they were very tenacious about parting with their stock at a moderate remuneration, and of a

treacherous nature, we were not sorry for their departure. During the night, while all hands were busily engaged in working the ship off the sand-bank, fires were observed on the sandy shore of the island, and great shouting was heard, as if from a numerous body of the natives, which continued till break of day, when several large canoes were seen rowing up against the ebb tide, and pulling out to the centre of the river, for the strength of the tide, with great rapidity, and with a tremendous *war-whoop*, came down upon our boats engaged in getting the stores off the sand-bank. A scuffle soon followed: our men being unarmed, a signal was made for their return, but it was not observed until some had leaped from their boats into the river; they were then signalled to keep to their boats, but the great number of giant and savage-like natives now around them, armed with muskets and spears, tended a little to discourage them, and they resolved at once on the only alternative, that of fighting their way with the oars, and warding off the muskets and thrusts of spears. They fortunately succeeded in regaining their vessel without a wound. The arms and marines being by this time (five a. m.) on deck, they commenced a fire on the canoes, in order to disperse them from the sand-bank, that our business might be renewed; but no sooner were our muskets discharged, than they capsize their canoes to keep off the shot, while they were loading their muskets to return the compliment. This continued for some time, and had not the desired effect, so that it was deemed necessary to favour them with a few canister-shot, which so startled and amazed them, that, throwing their heads around in all directions, and looking above them for the noise of the shot that whistled about their ears, they very quietly hastened to shore. Having a broadside ready loaded to guard against a precipitate attack upon the ship, it was, to prevent any further trouble, discharged as they were landing; and, cutting away the leaves and branches from the thickly studded palm-trees, so alarmed them, that they fled into the wood, leaving their canoes and arms scattered on the shore. On the morning following, our boats, accompanied by a party of marines, visited the land for the purpose of fishing, but caught very little; the canoes had been taken away, and not a native was to be seen on the shore, and those on the river kept at a very shy distance. The boats out on survey returning without being able to find a sufficient depth of water toward Hog Island for the ship to proceed, and the arrival of a couple of native pilots from a more civilised island adjoining that of the Portuguese settlement, confirming the inaccuracy of the late French survey of this part, we returned with the pilots for the entrance of the Rio Grande, where we met with a small schooner; but not being able to discover any thing suspicious about her as a slave-trader, we came to anchor near the old English settlement, formed and abandoned by Lieutenant —, R.N.

[To be concluded in our next.]

Paris, July 2d.

AFTER a pretty long interruption, news has been received at Paris from the French and Tuscan literati who are exploring Egypt and Nubia. Having examined the latter country to the second cataract, they returned to Egypt on the 1st of February last. The letters from M. Champollion, jun., received at three days interval, are dated the 16th and 15th of February, 25th of March, and 2d of April. The last two are from Thebes, where the travellers took up their abode on the 9th of

March, and were lodged in the magnificent tomb of Rhamses IV. at Behn-el-Molok. The historical details in these letters, which fill no fewer than sixty pages, are exceedingly interesting: we shall immediately give extracts from them.

LITERARY AND LEARNED.

OXFORD, July 4.—Wednesday being the day appointed for the *Encomia*, a convocation was held in the *chapel*, at which the honorary degree of D.C.L. was conferred on the following gentlemen:—His Excellency J. Harboun, Envoy of the United States of America; Sir Mowat Douglas, Bart. F.R.S.; Sir A. E. Emden-Wilmot, Bart. F.R.S.; Capt. Sir W. E. Parry, F.R.S.; Capt. Sir J. Franklin, F.R.S.

The Rev. J. Lodge, M.A. Fellow of Magdalen College, and the Rev. T. Thorne, M.A. Fellow of Trinity College, Cambridge, were admitted of *academia*.

The *Crescentian* Oration was then delivered by the Rev. H. H. Milman, Professor of Poetry.

The prize compositions were recited in the usual order.

CHANCELLOR'S PRIZES.

Latin Verse.—M. T. Cicero cum familiaribus suis apud Tuscum.—J. E. Wilmot, Scholar of Balliol College.

English Essay.—The power and stability of federative governments.—G. A. Denison, B.A. Fellow of Oriel.

Latin Essay.—Quibus pessimis rationibus gentes a Romanis debellate: its efficaciaur ut cum victoribus in unum imperii corpus coaluerint.—W. Sewall, B.A. Fellow of Exeter.

SIR ROGER NEWCOMBE'S PRIZE.

English Verse.—Voyage of Discovery to the Polar Regions.—T. L. Cloughton, Scholar of Trinity College.

ASIATIC SOCIETY.

JULY 4th. The President, the Right Hon. C. W. W. Wynn, M.P., in the chair.—John Babington, J. M. Arnett, J. S. Forbes, and Colonel Robert Soot, were severally balloted for and elected. A letter from Ram Ras, head English master at the College of Fort St. George, relating to his callation and translation of the *Silpi Sastra*, the Hindoo sacred treatise on Architecture and Sculpture, was read. Sir Alexander Johnston directed the attention of the meeting to a very beautiful lithographic work, entitled *Oriental Ornithology*, printed at the Behar amateur lithographic press, by Sir C. D'Oyly and C. W. Smith, Esq. Through the kindness of the Marchioness of Hastings, the book was placed on the table for the inspection of the members. Colonel Tod presented his magnificent work, entitled *Annals of Rajasthan*. Several presents in natural history were also made: amongst them was a curious collection of fossil shells (bellerophones), found at St. Helena, 1,000 feet above the level of the sea.

LONDON UNIVERSITY.

THE first session of this Institution having closed, there was, on Thursday, a distribution of prizes to the students who had most distinguished themselves on their examinations.—Earl Grey was in the chair; and, besides many persons of note, the great room, capable of containing about a thousand individuals, was filled by those anxious to witness this interesting ceremony. The rewards were adjudged by the several professors.—Mr. Key, Latin; Mr. Long, Greek; Mr. Dale, English; Mr. De Morgan, mathematics; Dr. Lardner, natural philosophy; and Mr. Amos, law. The latter delivered an eloquent address; as did also the noble chairman. The whole exhibition went off with great *éclat*.

ROYAL IRISH ACADEMY.

AT the first meeting of the Academy in March, Davies Gilbert, Esq. M.P., President of the Royal Society, was unanimously elected an honorary member. The essays, "on the character of Ossian's poems," and "on the change in the climate of Ireland," for prizes offered by the Academy, were announced as received.

At the April meeting of the Academy, several

remains of antiquity were exhibited by Sir William Betham, particularly some globular pieces of unbaked clay, about the size of an orange, which were found in the centre of a large stone cairn in the county of Armagh. This cairn, which was sixty feet in height, was opened by the late Sir Walter Sinnott, but nothing further was discovered therein except several cart-loads of similar pieces of clay, all bearing evident marks of the lath. Part of Mr. Dalton's prize-essay upon the ancient Irish was read; and it was announced that the council had determined to have it printed in the next volume of the Transactions of the Academy.

FINE ARTS.

NEW PUBLICATIONS.

Hanoverian and Saxon Scenery. From Drawings by Captain Batty. Part XI.

Or the plates which ornament the eleventh Part of Captain Batty's work, the View of the Palace of Fredericksburg is the most striking.

Sir William Clayton, Bart., Lieutenant-Colonel Commandant of the 1st Regiment of Bucks Yeomanry Cavalry. Robert T. Stothard.

A PLEASING little whole-length portrait, bearing intrinsic evidence of being a powerful resemblance to the highly respected original.

Sunday Morning—the Toilette. Painted by R. Farrier; engraved by J. Romney.

A CHARACTERISTIC exhibition of rustic vanity, very cleverly engraved.

ORIGINAL POETRY.

THE CLOSE OF THE SESSION.

The Catholic Bill.

MY Lords and Commons,—You have much neglected,

In your excessive kindness to the nation,
To see your own dear interest affected
In granting Catholic Emancipation.

I do not mean to tell, for four full hours,
Those threats to which no breast can be a
stranger—

To wit, the eternal Pope's too temporal powers,
The Church, the Country, and the King, in
danger!

And how the Papists' dearest, first desire,—
The one great privilege they seek the most,—
Is just to roast us at a cheerful fire,
Whenever they shall come to "rule the
roast!"

And how we all,—that is, the two or three
That have the infamy to be alive,—
(For every day in Smithfield there will be
"Hot joints" for cannibals "from 12 to 5")!

How we must all salute the Pope's old shoe,
And give our noses if he'd please to pull;
Confess our sins (we'll have enough to do!),
And honest John obey a Popish Bull!

These are but secondary things, no doubt,
Which no true patriot ever feels or fears:—
But pray, my Lords, what will you talk about
For all succeeding parliament's years?

Think of the theme of eloquence—so rich—
So inexhaustible!—(ay! that's the thing!)—
The standard topic, you are losing, which
Came, like the cuckoo, each returning spring!

How will the fine old speakers—*pro and con*—
Miss—sadly miss it, and too late deplore
What they have droned, and humm'd, and
haw'd upon
So well—for half a century or more!

The far-fetch'd similes—the quaint and trite
Quotations, which from Latin grammar came;
The frothy flourishes, that every night
Seem'd all so sensible—and all the same.

The poor reporters, once so grimly gay,
Now sigh disconsolate—their hearts are
broken!

They used to know what each of you would say,
Before a single word was ever spoken:

Or, if they *did* forget,—the old reports,
Of any of the last half-hundred sessions,
Were sure to give them the same brilliant
thoughts—

The same sound sentiments—the same dig-
ressions!

What will you talk of now? or will "the
House,"

Like Hamlet's father, take its evening nap?

Will each poor "Rat" sit "quiet as a mouse,"

Or novice newly captured in *La Trappe*?

You must say *something* sometimes—that's of
course—

When such a crowd of you are met to-
gether;—

Must you embrace a Briton's last resource,
And rise—and, hem!—and spout about—
the weather!

You must indeed! unless you choose to rant
Against old tyranny and tithe and tax,
Or try the softer philanthropic cant,
And whine o'er climbing-boys—and t'other
blacks. SIMKINS SIMKINS.

SKETCHES OF SOCIETY.

THE OLD POST-OFFICE.

WHEN a few words will preserve the memory of what is about to be removed for ever, we have pleasure in attempting to convey to our readers a brief account of the present Post-office,—an establishment of the greatest public utility, which is to be transferred on the 12th of August to the new and splendid building erected by Smirke on the site of the ancient religious house of St. Martin's le Grand.

The house in which the office is now held, and where it has been fixed from the time of Queen Anne, is one of those built immediately after the great fire; it was for some years the residence of Sir Robert Vyner, a jovial citizen of London, the very knight, indeed, who, on one occasion during his mayoralty, being *Bacchi plenum*, plucked his sovereign by the sleeve, and insisted he should "stay, and take t'other bottle."

Sir Robert, like other citizens of credit and renown, had a frugal mind, and, when it became necessary to rebuild his house, purchased an old manor-house of the Cromers, at Tunstall, in Kent, which he forthwith pulled down, and prudently conveyed the materials to London, to be used in the erection of his new mansion; and this he raised upon the exact spot where the house had formerly stood, in the same narrow, crooked, and incommensurable Lombard-street, which existed before the fire.

So many additions to the old edifice have been made, for the greater convenience of transacting the important business of the Post-office, that, at this time, the walls of the original mansion are not very easily to be discerned; but in the court-yard is a large doorway, the entrance to the secretary's office, which may be, perhaps, the identical portal where the royal carriage waited, when his majesty so gallantly returned to the table of his host, singing a line of an old song, "he that is drunk is as great as a king."

The rooms of the ancient mansion, now filled with clerks and accountants, are spacious, and exhibit a certain degree of grandeur in the architectural enrichments, much like the works of Sir Christopher Wren, who, it is not improbable, designed the building.

Amongst all the modern additions to the house of Sir Robert Vyner, the most remarkable and generally interesting structure is the inland office; the chief department, as being the means of producing a revenue to the government, from its facility of affording national convenience. By an indulgence, granted to very few, this office, whence it is obviously necessary to exclude the public, can only be seen. It is constructed for the reception of a numerous body, of various classes, all busily employed, and consisting of nearly two hundred and fifty persons. The action of this living machine, as it may well be termed, is certainly of very great importance to the community; by its operation, the hopes and fears of his majesty's subjects are raised or allayed, confirmed or annihilated; the immense trade of his dominions considerably facilitated, and a direct communication with the most distant parts of the empire and its colonies rendered certain and expeditious. The clerks and others employed in this part of the office, like the members of the everlasting club, must be always at their post. No public holidays, as in other offices, no leave of absence, or even illness, can excuse the daily attendance of this stated number, whose motto is *despatch*.

The inland office is a hall, of nearly equal dimensions on every side, about sixty or seventy feet, constructed from designs by the late John Thomas Groves. Twelve Doric columns form a peristyle, and support a continued entablature, whence rises an elliptical dome, open in the centre, to admit a very handsome sky-light of bent glass. The corridors are also lighted from the ceiling, and, excepting on the side communicating with the letter-carriers' office, by folding-doors: the surrounding walls are occupied by divisions, agreeing in number with the mail coaches despatched hence every evening. These divisions are filled with cabinets, closed with latticed doors, and containing partitions, all inscribed with the names of the several towns upon each separate road. In the area of the peristyle are large tables, covered with green cloth; upon these the operation of sorting the letters is performed, in a manner neither tedious nor intricate, which it is hardly necessary to explain in detail. The letters are transferred to the divisions before named, and, after undergoing a peculiar computation, are finally sent on their route; all which is accomplished with accuracy and precision, only to be acquired by constant practice. The degree of perfection, indeed, which this grand machine has already attained, must have required, in its gradual and progressive improvement, the application of powerful ability, as well as a very judicious adoption and arrangement of the various means frequently suggested by the speculations of ingenious projectors.

When any event of general or particular interest transpires, we are informed it is sensibly felt in this department of the Post-office: the debates of parliament, or the arrival of important news, greatly add to the public correspondence; other causes, as a popular election, Valentine's day, or the tea sales at the India House, also affect the circulation of letters. Fifty thousand in the morning for London, and the same in the evening for the country, is no uncommon number. On these occasions, a greater attendance of clerks is con-

sequently required, that no delay may be experienced by the public.

The public is now so well acquainted with the official attention to its convenience, that the ancient additions to the directions of letters of, *With speed. Haste, post haste*; and the very enticing words, *Please to deliver this immediately, and you will be rewarded for your trouble*, are no longer considered necessary.

The careful management of this active machine is under the direction of a superintending president, a president and a vice-president, appellations unusually characteristic in matters of business. Others to whom particular and confidential duties belong, are termed inspectors.

The blind inspector, rather a strange denomination, has the very difficult task of making legible all the ill-written and badly spelled directions of letters put into the office. Some, whose education has been neglected, will spell Oxford thus, *Aukspht*—right, according to their mode of pronunciation; others, for the humour of it, will enigmatise thus, A Bridge for Greta-bridge in Yorkshire. *Tosey* is, agreeably to a rural mode of spelling, St. Oysth, &c. Sometimes he is puzzled with a scrawl not unlike a spider's web, or the migration of a fly, wet from the inkstand, over the paper; the privilege of franking inducing some to direct a letter, who, perhaps, would not otherwise attempt it.

By a diligent study of his duty, for a certain number of years, a clerk renders himself competent to be an inspector of franks, an office once held by Edward Cave, who ought to be remembered as the first public reporter of the debates of parliament, and as the earliest patron of Dr. Johnson, who wrote the speeches from his reports. He was supposed to have too narrowly confined the privilege of franking, and, after being reprimanded by the House, was obliged to resign his post. He afterwards established the first monthly magazine; that very popular species of literature, which time has decidedly improved.

The inspectors of franks have now attained a remarkable facility of discovering the precise number each M.P. issues; and whoever it may be, prince or peer, who, in his readiness to confer a favour, exceeds his limit, is sure to make his correspondent pay the postage. Of this fact we are enabled to speak from costly experience. We indeed know a member of parliament, there are doubtless many such, who very candidly told us he never refused the trifling favour of a frank, even if asked for it thirty times a day. It is quite needless to say we should decline his frank if offered. The idle attempt at fraud of inserting in the usual corner, instead of the name, the words *Free, if you please*, meets with certain detection.

The packets for the West Indies are also made up in the inland office: this branch of the service was established in the reign of Queen Anne, by Sir Thomas Frankland, Bart., with whose excellent character, by a contemporary, we shall conclude our slight notice of an office distinguished by the usefulness of its objects. "Sir Thomas Frankland is chief of a very good family in Yorkshire, with a very good estate: his being my Lord Fauconberg's nephew, and marrying a grand-daughter of Oliver Cromwell, first recommended him to King William, who at the revolution made him commissioner of the Excise, and, in some years after, governor of the Post-office. By abundance of application, he understands that office better than any man in England; and notwithstanding we had no intercourse with

France last war, he improved the revenue to ten thousand pounds a year more than it was in the most flourishing years. He was the first that directed a correspondence with Spain and Portugal, and all our foreign plantations, to the great advantage of our traffic, and is turned for greater matters when the government shall think fit to employ him. The queen, by reason of his great capacity and honesty, hath continued him in the office of post-master general. He is a gentleman of very easy, affable disposition, of good sense, extremely zealous for the constitution of his country, yet does not seem over forward; keeps an exact unity amongst the officers under him, and encourages them in their duty, through a peculiar familiarity, by which he at once obliges them, and keeps up the dignity of being master."—*MacKay's Memoirs*, 1713.

DRAMA.

KING'S THEATRE.

ON Thursday evening Curioni took his benefit, on which occasion Mlle. Blasis performed *Semiramide*. This was certainly one of the finest parts of the season. Her grace, dignity, and majestic appearance on the stage, were highly imposing; and she sang with her usual judgment—together producing an effect unequalled by any one except Pasta. We think it a loss that this unpretending and excellent singer has not been brought more before the public; and trust to see and hear her on many a future day.

Of musical discords we have seen the prospectus of a plan on the tapis, and already sanctioned by the subscription of the Duke of Wellington, Lord Aylesbury, the Countess San Antonio, and other high amateurs, to open the Argyll Rooms next season with a mélange of opera, drama, and select entertainments,—such as concluding balls &c. &c. Welsh is to be the manager, Valluti the musical leader in the serious, De Bagnis in the comic, and D'Egville in ballet. The nights proposed are Tuesdays and Fridays (so that the balls may not run into Sunday mornings); and all the best music of an opera is to be compressed into a single act. Five hundred is the limited number of subscribers, and each subscriber is to be allowed, under authority, to issue a ticket for the evening. The whole to be rather exclusive. On the other hand, Laporte is already in the field, and greatly exerting himself to secure novelties for the ensuing season; besides opening the King's Concert Room, for operas similarly compressed into single acts, and other entertainments, in December and January. From what we hear, we think it unlikely that Sontag will be with us again; and Malibran is never a very sure card—(witness her undoing Curioni's benefit on Thursday, after all his trouble in preparing a public treat of a new and attractive order). But we are informed that Lalande, the celebrated prima donna of Naples and Milan, has been engaged; and that Lablache, the equally famous bass singer, is also to visit England. These, with the talent we have already in the country, Pisoni, Blasis, &c. &c., and what else may be added, are sufficient to make a very popular opera. Caradori, on the other hand, who has been performing English characters with great éclat in Edinburgh, is about to depart for Italy, where, we believe, she is to sing at the principal theatres.*

* Critical Errors in the Press.—As we do not always see the *Morning Chronicle*, we were not aware before last Saturday that we had been charged in that journal with mistaking Castelli for Sontag in a critique upon the

ENGLISH OPERA.

AT the English Opera House Miss Kelly's most affecting performance of the *Sister of Charity* brings crowds every night: and so it ought, for it is one of the finest pieces of acting ever seen upon any stage. The other parts are also admirably cast.

VARIETIES.

Mushrooms.—Such is the variety of this fungus, that 492 species of one genus—*Agaric*—are described in a work recently published on the subject at Erlangen; and it is added, that as many more species of that single genus are in existence!

Silk-worms.—An immense extent of country in the mountainous departments of the south of France, and especially in those of the Lot and the Aveyron, are suited to the culture of the mulberry-tree. A treatise has lately been published at Paris, inviting the inhabitants of those districts to engage in the profitable occupation of breeding silk-worms. The author calculates, that to produce the amount of her actual consumption of silk, France requires twelve millions more mulberry-trees than she at present possesses. Apropos: we lately saw in the Irish newspapers an account of the silk-worm in that country having taken to the spindle-tree, and done as well as with the mulberry.

Beau Brummell, Dealer and Chapman.—Among the metamorphoses of this strange world, that of Beau Brummell, once the supreme of ton, the arbiter elegantiarum, to a dealer in china, buhl furniture, and lacquered ware, is not the least surprising. This retired Fashionable has, it seems, been filling up the vacuum of exile at Gales by collecting articles of taste and vertu, for the purpose of sale in this country, where his first consignment has arrived, and was selling yesterday by auction, by Crockford of Bond Street. Some of the porcelain and furniture of the siècle Louis Quatorze are very fine.

The Vienna giraffe is dead.

Mode of making Kirch-wasser.—This celebrated liqueur, which in Switzerland is the brandy of the country, is made from the fruit of the small cherry-tree (*merisier*). When the cherries have arrived at maturity, they are gathered without the stalks, and pounded in a large wooden vessel,—their kernels not being broken, to prevent evaporation. When fermentation has begun, the liquor is stirred two or three times a-day; and as soon as the wash appears quiet, it is put into close barrels, to prevent acetous fermentation. The kernels being then broken, they are thrown into the liquor, and the whole is carefully distilled together. The best kirch-wasser is made from

opera of *Roméo e Giulietta*, which appeared in our No. of June 27th. Now, though an error of this kind might be very venial, considering that it would have applied to a very short scene, one half played in a coffin, and in which there was no singing to distinguish the performers, we are too anxious to maintain the character of the *Literary Gazette* for accuracy, as well as impartiality, to allow it to rest even under such an imputation. The fact is, that Sontag, and not Castelli, did act the part, as we stated; and the *Morning Chronicle* has been imposed upon in publishing the contrary. To make assurance doubly sure upon this point, we applied to Signor Rubbi, the prompter to the King's Theatre; and we have it certified under his hand, that "on the night of Bochia's benefit—the night referred to in our remarks—the part of *Giulietta* was performed by Mademoiselle Sontag!" We are thus precise, because the *Times* has fallen into a slight misrepresentation on this subject, speaking of the performance on the Bochia's night (*Monday*) as if it had taken place on the Castelli following, when the opera was repeated with Sontag instead of Sontag; and in its explanation of the circumstance seems to fling a slur upon us, who are quite guiltless of the slightest blunder. They had the rubbi: we have the Rubbi.

the small black cherries, of the kind which abounds in this country.

The *Noviomagus* Club, a pleasant emanation from the R. S. of Antiquaries, took on Thursday 26th ult. an anniversary excursion into the country, visiting Keston and the remains of Roman antiquities in that interesting quarter, and afterwards dining socially at the Cross. The extensive and remarkable remains which are found in Helwood Park (the retirement of William Pitt), and cover miles of the adjacent common, are not only evidences of the site of encampments, temples, burial-places, &c. &c., but also, according to all appearances, of a large city—probably *Noviomagus*.

Antiquities.—The remains of ancient Roman buildings are so numerous at Bavi, in the department of the north of France, that the inhabitants who want building materials, have only to dig some depth in the fields or gardens, to find great quantities of stones ready cut, and fit for immediate use.

Important Discovery.—At the sitting of the Paris Academy of Sciences, on the 29th ult., a letter was read from Dr. Duden, stating that he has discovered a perfect solvent for the stone in the bladder, even when it is encysted. He requests the Academy to name commissioners, in whose presence he will make use of his solvent (which is in the form of powder) upon dead subjects, preparatory to his performing the experiment on a living person. The Academy has named Messrs. Dumeril, Boyer, and Magendie, to assist Dr. Duden, and report upon his proceedings.—At the same sitting, a paper was read on the discovery of two new caves filled with fossil bones—one at Combes, and the other at Sauvignard. The presence of human bones, mingled with those of mammiferous animals, the species of which are extinct, was in these instances incontestable. They bear evident traces of the teeth of hyenas. The report states, that the excrement of the latter animal was also found.

The French minister of the interior has placed at the disposal of the authorities of Fréjus the sum of 4,000 francs, to be employed in the excavations of the amphitheatre in that town. Several discoveries have been already made; amongst which were stone seats in very good preservation; the broken shaft of a column in white marble; a piece of Roman coin bearing the effigy of Adrian; and several fragments of marble admirably carved.

Cobbett's Corn.—It is stated, in a letter from Paris, that the experiments which have been made in the cultivation of Indian or Cobbett's corn in many parts of France, have, in consequence of the long drought which ensued immediately after sowing the seed, turned out very unfavourably. Some of the crops are not expected to produce more than 20 bushels per acre, instead of 80 or 100: in some situations, however, from 50 to 60 bushels per acre are still hoped for.

Belief in Witchcraft.—Lately, the wife of a farmer's hind, in the vicinity of this town, was afflicted with a long and tedious illness, which baffled the skill of the faculty, and nearly exhausted the patience of her husband, who, finding that medicaments were uselessly administered, concluded that she was suffering under the influence of witchcraft. He therefore determined to seek revenge on the witch by a stratagem which he was informed had often proved successful. He accordingly procured a black hen, which he killed, in order to obtain the heart: this he took, at midnight, stuck it full of pins, and hung it before the fire to roast, by virtue of which ceremony the

witch was expected to make her appearance. He next loaded a gun, and anxiously awaited her coming to the door, with a firm determination to shoot her; but although the black hen's heart was kept roasting till it was almost burnt to a cinder, and the pins were nearly red hot, the witch chose not to approach his dwelling that night, which was his most grievous disappointment!—*Newcastle Courant*.

Three Animals not in the Ark!—The citizens of Florence having expelled the Medici in 1529, and manifested an intention of re-establishing their ancient republican constitution, were attacked and besieged with great vigour by the troops of Charles V., under the orders of the Prince of Orange. An extraordinary degree of political fanaticism animated the spirits of the besieged, and the party who were in favour of the old constitution successfully practised a variety of devices, for the purpose of inducing the multitude to submit patiently to the hardships of a strict and harassing blockade. One of their instruments was Brother Benedict, a monk of Tojano, who mixed up so inveterate a hatred of the house of Medici with his religious enthusiasm, that he not only disgraced his pulpit by the most extravagant displays, but on several occasions actually drove his audience into fits of laughter. Amongst other expedients, he descended for several successive days on Noah's ark, and each day enclosed certain animals within it. When his menagerie was completed, he courteously bade his hearers attend him again the next morning, as it was then his intention to close the ark. On the appointed morrow, therefore, the church was crammed in every nook and corner. Brother Benedict had taken care to make the sacristan his friend, and began his operations by addressing a sermon to the animals confined in the ark. This being concluded, he commanded the servitor to make the minutest search, and report whether any animals were wanting? The search was speedily performed, and the sacristan returned with intelligence that *three* were deficient, and waiting at the gates; the one being of huge, and the other two of diminutive dimensions. His description of these animals was so bitterly natural and apposite, that the dumbest person present could not fail of applying the portrait he had drawn to Clement VII., Cardinal Hypopolitus, and Alessandro de Medici. The sacristan then called out to Brother Benedict, that the three beasts insisted upon being admitted into the ark; whereupon the monk roared out to him, in a voice of thunder, "For Heaven's sake, be quick and bolt the door; for the Lord wills that no mules should set foot within the ark." Roars of laughter followed upon this exclamation, and such a scene of confusion ensued, that the monk was obliged to decamp without finishing his discourse. The gist of the sarcasm consisted in its reference to the illegitimate origin of those three scions of Medicean profligacy; and though its direct effect was to inflame the hostility of the Florentines, its ulterior result was to bring down bitter retribution on the preacher's head. For, upon the capitulation of the Tuscan capital, which was consequently obliged to admit Alexander as its unconditional master, Clement did not forget the public contumely which Brother Benedict had put upon himself and his relatives. He ordered him to be brought away by main force from the monastery of St. Maria Novella, and carried to Rome; where he was thrown into a loathsome dungeon under the Castle of St. Angelo, and a diminution being daily made in the quantity of his victuals, he

perished under the horrors of lingering starvation!

LITERARY NOVELTIES.

Mr. Hood, the author of *Whims and Oddities*, has a new work in the press, entitled *Epping Hunt*. It describes the adventures of a worthy citizen who joins the Easter Hunt, and is to be illustrated with several engravings on wood, after the designs of George Cruikshank.

Pelham has been translated into German, and published at Aix-la-Chapelle, by Major Richard. The same gentleman also published a translation of Almack's Revisited, and has just finished a translation of the Disowned. The author of Almack's Revisited, and of the Adventures of a King's Page, says the foreign journal which we copy, he resided for some years at Aix-la-Chapelle.

Messrs. Dymond and Dawson, of Exeter, are about to publish a Map of England and Wales, upon a new plan, in which numerals and letters are substituted for the names of places and rivers.

Molière.—A complete edition of the works of Molière has been published in the Polish language. The name of the translator is M. François Kowalski.

Mr. Kendall is preparing for publication a full and illustrated statement of his hypothesis of a Circulation in the Sea, in analogy with the Circulation of the Blood.

In the Press.—Memoirs of the Life and Works of George Romney, the celebrated Painter; with various Letters and Testimonies to his genius. By his Son, the Rev. John Romney, B.D., formerly Fellow of St. John's College, Cambridge.—The Heraldry of Crests; containing 3,500 Crests, from Engravings by the late P. P. Elven, with the Bearers' names alphabetically arranged.

LIST OF NEW BOOKS.

Edinburgh Gazetteer, second edition, 8vo. 18s. bds.—Trotter's Sea-Weeds, post 8vo. 6s. 6d. bds.—Pratt's Friendly Society Act, 15mo. 3s. bds.—Matthews on Portions, 8vo. 12s. bds.—Ham on Brewing, 12mo. 4s. bds.—Caledonian Horticultural Transactions, Vol. IV. Part II. 8vo. 10s. 6d. bds.—Tod's Annals of Rajasthan, royal 4to. 4s. 14s. 6d. bds.—Frankland's Constantinople, 2 vols. 8vo. 14. 14s. 6d. bds.—Devereux, by the author of Pelham, 3 vols. post 8vo. 11. 11s. 6d. bds.—Hall's Inquiry into Life, 8vo. 12s. bds.—The Brunswick, a Poem, 8vo. 5s. 6d. bds.—Portrait of the Dead, post 8vo. 10s. 6d. bds.—Hall's Sketches of North America, 8vo. 10s. 6d. bds.—Thomson's Magna Charta, 8vo. 11. 11s. 6d.; royal 8vo. 2s. 12s. 6d. bds.—Thomson's Edinburgh School Atlas, 8vo. 10s. 6d. hf.-bd.

TO CORRESPONDENTS.

We have this week taken an opportunity to clear off some of our reviewing arrears, though we are still pressed with new and important publications, to which we shall pay immediate attention.

In our No. 649, speaking of a clever miniature, in the Exhibition, by Mr. J. M. Davis, *esp. critic* noticed the strange fact of having, as the catalogue stated, "a portrait of the late William Corder, Esquire!" in such a place; and some of the newspapers have since commented on the apparent absurdity. We learn, however, that the whole is founded on a misprint in the first catalogue, all the after editions having corrected the blunder; from which it appears, that the likeness of the supposed malefactor is in reality that of "the late William Gordon, Esquire," nephew of a Scottish baronet, a member of the inner Temple, and an Esquire by right and station.

In our Review of the *Brunswick* last week, feeling that the name of so clever an author was not likely to be long concealed, we mentioned the rumours which had reached us on the subject; and we now beg leave to add, that it was simply from report that we spoke, and not from any authority on the part of the writer. While again mentioning this poem, we would direct attention to the fine opening of the Second Canto, which, unluckily, we had and have not room to quote.

The Coquilla ornaments are at 148, Regent Street.—We do not think there is a copy of M. Martin's book in this country.—We are not quite sure where the anodyne paste alluded to in our No. of June 6th is to be procured: Mr. Clarke, in Sackville Street, has published (as our readers know) an interesting work on the treatment of the teeth, and has, we believe, got into great practice as a dentist, preferring preservation to extraction.—We cannot tell when there will be a fresh supply of the *Waverley Novels*.

We will send W.'s hints to Mr. Barker: his other letters must be investigated, before we make ourselves publicly answerable for detecting "the fraud."

The subject of "Education in Greece" is our next.

"Explorator" we are happy to hear from, and much approve of his intents.

Oriental Translation Fund.—The Chairman of the Oriental Translation Committee presents his compliments to the Editor of the *Literary Gazette*, and requests he will have the goodness to correct an error which crept into his last No., viz. that the munificent donation of his Majesty, of two gold medals, was to be placed at the disposal of the Asiatic Society. His Majesty was graciously pleased, on being presented with the first five works published by the Oriental Translation Committee, to order two gold medals, of the value of twenty-five guineas each, to be placed at the disposal of the Committee, whose appointment was confirmed by the subscribers to the Oriental Translation Fund, to be awarded by it to the best translator of works from the Eastern languages. *Oriental Translation Committee, July 6th, 1833.*

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION,

GALLERY.
The Gallery, with a Selection of the Works of the Italian, Spanish, Flemish, Dutch, and English Schools, is open daily, from Ten till Six, at Messrs. Harding and Leppard's, No. 4, Pall Mall East, Corner of Suffolk Street.
Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

Books recently published by W. P. Grant, Cambridge, and sold by all Booksellers.

ELEMENTS OF GREEK VERIFICATION.

By the Rev. — DAVIES. 18mo. 2s. 6d.

2. Self Instructions in Arithmetic, designed for Schools and Universities.

This work demonstrates every rule of the science arithmetically, in the manner of Wood's Introduction to his Algebra, and contains many valuable improvements in actual practice.

3. Self-Examinations in Euclid, designed for Schools and Universities, 6s. 6d.

4. Francœur's complete Course of Pure Mathematics, translated by R. Blacklock, M.A. of Catherine Hall, Vol. I. 8vo. 15s. boards.

Vol. II. will appear in August, 1880.

5. Notes in Æschylus Eumenides, ad Wellaueri Textum accommodatæ, 8vo. 2s. sewed.

Notes to the remaining Plays will speedily be published.

6. Translator's Guide, Vol. I. containing a Selection of such Passages from English Prose Writers as will fairly admit of Translation into Latin Prose, and as the same time be useful for the Information they contain on classical and other Subjects. To which is prefixed, a Short Treatise on the Principles of Latin Translation, 18mo. 2s.

7. A Compendious Treatise on the Art of Latin Poetry, grounded on the Work of M. C. D. Jani. Contents: 1. Account of the Latin Language, and Chronological Sketch of the Roman Poets.—2. Laws of Metre, with a minute Analysis of the hexameter, Elegiac, and Alcaic Metres.—3. Grammar of Poetry, wherein the great difference of Language in the Roman Prose Writers and Poets are displayed and illustrated.—4. Poetical Elegance and Ornament.—5. Indexes of Epithets, &c. &c.—6. Hints for Composition, 8vo. 8s. boards.

8. Porsoni Prælectio in Euripidem, 8vo. 1s. 6d.

9. Bouchariat's Elementary Treatise on the Differential and Integral Calculus. Translated by R. Blacklock, M.A. Catherine Hall. With an Introductory Chapter on Curves. 8vo. 15s. boards.

10. Theatre of the Greeks. A Second and greatly improved edition, with an original Treatise by Mr. Tate, of Richmond, on the principal Greek Tragic and Comic Metres. 8vo. 15s. boards.

11. An Index to the Cambridge Problems, from the Year 1800—1830; arranged according to the Subjects. 8vo. 2s. 6d.

12. An Analysis of Paley's View of the Evidences of Christianity. By Joyce, neatly printed in a pocket size, 1s. 6d.

13. Jones on the Trinity, 18mo. 2s. boards.

14. Harper's Index to Matthiæ's Greek Grammar, 8vo. 2s.

In addition to the advantages which this Index possesses, in affording a much more convenient mode of reference, it contains also a considerable number of valuable references, which are not to be found in the Index subjoined to the Grammar.

15. Miscellanea Virgiliana, containing the whole of Holdsworth's valuable Notes on the Four Georgics and first six Æneids; Spence's Political Character of the Æneid, from Polymetre; Warburton on the sixth Æneid; and Jortin's Critical Remarks on Virgil. 8vo. 16s. 6d. boards.

16. Miscellanea Græca Dramatica, containing Valcanari Diatribæ in Euripidem; Boeckhii de Gr. Trag. Prin. Bouterwek de Philosophia Euripidis, Schneider de Dialecto Sophocli, &c. &c. 8vo. 10s. 6d. boards.

17. Boeckhii de Gr. Trag. Prin. Æsch. Soph. Eurip. 8vo. 2s.

18. Bouterwek de Philosophia Euripidis, 8vo. 1s. 6d.

19. Schneider de Dialecto Sophocliæ enteromque Trag. Græcorum. 8vo. 1s. 6d.

20. Valcanari Diatribæ in Euripidem (Capita quædam insigniora). 8vo. 3s. 6d.

21. Hermannii Dissertatio de Pronomine Autog. 8vo. 1s.

22. Groddeck de Theatri Græci Partibus, 8vo. 1s.

23. Æschylus Wellaueri, 2 vols. 8vo. 11. 1s. boards. Each Play may be had separately, price 2s.

24. Index Accuratus et Copiosus Verborum, formulæque omniæ in Euripidis Trag. integræ et deperitæ fragmentis necnon Epistolæ occurrentium. Cumviti C. D. Beckhii. 8vo. 11. 1s. In the press.

1. Uniform with the above, Indexes to Sophocles and Æschylus, forming together a complete Index to the Greek Tragedians, in 3 vols. 8vo.

Each Index may be purchased separately.

2. The Georgics of Virgil, with English Notes. The edition of this complete Poem, by Mr. Martyn, valuable as it is in many respects, is allowed to be entirely unfit for the use of Schools or Lecture Rooms. The present edition will comprise all that is most useful in Martyn, Holdsworth, Hayne, and others; but its principal object will be to point out and illustrate the Errors and Feculiarities of Latin Poetry, with a View to the purposes of Composition.

3. A Supplemental Volume to Wellauer's Æschylus, containing the Fragments and a Body of Philological and Explanatory Notes, adapted to the Text of Wellauer.

4. A Collection of Cambridge Mathematical Examination Papers, as given at the several Colleges; with the Answers and Hints for the Solutions of the more difficult Questions.

5. A Translation of the First, Second, Third, Sixth, Seventh, Eighth, Ninth, Tenth, and Eleventh Sections of Newton's Principia, with Notes, Critical, Explanatory, and Deductive.

6. Cambridge Classical Examination Papers, with Prefatory Observations.

7. Translator's Guide, Vol. II. containing a Selection of Poetry for Translation into different kinds of Latin Verse; to which will be added, a short Treatise on the Principles of Latin Translation.

Lawrence's Grecian Stories. 2d edition, much enlarged and improved, price 3s. 6d. half-bound.

STORIES; presenting a Summary of the History of Greece, for the Use of Children and Young Persons.

By SARAH LAWRENCE. Published by Boosey and Sons, Broad Street, Exchange.

Where may be had, by the same Author, Genlis Veillées du Château (Contes Choisis des) à l'Usage des Femmes, 12mo. 6s.

In 12mo. price 7s. boards, the 9th edition, corrected and improved.

THE HISTORY OF ANCIENT GREECE,

from the earliest Times till it became a Roman Province. By WILLIAM ROBERTSON, Esq. F.R.S.

Deputy Keeper of the Records of Scotland. To which is prefixed, a Life of the Author.

Pinnock's Universal Explanatory English Reader, consisting of Selections in Prose and Verse, on interesting and improving Subjects. 18mo. price 4s. 6d.

The Literary and Scientific Class-Book, consisting of 265 Reading Lessons for every Day in the Year. With 1000 Questions for Examination. By the Rev. J. Patten. 18mo. price 5s. 6d.

The Moral Poetical Miscellany, containing choice Selections from our most approved Poets, arranged under distinct heads. 18mo. price 3s.

The Christian Child's Reader, calculated, by regulating the Affections and inducing right Principles, to direct the Minds of Youth to Religion and Morality. 18mo. price 3s.

A Compendious History of the Bible, containing the principal Events recorded in that Sacred Book, for the Use of Young People. 18mo. price 3s.

Sacred Biography; or, the Lives of eminent Men, whose Actions are recorded in the Holy Scriptures. By G. Roberts. 18mo. price 3s.

An Historical Epitome of the Old and New Testaments, and part of the Apocrypha, in which the Events are arranged according to Chronological Order. By a Member of the Church of England. Author of "Family Prayers upon the Creation." 18mo. price 3s.

Also may be had, gratis,

Whittaker and Co.'s complete School Catalogue.

THE COURT JOURNAL NOTICE.

The Proprietors and Conductors of the Court Journal beg to apprise their Readers and the Public, that, in future, the whole of their impression will be printed on a stamped sheet. This change has been deemed advisable (chiefly) for the two following reasons:—First, the power that will thus be gained, of inserting those matters of passing interest which the conductors of stamps designate as "News," and which the want of a stamp has hitherto necessarily excluded; and secondly, the great and manifest advantage that will thus be afforded to every individual subscriber, of circulating the paper, postage free, among his friends in all parts of the country.

As the Proprietors of the Court Journal confidently reckon on a great increase of circulation, in consequence of this new arrangement, they are induced to make it at a great pecuniary sacrifice in the first instance, by reducing the price at which the stamped copies have hitherto been published, from a shilling to sevenpence, at which latter price the whole of the impression will in future be published.

Orders received by all Booksellers and News-vendors. Office of Publication, 19, Catherine Street, Strand.

English Syntax.
Randomly printed on fine paper, dandy 10mo. price 1s. 6d.
neatly bound.

NEW EXERCISES IN ENGLISH

SYNTAX, intended to succeed those usually found in English Grammars, and furnish the Senior Scholars in Ladies' and Gentlemen's Schools, with additional Rules and Exercises, to complete their Knowledge of Syntax.

By **JOSEPH GUY, Jun.**
Member of the University of Oxford, Author of the "English School Grammar," &c.

It is intended for schools, and among those classes in our academies that are supposed to be learning English through the medium of the Latin Grammar, these Syntactical Exercises will prove a useful auxiliary in initiating the more classical studies in the important study of English Syntax, and thereby supply a desideratum that experience has demonstrated cannot be effected by a knowledge of the dead languages only.

London: Printed for Baldwin and Cradock.

Where may be had, by the same Author, the following established Works for Schools:—

2. **Guy's English School Grammar**, in which Practical Illustrations, in every step, blended with Theory, by Rules, Examples, and Exercises; adapted to the Use of School and Private Teachers. The 7th edition, demy 18mo. 1s. 6d. bound in red.

3. **In this work English Grammar is rendered easy to the capacity of every learner, not only by giving a concise outline of its Theoretical Principles, but by combining Practical Illustrations with those Principles: appropriate Questions and Exercises also accompany the Rules.**

3. **Guy's New Exercises in Orthography**, containing Selections from the most admired Authors, in Prose and Verse. Fifth edition, with the Addition of an Appendix, containing the Meaning, and correcting the Orthography of the Words commonly spoken in the work. 18mo. price 1s. bound in red.

4. **A Key to Guy's English School Grammar**, and new Exercises in Orthography. In 1 vol. price 2s. bound and lettered.

5. **Guy's New Latin Primer; or, a Compendium to Latin Grammars.** In 3 Parts. 8mo. price 3s. bound.

This little volume will greatly facilitate the progress of those pupils who are commencing the rudiments of the Latin language. It supplies a useful practice upon the declensions and conjugations, and thus renders the entrance upon classical learning easy and inviting.

6. **Guy's New Arithmetical Plan; or, an Improved Method of Teaching the First Four Rules of Arithmetick, Simple and Compound.** Price 1s. sewed.

A Key to the above, on a Sheet, price 1s.

This novel improvement in the method of teaching the first four rules remedies the inconvenience, confusion, and loss of time, which arise from a master's being himself obliged to set the sums, and furnishes immediate employment for any number of Scholars, enabling them to do infinitely more than the utmost labour of the teacher could otherwise stimulate them to perform. This little work contains the astonishing number of 611 questions, and all which are answered in the Key.

7. **Guy's Outlines to Walker's Themes and Essays.** Price 1s. sewed.

This work will much assist early attempts at English composition;—a consideration of great importance in the enlarged view of modern Instruction.

8. **Guy's School Epitome of British Geography.** Price 1s. sewed.

The want of such a work as this must have been felt by every teacher who has had to instruct a pupil in the geography of the British Isles.

THE WESTMINSTER REVIEW.

No. XXI. was published on the 30th of June, containing the following Articles: 1. Corn Laws—2. Life and Writings of P. L. Courier—3. Living Poets of Hungary—4. Last of the Plantagenets—5. Cobden's Corn—6. The Interior of Africa—7. The Village Patriarch—8. Physiology of Trees and Ornamental Planting—9. Modern Italy—10. Civil Government of Canada—11. Vidocq's Memoirs—12. I. Taylor's Translation of Herodotus—13. Southey's Colloquies on the Progress and Prospects of Science—14. Anna of Georgia—15. Historical Record of the Peruvian Indians—16. Greatest Happiness Principle, and the Edinburgh Review.

No. XXII. will be published on the 30th of September, and will contain Articles on the East India Free Trade, the West India Question, Legislation for Gaming Houses, Newspapers, &c.

The Catechism of the Corn Laws (6th edition), quoted with high praise in both Houses of Parliament, may be had at the Office, and from all the Agents of the Westminster Review. Price 6d.

Office of the Westminster Review, No. 2, Wellington Street, Strand.

A PRELIMINARY DISSERTATION

Illustrative of a NEW SYSTEM OF PULMONARY PATHOLOGY, supported by a Series of conclusive Physiological Experiments; combining a rational Theory with a successful Method of conducting the Cure of Consumption.

By **P. P. P. MIDDLETON, M.D. &c.**

Author of a Treatise on the Diagnosis and Prognosis of Diseases, on Emphysema, and Clinical Reports of select Medical Cases, with Practical Notes.

Sold by Baldwin and Cradock, Paternoster Row, London.

The object of this Dissertation is to point out the advantage of inhaling various medical agents, in the form of impalpable powder, in pulmonary consumption. Dr. M. has certainly stated enough to attract the serious attention of the profession to the subject; but he must allow us to add, that if he does not quickly confirm his promise of pursuing a full and perfect statement of his doctrine and his practice, he may not escape the suspicion of being a mere theorist.—*London Medical and Physical Journal, July 1847.*

Preparing for the press, by the same Author,

A Treatise on the Morbid Impressions of the Respiratory Organs, with Illustrations, Physiological, Experimental, and Practical.

ANTI-PHRENOLOGY. An Endeavour

to show that the Exposition of the Human Mind, taught by Phrenologists, is reared upon fallacious Principles, and therefore undeserving of that importance which its Advocates insist on.

By **JOHN WATTS, M.D.**

Sold by Baldwin and Cradock, &c. Thompson, Edinburgh; Parker, Oxon; Bridges, Cambridge, and Atkin, Lynn.

Just published, in 1 vol. 18mo. price 7s. neatly done up in cloth boards.

MORAL and SACRED POETRY,

selected from the most esteemed Authors, Ancient and Modern.

By the Rev. T. WILLCOCKS and the Rev. T. HORTON. Printed for the Editors, by W. Byers, Devonport; and sold in London, by Longman and Co.; Baldwin and Co.; Hurst and Co.; Whittaker and Co.; Hamilton and Co.; Holdsworth and Ball; Washburn; and Poole and Edwards, 15, Ave Maria Lane.

Of whom also may be had, nearly ready, the 2d edition of

The Plymouth and Devonport Guide, with

Descriptions of the surrounding Scenery. By H. Carrington. Price 4s. 6d. in cloth boards, illustrated with a Map and Views.

In 3 vols. post 8vo. with a coloured Map, price 11. 11s. 6d.

TRAVELS IN NORTH AMERICA,

in 1837 and 1838.

By Captain BASIL HALL, R.N.

Printed for Cadell and Co. Edinburgh.

Who have just published, in royal 4to. price 10s. 6d. sold separately.

Forty Etchings, from Sketches made in America with the Camera Lucida, by Captain Hall.

As above may be had,

1. Anne of Geierstein, by the Author of *Waverley*, 3 vols. 11. 11s. 6d. Just published.

2. The Practice of Cookery, adapted to the Business of every-day Life. By Mrs. Dalglairn. In 1 thick vol. 7s. 6d. Just published.

This is by far the most complete and truly practical work which has yet appeared upon this subject. It will be found an infallible cook's companion, and a treasure of great price to the mistress of a family.—*Edinburgh Literary Journal*, 18th April.

We consider we have reason strongly to recommend Mrs. Dalglairn's as an economical, useful, and practical system of cookery, adapted to the wants of all families, from the tradesman to the country gentleman. It is not a gourmand's book, nor does it pretend to be; and though we shall not put away *Rundell and Kitchen* for Mrs. Dalglairn's, she is far more copious than they are, far more various, and to us more novel.—*Spectator*, June 13.

In 8vo. price 10s. 6d. boards.

THE GERMAN PULPIT; being a Selection

of Sermons by the most eminent Modern Divines of Germany.

Translated by the Rev. RICHARD BAKER, A.M.

Of Merton College, Oxford; and Chaplain to the British Residents at Hamburg.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 14s. boards, the 2d edition, enlarged, with an Appendix.

THE STATE OF PROTESTANTISM IN

GERMANY DESCRIBED; being the Substance of Four Discourses preached before the University of Cambridge, in 1835.

By the Rev. HUGH JAMES ROSE, B.D.

Christian Advocate to the University of Cambridge, and Vicar of Hornham, Sussex.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. and J. Deighton, Cambridge.

The Appendix may be had separately, price 3s. 6d.

LIST OF SOUTER'S NEW and

IMPROVED SERIES OF CATECHISMS.

By C. IRVING, LL.D. F.R.S., Dr. BURBY, and others.

6d. each, neatly sewed, or 1s. bound.

Valpy's *Dolphin Classics*, 124 Parts, at 9s. each, published at 1s. 1s. each.

Stephani Thesaurus Lingue Græcæ, Valpy's edition, complete, 34s.

THE FRENCH DRAMA, illustrated by

Arguments in English at the Head of each Scene, with Notes, critical and explanatory.

By MORS.

Under the above title, a selection from the best productions of the French dramatic writers, is now in course of publication.

Each Play is elucidated—

By appropriate arguments at the head of each scene, to unravel the plot, as well as develop the subject, character, and various incidents throughout.

By an English translation of such words and idioms as may arrest the progress of the student.

And by grammatical and critical observations, in which are interspersed occasional remarks upon the beauties of the style and conceptions.

The drama, that exquisite and invaluable portion of French literature, cannot fail to present to the learner many perplexities far beyond the comprehension of his immature judgment. By the different illustrations given, the chief object is to render his path easy and pleasant, and to unfold the beauties of the scene, which might otherwise be unobserved or unregarded.

The pronunciation may be greatly improved and facilitated by a recitation of well-chosen pieces: by this means the memory will be enriched with lessons of morality, and a correct judgment and taste will be inculcated.

The selection embraces the high and dignified character of tragedy, as well as the refined and spirited elegance of the comic muse. Great pains will be taken to combine pleasure with utility; the arguments and notes are written in an easy style, and the dryness of observation avoided as much as possible.

The following are already published:—

By MORS.

Le Misanthrope	Les Précieuses Ridicules
L'Avar	L'Ecole des Femmes
Le Bourgeois Gentilhomme	L'Ecole des Maris
Le Tartuffe	Le Misanthrope
Le Malade Imaginaire	M. de Poussin
Les Femmes Savantes	Amphitryon
Les Fourberies de Scapin	

To enable persons to make their own selections from the above, the Publisher will continue to send the Plays separately, at 1s. each; or the whole may be had in three vols. nearly half-bound and lettered, price 15s.

By RACHO.

Andromaque	Athalie
Les Plaideurs	Esther

And the remainder of Racine's Tragedies will shortly appear.

By CORNELIE.

Cinna; ou, Clémence d'Auguste.

And others in great forwardness.

Published by J. Souter, School Library, 73, St. Paul's.

An amusing English Grammar.
In royal 18mo. finely printed by Davison, price 5s. neatly half-bound and lettered.
A CLASSICAL GRAMMAR of the ENGLISH LANGUAGE, with a short History of its Origin and Formation.

By CHARLES BUCKE.
Author of the "Beauties, Harmonies, and Sublimities of Nature."
London: Printed for Baldwin and Cradock.
* * * This Grammar has been written with a view of saving trouble on the part of the tutor; of engaging the attention and exercising the reasoning faculties of the pupil; of furnishing a Key to the best English poems (for nearly all the Illustrations are given in the most admired poetry of our language); and of rendering that study attractive and amusing, which has hitherto been considered dry and repulsive.

No. 1. price 3s. 6d.
SHARPE'S LONDON MAGAZINE, for July 1809. With an Engraving by Henry Rolle, from a Picture by David Wilkie, Esq. R.A. in His Majesty's Collection. **THE THREE CHAPTERS.**

THE FRENCH LIBRARIAN; or, Literary Guide: pointing out the best Works of the principal Writers of France, in every Branch of Literature, with Personal Anecdotes and Biographical Notices: preceded by a Sketch of the Progress of French Literature.
By L. T. VENTOUILLAC.

To make French literature more generally known, to obtain for it a higher degree of estimation in England than it has hitherto enjoyed, by making both the extent and the value of its stores more familiar to the English public, is the object of the present work—the result of some years' research and application. The more fully to obtain this end, a list in each branch of literature is given of every work (within the author's knowledge) which may be considered deserving of attention. Where various editions of the work are known, the best is pointed out, and the merit of the work itself is established, not upon the author's opinion, but upon that of the most eminent writers of France and of England; and that a still greater degree of confidence might be obtained for the critical dictum thus introduced to the English reader, although the French criticisms have been translated into English, a reference is always given to the volume and page of every work where remarks have been taken so that the reader may not only ascertain their correctness, but, where it may seem desirable to him, may, by turning to the original work, find a full critique on the work in question. In addition to these critical remarks, personal and literary anecdotes have been introduced, partly to do away with the appearance of a mere dry catalogue, and partly because these anecdotes, by making the character of the authors more fully known, tend to throw additional light on the nature and merit of their works. This book, it is hoped, will be found a full compendium of French literature; and indexes, on an enlarged and improved plan, will be added, to give every possible facility for reference, and thus render the work more generally useful.

BOOKS IN THE PRESS.

THE AUTHOR of the forthcoming ILLUSTRATIONS of the ANGLO-FRENCH COINAGE has been obliged to postpone its publication, owing to one of the Plates not turning out to his mind, which he has resolved to cancel: the Work will undoubtedly appear by the 1st of January, 1810. The Author indulges a hope that the Public will not be less by this arrangement, as, since the 20th of April (when the Manuscript was sent to Mr. Hearne, 81, Strand, the publisher), he has obtained Six additional Gold, and Fourteen Silver, mostly unpublished; thus making Forty-four Gold, and Two Hundred and Sixty-two Silver Anglo-French Coins in good preservation; independent of Forty-two less well preserved, all in his Cabinet.

On Saturday, July 11th, will be published, illustrated by Eleven Engravings on Steel and Wood, small 8vo. 4s.

NO. IV. of the FAMILY LIBRARY,
being Lives of the most eminent British Painters, Sculptors, and Architects.
By ALLAN CUNNINGHAM.
Vol. I. (to be completed in 2 vols.)

Volumes of the Family Library published to July:—
Nos. I. and II. containing the Life of Raphael Mengs; with Fifteen Engravings on Steel and Wood, by Flaxman and Thompson, the Woodcuts from Designs of George Cruikshank. Very neatly bound in canvass. 2 vols. 5s. each. A new edition.
No. III.—The Life of Alexander the Great. By the Rev. John Williams, M.A. Rector of the Edinburgh Academy. 1 vol. 5s.
John Murray, Albemarle Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street; sold also by J. Chappell, 98, Royal Exchange; R. Barlow, 41, Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cumming, Dublin.

J. MOTES, Tick's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 652.

SATURDAY, JULY 18, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Travels to and from Constantinople, in the Years 1827 and 1828: or Personal Narrative of a Journey from Vienna, through Hungary, Transylvania, Wallachia, Bulgaria, and Roumelia, to Constantinople; and from that City to the Capital of Austria, by the Dardanelles, Tenedos, the Plains of Troy, Smyrna, Napoli di Romania, Athens, Egina, Poros, Cyprus, Syria, Alexandria, Malta, Sicily, Italy, Istria, Carniola, and Styria. By Captain Charles Colville Frankland, R.N. 2 vols. 8vo. London, 1829. Colburn.

THIS long inscription of title-page explains the nature of Captain Frankland's Travels: and as we have frequently had occasion to traverse the same routes in our *Gazette*, we shall abstain from repetition, and go at once to what seems most new and worthy of notice. We should premise, that being a mere journal or personal narrative, though it places before us what Captain Frankland himself saw, the descriptions are very brief, and there is no great light thrown by patient research upon parts imperfectly known, or upon popular circumstances which had escaped preceding travellers. As Chumla possesses peculiar interest just now, we transcribe what is said respecting it, as the writer in April 1827 passed it on his way from Vienna to Constantinople.

"We reached Shumla, or Chumla, at about two o'clock, having crossed a very high and steep ridge of sandy but well-wooded hills, in which we were caught by a violent storm of snow and rain. Shumla, or Chumla, is called the Thermopylae of Bulgaria; and indeed the pass over the mountains which separate it from the Danube is a very difficult one, but the town itself is commanded by the heights which surround it on three of its sides, in the shape of a crescent. These heights seem nearly impregnable, and form the chief strength of the fortress, or rather vast entrenched camp. We saw here many tailors and braziers at work, which gave the town an appearance of activity and commerce. There are likewise many vines upon the sides of the sandy hills which nearly surround Shumla, which therefore I infer manufactures wine. The Russians have twice advanced as far as Shumla, in 1774 and 1810, but have never yet taken it. I should consider the fortress untenable in the hands of European troops. Dr. Clarke inclines to think that Shumla is the ancient Marianopolis, the capital of Mesia Inferior. It is a large straggling town, having a wall round it, flanked at intervals by brick towers, in many parts broken down and decayed. It has a considerable commerce in braziers and clothing. The country round about it might be even beautiful at a more advanced season of the year. Here we took coffee at the khan with the Turks, changed horses, and proceeded on towards a village called Dragoleu, observing on our left hand upon the horizon five very high and remarkable barrows."

We now give a specimen of public manners at Constantinople:—

"On the 2d of May, while I was employed sketching, sitting down on the roadside, over the plain of Dolma Batchi, a young Turkish female, followed by a black slave and some children, came up to me, and after looking a long while over my shoulder and talking to me, placed herself quite in front of me, and unveiled herself. I hardly dared to take any notice of this manoeuvre, knowing that it is not customary in the East to speak to females in public. She, however, seemed to wish me to make a drawing of her, and signed to me to do so. I looked steadfastly at her for some time, and began to draw upon a spare piece of paper the outline of her figure. She was so pretty that I could not refrain from kissing the end of my pencil, and blowing the kiss to her, as one does in France to children. Upon seeing this, she coloured up to her forehead, made a sign as if she would draw a sword, and then a motion with her hand, as though she said, 'if you dare do such a thing, I would have your head cut off.' She was likewise very lavish of her epithets, some of which I had learnt were not very complimentary. I now began to be apprehensive of the consequences of my indiscretion, and thought it best to continue my sketch of Scutari, and to take no notice of her anger. She waited some time, then went behind me, looked over my shoulder, and seeing that I had ceased to make her portrait, patted me caressingly on the back, spoke softly, and then resumed her place in front of me, hoping that I should finish her likeness; but while this little coquetry was passing between us, some men Turks made their appearance, and she took the alarm, and walked hastily away, looking very significantly as she departed. The Turks passed on, and presently came some young girls, who, after looking at my drawings, tipped my hat off my head and spat in my face. I could not bear such uncivil treatment as this, and rose and drove them off, while they began to arm themselves with stones and earth, and to throw at me with all their might. I do not know how this scene would have ended, had not some Effendi Turks passed by, who seeing how the matter stood, rebuked the women and drove them away. I was employed in wiping my face, arranging my clothes, and picking up my hat, when some Greek ladies, who had likewise been spectators of my distress, came up, and consoled me by saying in Italian, 'Ah, signore! son cattiva gente, gente barbara, canaglia; non turbatevi, signore, son maladetta gente, senza fede.' Upon another occasion, I was witnessing, with great pleasure, upon the plain at Dolma Batchi, the evolutions of some Turkish horsemen, who were exercising with the djerid. Suddenly I found myself assailed by a shower of stones, and looking upwards towards the hill upon which the sultan's kiosk stands, the wall before which was crowded with Turkish females, I perceived on the left, at a little distance, two men who were amusing themselves at my expense, and pelting me as

fast as they could. It was in vain that I shifted my ground; the more moderation I displayed, the more they pelted me; at length I thought of my arms, and brandishing a pistol in the air, I pointed it at my opponents, in hopes of warning them to desist. It was not my intention to fire my weapon, but I thought that its display might be productive of a good effect; and so indeed it was; for, upon the sight of its glittering steel barrel, my two assailants ran away, laughing. When I related this circumstance afterwards, in conversation at the embassy, I was informed, that if I thought I could identify either of the men who had insulted me, his excellency would have them punished; and that the sultan was determined to protect Franks in the most effectual manner: indeed, by disarming the populace of the capital, his highness has taken the first step towards this measure, as the Turks are now no longer so prone as they were to insult Europeans, now that they feel they possess no loaded pistol, or sharp yatagan, ready to assert their superiority."

The following general reflections on the condition of Turkey are worthy of attention:—

"Their humanity to animals is strangely opposed to their cruelty to man; and they would think less of beheading or bastinading a whole province, than they would of ill-treating a horse or camel. In their exterior they are remarkable for a decency and apparent propriety of conduct; but yet we know that in secret they indulge in all sorts of abominable vices. They are apparently frank and cordial in their manners; but are often known to disguise the most atrocious designs beneath the cloak of benevolence, and to be plotting the ruin and destruction of the unsuspecting victim of their duplicity, while lulling him into a false security by a show of kindness and affection. The Mussulman justice is much vaunted; but yet it is notorious, that in no nation upon earth so little of this commodity is dispensed in the courts of the magistrates, where, if Justice be represented holding the scales, it is to weigh, not the merits of the case, but the gold of the conflicting parties; and that although the law punishes false witnesses with death, yet in no country are they so numerous, or so easily obtained, as in Turkey. If indeed it were a fair maxim to estimate the virtues of a nation by the measure of the acts and influence of its government, and by the effects produced by its policy, one would arrive at this conclusion: that the Ottoman nation is the bitterest enemy to the human race, and the severest scourge that ever was sent by Providence to chastise mankind. From the banks of the Danube to the shores of the Propontis, the traveller will find abundant cause to reason in this manner. He will see fertile provinces lying waste, well inhabited cities of the dead, but desolate and ruined abodes of the living. He will see the remains of the arts, and the civilisation of a former and a better age, and but few marks of the present era, save such as denote barbarism and decay."

The few towns that he will meet with in his long and dreary journey are rapidly falling into ruin, and the only road (the great means of civilisation) now existing, and which can put in any claim to such an appellation, is either of the Roman age, or of that of the great Sultan Solymán; but even this pavement is now almost worse than nothing. Wherever the Osmanli has trod, devastation and ruin mark his steps, civilisation and the arts have fled, and made room for barbarism and the silence of the desert and the tomb. 'Where the sultan's horse has trod, there grows no grass,' is a Turkish proverb, and a fatal truth. The great city of Constantinople, and the well-peopled villages of the Bosphorus, indeed present a contrast with the melancholy scene I have just described; but they owe their apparent prosperity to the desolation of the provinces, the miserable inhabitants of which, fleeing from the extortions and oppressions of the local authorities, herd together in and about the capital, where (as is the case in all countries) they less feel the hand of power and the persecution of petty tyrants. This plethora of the heart I look upon as one of the strongest symptoms of the fatal disease which affects the whole system. But even Stamboul, rich and beautiful as she is, verges towards her decay. By the alienation of the Greek nation, she has lost the brightest jewel in her imperial diadem; by it she has been bereft of the great bulk of her maritime, commercial, and literary population. She is now making an heroic struggle against accumulating evils; but it looks more like the convulsive effort of the dying Colossus, than the well-regulated exertion of a healthy body. We have no instance in history of the regeneration of such a people as this, who, witnessing the advancing civilisation, and the increasing power, moral and physical, of all the nations around it, remains nearly in the same condition that it did when first it forced its way into Europe,—with this only difference, that it has long ceased by its warlike energies to terrify and to overcome the nations of the West. The personal character and magnanimous efforts of the sultan may do much; but he stands alone; he has no followers in the race towards reform: should he fail, it is to be feared that the Ottomans will relapse into their old system, for they are constitutionally opposed to novelty, and regard all innovation as a dereliction from the precepts of their law. But even Constantinople, although apparently well peopled, has in reality, within the last twenty years, rapidly decreased in this great essential to a nation's wealth."

Our next extract, on the organisation of the Nizam Djedid, deserves equal consideration.

"The troops are divided into bodies of one thousand men each, which number constitutes a legion or regiment, commanded by a 'bin bashi,' 'chief of a thousand.' They are subdivided into hundreds and tens, commanded respectively by 'gus bashi,' 'chief of one hundred,' and 'om bashi,' 'chief of ten.' These latter officers are generally from the army of Mehmed Ali, and have learnt European tactics from the French 'instructors' at Cairo. They seem to be indefatigable in drilling these troops; and, as far as the manual and platoon goes, have succeeded to a certain degree; but I doubt whether they are equal to the duties of manœuvring either battalions or large bodies. These troops are generally very young men and boys; and I remember to have seen a whole corps de garde of them at Pera, who were such children, that one felt as if one could, with the assistance of one's sur-

rogate, have ridden over the whole of them as they defiled in the narrow streets. Nevertheless, I admire the wisdom of the sultan in this arrangement. He well knew that the grown men and soldiers of the old system could never be reconciled to the new one; and he felt that the rising generation presented the best subjects for forming a new army upon a new system of tactics. In the course of a few years, these boys will become men and good soldiers. It is calculated, that the sultan can raise throughout the empire four hundred thousand of the Nizam Djedid; but those best informed upon the subject say, that the financial means of the country, which yet remain to be organised, will not support such an expense for any length of time. However this may be, the sultan is taking every opportunity of assimilating, as much as possible, the new institutions to those of Europe; and, should he live, he will effect great ameliorations in the state of things in this country."

Accompanying the Swedish minister, Captain F. visited Greece and the adjacent coasts,—among other places, the Troad, where (though his inspection was hurried) he thinks he discovered some columns hitherto unnoticed: it is droll that another recent traveller, Mr. Madden, fancies that he caught a like new light on the same scene. Thence he went to Smyrna, and here gives us the account of a curious natural phenomenon.

"While we were enjoying the hospitalities of Bournabat, the French consul at Smyrna died, and was attended to the grave by all the consuls of foreign nations, and the chiefs of the naval forces in the bay. At this period an immense flight of locusts (which indeed had for some days shewn themselves in great numbers) passed over the city, falling upon the roofs of the houses, where they lay two or three inches deep, and tumbling into the sea in such quantities, that they could be traced in continuous streams for many leagues from the land, resembling in colour and appearance so many millions of boiled shrimps. These insects, being brought by the sea-breeze into the harbour, were thrown upon the shores and against the quays in such masses, that their putrefied carcases infected the air in all directions. The passage of these animals lasted during many days, and at night as they crossed over the disk of the moon, by reflecting the light as they shot across the face of the planet, they resembled so many flakes of snow, or almost as many shooting stars. The heat of the weather at this period (87°) was so intense, that during the night I was always obliged to sleep with my window open,—the consequence of which was, that the locusts used to tumble into my room and upon my mosquito curtains, and by hopping about the floor and creeping up into my bed, generally annoyed me extremely. I observed that there was one description of locust which materially differed in shape from the rest; this animal was more like a large round moth, or beetle, in form, although covered, like the rest, with a shining coat of mail; he was shorter and thicker, and much stronger than the other sort, which in shape resembles the common grasshopper. These reptiles are amazingly powerful in their hoppers, but do not seem to fly very well. They are extremely salacious, and deposit their eggs in all directions in great abundance. Poultry of all sorts are very fond of eating the locust, and particularly of devouring the ova, which however produce a very bad effect upon their own eggs, which, at such periods as these, are extremely strong, and quite red in the yolk;

indeed the natives will not eat them at this time, saying that they are unwholesome."

With this we are inclined to conclude our extracts; and also our remarks, were it not that we cannot take a better opportunity than that now offered of reverting to a topic of much importance in the passing state of English authorship: we allude to the vile custom of larding our books with French words and French phraseology. Why an English author should not use his own language, when equally or more expressive than any foreign tongue, we are at a loss to imagine; and yet we have here a captain of the British navy, who cannot tell us what he wishes without speaking of his book as *mon premier né* (why not first-born?); his writing as *trait de plume* (why not stroke of the pen?); his illustrations (which by-the-by are numerous and good), as each a *coup de crayon* (why not drawing?); even of going on *bateau*, as if in a boat were unfit for a naval officer!—of *voies de fait*—*faute de bons maîtres à dancier*, and similar slip-slop. We do not mean to say that Captain Frankland is guilty of this offence to any excessive degree—not to the extent of our modern would-be fashionable writers, of whose idiom it is difficult to determine what language it is;—but because, even in a slight degree, he lends his countenance to the corruption, and it is specially unbecoming in one of his rank and profession, do we take the opportunity of entering our protest against this very bad custom. With one of the most copious and expressive languages in the world, why should the native of England do what the native of no other country on earth ever dreams of doing? What should we say to a Frenchman, for instance, who wrote in a jargon like the following, and which we pen in humble imitation of our present race of fine writers.

Lorsque nous arrivâmes chez la comtesse, la salle était pleine. Le coup d'œil était magnifique: il y avait de pures charmes, grande quantité de diamans et autres bijoux, qui éblouissaient par leur lueur éblouissante des yeux aussi brillants et bien plus dangereux, des épaulettes, des cordons bleus, de doux sourires, et des moustaches superbes, beaucoup de beautés, et pas mal de rogne. Mon Dieu, quelle foule!—oh, very crowd! Le Marquis de Larimonne faisait des grimaces en essayant de jouer le sentiment; et le jeune Despard, toujours le même, faisait des folies—he was making follies—il allait par-ci par-là comme un fou; et puis cette pauvre coquette Madame Berlange, comme elle se mettait en quatre—how she put herself into four—pour attirer les admirateurs, que, malgré tous ses efforts, elle avait perdus à jamais! Hélas! c'est fort triste—it is very much sad—pour une dame d'être ainsi délaissée lorsqu'elle n'a tout au plus—all to the most—que quarante ans, et surtout lorsqu'elle possède encore—when she possesses again—de beaux yeux, une belle taille, and very fine teeth. La musique était assez bonne: on nous donna peut-être un peu trop de la *Musette de Perliot*; mais qu'est-ce que ça fait?—indeed, what do this make?—comme dirait Monsieur Fontlac, qui a toujours le rage de parler Anglais. La conversation tourna bientôt sur les acteurs Anglais. Charmante Smithson! s'écria Fontlac, elle joue à ravir—oh yes, she plays to ravish. Comme elle dit bien cette belle scène du *Romeo de Shakspeare*: attendez, donc—que je ne rapelle—ah? j'y suis:—

"What devil art thou that does torment me thus?
This torture should be near in this small hall.
Hath Romeo slay himself?—say thou outright,
And thy dear bosom, I shall poison sore
Than the death-dirty eye of a cock in town."

Pendre réelle ce passage avec beaucoup de sang froid — he ever has plenty of blood cold. Poor fellow! c'est toujours comme ça. On aime à montrer son érudition, en dépit du bon sens qui vous conseille le contraire: mais peut-être le bon sens est plus difficile à trouver que l'érudition; du moins c'est bien le cas lorsque l'érudition ne consiste qu'à écrire des mots d'une langue qu'on connaît mal.

This is not a whit more absurd than the prevailing practice of preferring bad French to good English — a practice which, if it had any weight, would soon destroy our literature; and we trust it will not be considered that we have acted with undue severity towards Capt. Frankland, because we have adopted his work as a vehicle for these observations, not on account of its quantity of offence, but on account of the offence being aggravated in consequence of being committed by a British naval officer, who, above all other men, is bound to speak straight forward, honestly, and in his own mother tongue.

Oldcourt; a Novel. 3 vols. London, 1829. Colburn.

HAS our taste for the novel become so partial to a particular class, that we are incapable of relating any other kind? For the sake of the author of *Oldcourt* we will presume this to be the fact; for though he has produced a work of such information and sound sense,—though the colloquies are natural, and occasionally pleasing,—and though there is displayed an evident acquaintance with the world, and an amiable disposition; yet, upon the whole, do we find these volumes to be flat and uninviting. This may, in some measure, arise out of the triteness of some of the subjects discussed; and also of a certain evenness of tone which runs through the work, and deprives it of the great charm of variety—even of the variety of bad and good, which is better than all unobjectionable. The author, indeed, tells us that he has attempted nothing more than “a narrative of the ordinary occurrences of human life; interspersed with such reflections on the habits, manners, and morals of society as his experience has suggested to him:” and we are free to confess, that however ably such a design might be executed, it is hardly sufficient to sustain the interest of something very like twelve hundred pages.

We have penned these remarks with no small reluctance; because we are convinced that the writer must be a person who could shine far more brightly in other courses. We should guess him to be a man of considerable imagination, and of fine observation in the arts: that he is an Irishman, is clear from the entire tenor of his sentiments and opinions; and we are rather surprised to see the judgment so obvious in other matters, fall into all the worst prejudices of Ireland whenever the concerns of that country come into discussion. But when speaking of the worst prejudices of Ireland, we beg to be understood as neither undervaluing the good points of her national character, nor as attributing greater vices to her people than to those of other lands: what we deem the worst of Ireland, is a feeling which militates continually and strongly against every improvement,—a feeling which converts errors into boasts, gilds follies with the brilliant semblance of ornaments, and even exalts crimes into the rank of virtues. It is thus, that in too many an Irishman's catalogue the extravagance which ruins himself and others is but a little rather heedless generosity; want of principle is but a careless eccentricity which goes without calculating consideration; deeds are laughable recals; igno-

ance is covered by natural talent and humour; bloodshed is a quick and sensitive resentment of injuries:—in short, there is no offence proscribed in the decalogue, which has not its apologetic resource in a neighbouring excellence, or explanation in a slight confession of venial misconduct. It is for these reasons, that, without being more culpable than the English or the Scots, the hope of amending the Irish national character has been so long deferred; for while we glory in our blemishes, and find excuses for our guilt, we have no prospect of reforming the one, or abandoning the other. The following passage, descriptive of a gallant young Hibernian, will serve to illustrate our remarks and shew the author's style:—

“To quiz the natives was a favourite practice amongst the officers at the mess-table of the —th regiment; and they were much inclined to continue the amusement, even when D'Arcy became one of their number; but he displayed a spirit and determination of manner which tended to repress this propensity, and led them to suspect that

‘There was in him something dangerous.’

A young lieutenant, however, who, as a sprig of nobility, considered himself to be particularly privileged, forgot this salutary caution; and, in the rashness of his nationality, hazarded a sneer at the new recruit. D'Arcy, who was as little deficient in wit as in spirit, retorted with a humorous severity that completely turned the laugh against his assailant. Mortified at the ill success of his first sally, and angry, as baffled impertinence always becomes, the young noble endeavoured, in a strain of irritated imbecility, to recover his ground; till, in the agony of his exasperation, he had the brutality to observe, in an audible whisper, that ‘the character of the regiment was degraded by the admission of an Irish bag-trotter.’ D'Arcy, who at the moment was in the act of raising a glass of wine to his lips, immediately altered its direction, and delivered it full in the face of his opponent; at the same time demanding instant satisfaction for the unprovoked insult he had received. The manner in which the last bumper had been administered to the haughty young noble, immediately counteracted the effect produced by those bumpers which he had previously taken. Becoming at once sober and civil, he professed himself ready to submit his conduct to the decision of the mess; but D'Arcy would listen to no terms of accommodation. The interference of the major, however, who presided, effected a postponement of hostilities to the following morning, when the parties met in the Phoenix Park; and D'Arcy, who was an excellent shot, lodged a ball in the body of his antagonist, whose life had nearly been the forfeit of his illiberality. The spirit with which D'Arcy asserted himself on this occasion, and the evidence which the duel afforded, that he possessed in no ordinary degree an accomplishment in which the better orders of his countrymen are generally proficient,—that of firing at a mark—put an end to all further molestation on the subject of his country. The standing jokes of the mess-table were suddenly discontinued; and to quiz the natives appeared to be by no means so agreeable a recreation over the bottle, as it had been previously considered by his brother-officers. The social qualities of D'Arcy were calculated to overcome all prejudices against him. He was lively, loquacious, and good-humoured; had wit enough to be entertaining, and information enough to give an interest to his conversation, without imparting to it the assuming air of instruction.

Though fiery and impetuous in repelling the slightest insult, he was never forward to give offence, and seemed to have pleasure in reconciling the quarrels of others. He was always ready for a frolic, and as fertile in resources for conducting it, as in expedients for turning aside whatever disagreeable consequences might result from it. His irregularities, indeed, were of a nature, which, as far as they operated, tended rather to raise the corps in the public estimation; for, though he was very dissipated, and somewhat prone to mischief, there was an open boldness, and a manly spirit of gaiety about him, which were highly congenial to the disposition of the people amongst whom they were displayed. It is no unmerited compliment to say of the Irish, that they are as martial a race as any in Europe. As far as it may be considered to express a disposition to fight, their claims to that character must be admitted as incontrovertible. It has been jocularly, though not unjustly, said of them, that they are the only people who ‘fight for their amusement;’ and certainly, taking the sons of St. Patrick in the mass, it would not be easy to find a community amongst whom the pleasures of the bottle and the battle are more intimately connected, or the ideas of a fray and a festivity so habitually associated.”

We have thus, in the *hero* of the author, a determined duellist, well practised at the mark, so as to be able to shoot a fellow-creature for a foolish expression used after taking too many bumpers of wine;—one who would listen to no terms of accommodation; fiery and impetuous, repelling the slightest insult; full of frolic, and fertile in obviating any disagreeable consequences; irregular, “very dissipated, and somewhat prone to mischief;”—in fine, one of those sons of St. Patrick who take equal pleasure in the bottle and the battle—in frays and festivities!! And we ought to remember that all this is eulogy!! What would a world of such characters be?—a quarrelsome, mischievous, profligate, vindictive, and murderous world, in which the human race might as soon as convenient come to the Irish end of the Kilkenny cats, destroying each other, till there was only a tale left, but nobody to tell it! We consider the sanction given to such portraits by a grave and rational writer like the present, to be calculated to do infinite evil in social life, and indefinitely prolong a state of things, the existence of which every right mind must lament. And here is another yet more objectionable.

“O'Hara was several years older than D'Arcy, but a similarity of spirit had attracted them to each other at school, and the former found in his young associate an apt scholar, as ripe for mischief as himself. The attachment, commenced thus early, was renewed after D'Arcy's return from Oxford. O'Hara had passed through his career in the Dublin University with pretty nearly the same honours and advantages which D'Arcy had obtained on the banks of the Isis. The frolics of our ‘silent sister’ were, however, of a more pugnacious character than those which occupied the students of the English Alma Mater; and, independent of the general warfare against the watch and the theatres, which the college lads at that time carried on with equal spirit and perseverance, and in which he bore a distinguished part, young O'Hara had been engaged, either as principal or second, in so many duels, that he obtained the enviable reputation of the most daring blood, and formidable fire-eater of his day. Yet, notwithstanding the offensive celebrity which he had thus early attained, he could not justly be considered

quarrelsome or ill-tempered. By a kind of Quixotic generosity, not uncommon amongst his countrymen, he was more frequently engaged in the disputes of others than in his own. He was ready to be any man's second; for that was a duty which he held himself bound to perform for every gentleman who paid him the compliment to apply to him for such a service; and he was so tenacious of the honour of his friend, when it was once placed in his hands, that it could be very rarely extricated, but at the risk of a shot or two. Whatever the cause of quarrel, he considered all attempts at apology or accommodation, as equally suspicious and derogatory, until sanctioned by such a preliminary. The duty of a second, he contended, was not to make up the quarrel, but to regulate the combat, and be responsible for its being conducted according to the laws of honour.

"The peculiar taste and prowess which O'Hara displayed in all matters connected with affairs of honour, occasioned him to be consulted as an authority, and selected as an umpire in disputed points. His decisions, too, were generally submitted to without appeal. To demur was considered a contempt of court, for which the refractory party was expected to answer, as for a personal offence. O'Hara laid down the law as to the number of paces to be measured between the combatants—the exact size of the pistols—how many shots should take place before a proposal for accommodation could be offered or accepted. He established in his apartment a drill for young duellists; and it was his favourite amusement to instruct them in the ceremonial according to which a man of honour and spirit may blow out the brains of his best friend and most intimate companion, without the smallest impeachment of his gallantry, his morality, or his humanity."

No comment is necessary upon the extreme absurdity of exalting a pestilent fellow like this—an incarnation of moral depravity—into a gay and excellent character! And really we must say in conclusion, that faults of this description have rendered us less inclined towards the meritorious portions of *Oldcourt* than we might otherwise have been.

A Treatise on the Police and Crimes of the Metropolis: also, an Account of Courts of Justice and Prisons; and an Inquiry into the Causes of the Increase of Crimes, the Tendency of the Debtor Laws, and Present State of the Licensed Victuallers' Trade.
By the Editor of "the Cabinet Lawyer."

THE metropolis, comprehending within itself the elements of a powerful state, an exposition of its protective institutions and predominant crimes affords topics of interest to the general observer, as well as those engaged in the discharge of magisterial and professional duties. One reason may be assigned for the imperfect state of the police, in the singular fact, that scarcely a magistrate or writer of eminence has bestowed the least attention on the subject. On general legislation, on the theory of crimes and punishments, and on all the ulterior proceedings of criminal administration, we have treatises without number; but on the institutions of preventive justice we have not a single author (the late Dr. Colquhoun excepted) to explain their organisations, or the general principles on which they ought to be established. In the present work much valuable information has been collected; and though the reformatory suggestions, and the writer's remarks on the causes of the increase of crime—on the tendency of the debtor laws—on anatomical legislation—and on the

licensed victuallers' trade—and other questions of difficulty, may not always be free from objections, there can be none against the importance of the details here brought together from authentic sources, and which must be of the utmost utility to those who feel any concern in the growth of delinquency, and the civic establishments intended for the security and enjoyment of a great capital.

The principal defects in the London police are ascribed to the want of a uniform and consolidated establishment for the whole metropolis—the inadequate number of its functionaries in the several grades of magistrates, constables, &c.—the absence of classification, with corresponding remuneration, rank, and responsibility—defects in the parochial constabulary—obstacles arising out of parochial districts and authorities—and the imperfect discipline and instruction in their duties of constables, watchmen, and patrols. In spite of these defects, it is allowed, that, as regards police and judicial administration, the inhabitants of the metropolis have many advantages over those residing in the country. Criminal trials are more frequent; and they have a permanent magistracy, always to be found at a certain place and time, and who render their services not as a gratuitous offering, but a duty they are bound to discharge. Moreover, they enjoy the advantage of having every judiciary act performed in the most public manner; and, by the agency of the press, of having it brought, within a few hours after adjudication, under the comment and observation of an intelligent and multitudinous population.

Among the promotives of crime the debtor laws are enumerated, and their operations shewn to be chiefly profitable to the legal profession, and comparatively of little utility to creditors. Thirty-four debts of 15,259 discharged insolvents amounted to nearly eleven millions sterling, and the whole property got in by the assignees left only one penny-farthing in the pound to the creditor, without deducting court fees, &c. It appears, that in two years and a half, 70,000 persons have been arrested in London and the environs, the law expenses of which could be not less than £500,000. So gainful is the trade to attorneys, that they frequently buy up small bills for the purpose of suing the endorsers, and bring nine or ten actions on each: one house alone has brought 500 actions in this way. About 6000 persons are annually committed to the five principal London prisons for debt; and of these more than one-third are for sums under £20. The expense of recovering small debts, and the demoralisation of the debtor by imprisonment, are urged as reasons for abolishing compulsory process for recovering sums below a certain amount, and thereby compelling a simultaneous abridgment in the practice of credit among tradesmen.

Mendicity is considered to be without excuse in England, the institution of the poor-laws having superseded every pretext for begging for subsistence. If an Englishman fall into distress he ought to apply to his parish; if not resident in his own parish, the parish where he happens to dwell is bound to take charge of him. Natives of Scotland or Ireland have no claim to parochial relief in England; but the law has provided for their removal to the country of their birth. Foreigners cannot be justified in begging; they are emigrants into a country where mendicity is a crime; and having voluntarily submitted to its laws, cannot complain if its penalties be enforced.

Ninety-nine out of every hundred of London beggars have been ascertained to be impostors; and a curious account is exhibited of the various artifices by which they impose on the charitable. Great numbers subsist by writing begging letters: the Mendicity Society last year received 2,988 letters of this description for investigation, of which 1,680 were from new applicants. Of 40,000 beggars who presented themselves to this Society, the cases of only 806 were plausible enough to merit inquiry; and of this number only 237 were entitled to and received relief. Half of the mendicity and vagrancy is ascribed to the vast influx of the lower Irish, who not only depress the English labourer in competing with him for employment, but, from their semi-barbarous habits, tend to debase his manners and character. For want of a better system of passing Irish paupers, the expense of conveying them to Liverpool is greater than the charge for an inside passage in the mail. Many of the Irish who appear utterly destitute in the streets, have been found, on examination, to have several pounds sewed up in their clothes; and they frequently remit sums collected in this country, through the means of agents in London, for the payment of their rents in Ireland.

There is an interesting chapter on the effects of an adulterated coinage, and on the advantages of the trading and working classes lending their aid to check the nefarious practices of the counterfeiter. The increase in the crime of burglary is ascribed to the vast amount of chattel property, and the absence of precaution on the part of householders. Most robberies of houses and warehouses are said to be "put-up ones," by persons who either are or have been domesticated or employed there; and greater caution is recommended in taking servants and admitting them to the confidence of their masters. It is suggested, that occupiers of houses and warehouses likely to become objects of attack, should have them surveyed by persons qualified for the office, their internal securities and adjacent premises examined, and such precautions adopted as might be recommended. Street-robberies, the practices of receivers of stolen goods, and of negotiating police-officers and attorneys, are exposed and commented upon. The difficulty of framing a law for the supply of anatomical subjects, is forcibly exemplified; since any means tending to lessen the respect now felt towards the dead, might compromise the safety of the living.

Though crime has increased in the metropolis, it has not increased so rapidly as in the country. The causes chiefly relied upon by parliamentary committees to account for the augmentation in delinquency, are, the increase in population—the cheapness of spirituous liquors—the neglect of children by their parents—want of employment—absence of suitable provision for juvenile delinquents, and defects in police and prison discipline. In addition to these, the author suggests the following:—1. The enormous augmentation of national wealth, especially chattel property. 2. The long continuance of public peace. 3. Ameliorations in criminal punishment. 4. Commercial avidity and speculation, involving a decline in mercantile principle and character. 5. More extended operation of the debtor laws, from the increase in commercial transactions. 6. Poverty, occasioned by diminished wages and profits.

The increase in female delinquency has barely kept pace with the increase in popula-

tion; and this is considered a conclusive argument that society has undergone no moral deterioration, and that the greater development of crime, as exhibited in the criminal calendar, has principally resulted from the causes mentioned, and which have principally acted on the male part of the community. Had there been any growing depravity, it must have been shared by the women as well as the men, and the existence of it would have been demonstrated by a corresponding augmentation in the number of female offenders.

Did our limits permit, we might refer to various other matters in this publication of great interest and importance: there is a valuable chapter on the present state of the licensed victuallers' trade; and a brief account is given of the courts of justice and prisons of the metropolis—of the public sewers—of the supply of water—of gas-light establishments—of the fire-police, and other branches of our civic and protective institutions. We recommend it as a book of great intelligence and merit.

Travels in Turkey, Egypt, Nubia, and Palestine, in 1824, 1825, 1826, and 1827. By R. R. Madden, Esq. M.R.C.S. 2 vols. 8vo. London, 1829. Colburn.

LET war, pestilence, famine, or aught else, lead the current of public interest to any part of the world, booksellers and publishers are immediately on the alert; travellers are way-laid on their return, and with doses of gentle flattery, mingled with the *aurum potable*, are wooed and won to resign note-book and journal, tell all they saw, and often much they did not see; and however meagre the material thus obtained, it serves, as it were, for the outline of a picture, and is consigned to other hands, who dash in the colours,—and a volume is produced which not unfrequently is the astonishment of the individual whose name is prefixed. Within the short period of one month, three publications on the subject of Turkey, and of no inconsiderable size, have appeared: we have before done justice to Mr. Macfarlane's volume, and in this No. pay our tribute to Capt. Frankland's, and we have now to deal with Mr. Madden's too, under the above title. The author lays considerable stress in the preface on the ample opportunities afforded to him as a medical man for ascertaining the state of society in these countries, which, we must say, an attentive perusal does not lead us to confirm; and this he endeavours to heighten by a somewhat ludicrous enumeration of hair-breadth escapes which seem to us no heavier than what usually befall travellers. These volumes appear in the shape of letters, addressed to individuals whose names are prefixed. The account of Turkey contains little new, or of general interest; the description of female society there is no doubt correct, as far as it goes, though we venture to question whether Dr. Clarke, whom Mr. Madden so frequently condemns, is not right as to the accomplishments of the Turkish ladies; as we have been assured by the excellent physician to the embassy at Constantinople, that in the course of many years' practice, he has not unfrequently been surprised at the information and acquirements they displayed. Of the political state of the Turkish empire we have only to remark, that the letters of the date of 1824, from the frequent use of the term, "natural, ancient, and faithful ally," lead to the suspicion of a very late coat of varnish being applied. The remarks on the Troad, and the notable discovery of a moat and redoubt,

probably the remains of the Grecian camp, are very puerile. From Thebes, we have a fine specimen of bombast, which will bear quotation.

"You must have often marked the effect of material immensity on the mind; how vision wanders in a species of delirium over the magnificence of Carnac, which all at once it cannot comprehend; and how the sense aches with delight while one vast wonder succeeds another; and the retina, like the sensorium, becomes crowded with images, which require silence and solitude for contemplation. The impression which Thebes makes on the thinking traveller is indelible; the levity of his mind, however marked it may have been, is likely to become less; and his gravity, however great it may hitherto have been, imperceptibly becomes augmented."

A letter to Joshua Brookes, on the subject of crocodiles, hyenas, wild cats, rats, jackals, horned vipers, and locusts, comes within the verge of our ideas of propriety; but to address the fair, and, we are sorry to say, now the widowed Countess of Blessington, on ancient inhumations, mummies, troglodytes, mummy powder, mummy heads divested of integuments, men with black skins and short woolly hair, is somewhat too much for us, whether "our sensibility be on the lip, or in the heart."

The visit to Lady Hester Stanhope is interesting, and we willingly insert a portion of it.

"The people of Sidon laughed at me when I talked of visiting Lady H—— S——; the greatest lords, they said, had been refused admittance; and latterly every stranger had in vain solicited an interview. I wrote a note to her ladyship, requesting the favour of an audience, and stating my profession and pursuits. In the evening, to the surprise of all Sidon, a pair of horses arrived for me, and a polite note from her ladyship, stating she would be happy to see me, but without a single servant. Her ladyship is now living about eight miles from Sidon, in the interior of the mountains, at a villa of her own construction, called D'Joun: there is no village in its vicinity; hemmed in on all sides by arid mountains, this residence is shut out from the world, and is at the mercy of the Bedouins, if they had the audacity to attack it. But of this there is little fear; they regard her as a queen of the desert, though I never heard her receive any other title from them than *Sittee Inglis*, or the English lady. When I was setting out from Sidon, all the merchants and Jews of the place gathered round me; one kissed my hand, another invoked blessings on my beard, and all this courtesy arose from a report that I was her ladyship's English agent coming out with a vessel of specie for her use. I protested that I was not the bearer of a single *paras*; and when I failed to convince them, I proceeded on my route. For about two hours the scenery became wilder at every step, and at last, on the peak of a solitary mountain, separated from every human habitation, the humble abode of Lady H—— S—— burst on my sight. I approached the house with a feeling of awe I could not overcome; the high walls that surrounded the building, the massive bars that closed the gates, the gloomy windows that overlooked the entrance, all contributed to inspire a stranger with ideas that were likely to unfit him for an immediate interview with the celebrated owner of the mansion. After the gates were thrown open I was surprised to observe a thousand little elegancies in the distribution of the walks, and the adjustment of the flower-pots in the court through which I passed. Every thing without was wild and barbarous, and all within confessed

the hand of taste. I was led from the court into a little garden, at the extremity of which there was a sort of kiosk, consisting of two rooms, a sitting-room and bed-room, furnished in the European style, with chairs and tables. Every thing seemed to have been prepared for my arrival; and in a short time, an excellent dinner was served up, and various sorts of the choicest wines of Lebanon were laid on the table. It seemed to me as if I was in some enchanted palace; the servants came and went, but never opened their lips; I spoke to them, but they answered me with bows and nods. I would have given the world to have had somebody to talk to: in the evening, however, I received a note from her ladyship, stating that business prevented her from seeing me till the *mogreb*, or sunset; and in the event of my wanting any thing, that I was to write it down on paper and commit it to the servant. The formidable moment for the interview arrived at last; I decked myself out in my finest mameluke apparel, and followed the servant who brought her ladyship's message. The room into which I was ushered was in the Arab style; a long divan was raised at the end, about a foot and a half from the ground; and, at the further corner, as well as a glimmering lamp would allow me to distinguish, I perceived a tall figure in the male attire of the country, which was no other than Lady H—— herself. She received me in the most gracious manner, arose at my entrance, and said my visit afforded her great pleasure. In the course of one hour we were on the best of terms, we conversed like people who had been acquainted for years; and, indeed, her ladyship was so well acquainted with my character within the first two hours of my interview, whether by physiognomy or the stars, that she acquainted me with every peculiar lineament of my mind, with as much facility and as much correctness as if she had been tracing those of my countenance. I was certainly astonished at her penetration; but I have no doubt, that in judging of the characters of strangers, her ladyship 'consults the stars' less than the features of the person whose intellect she wishes to ascertain. For seven hours that I had the honour of sitting with her ladyship, there never was a pause in the conversation. Every subject connected with oriental learning was discussed, and every observation of her ladyship's evinced a degree of genius that astonished me, and was couched in such forcible and energetic language as to impress me with the idea that I was conversing with a woman of no ordinary intellect. The peculiarity of some of her opinions in no wise detracted from the general profundity of her reflections; and, though I could not assent to many of her abstract notions regarding astral influence and astrological science, I had still no reason to alter my opinion of her exalted talents, though it might appear they were unfortunately directed to very speculative studies. It is too much the fashion with us to impugn the understanding of every individual who differs in a single point from received opinions. There is not a physician in England who does not ridicule the notion of there being a particle of truth in the alleged effects of animal magnetism; and yet the most scientific men in France have asserted that its influence is not altogether an illusion; and, I believe, with justice. But, granting that it were an illusion, or, to go a step further, that the power which a wand is supposed to possess in the hands of certain individuals to indicate the spot where water is to be found, is but a fanciful idea, still I do not conceive that Lady

B——n, who was one of the first persons who brought that German discovery, or juggle, into notice in this country, should be deemed of an unsound mind. Neither should the understanding of Lady H—— S—— be supposed to have become a prey to ecstasy, because she holds opinions that are prevalent, not only among the Arabs, but, strange as it may appear, among some of the most learned people in Syria, among some of the most enlightened European residents in Egypt, and among many travellers, two of whom are English noblemen, and whose opinions concerning magic, to my knowledge, are no less singular than those of Lady H——.”

That Mr. Madden is an active and clever medical man, we most willingly acknowledge; indeed, his volumes afford too many evidences of it to be acceptable to the general reader; and many of his professional details, however suitable for the arena of an anatomical theatre, are, from their indecacy, unfit for the female eye: his observations on the probable causes and treatment of the plague merit attention; and his medical advice to travellers is valuable.

We conclude our review with an extract which may warn wayfarers from the too frequent assumption of medical skill in these countries.

“Shortly after, we met a *kangea* with an English Jack; it turned out to be that of Mr. L——, an English traveller; we dined together: I found he was a medical amateur, and had been physicking the Arabs beyond the second cataract. I was surprised to see his crew of Nubians excessively pale and meagre; and still more so to learn that every man of his had suffered from a contagious malady contracted in the unwholesome neighbourhood of *Kennah*. Mr. L—— very humanely undertook to cure them all: small mercurial applications were judged necessary; but Mr. L—— confessed to me, that small as these were, the effects were terrible, and his crew was already toothless. I asked to see the medicine, and, to my horror, I found that, owing to a mistake (not of Mr. L——’s, but of the person who wrote the label on the medicine), the corrosive ointment of nitrate of mercury had been employed instead of the simple unction. Turks and Arabs take a great deal of killing; no others could have survived this cure.”

CAPTAIN BASIL HALL’S AMERICA.

[Third notice: conclusion.]

LEAVING Charleston, Captain Hall travelled over a good deal of the interior country; and his accounts of the new settlements are replete with interest and intelligence. He tells us—

“About a year before the period of our visit, that is to say, in the course of 1827, an arrangement was completed by the government of the United States, by which the Creek nation of Indians were induced to quit the territory lying between the Chatahoochie and the Flint rivers, and to move westward within the limits of the state of Alabama; thus leaving the vast intermediate district of country at the disposal of the Georgians. It seems that, according to the laws of Georgia, any land so acquired, by what is called the extinction of the Indian claims, is divided by lottery amongst the inhabitants of the state. Every citizen twenty-one years of age has one draw, as it is called; a married man two draws, a married man with a family three. I forget the farther particulars, and have mislaid the act of the legislature upon the subject. I believe, however, that the lots were of 202½ acres each. Be these details, however, as they

may, the whole of the country, formerly occupied by a few Indians, was no sooner acquired than it was divided in the way I have mentioned amongst the people of that state. When this distribution took place, however, the state government reserved a portion of the country, five miles square, upon which they proposed to found a city. The situation chosen for this purpose was a spot on the left bank of the Chatahoochie, which is the boundary line between the state of Georgia and Alabama. The new city was to commence at the lower end of a long series of falls, or, more properly speaking, rapids, over which this great river dashes for some miles in a very picturesque manner. The perpendicular fall being about 200 feet, an immense power for turning mills is placed at the disposal of the inhabitants of the future city, within the limits of which the whole of this valuable portion of the river has been included. All the way down to the Gulf of Mexico, also, the navigation of the Chatahoochie is unimpeded; so that several steam-boats had already made their way up to the spot I am speaking of. By a law of the state of Georgia, it was arranged that sixty days should elapse after this portion of land reserved for the city was completely surveyed, before any of the building lots could be sold. These lots were to consist of half an acre each, and the whole five miles square was to be distinctly marked out in streets, on paper; and, being numbered and lettered accordingly, they were to be advertised for sale over the whole Union. These sixty days were considered sufficient to enable adventurers, settlers, land-speculators, merchants, and all others so disposed, to come to the spot preparatory to the auction. The project took like wildfire; and the advantages of the new city being loudly proclaimed over the land, people flocked from all quarters to see and judge of it for themselves. We arrived, fortunately, just in the nick of time to see the curious phenomenon of an embryo town—a city as yet without a name, or any existence in law or fact, but crowded with inhabitants, ready to commence their municipal duties at the tap of an auctioneer’s hammer. On leaving the Creek agency, we drove for some miles along the Indian, or western side of the river, and then crossed over by a ferry to the left bank. In order to see things better, we sent on the carriage, and walked towards Columbus, which it was understood was to be the future name of the future city. A gentleman, one of the assembled inhabitants, had been kind enough to accompany us from the agency, to show-off the lions of this singular place. The first thing to which he called our attention, was a long line cut through the coppice-wood of oaks. This, our guide begged us to observe, was to be the principal street; and the brushwood having been cut away, so as to leave a lane four feet wide, with small stakes driven in at intervals, we could walk along it easily enough. On reaching the middle point, our friend, looking around him, exclaimed, in raptures at the prospect of the future greatness of Columbus—“Here you are in the centre of the city!” In a very short time, he assured us, it would be no longer a mere path, but a street sixty yards wide, and one league in length! By keeping a bright look-out as we proceeded, we could detect other similar cuts into the forest, branching off at right angles to this main avenue, as it was to be called. As yet, however, these cross streets were only indicated by a few stakes driven in by the surveyors. After threading our way for some time amongst

the trees, we came in sight, here and there, of huts made partly of planks, partly of bark, and at last reached the principal cluster of houses, very few of which were above two or three weeks old. These buildings were of all sizes, from a six-feet box or cube to a house with half-a-dozen windows in front. There were three hotels, the sign belonging to one of which, I could observe, was nailed to a tree still growing, untouched, in the middle of the street. Another had glazed windows, but the panes of glass were fixed in their places merely for the time, by a little piece of putty at each corner. Every thing indicated hurry. The direction and width alone of the future streets were adhered to; but no other description of regularity could be discovered. As none of the city lots were yet sold, of course no one was sure that the spot upon which he had pitched his house would eventually become his own. Every person, it seemed, was at liberty to build where he could find room, it being understood that forty days after the sale would be allowed him to remove his property from the ground on which it stood, should he not himself become its purchaser. In consequence of this understanding, many of the houses were built on trucks,—a sort of low, strong wheels, such as cannon are supported by,—for the avowed purpose of being hurled away when the land should be sold. At least sixty frames of houses were pointed out to me, lying in piles on the ground, and got up by the carpenters on speculation, ready to answer the call of future purchasers. At some parts of this strange scene, the forest, which hereabouts consists of a mixture of pines and oaks, was growing as densely as ever; and even in the most cleared streets some trees were left standing, I do not well know why. As yet there had been no time to remove the stumps of the felled trees, and many that had been felled were left in their places; so that it was occasionally no easy matter to get along. Anvils were heard ringing away merrily at every corner; while saws, axes, and hammers, were seen flashing amongst the woods all round. Stage-coaches, travelling waggons, carts, gigs, the whole family of wheeled vehicles, innumerable, were there. Grocery stores and bakeries were scattered about in great plenty—and over several doors was written, ‘Attorney at Law.’ One of the commissioners from the state of Georgia, who had the management of this extraordinary experiment in colonisation, assured me there were upwards of 900 inhabitants already collected together, though it was expected that four months must still elapse before the sale could take place, or the city have any legal existence! Many of these people being without houses, or even sheds, were encamped in the forest. Some lived in waggons; and many persons strolled about, so pick up quarters and employment where they best could. As all sorts of artificers were in great demand, it was a fine harvest for carpenters and blacksmiths. I was told that upon a moderate computation there would probably be assembled, on the day of sale, between three and four thousand people, ready to inhabit the new city. I can well believe this; for, during the short period we were there, many new comers dropped in from different directions, out of the forest—like birds of prey attracted by the scent of some glorious quarry. It must have been a curious sight after the auction, to witness the scatter which took place when the parties came to claim each his own property—to demolish or remove the old, and raise the new dwellings; to say nothing of the entangled

machinery of police and other municipal arrangements—the mayor and aldermen to get up—the town taxes to levy;—the school, the jail, the court-house, the church,—all to be erected. In other places these things rise up by degrees—but here they must have taken their date all at once, and all in a body! I could form no idea from what I saw or heard on the spot, how this strangely concocted town would get on;—nor have I ever since been able to learn one syllable respecting its progress.”

At the end of his work the author embodies his general observations and opinions in the form of a conversation with a citizen of the United States; of which dialogue the following is the finale, and a fair sample of the whole.

“At all events,” said my American friend, “although I fear no foreigner can ever understand our character, or appreciate the value of our institutions, I trust you at least will admit that we are a great nation; that we are treading close on the heels of the mother country; and that we are making gigantic strides in the way of every kind of improvement?” I remained silent, not knowing well how to reply to such an appeal. “At least,” he added, “I trust you have seen enough to make a favourable report of us to your countrymen; and that you will do what you can to bring the two countries more together?” My answer was in these words: “I came away from England with that express intention, or at least, to speak correctly, with the anxious hope that I should find sufficient materials to enable me, with a safe conscience, to make an effort towards the accomplishment of that object.” “And what is the result?” “I will not conceal from you that I have been somewhat disappointed; and my opinion now is, that while each of our governments retains its present character, any closer intimacy between us is not likely to spring up. Neither do I think, all things considered, it is what the Americans themselves ought to desire.” “Why not? You surely do both countries injustice.” “Pray do not misunderstand me,” I said, “or think me unkind. My meaning is simply this. If an American traveller were to come to England, stay in it as long as I have done in America, and pay as much attention to my country as I have done to his, and after all were to declare, that upon the whole he did not think much further intimacy between the two countries was either probable or very desirable, I should be far from saying his speech was an unkind one to us, or unpatriotic to America; still less that he did either party the slightest injustice.” “Surely, it would be wanting in true philanthropy, however?” he said. “Not a whit,” I replied. “Each of our countries loves its own institutions better than those of the other. You prefer a democracy, we choose to abide by our monarchy. You love to be chopping and changing, we desire to continue in our present path. Which is the best, time will shew. But however that may be, it is quite clear, that as our views and wishes are so diametrically opposed, not merely in name but in substance, and in all that we respectively consider valuable in life, any closer contact could not possibly tend to advance the objects of either. We, for our part, have no mind to change to your system; and you, in like manner, I presume, have no wish to come round again to that of England. Let us, therefore, in God’s name, long preserve our present friendly and useful relations, leaving it to time and the course of events to regulate the terms of our future intimacy.” “I fear,” said my excellent

friend, “we are doomed, in America, to be perpetually misunderstood. I trust, however, that this national reserve—which I earnestly desire to see removed—does not extend to individuals. You and I, for instance, may continue to enjoy each other’s friendship without risk.” “Indeed, I hope so,” I exclaimed: “I should be much grieved to think that any thing else could ever be the case. I have had the pleasure of becoming acquainted with many persons in America, whose good-will and good opinion I hope I shall never lose, and for whose kindness to my family and myself I shall feel grateful to the last hour of my life.” So we shook hands and parted.”

In addition to the extracts and remarks which we have now offered to our readers, we have only farther to notice, that the first of Captain Hall’s able volumes relates to Canada and our own North American colonies (respecting which it gives a mass of useful information), and that the whole is illustrated and improved by excellent maps. Where so much ability has been displayed, it cannot be expected that a brief review could do the author justice; but as, on the whole, his statements are rather unfavourable to America, we have no doubt they will provoke plenty of discussion, without our entering into the warfare.

Forty Etchings, from Sketches with the Camera Lucida, &c. &c. 4to.—This appendage to the preceding volumes demands from us a short record and panegyric. Captain Hall, by a skilful use of that admirable instrument, the camera lucida, has here separately and most felicitously illustrated his North American tour. We have remarkable landscapes, and characteristic figures, etched with equal fidelity and spirit. We are sure that this publication will not only recommend itself to the public, but the means by which it has been accomplished to many a future traveller.

Maw’s Passage from the Pacific to the Atlantic.
[Third Notice; conclusion.]

THE lengthened extracts to which the interesting matters treated of in Lieut. Maw’s work have already seduced us, leave us no space for any remarks of our own; and indeed, the nature of the topics discussed would render these unnecessary, even had we opportunity and inclination to indulge in them: we therefore proceed with our extracts. At Tabitinga, at an Indian festival:—

“During the week we went frequently to the governor’s and the padre’s houses, and accompanied the former to an Indian dance or festival. These festivals are not uncommon at Tabitinga, occurring, I believe, about once a-month, when the Indians, few of whom live in the pueblo, collect, and dance and drink chicha for three days, to such an excess, that they become thoroughly stupified; and it requires four and twenty hours, or one day and night’s sleep, to recover them. The dances are performed in masks, and there is much acting in the performance: that which we saw appeared to me to relate to some story; but what the story was I could not learn, although I made repeated inquiries. I will, however, attempt to describe that part of the performance we witnessed. At the time we entered, which was after the dance had commenced on the first evening, several persons were collected in a house that had apparently not been long built, standing close round the walls inside, so as to leave the middle of the apartment clear for the dancers and their attendants, the latter of whom were numerous. Seats were given us near the master of the ceremonies, an

elderly Indian who stood alone. The dancers, who, from what we could judge of their figures when disfigured, appeared to be men, were dressed in shirts made of bark, stripped off the trees whole, therefore having no seams, and marked with rude figures of different colours, principally red and yellow. The shirt was continued over the head, with holes for the eyes, nose, and mouth, and above the shirt was a head-dress made from the stems of Indian corn; sleeves were made of the bark of smaller trees or branches, also without seam, except where they joined the body of the shirt; and ears were attached according to the objects intended to be represented, some resembling monkeys. On the legs, particularly on the right ankle, were tied strings of rattles, made from the shells of some small hard nut, the sound of which was loud, but not disagreeable. The dancers were usually linked three together, one principal character supported by two others, one on each side; and there were generally two sets dancing at the same time, each set being followed by women and children dancing or jumping in a similar manner. The step was a kind of run, one, two, three, then the same number of beats with the heel, jerking the rattles, and then on again, one, two, three, passing continually round and across the apartment. After the parties who were dancing when we entered had gone on for some time, the arrival of fresh characters was announced by a noise, (I think beating a kind of drum at the door); room was then made; the first performers retired, and the new-comers entered, dressed so as to represent various characters; and armed with false spears or javelins, which they darted into the thatch of the roof inside the house, and then proceeded to dance in a similar manner to their predecessors. The conclusion of the festival was, that the women as well as the men were all intoxicated; and the day after the rites terminated, few Indians were seen out of their hammocks. We availed ourselves of the opportunity to obtain some of their costumes, &c. I got two bark dresses; some necklaces made of teeth, and a bark belt, which is the only dress of some of the Tacanas. I also got a string of the scarlet macaws, or, as they are there called, arara’s feathers, resembling the head-dress described as having been worn by the Peruvians at the time of the Spanish conquest. One of the Indians, who came to the festival, brought a few birds which he had shot with his pucuna, and stuffed with cotton, slung over his shoulder; these we also got. The commandante had several string of birds of similar descriptions, and stuffed in a similar manner, hanging in the veranda of his house, which he intended taking down to Para. He had also got a young king of the vultures, and some monkeys of a rare species. The accounts given us at Tabitinga of Dr. Spix, the German naturalist, who had come up to the frontier, with particular directions from the emperor for assistance to be rendered to him, were considered as little less than marvellous by the related. He had examined various subjects; and we were told that there was not a monkey in the district one or more of whose species he had not stuffed. The scientific ability and indefatigable perseverance of this gentleman, and of his companion, Dr. Martius, who proceeded up the Japura, and of whom we afterwards heard much from Colonel Zany, commandante of militias at the Rio Negro, who accompanied Dr. Martius by order of the government, and obtained his rank of colonel for having done so, are too well known for me to presume to say more respecting

them. There was a large canoe at Tabitinga that had come down the Ucayali with sarsaparilla belonging to the intendente of Moyobamba, and his uncle, the prefect of the missions on the Ucayali. She had been consigned to the padre, and was waiting for some goods which the new commandante was supposed to be bringing up with him. The Indians who manned the canoe belonged to the Ucayali missions; they were savage, that is to say, rude in their appearance, but quiet and peaceable in their manner. Their dress consisted of a single garment, not much unlike an English carter's frock, made of coarse cotton cloth, and dyed of a brown colour. Their weapons were bows, made of palm wood, and about six feet long, and arrows of strong reeds, as stout as a man's finger, without knots, and headed, some with bone, others with a broad hollow cane split in halves, and pointed. We got several of these bows and arrows, in exchange for knives, fish-hooks, large needles, &c. which were valued highly by these poor beings, and some of which we distributed amongst them, but not in such numbers as to render them valueless. When at Moyobamba, the intendente assured us that his uncle, the prefect of the missions, had seen an arrow headed with cane, and shot from a Ucayali bow, enter a man's chest, and shew itself through the back. The man who had charge of the canoe was a Peruvian, and spoke the Spanish language. The account he gave of the Ucayali was, that Sarayacu is the highest station of the missionaries, and the residence of Padre Plaza, the prefect. The Ucayali is broad and deep as far as Sarayacu, but divides into smaller streams soon afterwards. He had been up the Ucayali as far as Ocopa, noted as the college of the missionaries, and only a few days' distance by land from Lima. Some of the Indians between Sarayacu and Ocopa are dangerous, but others come down to trade. I do not suppose that these accounts are implicitly to be relied upon, although I give them as the best we received in the country.

"Some of the Tabitinga Indians have a preposterous practice of tying ligatures so tight under the knees and elbows, that the circulation of the blood must be in a great measure stopped; the joints swell in consequence, and the flesh and muscle of the limbs entirely dwindle. Their knowledge and application of particular herbs is as remarkable as their ignorance of others. Whilst we were at Tabitinga, an Indian who had gone into the woods to collect sarsaparilla, was bit by one of the deadly snakes of the country, and was brought back to the pueblo supposed to be dying. Being a Christian, Padre Bruno went to perform the last offices of the church over him; but the women took charge, and, by the application of herbs, cured him in three days. The poison in which the Indians dip their wooden spears, and the small arrows for their pucunas, has frequently attracted notice by its power and rapidity of execution. Its preparation is kept a mystery confined to certain tribes, and that manufactured by different tribes may, perhaps, differ; but from its great value amongst the Indians, the difficulty of procuring it, and from those by whom it is manufactured being inferior tribes, and of the lowest order of savages, I suspect that the preparation is not altogether a safe process. I had endeavoured to get some of this poison, but without success, until some men, seeing a large knife of the same kind as those with which we had paid the Laguna canoe-man, and which we intended to keep, as it might be useful, being

about eighteen inches long, brought several bows, arrows, &c. to obtain it; but we had got sufficient bows and arrows, and would not give the knife. At last, after various attempts had been made, a jar of poison was brought, and the knife was then given. Yet so much was the poison coveted, that when we reached the Rio Negro, it was stolen; and I am indebted to Colonel Zany for another jar, which is now in the hands of Mr. Brodie. Its effects are rather stupifying than convulsive. Salt and sugar are both considered remedies, taken inwardly, and applied externally.

"During our daily visits, the padre related to us various anecdotes and descriptions of Peru, which corresponded generally with what we had seen. At his house we met with a Peruvian, a man about six feet high, and unusually stout in proportion, who, amongst other adventures, had had an extraordinary engagement with a tiger, the marks of whose claws and teeth he still retained on his head and arm, although several years had elapsed since the combat. Repetitions of such recitals are not easy, inasmuch as the spirit of them depends greatly on the manner and peculiarities of the actors, which are almost indescribable. The tiger's antagonist and his brother were proprietors of a chacra that was infested by animals coming under the general denomination of tiger, and which includes a variety of species, some incomparably more formidable than others. What was the particular description of this animal I do not know; the reader must endeavour to form his judgment from the narration. However, our acquaintance passing one day through part of his chacra, saw the tiger lying under a bush or tree; and, according to the Peruvian, or perhaps his own more peculiar manner, he addressed it. 'Ho, my friend, you are there, are you? I have been seeking you for some time, and we have a long account to settle. Wait till I get my weapons, and I will be with you again quickly.' Accordingly, going to the house of the chacra, he got his pucuna and arrows, and returned: these men always wear a long knife in a leather sheath, suspended to a strap that buckles round the waist. When the tiger saw him coming with his pucuna, he thought it time to be off; and, springing up, began to run. A chase then commenced, the man's conversation also proceeding—'What, you are off now, are you? but you shall not pass quite so easily; we must have some further communication before we part.' In the mean time the tiger, either not liking the sound of the man's voice, or the appearance of his weapons, made a spring, and got up into a tree. A momentary pause ensued, when the man laying down his spears, if he had any (which I really do not know), began to make use of his pucuna by blowing poisoned arrows at the tiger; but either the poison was old, and not good, or the tiger's skin was too tough and glossy, as no deadly effect was produced; but the animal was annoyed; and, after several arrows had been blown at him, sprung or fell from the tree, and again started to run. The chase was renewed, and the man came up, the tiger turning on his haunches to defend himself. The pucuna was now of no use, and was thrown aside: the left arm advanced to keep the animal off, whilst with the right the man felt for his knife. The exertion of running had broke the strap, and he was without arms. Desperation sometimes gives courage, and this man was evidently not deficient in what at that time was a desirable quality; moreover,

his strength was uncommon. He remained firmly on his guard. The tiger attempted to spring; the man struck him with his fist on the nose, still keeping his left side forward and his arm extended, and continuing his conversation—'I am without arms, but I am not beat.' The tiger made another spring, and was again struck on the nose; some other remark was made, and in this manner the combat went on, until the tiger finding himself foiled in his endeavours to spring, made various other attacks. On one occasion he seized the man's left arm and bit it through, but was again struck on the nose, and fortunately let go without injuring the bone: on another occasion he got one of his paws on the man's head, and the claws tore through the scalp to the skull; the marks and the man's height proved that they were no kitten's claws. In the end, the man would probably have fallen; but his brother hearing him talk in rather an uncommon manner, came up with a spear, and ran the tiger through the body. After the story was finished, the padre asked the man, 'What made him go and fight with a wild beast?' However, he said, the account was true, as, indeed, the marks on the man's head and arm proved. We were also told of a Peruvian pueblo that was infested by an animal of this denomination, and which I think was said to be black, that would walk into the plaza in the middle of the day, and seize on the first person it could lay hold of. It carried off about fifty people before it could be destroyed. It was at length shot.

"The padre had some large land-tortoises, which were considered good to eat, and even preferred by some people to tartarug, or the water-tortoises. I cannot say I admired such diet; but in a country where monkeys and vaca marina are considered delicacies, and snakes and alligators have been eaten, not to mention human flesh, any thing will go down. I bought a small monkey at Tabitinga, of an uncommon species. It had been domesticated, and was a playmate of the children. The man to whom it belonged, who was an Indian, objected at first to parting with it; but a good price being offered, he at last consented. When he was receiving payment, supposing we wanted to make a mess of it, he said it was not large, but it would be good to eat. A land-tortoise, that stood a yard high, was said to have been sent as a specimen to the emperor. They abound in some parts of the Montana. The day before we left Tabitinga, a fisherman, whom the padre had sent out, returned with a vaca marina that he had harpooned; and as I had repeatedly expressed a wish to see one, and if possible to get a skin preserved, the padre sent to us before he allowed it to be cut up. Its shape, with the exception of the snout, resembled a seal; the skin that of a whale or porpoise, smooth, of a dark lead colour on the back, and with a few occasional hairs. The snout, and particularly the lips, were like those of an ox, whence it derives the Spanish name of vaca marina, and Portuguese 'peixe boy.' The tail was broad, not thick, and horizontal. On each shoulder was a fin joined close to the shoulder, broad, but not thick, and tapering narrower and thinner towards the extremity. The dimensions of this one, which was full grown, but not considered fat, were about ten feet long, and eight round the thickest part of the body; but as the Indians were not willing to move it, and I agreed with the fisherman to buy the skin, I was not so particular as I otherwise should have been in measuring. When cut,

on the under part of the body, from the head towards the tail, immediately under the skin, a layer of fat covered the ribs and fleshy part of the body; and this layer being the part from which oil, or, as it is there called, 'man-teiga,' is extracted, was carefully stripped off by the fisherman and his assistants. In its thickest part, immediately over the intestines, the layer was about two inches in diameter. Under the fat the flesh resembled that on the ribs of moderately fat beef, and was also stripped off in one layer. The ribs were then divided, and the intestines taken out. I do not understand sufficient of anatomy to describe each of the organs, but it appeared to have most of those common to land animals. The lungs were of large size, extending nearly the whole length on each side of the back, protected from the intestines by a strong diaphragm. There were two distinct stomachs connected by a small but long intestine, with a much larger intestine leading from the second stomach. On being cut open, the whole were found to contain grass or some kind of vegetable, which the animal had lately eaten; that contained in the first stomach was covered with a thick mucous substance, whilst in the second stomach and larger intestines it was of a yellower colour, and appeared to have undergone a considerable degree of digestion. Each of the fins had five long tapering bones, with joints resembling those of the human hand. The extremities of both the tail and fins were gristle. The cutting up this vaca marina had attracted the attention of a variety of animals. The men were the operators; a number of women and children were in attendance with baskets; whilst several half-starved dogs were on the look-out, and fighting for whatever might fall to their share; and when any of the refuse was thrown into the water, it was instantly snapped at by what we supposed to be alligators."

On the 8th of February our countrymen left Tabitinga, and passed the boundary line between Peru and Brazil.

Gabrielle; a Tale of the Swiss Mountains.
By C. Redding. 12mo. pp. 136. London, 1829. Ebers and Co.

THE story of the principal poem is a very pathetic one—that of a Swiss girl who loses her reason in the fright occasioned by the sudden fall of an avalanche. There is much beauty and sweetness in many parts, though not throughout so critically correct in composition and rhyme as poetical in thought. As it would be difficult to detach passages, we prefer quoting one of the minor pieces, from its being finished within our limits.

"The Sword Song.
'Thou sword upon my belted vest,
Why glitters thus thy polish'd crest,
Kindling high ardour in my breast,
From thy bright beams?—Hurrah!'
'A horseman brave supports my blade,
Proud for a freeman to be made—
For him I shine, for him I wade
Through blood and death.—Hurrah!'
'Yes, my good sword, behold me free,
In fond affection bound to thee,
As though thou wert betroth'd to me,
A first, dear bride.—Hurrah!'
'Soldier of Freedom, I am thine!
For thee alone my beams shall shine—
When, soldier, shall I call thee mine,
Join'd in the field?—Hurrah!'
'When the shrill trumpet's summons flies—
When red guns flash upon the skies—
Then will our bridal sun arise
And join our hands.—Hurrah!'
'O welcome union! haste away,
Ye tardy moments of delay;
I long, my bridegroom, for the day
To wear thy wreath.—Hurrah!'

'Why restless in thy scabbard, why,
Thou iron child of destiny?
So wild, as if the battle-cry
Thou hearest now.—Hurrah!'
'Impatient in my dread reserve,
Restless in battle-fields to serve,
I burn our freedom to preserve.
Thus with bright gleams.—Hurrah!'
'Rest, but a little longer rest,
In a short space thou shalt be blest,
Within my ardent grasp compress,
Ready for fight.—Hurrah!'
'Then let me not too long await—
I love the gory field of fate,
Where Death's rich roses blow elate
In bloody bloom.—Hurrah!'
'Then out, and from thy bondage fly,
Thou treasure of the freeman's eye!
Come to the scene of slaughter, hie,
Our nuptial home.—Hurrah!'
Thus be our glorious marriage-tie
Wedded beneath heaven's canopy:
Bright as a sunbeam of the sky
Glitters my bride.—Hurrah!'
Then, forth for the immortal strife,
Thou German soldier's new-made wife!
Glow not each heart with tenfold life
Embracing thee?—Hurrah!'
While in thy scabbard at my side
I seldom gazed on thee, my bride—
Our hands now join'd, we'll ne'er divide,
Ever in sight.—Hurrah!'
Thee sparkling to my lips I press,
And thus my ardent vows profess—
O cursed be he beyond redress
Who parts us now!—Hurrah!'
Come joy into thy polish'd eyes,
Let thy bright glances flashing rise—
Our marriage-day dawns in the skies,
My Bride of Steel.—Hurrah!'

Amid the many translations of this celebrated poem, we know of none than can at all compete with this most animated and stirring one: it has completely caught the spirit of Körner.

SIGHTS OF BOOKS.

Emily Moreland; or, the Maid of the Valley.
3 vols. 12mo. Sherwood and Co.
ONE of the old-novel school; the dangers of a pretty girl whom every one wishes to seduce. She escapes of course, and is happily married.

The Extractor; or, Universal Repertorium of Literature, Science, and the Arts, &c. &c., from March to July. Vol. II. 8vo. pp. 548. J. Ware.

THE immense mass of useful and amusing reading which is now poured out by the periodical press, and which has happily superseded that torrent of irreligion, immorality, and mischief, which previously overflowed the country—enables the judicious selector who conducts this publication, to compile, every few months, a miscellaneous volume of much entertainment and interest. We spoke well of his first, and have no cause to retract our praise on looking over this, his second, effort.

Moral and Sacred Poetry. Selected and arranged by the Rev. T. Willcocks and the Rev. T. Horton. 12mo. pp. 296. Devonport, 1829. W. Byers.

WITHOUT subscribing to the poetical opinions of the reverend editors of this volume in their preface, and indeed differing from them on almost every point *toto cælo*, we willingly accord to them the meed of having chosen from the grand body of English poetry a series of examples well suited to their object,—the exhibition of fine as well as ordinary talents employed in disseminating a love of virtue and religion. The book is neatly printed and got up, with a pretty vignette.

The Hobart-Town Almanack, for the year 1829.
Hobart Town, printed by James Ross.
AMONG the literary novelties and curiosities which reach us from various parts of the earth,

we may fairly reckon the first publication of an Australian almanack. Let us add, that it is very appropriately embellished, and, except that the paper is rather inferior, altogether a creditable little volume. The contents, with the usual cycles, calendars, &c. &c., are devoted to local information; and, we daresay, are as useful in Van Diemen's Land as they are strange to us.

An Historical Essay on the Magna Charta of King John; to which are added, the Great Charter in Latin and English; the Charter of Liberties and Confirmations, granted by Henry III. and Edward I.; the original Charter of the Forests; and various authentic Instruments connected with them: Explanatory Notes on their several Privileges; a descriptive Account of the principal Originals and Editions extant, both in print and manuscript; and other Illustrations, derived from the most interesting and authentic sources. By Richard Thomson. Large 8vo. pp. 611. London, 1829. J. Major; and R. Jennings.

THE title-page so fully explains the nature of this, we will say national, work, that we have only to speak of its literary character, and admirable execution as an example of typography and embellishment. In the former respect Mr. Thomson has done every thing that could be wished, and added greatly to the reputation he had already established as a diligent antiquary and popular writer. He seems to have consulted every authority which could render such a volume more valuable than any that have preceded it; and his mass of information is really "prodigious." With regard to the decorative parts, they must be seen, to be prized as they ought to be: every page is a picture. The designs and wood engravings, by Brooke, Thurston, Branston, Bonner, Hughes, Mosses, White, Mason, and other eminent artists, are at once appropriate and beautiful—well chosen and well copied after striking originals, whether of charters, armorial bearings, tombs, effigies, or other sources. In short, this book ought to adorn every library in the kingdom.

ARTS AND SCIENCES.

NEW RUSSIAN EXPEDITION.

BARON HUMBOLDT, after a short stay at St. Petersburg, left that city towards the end of May, to proceed to the Ural mountains. There is every reason to expect from him, if not a number of new observations, at least a series of experiments and notices much more exact than those made by his predecessors, with the exception perhaps of Messrs. Hausten and Erman, of Stockholm and Berlin, whose objects were much more limited. What will give much interest to his journey, is the comparison which will probably be instituted between the steppes of Asia and Africa; for M. Humboldt is accompanied by Professor Ehrenberg, as zoologist and botanist, who made so interesting a journey through the Libyan deserts, to Dongolah, Mount Sinai, and Mount Lebanon, and who alone will be thus enabled to give a correct comparative table of the phenomena presented by analogous countries in these two parts of the world.

AFRICA.

Continuation of the Journal of the Expedition under Captain Owen.

[We had arrived off the deserted settlement at the entrance of the Rio Grande, and the writer proceeds:]
Part of the buildings are still remaining, uninhabited and in ruins. The main and the islands are very fertile, covered with fine large

trees, bushes, and grass; plenty of cattle, deer, and many kinds of game; elephants, wolves, baboons, monkeys, &c. &c. The alligator and hippopotamus abound in this river. One of the natives, who had spent his youthful days at Liverpool, could speak English tolerably well, came on board to dispose of Ivory and skins, and was very communicative. Upon being asked if he would join in an elephant hunt, he declined, saying he had had enough of them in his searches for dropped tusks in the woods; and related an instance of his being chased by one of them through a wood, and his progress obstructed by its breaking off and throwing large branches in his way; and having frequently to be on his hands and knees to get through the thick jungle, he with great difficulty and fatigue escaped from this furious animal. Some of our party, however, attempted it, but could not succeed in the many tracks to discover one, although but a few minutes previous to their landing one or more had passed that way. This native also informed us, that two of his slaves, in wading the river, had a few days previous been seized by alligators, and dragged to the bottom of the river, in the presence of their countrymen on the opposite side. Great advantage was derived from this native; and he volunteered to be the pilot of our boats up the Rio Grande. We were now joined by the tender, Albatross and Conflict; the latter vessel had also been aground upon a ridge of rocks at low water, but sustained little or no injury; and recommenced survey with great alacrity, in order to quit these islands before the tornadoes set in. While in the act of quitting this anchorage, early in the morning, a large canoe came alongside with the padre and a native officer of the Portuguese garrison—having stole away at night to inform us, that the soldiers had revolted, and the other officers having confined themselves to their quarters, it was expected the mutineers would steal away in a brig at anchor off the port, and they came to claim our immediate help. Captain Owen, ever ready to render assistance in time of need, acceded to their wish; and on our arrival off their port, Bissao, after pursuing a very intricate and shallow entrance among the islands, we found that the sight of our ship alone had caused great confusion, that several of the disaffected had given themselves up, and that the officers had released themselves, and taken several prisoners. A party of marines, under Lieutenant Seymour, was sent a-shore to apprehend those that were missing from the garrison. All was soon quieted by our approach; and the poor, heavy, and dejected-looking officers of the garrison were invited on board. Having imprisoned the mutineers, they were sent to the island of St. Jago for trial. For this act of kindness, two of the finest heifers which had been purchased were changed for two miserably lean ones, which were forced on us just as we had got under weigh,—a proof of the ingratitude of these people. We were joined by his majesty's steam-vessel, African, from Sierra Leone, bound to the river Gambia: by her we despatched a boat, with Lieutenant Owen, Mr. Tudor, and six seamen, for the survey of that river, in which they succeeded beyond any former attempt, and got safe to Sierra Leone before the severity of the unhealthy season had set in. We remained several days at this anchorage, during which we erected a tent upon an island in the centre of the channel, which we named Observation, it being well adapted for that purpose. Our boats not having returned from survey between the islands, the men were employed

in procuring wood and water. A number of wild fowls' eggs were found here; and pelicans, herons, and several handsome birds, were shot. The island from which the natives sallied upon us was in sight from this anchorage, but they kept away. We occasionally saw about 1,500 head of cattle, moving along the sandy shore of the island Canabec; and observing the natives beckoning on shore, it was thought a favourable opportunity for renewing our friendly disposition and procuring a few fish: the boats' crews were cautioned as to landing before they had well acquainted themselves with a probability of favourable reception. The shore was soon crowded by the natives, and our boats hauled a-shore by them. Some of the officers and men landed; and upon making signs of barter, such confusion prevailed (through eagerness to procure tobacco, beads, and buttons) as to render it absolutely necessary to rejoin their boats. After a long palaver, one of the old native chiefs was prevailed on to venture in our boat to the ship; and shortly after, a number of chiefs and females came off in their canoes, and were presented with buttons, beads, &c. Our boats proceeding again to shore, the men were joined and followed by the chief on a bullock, and by his subjects, who soon became familiar, and paid a visit to the ship, which in a few minutes was surrounded by canoes. Several of the chiefs persisting in bringing their muskets on board with them, to guard against our marines, whom they did not seem to fancy, were ordered back; whereupon they became greatly incensed; and, recalling their people in the act of barter, *whistled* a summons for all to join their canoes, and, in a very independent and offended manner, rowed off to the shore, having disposed of little or none of their cattle and poultry. The landing at low water is very indifferent; the shore muddy and shallow. The tribes of these islands appear as void of chastity as of civilisation; the husband only taking care to receive a share of the recompense for his spouse's dishonour. The countenances of both sexes are affable and pleasing; but they are a dangerous people to confide in; and much, I fear, of their cunning and treachery is to be attributed to former visitants of this quarter in the Guinea trade. They have large and expressive eyes: the women are of a low stature, and the men in general very tall and well-proportioned. Each island seems to constitute a distinct tribe. Their habits are remarkably selfish, and they beg with unceasing importunity for every thing that attracts their notice. We met with a French smack while here from the island of Goree, with European produce, and made some good purchases. The natives of the islands are provided with spear, musket, and large case-knife, and are tattooed over the face and body, in every respect much resembling the Bijugas. The men wear a piece of skin round them above the hip, and the women a thick, heavy mat of grass about the waist, from which they can instantly release themselves; they wear also a kind of tippet made of grass. The immense size of their canoes, of thirty and forty paddles, and from forty to sixty feet long, and the great number of natives well armed, have a most formidable appearance. The islands are very fertile; and from the regularity of the palm and cocoa-nut tree, they more resembled ranges in poka, than wild and natural productions of such a country as this.

[To be continued.]

ZOOLOGICAL GARDENS.

THE additional ground obtained by the Zoological Society in the Regent's Park lies to the north of the present gardens, and across the road. Maintaining a part of the woody hale which now exists on that (the northern) side, there is to be a gentle sweep up to the gates, to admit of the egress and regress of visitors; while the communication between the two gardens will be effected by means of a sufficiently spacious tunnel under the road. The whole space will be about fifteen acres; and thus, what may be considered the public exhibition part of the establishment will be much extended and improved, the sights more numerous, and the habitats of the various animals better suited to their natures, as well as to the conveniences of those who come to view or study them. And this seems to be the more requisite, from the increasing popularity of this lounge; to which the mature crowd to gratify their curiosity, and the young are taken to inform their minds. So great, indeed, has the resort become, that when there, on Wednesday, we learnt, to our surprise, that no less than about £190 had been received in shillings on each of two separate days during the week!! Two thousand visitors per day!! Among the novelties which may partially account for this, we noticed the Brahmin bull (not white, as has been stated in the newspapers, but grey; and certainly a beautiful as well as interesting animal). The alligator died on Monday; but the beavers, the seal (still living, though we do not think very promising), two opossums, a young scarlet ibis, the macaws in high feather, several species of remarkable dogs, together with the usual tribes from the lion to the monkey, and the sea-eagle to the linnet,—give great animation to a spot which is in itself a delightful place of recreation. Thus, while what may be called the Metropolitan Show is so eminently prosperous, it is to be expected that, in conjunction therewith, the more useful establishment near Kingston may be made productive of real benefits to the country, by improving the breeds of animals, by naturalising foreign and exotic specimens which will adorn England, or be valuable for food and commercial purposes. There are a multitude of creatures of every kind, which, if properly cultivated (and this may be done at a distance from London, where they are not everlastingly disturbed in their habits), would enrich our rivers, our fields, our hearths, and our woods: there are even many, once indigenous, which might advantageously be introduced—from the lovely egret, through several excellent varieties of game, to the noble cock of the wood and the bustard. We trust the Society, now so largely patronised by the public, will hold these objects in view; and while it administers a laudable amusement to the inhabitants of the capital, pursue the still more scientific ends which such an institution may fairly propose as its chief title to national support and honour.

INEFFICACIOUS POISONS.

THOUGH we do not think the writer of the following letter differs so materially from us in our account of M. Chabert's exploits as to require insertion; yet, as the author of several able works on the subject of poisons,* &c. &c., we consider his letter to be rather an important corroboration of our own views.

* We would particularly recommend, as worthy of attention on this subject, Dr. Smith's "Hints for the Examination of Medical Witnesses," 12mo., recently published by Longman and Co.

Hampstead, July 11, 1890.

My dear Sir.—Pursuing that you have noticed the exploits of M. Chabert in the *Literary Gazette* of this day, and that you have introduced my name as having been present on the occasion of his private exhibition, I am anxious to point out to you a few inaccuracies into which it is not wonderful that (owing to hurry and other circumstances) you should have fallen. I am confident that your love of candour, and regard for the interests of science, upon which hangs so great a portion of human welfare, will induce you to insert this communication in the next Number of your eminent Journal.

I beg to remark, that phosphorus not being an animal substance, the application of an antidote to a poison derived from the animal kingdom in general, would have excited any suspicion as to Chabert's integrity at once; but I distinctly understood from him that he had proposed himself for that individual poison, which, in point of fact, he did swallow, and for no other. He was not aware of the scrutiny to which he was to be subjected, or else (he told me) he would have been prepared to take any one of a variety of antidotes, in the event of some saline poison having been selected. As it was, we were compelled to take him as we found him. I entirely agree with you, that he, *crassa fide*, swallowed forty grains of phosphorus, which created the perceptible alteration in the state of his system, and which did not hinder him from eating as hearty a dinner as any one present. It may not be quite irrelevant to add, that during the exploit of taking the poison I stood close to him; and that during the whole of the evening (at dinner and afterwards) he sat next to me: of these facts you yourself were eye-witnesses. A vast deal of conversation consequently passed between us, which the company in general did not become privy to; and in this incipient stage of the business, I am satisfied that Chabert is not an impostor. However, we shall put him to other trials in the course of a short time.

You are mistaken about the experiments with the arsenic. There was no vapour or emanation whatever, but of the sulphuric acid. Owing to Chabert giving me his directions in English (which he speaks imperfectly) instead of French, the arsenic was improperly introduced into the stove; but, even had the experiment completely succeeded, I should not be disposed to attach any importance to it.

As I have no doubt that Chabert (in good hands) will contribute to enlarge the boundaries of useful knowledge, and am sanguine enough to hope that he may be rendered a benefactor to his fellow-creatures, still exposed as we are to deplorable calamities, from our ignorance of remedies in many cases of poisoning,—I have as little apprehension that you will see this explanation in its proper light, and give it publicity.—I am, Sir, &c.

J. GORDON SMITH.

LITERARY AND LEARNED.

CAMBRIDGE, July 10.—On Tuesday last, being commencement day, the following Doctors and Masters of Arts were created:—

Doctors in Divinity.—The Rev. W. Dealtry, late Fellow of Trinity College, rector of Clapham; the Rev. J. Allen, late Fellow of Trinity College, prebendary of Westminster; the Rev. G. Ackland, St. John's College, rector of St. Mildred's, Bread Street; the Rev. M. J. Naylor, late Fellow of Queen's College; the Rev. S. T. Bloomfield, Sidney College, vicar of Ebbw Vale, Radnor.

Doctors in Physic.—H. S. Roots, Jesus College; G. Shaw, R. Pinckard, Caius College; J. B. Steward, Pembroke College.

Bachelors of Arts.—W. Gurdon, W. F. Bally, A. Power, Downing College; W. Goodwin, H. W. Crick, J. H. Sadler, H. Sawtree, W. Warren, J. Carver, E. R. Otter, G. Shearhead, W. Steggall, G. Otter, R. M. Budgeley, Jesus College; R. Day, F. O. Martin, R. Willis, W. H. Hanson, H. Clinton, S. Stone, T. Hulston, C. Dade, C. Paul, G. O. Miller, H. B. Leeson, J. T. Debray, J. D. Hazen, Caius College; R. O. Townshend, W. G. Cooke, Iley, King's College; J. Bishon, R. Maitland, H. Collins, J. Hodgson, W. Law, M. Prickett, H. Ashington, F. F. Plender, W. M. Heald, E. Jenkins, R. Atkinson, W. Hopwood, C. Naimie, W. Mason, M. Barnard, R. H. Lewin, W. Webb, J. D. Hales, R. B. Baker, J. Darnell, J. B. B. Clarke, H. P. Daniell, J. Fitz-Gerald, T. Stratton, J. R. Bovell, G. H. Bower, W. Overton, O. Head, J. Warner, E. A. Smedley, J. Leah, G. D. St. Quintin, D. Ricardo, C. J. Sympon, J. L. Freer, G. Thornton, P. Morton, E. Heneage, J. A. Kinglake, J. Allen, W. M. S. Marriott, T. Rawson, Trinity College; G. Hepper, G. Hodgson, W. H. R. Bayley, J. Hymers, E. B. Sparke, H. Jesson, W. Keeling, W. H. Miller, W. Metcalfe, J. A. D. Meakin, R. D. Powell, W. R. Richards, S. Revell, H. R. Verke, R. Foster, J. L. Tanner, B. Maddy, W. W. Robinson, J. H. Fladger, J. H. Marsden, J. Pedder, W. L. Butaby, H. Fox, E. Cole, W. E. Stevens, F. H. S. Say, G. H. L. Warner, J. H. Gregg, J. Greenall, J. F. Flavel, T. M. Gove, J. H. Rowlett, F. J. Hall, F. E. Grettton, N. Hubberty, T. Hooley, F. Coleridge, W. H. Foster, G. F. P. Smith, E. Gibson, D. R. Pearson, E. Lowe, St. John's College; J. G. Milne, W. Stone, B. F. Couch, S. Hudson, R. M. Poore, St. Peter's College; T. Booner, J. Champion, J. V. Coombe, Clare Hall; R. South, R. T. Fisher, J. H. Sympon, J. W. Budd, Pembroke College; W. M. Farish, J. Bragg, P. Booth, W. Wells, Corpus Christi College; R. Clutton, A. H. Small, W. Jones, G. Annals, H. P. Blencowe, C. Tyrell, R. Wilson, Emmanuel College; J. Rawlings, T. Bell, T. Clark, J. Simons, J. Harrington, N. Chalmers, R. Geyroynne, H. Bagnall, T. Ramsay,

Queen's College; J. Pedder, G. Wallington, T. S. Green, E. J. Sams, O. A. Heywood, Christ College; J. Gibson, H. Alford, W. Sykes, W. B. Harrison, G. Gibbons, G. G. Wyatville, A. Boulton, Sidney College; J. Gibson, Catharine Hall; G. Marriott, T. L. Cooper, T. Hubbard, T. Wood, Magdalene College.

At the congregation on Saturday last the following degrees were conferred:—

Bachelors in Divinity.—Rev. J. N. White, St. Peter's College; Rev. J. Thomas, St. John's College.

Bachelor in Civil Law.—Rev. W. B. Hall, St. Peter's College.

Bachelor in Physic.—L. R. Willan, St. Peter's College.

Bachelors of Arts.—C. Q. Constable, Trinity College; B. Smith, Magdalen College; W. F. Raymond, St. Peter's College.

At the congregation on Monday, the following gentlemen were admitted:

Bachelors in Civil Law.—Rev. G. Pocock, Trinity Hall; H. Prendergast, Esq., Trinity College; Rev. A. B. Russell, Emmanuel College.

At the same congregation the Rev. W. S. Phillips, B.D., late Fellow of Trinity College, Oxford, was admitted *ad eundem*.

At a congregation yesterday, the Rev. E. Cox, of Trinity College, and T. Newbery, of Queen's College, were admitted Masters of Arts; and the Rev. R. Grewell, M.A., Fellow and Tutor of Worcester College, Oxford, was admitted *ad eundem*.

ASIATIC SOCIETY.

JULY 11th. Colonel C. Doyle in the chair.—Chandos Leigh, Esq., T. J. Pettigrew, Esq., E. Russell Mardon, Esq., Thomas Tod Mardon, Esq., John Stewart Sullivan, Esq., C. N. Palmer, Esq., M.P., and Colonel M. Stewart, were severally balloted for and elected. Baron Vander Capellan, his Excellency Don F. de Zea Bermudez, Spanish ambassador, Professor Wilken of Berlin, and M. Edouard Thayer, were elected foreign members. The reading of Tansch's paper on Circassia was concluded: the author was an *employé* of government with the Circassians. In this paper he strongly urges an intercourse being kept up between that country and more civilised nations, as the only means of effecting a favourable change of character. Mr. Goldingham was elected a member at the last meeting.

ECCLIASTICAL ANTIQUITIES.

AMONG the curious relics of antiquity recently discovered in the tomb of St. Cuthbert, at Durham, are part of the pontifical vestments of a bishop, consisting of a maniple and stole, in a high state of preservation. These interesting remains having been, by the permission of the dean and chapter, forwarded to London, are now in the Tower, consigned to the care of that able antiquary Mr. Petre, under whose superintendence a set of drawings, forming perfect fac-similes of the originals, are now in the course of execution, at the expense of the Antiquarian Society. The gold lace, which appears to be constructed solely of fine gold wire, partially flattened, and without any admixture of silk thread, retains its metallic colour and brilliancy almost as freshly as when it was first put on, 900 years ago; nor is the ground-work on which it is laid in a greater state of decay. By an inscription in embroidery, perfectly legible to the most inexperienced eye, these robes appear to have been the gift of Ælfred to Frithstan,—a circumstance which at once fixes their date, beyond all dispute, to the earlier part of the tenth century. In the whole catalogue of English bishops there is but one Frithstan, or Frithstan, who, according to all the most received authorities, succeeded Denewulph in the see of Winchester, A.D. 909, being one of the seven prelates simultaneously consecrated by Plegmund, Archbishop of Canterbury, in pursuance of the mandate issued by King Edward the elder (son and successor of the illustrious Alfred), as the condition of removing the papal interdict under which the kingdom had been placed, in consequence of a previous neglect in

filling up certain vacant bishoprics. Bishop Godwin, in his work *De Prasulibus Anglie*, assigns, indeed, the year 905 as the date of this transaction; but his learned annotator, Richardson, proves that Denewulph's decease did not take place till 909; while both the Saxon Chronicle and Florentius speak of St. Frithstan as in possession of the see in 910. This Denewulph, according to some of the earlier writers, was the very swineherd of whom the popular tradition goes, that Alfred, having taken refuge in his cottage, acted as his servant, and was so grievously vituperated by his wife for letting her cakes burn. On the expulsion of the Danes, the grateful monarch, says the story, finding his late master tolerably shrewd, and not altogether illiterate, sent him to Oxford, and eventually raised him to the see of Winchester. It is almost a pity that Wharton, in his *Anglia Sacra*, has demolished this account by an appeal to dates, which, like Lord Mayor Beckford's "facts," are "stubborn things." That Frithstan was his immediate successor, however, Malmesbury, Florentius, Ingulphus, and others, all concur in affirming, as also that he held the bishopric till 931, when he resigned it, and was succeeded by Brinstan. St. Frithstan survived his abdications only a twelvemonth, dying in the odour of sanctity A.D. 932. Between these two periods, then, viz. 910 and 932, we must fix the date of these his relics. With respect to the lady who bestowed them on him, and by whose fair hands they were perhaps embroidered, we cannot arrive at the same degree of certainty, inasmuch as there were no less than three illustrious ladies of the name of Ælfred in existence during the period above mentioned. Of these, one was daughter to King Alfred, a second stood towards him in the relation of daughter-in-law, and the third was his grand-daughter. The first has obtained a distinguished name in the chronicles of our Saxon ancestors, as one of the most stirring, valorous, and wise princesses in our island's history. She married Ethelbert, Earl of Mercia, whom she survived; and afterwards rendered the most material service to her brother Edward, both in the field and cabinet, towards the subjugation of his Danish enemies. The third became a nun in the abbey at Winchester; and she it was, in all probability (judging, however, from that circumstance alone, in the absence of all other testimony), who made this handsome present to her diocesan. Among the figures worked in the embroidery, are those of Sixtus, Gregory, St. Laurence the deacon, &c., with several other saints and popes, which afford a very pleasing illustration of the costume of the period, and the then state of the art of embroidery. The drawings are going on with great care and accuracy; and we do not doubt but that the engravings hereafter to be taken from them will be executed in such a manner as to be equally creditable to the artists and patrons.

FINE ARTS.

NEW PUBLICATIONS.

Nature. Painted by Sir T. Lawrence; engraved by G. T. Doo. Moon, Boys, and Graves.

NATURE, and English *Nature* too, in a rich and happy exhibition of infantile loveliness. An exquisite little girl is fondling a younger child; and the group is, we think, the most charming that ever proceeded even from the President's pencil, delicious as it is on such subjects. The engraving by Doo is worthy of the picture; apparently slight, but producing

the finest effects of harmony, expression, light, and shadow.

View at Brighton. Painted by Copley Fielding; engraved by C. G. Lewis. Same Publishers.

ANOTHER beautiful specimen of art, though of a different kind. It faithfully represents the shore at Brighton, with fish landing, &c., vessels at sea, and the town on the left. It is sweetly executed.

The Rustic Wreath. Painted by W. F. Witherington; engraved by G. H. Phillips. Same Publishers.

A GOOD third to complete this trio of engravings so honourable to the state of our arts. It contrasts well, too, with the elegance of Lawrence; for here we have a country lass twining a wreath about a child's bonnet, while the youngling is in all the ecstasy of a romping attitude, with a shepherd's dog watchful. There is great simplicity and truth in the design, and the look of the elder is uncommonly pleasing.

ROME.

AMONG our young and rising artists at Rome we have, in a letter just received, a very favourable report of a sculptor of the promising name of Wyatt, and, we believe, nearly related to the able individuals so highly appreciated in England, from Windsor-ville to Hyde Park Corner and elsewhere. To form a third distinguished artist in union with such men as Campbell and Gibson, is no small honour to the British school in Italy. Among his commissions, Mr. Wyatt is executing a statue rather smaller than life for Sir M. W. Ridley; a monument for the lady of Lord Barrington, and another for the late Mrs. General Buller; and, we believe, also a group for Sir Robert Lawley. He unfortunately, however, met with an accident lately in visiting, in company with some brother artists, the scene of the earthquakes near Albano Marino, — his horse falling with him, and broke his thigh. He was doing well when the accounts came away; but the injury would of necessity retard his labours for a while.

ORIGINAL POETRY.

TO THE SUN-FLOWER.

BRIGHT emblem of passion ambitiously high,
Unchangeably constant, and fervent as pure,
Asks thy love unattainable sympathy's sigh,
Or do feelings like thine their own guerdon insure?

O selfish, and dead to the generous fires
In bosoms impassioned as tender that glow,
Were he who in love that so proudly aspires,
Unhoping return, should discover but wo!

Or is't not for man, with adventurous mind
Each purpose by energy wont to achieve,
To judge how fond woman, each self-thought resigned,
Can rejoice ev'n in triumphs that doom her to grieve?

He knows not, upon those magnificent rays
Their own beauty imparting to Nature around,
How exulting thou dwell'st with devotion's
And of life's choral gratitude drink'st the glad sound.

What though from his throne's exaltation, the Sun

On his lowly adorer bestow not a thought,
His triumphant career thou enjoy'st as 'tis run,
And with sympathy's glow thine existence is fraught.

When, dispersing the shadowy gloom of the night,
Dawn's roseate tints flush the sky's colder
From dreary obscurity wakening to light,
Thou smile'st on the promise of morning's gay hue.

When the orb, of heat, light, and existence the source,
[his power,
Bursts from thralldom below, in the pride of
With delicious emotion thou follow'st his course,
[flower.

And deck'st in his own golden radiance thy
Even when tow'rd's his setting thine idol declines,
His track thou pursuest with joy undepressed;
Nor whilst in his splendour the universe shines,
Do forebodings of sorrow intrude on thy breast.

When the lord of thy passion and life disappears,
The reflection of glory in heav'n that is left,
So sweetly of absence the loneliness cheers,
That scarce of his influence seem'st thou bereft.

And—O how unlike to the sorrows of man!—
To thee shall each morrow thine idol restore;
No dreary abandonment blights the brief span
Of a creature but fashioned to gaze and adore.

There are, 'mid the heirs of humanity's pride,
Whom desolate widowhood slowly destroys;
Or, selfishly cold, through existence who glide,
Unconscious alike of its sorrows and joys.

O many with pity who look, or disdain,
On a passion so humbly aspiring as thine,
Might envy emotions whose rapturous pain
Thou wouldst not for all their enjoyments resign!

M. M.

SUR LE TEMPS QU'IL FIT A LONDRES* EN MAI 1829.

QUEL astre de malheur, sur cette ville immense
Exerçant nuit et jour une noire influence,
Y vient éterniser, au milieu du printemps,
Des rigueurs que l'hiver prodiguait si long-temps?
Quoi! verrons-nous sans cesse et le froid et la pluie

De la grêle et des vents imiter la furie,
Pour tantôt à la fois, et tantôt tour-à-tour,
Se disputer entr'eux tous les instans du jour?
J'ai beau chaque matin, au retour de l'aurore,
Pour dissiper enfin l'ennui qui me dévore,
Offrir des vœux au ciel, et prier le soleil
De venir quelquefois éclairer mon reveil:
J'ai beau me persuader qu'à midi, plus traitable
Le temps, pour m'épargner de paraître coupable,
Me permettra du moins, par faveur, par pitié,
De remplir les devoirs qu'impose l'amitié:
Le matin, à midi, trompé dans mon attente,
Et déjà de la faim sentant la loi pressante,
J'ai beau croire le soir que du moins pour dîner
Je pourrai chez mon hôte aller sans me noyer:
C'est toujours le brouillard, enfant de la Tamise,
C'est le vent, c'est la pluie, à leurs ordres soumise,

[efforts

Qui m'attendent partout, et joignent leurs
Pour troubler mon esprit, et glacer tout mon corps.
Quel diable de pays!—O beau soleil de France!
Ne viendras-tu jamais, par ta douce présence
Dissiper les frimas, et chasser l'aquilon,
Qui désolent encor les beaux champs d'Albion?
Soleil! à ma prière, une fois plus docile,
Détourne tes chevaux aux murs de cette ville,

* The above remonstrance and complaint of a French poet, on a visit to London, being as applicable to the weather of July as to that of May, we insert it as a part of our meteorological records for the present year.—Ed.

Par tes rayons dorés viens charmer mes ennuis,
Et me faire oublier le séjour de Paris.

Approche, astre brillant, et bientôt la Nature,
Pour plaire à tous les yeux, reprendra sa parure;
Bientôt Flore et Zéphire, à l'or de leurs cheveux,
Mariant et la rose et le myrte amoureux,
Verront, près de l'Amour, folâtrer sur leurs traces,

Les Ris et la Beauté, les Plaisirs et les Graces;
Tandis que le ramier, en l'honneur du beau temps,

Fera gémir Echo de ses heureux accens;
Ou que, sur le peuplier, la tendre Philomèle
Répondra par ses chants à l'époux qui l'appelle,
Et contant ses amours aux habitants des bois,
Leur fera de Cythère aimer aussi les loirs.

DRAMA.

OPERA SINGERS.

IT is not easy to please the whole tribe of Opera singers and dancers, and their friends and admirers. We have had an anonymous letter dated *Regent's Park*, and put into the twopenny post in *Tower Street* (!), charging us with being unfavourable to Malibran. The reverse is the fact: we have spoken most highly of her; and when we have been obliged to point out her errors, have almost invariably stated that she had powers of every kind, which, properly directed, must place her at the head of her profession. But we cannot praise extravagance of action or singing; nor capriciousness of conduct, interfering with the public gratification. On the contrary, we applaud Malibran's accepting and making a great deal of a slight part on Thursday night (how much more meritorious than throwing obstacles in the way on every occasion!); and also willingly insert the following explanation (such as it is) from Curioni:—

186, Piccadilly, 11 Juillet, 1829.

Monsieur le Rédacteur, — Il y a un article dans votre Journal d'aujourd'hui, où vous dites que Madame Malibran faisait du tort aux préparatifs que j'avais faits pour mon bénéfice de Jeudi dernier. Pour l'honneur de la vérité je dois dire, qu'après l'accident arrivé à Madame Malibran, elle m'avait fait prévenir qu'il lui était impossible de jouer un rôle aussi fatigant que celui d'*Orsica*; mais elle a eu la complaisance d'ajouter, qu'elle était prête à jouer dans l'un des trois opéras suivants—*Don Giovanni*, *Il Barbier*, ou *Le Nozze di Figaro*. Ayez la bonté, monsieur, d'insérer cette déclaration dans votre prochain numéro, et recevez l'assurance de ma parfaite considération.

Votre très humble serviteur,

CURIONI.

AT the English Opera House, the *Robber's Bride*,—the music by Ries, and adapted by Hawes,—has been produced with much effect. The concerted pieces are very fine; and the amateurs of music have a great treat in hearing them, executed as they are by the superior musical skill and strength of this house.

The Adelphi terminated its justly most successful *interludary* season on Wednesday: Mathews and Yates have only to be at home in this style for a few seasons, to make very comfortable homes for themselves during the rest of their lives.

VARIETIES.

M. Abel, the celebrated, though young, mathematician of Christiania, died recently. He had been invited to settle at Berlin, as Professor in the School of High Sciences, the foundation of which has been proposed by M. Humboldt.

Shipwrecks.—A Society for the relief of shipwrecked persons is spoken of in Paris.

Antiquities.—Accounts from Rome state, that the researches making there continually bring to light new archaeological treasures; and the number of Etruscan vases discovered is report-

ed to amount to more than 5000, among which there are at least 200 which have Grecian inscriptions. A catalogue of the latter has just been published; and it is likely to excite much curiosity among antiquaries. Many of the vases described in this catalogue will probably tend either to confirm or destroy the conjectures which well-known archaeologists have made respecting similar vases which had been previously discovered in other localities, and whose bad state of preservation rendered explanations difficult or doubtful. Among the objects found at Canino, are a considerable number of antique jewels in gold, and several small bronze figures executed in very good style.

At the last sitting of the Academy of Sciences of Paris, several papers were read from the commission in Greece under the direction of M. Bory de St. Vincent. These papers were sent, in the first instance, to the minister, by whom they were forwarded to the general commission charged to receive the documents relating to Greece; but the request of M. Bory to have them submitted to the Academy has been acceded to. Messrs. Cuvier, Geoffroy St. Hilaire, and Desfontaines, were directed to examine the papers in question, and to report upon them. At the same sitting, M. Bourgive presented to the Academy a new method of tanning leather; by which means, a process that now requires three years may be perfected in four months. M. Chevallier also announced to the Academy, that he had discovered a process by which ancient monuments could be cleaned in a much more effective manner than by scraping. The process of M. Chevallier consists in rubbing the article to be cleaned with a brush dipped in water sharpened with hydrochloric acid, in the proportion of twelve ounces to a pail of water.

To preserve Cherries.—The best way to preserve cherries is to procure some of the common cherries very ripe, and add to them two pounds of sugar, four pints of brandy, four ounces of clove pinks, and a few Morel cherries; bruise some of them with the hand, and boil them over a slow fire, until they have the consistency of syrup. They are then to be strained, and the juice is to be poured into the mixture as before ordered, which is to be left in infusion, and exposed to the sun for a fortnight or a month. By this process the cherries will have a very fine flavour. A few cloves may be used as a substitute for the clove pinks.

To make Syrup from Currants.—Take 100 pounds of ripe currants; having carefully removed the stalks, put them into a vessel on a fire, and let them get just so hot that the greater part shall burst, or the pulps become discoloured. Pour them out gradually into a sieve, and add five pounds of cherry juice, prepared in the same way, to that of the currants. Let the liquor be placed in a cool cellar, and thirty-six hours afterwards the jelly must be strained over clean cloths. By this means about forty pounds of clarified syrup will be obtained, into which you must put about seventy ounces of the best sugar, and the syrup may then be bottled off till it is wanted. (From a work on domestic economy published in Paris.)

Egypt.—This fertile country yields, to every grain sown, fifty grains of corn, fifteen grains of barley, eight to ten of maize, and twenty-four grains of rice. Its other agricultural productions are, linseed, beans, peas, lupins, and flax, which give abundant crops. One moiety of its produce of wheat, beans, and peas—one-third of that of maize—and two-thirds of its produce of flax and rice, are left over from its

domestic consumption, for the purposes of exportation. Of cotton—the better species of which resembles the best kind of Brazilian—more than 200,000 cwt. have been brought to market in one year; though the cultivation of this article has not been pursued above seven years. The sugar-cane is grown in Upper Egypt, and produces between 40,000 and 50,000 cwt., one-half of which circulates as merchandise, in a raw state. Were this article treated with proper skill and attention, it might not only be cultivated with much profit and to an immense extent, but would be found, from its intrinsic excellence, far superior to any West India produce for the refiner's use. The raising of indigo has been attempted, on a considerable scale, and with great success, of late years; and of this product 60,000 oka, or 135,000 pounds, have been sold, from one twelvemonth's growth. The finest of the three qualities which are raised is esteemed quite equal to the best East India indigo. Some Christian settlers from Syria have begun the cultivation of silk; but nothing certain is yet known as to its fitness for the purpose of exportation. Nature has endowed this country with a lavish hand—whether we look at its capabilities for vegetable or animal productions; and Mengin* has calculated, that if it enjoyed the advantage of a mild and intelligent government, it might, independently of a considerable export-trade, be rendered capable of maintaining a population of 8,000,000 of human beings: whereas, under the iron grasp of its present ruler, it does not support above 2,500,000, including 3,000 Jews, and 170,000 Christians of various persuasions; but exclusive of fifty tribes of Arabs, whose numbers amount to 120,000, or thereabouts, dispersed in villages, or following a nomadic life. The same writer estimates the annual revenue at £2,000,000—one-half of which is derived from the miri, or land-tax—the regular force, trained after the European fashion, at 10,000 infantry, 9,000 cavalry, and 1,200 artillery—and the irregular, at 36,000 infantry, and 6,000 men mounted on horses and dromedaries.

Lancasterian Schools in France.—Several Lancasterian schools have been established in the French provinces during the last two months, notwithstanding the opposition of the clergy. About a fortnight ago, one was opened at Cambrai, by subscription, to which the municipality contributed very liberally. Hitherto, these schools were not permitted to have any books which were not approved by the curé of the parish; but this restriction is now done away with, and the choice of books is left to the discretion of the trustees.

Micrometer.—In one of the late Nos. of Beck's Repertorium, an account is given of a Mr. Skiadan's (a Russian) invention of a micrometer capable of measuring the thousandth of an inch with accuracy.

Marriage: an Epigram.
In the very worst marriage there's one thing that's good!
A blessing to lessen the pain;
For a man when fast tied to a wife, by the road,
At least, cannot marry again!—Benedict.

Canterbury, July 10th, 1829.

Sir,—If you think the following worthy of a place in your paper, you will oblige by inserting it. The name Napoleon, if written in the Greek characters, and the first letter taken away perpetually, is, when translated, singularly descriptive of the character of the celebrated "little Corsican officer."

* Histoire de l'Egypte sous le Gouvernement de Mahomed Aly.

ΝΑΠΟΛΕΩΝ
ΑΠΟΛΕΩΝ
ΠΟΛΕΩΝ
ΟΛΕΩΝ
ΛΕΩΝ
ΕΩΝ
ΩΝ

which constitutes the regular Greek sentence, *Ναπολεων απολειων πολειων λειων των ανων*, and is to be rendered thus: "Napoleon being a destructive lion going about destroying cities."

N. B.—These initials, signifying Napoleon Buonaparte, when written in the Greek, thus —νβ', mean 52, the year of Napoleon's age when he died. I am, &c. A. J. E.

Regius Scholæ Salopianæ Alumnus.

LITERARY NOVELTIES.

Proposals have been issued by Messrs. Carpenter for publishing a Series of Twenty Subjects from the Works of the late R. P. Bonington, in Parts; and lithographed by J. D. Harding. From the anxiety to possess his drawings evinced at their sale a fortnight ago, we anticipate that these fac-similes will be very popular. We have seen a fine portrait of Bonington by Mrs. W. Carpenter, which we are glad to find is to be engraved for this publication, and accompanied by a memoir of the original.

The author of that strange volume the *Revolt of the Bees*, announces Hamden in the Nineteenth Century, or Colloquies on the Errors and Improvement of Society.

Literary Forgeries.—We are assured that the Parisian Memoirs of a Lady of Quality, by Madame du C—, is the work of three young men (not of Madame du Cayla, as insinuated), one of them the projector of the *Soirées de Sir Walter Scott*; and that the *Mémoires d'un Pair de France*, et ex-Sénateur de Buonaparte, is in fact done by a novelist of the name of La Motte Langon;—so that fictitious authorship is not confined to London, nor are our writers the only persons who assume titles that do not belong to them.

In the Press.—Vol. III. of the *Olio*, or Museum of Entertainment, with more than thirty engravings.

LIST OF NEW BOOKS.

Longitude ... 0° 3' 51" W. of Greenwich.

✂ Two of our Meteorological Journals have, we fear, miscarried; but we shall make inquiry concerning them, that there may be no gap in the year's register.

TO CORRESPONDENTS.

J. H. E. could hardly suppose his "imprisoned doves" would be loosened by us.

The writer of the Essay on Lord Bacon will find a packet addressed to him at our office.

The Edinburgh Weekly Journal is generally better informed than it appears to have been on Wednesday last, where it comments on our news respecting Captain Ross. Had the writer perused our *Gazette* of the preceding Saturday (which he ought to have done before he censured, if not in the course of his duty as a purveyor for the public information), he would have seen that his remarks were utterly irrelevant and uncalled for, and that we had published, four days before himself, intelligence from the worthy captain two days before he possessed it. Thus it is to find fault without due inquiry: we trust our esteemed contemporary will set himself and us right with his readers.

Turkey presenting at this period one of the most interesting points for inquiry, we have admitted two Reviews of works referring to it into this No.

ADVERTISEMENTS

Glasgow, July 24th, 1850.

EDINBURGH REVIEW. Advertisement.

ments, Notices, &c. to be inserted in the General Advertising Sheet of the forthcoming Number of the Edinburgh Review, are requested to be sent to Longman and Co. Paternoster Row, by the 25th of July; and Prospectuses, Catalogues, Bills, &c. to be stitched in the Number, not later than the 1st of August. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

MR. VON BROMHOLL. A Family are

most anxious to communicate with Mr. Charles von Bromholl, who is supposed to reside in some part of Germany, and who has lately transmitted to a Member of that Family some Documents from a Gentleman deceased. Some letters appear to have been sent by means of a Mr. Affleck, of London; and it is earnestly requested that this Advertisement should meet the eye of Mr. Affleck, he will write to Mr. Dodd, Solicitor, Billiter Street, Ludgate Hill, London, and appoint a time for an interview; or Mr. Dodd will feel greatly obliged to any Friend of Mr. von Bromholl who will favour him with that Gentleman's Address.

PRIVATE TUITION, preparatory to the

Universities. A married Clergyman of the Established Church, a Graduate of Oxford, resident in a very salubrious and romantic Part of North Wales, is desirous of taking Three or Four Pupils, between the Ages of 12 and 16. The Number being limited to Four, the Terms, including every ordinary charge, are 100 Guineas. French will be taught (if required) by a Native of France.

Address, B.A., to the care of Mr. Phoenix, Bookseller, No. 17, Fleet Street, London.

BOOKS PUBLISHED THIS DAY.

In 2 vols. post 8vo. with a coloured Map, price 17. 11s. 6d.

TRAVELS IN NORTH AMERICA,

in 1827 and 1828. By Captain BASIL HALL, R.N.

Printed for Cadell and Co. Edinburgh.

Who have just published, in royal 4to. price 10s. 6d. sold separately.

Forty Enchiridia, from Sketches made in America with the Camera Lucida, by Captain Hall.

As above may be had,

1. Anne de Geierstein, by the Author of Waverley, 3 vols. 12. 11s. 6d. Just published.

2. The Practice of Cookery, adapted to the

Business of every-day Life. By Mrs. Dalrymple. In 1 thick vol. 7s. 6d. Just published.

"This is by far the most complete and truly practical work which has yet appeared upon this subject. It will be found an inimitable cook's companion, and a treasure of great price to the mistress of a family."—*Edinburgh Literary Journal*, 18th April.

"We consider we have reason strongly to recommend Mrs. Dalrymple as an economical, useful, and practical system of cookery, adapted to the wants of all families, from the tradesman to the country gentleman. It is not a gourmand's book, nor does it pretend to be; and though we shall not put away Kitchiner for Mrs. Dalrymple, as he is far more copious than they are, for more various, and to us more novel."—*Spectator*, June 12.

French Language.

ABLE PLACES in the WORLD, with brief Notices of the Principal Historical Events, and of the most celebrated Persons connected with them; to which are annexed, References to Books of History, Voyages, Travels, &c. intended to promote the Improvement of Youth in Geography, History, and Biography.

By THOMAS BOURNE.

Teacher of Writing and Geography, Hackney.

"We are happy to see the favourable opinion we have already expressed of this useful work, confirmed by the appearance of a third edition. For general reference it is superior to any of the same size, and as a school-book has no competitor."—*New Monthly Magazine*.

"Mr. Bourne's plan is a very good one, and very pleasantly executed."—*Literary Gazette*.

"I think that Mr. Bourne's particular object in forming it, and the great labour and research which have been made subservient to it, deserve the success which it has experienced, and the good opinion which we now readily pronounce on it."—*Monthly Review*.

London: Sold by Samuel Leigh, 18, Strand; J. Harris; Harvey and Darton; and Simpkin and Marshall.

CAIN, the WANDERER; a VISION of HEAVEN; DARKNESS; and other Poems.
By
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

New edition, connected to the present period, inscribed, by permission, to His Most Gracious Majesty, bound in 1 very large vol. price 12. 12s.

BURKE'S DICTIONARY of the PEBBAGE and BARONETAGE of the BRITISH EMPIRE.

Compiled from the Communications of the Nobility, with upwards of 1800 Plates of Arms, and containing Descriptions of the Armorial Bearings of each House.

"The work which Mr. Burke has just given to the public is equally well planned and well executed. Great ability is shown in the condensation of all the requisite matter into one thick volume, which, owing to the clear and beautiful mode of printing and engraving, is justly entitled to be called a cheap one, not only in comparison with the tedious and expensive works on the same subject, but in reference to the quantity of reading it contains, and the superior style of its execution."—*Standard*.

REVIEW OF NEW BOOKS.

Memoirs of his own Life and Times. By Sir James Turner. M.D.CXXXII.—M.D.C.LXX. From the original MS. Printed at Edinburgh, 1829.

THIS quarto volume of 300 pages, though printed by the Bannatyne Club of Scotland, has, fortunately in our opinion, been considered the repository of so much curious matter as to justify the general publication of a limited number of copies.* When we state that this autobiography of Sir James Turner furnishes the remarkable history of the prototype of the famous Dugald Dalgetty, we say enough to interest every reader in the work. But it is still more important in a higher point of view, being one of those narratives which throw a certain light over the times of which it treats, and enable posterity to compare conflicting testimonies, so as to elicit the truth—to form correct ideas of men and things,—and, while fairly appreciating political and national concerns, be enlivened with those glimpses of inferior character and domestic manners which are far more agreeable and entertaining.

Of the authenticity of this manuscript, no doubt whatever can exist; it bears internal evidence of its fidelity, which is far stronger than even the satisfactory account of its transmission to the present day, furnished by the preface. We miss, however, a slight biographical sketch of the writer's lineage and family. At seventeen years of age, having passed through the schools, young Turner was sent to Glasgow University; but neither at school nor college does he seem to have had any powerful vocation to learning. On the contrary, at eighteen, having a restless desire to be an actor, or at least a spectator, in the wars "which made so much noise over all the world, and were managed against the Roman emperor," he obtained the consent of his friends, and in 1632 joined the Swedish forces of Gustavus Adolphus, as an ensign in the Scots auxiliary regiment, commanded by Colonel Lumsdaine. Serving with this regiment, and its English companion under Colonel Ashton, our hero took part in many a bloody fray, and became inured to the hardships and privations, which, alternating with plunderings and excesses, made the soldier of fortune of that period. He tells us:

"In the beginning of the year 1634, our English and Scotch regiments, such as they were, came to be quartered at that Oldendorpe neere to which the battell was fought. I was lodged in a widows house, whose daughter, a young widow, had been married to a ritt-master of the emperors. She was very handsome, wittie, and discreet; of her, though my former toyle might have banished all love thoughts out of my mind, I became perfittie enamoured. Heere we stayd six weeks, in which time she taught me the Hie Dutch, to reade and write it, which before I could not learne bot very

rudlie from sojors. Having then the countrey language, I learned also the fashions and customes of the Germane officers; and about this time was both regiments reduced to two companies; tuo capitaine lieutenants, and tuo ensigneys, (whereof I was one,) onlie ordaind to stand; all the rest casheerd, and in great necessitie and povertie. The tuo companies were bot badlie used, tossed to and fro, in constant danger of ane enemy, and without pay. Bot I had leard so much cunning, and became so vigilant to lay hold on opportunities, that I wanted for nothing, horses, clothes, meate, nor moneys; and made so good use of what I had learned, that the whole time I servd in Germanie, I sufferd no such miserie as I had done the first year and a halfe that I came to it."

About this time his father's death recalled him to Scotland; but he speedily returned to his adventurous career, and presents us with the following ruthless picture of the horrors of war in those days.

"In the year 1637 I went with some commanded men, with Lieutenant Generall King, into the land of Heesen, to assist the landgrave to beate some imperiall regiments out of his territories, who indeed were making havocke of all among his poore subjects. Upon our approach they retir'd; bot though we were tuo to one against them at least, and that Bigod, who commanded them, made a stand at Eschvegen, yet did we retire in great haste, though in good enough order, back to Cassels, the landgraves residence and capitall citie, and left the poor countrey to the mercy of ane enraged enemy, who had order by fire and sword to force the landgrave to accept of the peace of Prague. Neither did Bigod desire to burn three faire townes, Eschvegen, Olendorpe, and Vitsenhausen, before our eyes. A mournfull sight it was, to see the whole people follow us, and clime the tuo hie rockes which flanked us. Old and young left their houses, by the losse of them and their goods to save their lives. Aged men and women, many above fourscore, most lame or blind, supported by their sonnes, daughters, and grandchildren, who themselves carried their little ones on their backs, was a ruthfull object of pitie to any tender-hearted Christian, and did shew us with what dreadfull countenance that bloodie monster of warre can appear in the world. Neither did our feare (which often masks itself with reason of state, as then it did) permit us to make any stay at Cassels, bot pousd us with some haste to Westphalia."

Some differences having arisen with his commanders, in 1639 Turner paid another visit to Scotland, and afterwards went to Stockholm to endeavour to obtain redress; failing in which, he finally came back to his native land, in principles as genuine a Dalgetty as ever was drawn.

"I had (he candidly confesses) swallowed without chewing, in Germanie, a very dangerous maxime, which militarie men there too much follow; which was, that so we serve our master honestlie, it is no matter what master

we serve; so, without examination of the justice of the quarrell, or regard of my duetie to either prince or countrey, I resolved to goe with that ship I first rencounterd. After tuo days necessare stay at Gottenberg, I hired a boat and went away in the evening; we rowed all night; and haveing pasd tuo Suedish castles, about breake of day we came neere Millstrand. Understanding the wind blew faire for both ships, I was advisd to step out and goe a foot straight thorough the tounne to the shoare, it being the neerer cut, whill the boat went a greater way about with my servant and coffer. I did so, and came just there as the Englishman was hoyseing his sailes. I askd him if he wold give me passage to Hull (a place I have since beene too well acquainted with), who told me he wold with all his heart, provided I wold presentlie step in. I beseeched him to stay till my servant and coffer came, without whom I could not goe; but no in-treatie or prayer could prevaile with the inexorable skipper—for away he flew from me, as ane arrow from a bow. This onlie hinderd me to present my endeavors to serve the king against the Covenanters. I calld instantlie for the Dane who was bound for Scotland, resolving to serve either the one or the other without any reluctance of mind; so deeple was that base maxime rooted in my heart. The people pointed with their fingers to the ship, which had got a great way out from the shoare, and stayd there for a passenger whom the skipper had promisd to carry to Edinburgh. He was ane old man, who at taking his farewell of his friends the night before, had drunke so much that he had sleepd his time. Immediatlie I clapt in fresh men in my boate, the others being overwearied with rowing, and so came to the ship; neither did the skipper make any scruple to ressave me, thogh at first he conceaved his old man was in my companie. To the neglect of this old man, nixt to all-ruling providence, may I attribute my goeing at that time to Scotland. On the sixth day after my embarkeing, we saw ourselves not farre from Aberdeene. I was glad we were so farre north, because I had heard the kings ships were in the frith; bot I was mistaken, for they were gone; and no matter they had been gone sooner, for any good service they did the king there. The skipper set me ashore at a place called the Cove; from thence I hired horses to Edinburgh. This was in the month of September; and Generall Leslie haveing marchd into England with a numerous armie at the Lambes before, and put my Lord Conway with some of the kings forces to a shamefull retreat at Newburne, had made himself master of Newcastle and all the bishoprick of Durham. I found this successe had elevated the minds of my countrey men in generall to such a height of vanitie, that most of them thought, and many said, they sould quicklie make a full conquest of England." [He accordingly joins the strongest party, goes to Newcastle, and is made a major in the rebel army; but] "All

* In about a fortnight, by Messrs. Longman and Co., see our Edinburgh letter advice.—Ed. L. G.

this while (he adds) I did not take the National Covenant; not because I refused to do it, for I would have made no bones to take, sueare, and signe it, and observe it too; for I had then a principle, haveing not yet studied a better one, that I wrongd not my conscience in doeing any thing I was commanded to doe by these whom I served. Bot the truth is, it was never offerd to me; everie one thinking it was impossible I could get into any charge, unles I had taken the Covenant either in Scotland or England."

Serving with the Covenanters, but frequently negotiating with others to desert them for the royal cause, circumstances kept our easy-conscienced soldier true to his engagements; and in 1643 he went in Sinclair's regiment against "the rebellious Irish." His descriptions of this warfare are very striking; and we select a few examples:

"After we had refreshed a little, Major-General Monro left seven or eight hundreth men in Craigfergus, and went to the field with the rest, among whom was my lieutenant-colonnell and I; my Lord Conway went along also with neere two thousand English. In the woods of Kilwarning we rencountered some hundreths of the rebells, who after a short dispute fled. These who were taken got bot bad quarter, being all shot dead. This was too much used by both English and Scots all along in that warre; a thing inhumane and disavouable, for the crueltie of one enemie cannot excuse the inhumanitie of ane other. And heerin also their revenge overmasterd their discretion, which sould have taught them to save the lives of these they tooke, that the rebells might doe the like to their prisoners. Then we marchd straight to the Neurie, where the Irish had easilie seizd on his majesties castle, wherin they found abundance of amunition, which gave them confidence to proclaim their rebellion. The fortification of the toune being bot be-gunne, it came immediatlie in our hands; bot the rebells that were in the castle keepd it tuo days, and then deliverd it up upon a very ill-made accord, or a very ill-keepd one; for the next day most of them, with many merchands and tradesmen of the toune, who had not beene in the castle, were carried to the bridge and butcherd to death, some by shooting, some by hanging, and some by drowning, without any legall processe; and I was verilie informed afterwards, that severall innocent people sufferd. Monro did not at all excuse himselfe from haveing accession to that carnage, nor coulde he purge himselfe of it; thogh my Lord Conway, as Marshall of Ireland, was the principall actor. Our sojors (who sometimes are cruell, for no other reason bot because mans wicked nature leads him to be so, as I have shoune in my Discourse of Crueltie) seeing such pranks playd by authoritie at the bridge, thought they might doe as much any where els; and so ranne upon a hundreth and fiftie women or thereby, who had got together in a place below the bridge, whom they resolv'd to massacre by killing and drouning; which villanie the sea seemd to favour, it being then flood. Just at that time was I speaking with Monro, bot seeing a fare off what a game these godles rogues intended to play, I got a horse-back and gallopd to them with my pistoll in my hand; bot before I got at them they had dispatchd about a dozen; the rest I savd. This execution had not the success which Conway and Monro had promis'd themselves; for instead of terrifieing the rebells from their wonted cruelties, it enraged them, and occasioned

urthering of some hundreths of prisoners

whom they had in their pouer. Sir Phelomey Oneale, the ringleader of the rebellion, hearing of the losse of the Neurie, in a beastlie furie burnt the toune of Armagh, where he then was, and as much of the Cathedrall as fire could prevaile over, and then retir'd himselfe to the woods and bogs.

"My lieutenant-colonnell stayd at the Neurie, haveing got two hundreth commanded men added to his oune, till I could bring up from Craigfergus as many of the regiment as were comd from Scotland. Accordingly I went thither with the armie: we tooke our march thorough the woodes and mountains of Morne, where severall rebells were killd, and many cows taken. I do remember that there we sufferd one of the most stormie and tempestuous nights for haile, raine, cold, and excessive wind (thogh it was in the beginning of May) that ever I yet saw. All the tents were in a trice bloune over. It was not possible for any matche to keepe fire, or any sojor to handle his musket, or yet to stand; yea severalls of them dyed that night of meere cold. So that if the rebells, wherof there were 500 not farre from us, had offerd to beate up our quarters with such weapons as they had, which were halfe pikes, suords, and daggers, which they call akeens, they wold undoubtedlie have had a cheap market of us. Our sojors, and some of our officers too (who suppose that no thing that is more then ordinarie can be the product of nature), attributed this hurrikan to the devilish skill of some Irish witches; and if that was true, then I am sure their master gave us good prooffe that he was reallie prince of the aire."

The war in England between the king and parliament having now broken out, Turner says—

"The officers of this our Scots armie in Ireland finding themselves ill payd, and, which was worse, not knowing in the time of the civil warre who sould be their paymasters, and reflecting on the successful issue of the National Covenant of Scotland, bethought themselves of making one also; bot they were wise enough to give it ane other-name, and therefore christened it a Mutual Assurance; wherby upon the matter they made themselves independent of any except these who wold be their actual and reall paymasters, with whom, for any thing I know, they met not the whole time of the warre. The generall was very dissatisfied with this bond of union, as he had reason; and at first spokd hie language of strikeing heads of; bot the officers sticking close one to another, made these threats evanish in smoake. And indeed it is like, ane active generall (who could have added policie to courage, and divided them) might have made their union appear in its oune collors, which were even these of blacke mutinie. Bot the Earle of Leven, not being able to overmaster it, gott himselfe ane errand to go to Scotland, and so gave an everlasting adieu to Ireland. The most remarkable thing he did in the time of his stay was, that he tooke 2500lb. sterline to himselfe, which the parliament of England had sent to the officers of his armie for wagon money. And trulie this earle, who lived till he past fourscore, was of so good a memorie that he was never knowne to forget himselfe, nay, not in his extreame age. I cannot say more of his deportments in Ireland then what my Lord Viscount Moore (who was killd next yeare) said to tuo of my friends, and it was this: That the Earle of Levens actions made not such a noyse in the world as these of Generallesley."

This is a hard hit:—but we must revert to

our hero, who, after sojournning two years in Ireland, and securing a wife (of whom throughout he speaks most affectionately) in Miss White of Newrie, in the year 1644 again joined the Covenanters in their invasion of England. Here he played over the old game, fighting on the one side, and tampering with the other; and he points out one particular occasion, in which, if the design had been successfully effected, the king's cause wold in all probability have triumphed, in consequence of his own and other regiments going over at a critical emergency to the Marquess of Montrose. But the plan failed in the execution; and the writer naively tells us—

"Upon these grounds my Lord Sindars' regiment marchd into England, and I with them, and made a fashion (for indeed it was no better) to take the Covenant, that under pretence of the Covenant we might ruine the Covenanters; a thing (thogh too much practis'd in a corrupt world) yet in itselfe dishonest, sinful, and disavouable; for it is certain that no evil could be done that good may come of it; neither did any good at all come of this, for Calander all along proovd true to his own interest and gaine, and false to the kings, never laying hold on any opportunitie whereby he might, with small difficultie, have done his majestic signall service."

When the fatal battle of Naseby blighted the king's hopes, we have next an interesting account of his surrender by the Scots, of which Turner was a personal witness, having seen and spokn with the unfortunate prisoner, whom he endeavoured in vain to save by aiding him to escape. And we find now a characteristic touch of his personal conduct:—

"Haveing drunke at one time too much at parting with a great person, rideing home I met one Colonnell Wren, betweene whom and me there was some animositie. He was a foot, and I lighted from my horse; drinke prevailing over my reason, I forced him to draw his sword, which was tuo great handfulls longer then mine. This I perceiving, gripd his sword with my left hand, and thrust at him with my right; bot he stepping backe avoyded it, and drew his sword away, which left so deepe a wound betweene my thumbe and formost finger, that I had almost lood the use of both, unles I had beene well cured. Ane other hart I got in my left arme. The passengers parted us; bot I could never find him out after, to be revenged on him, though I sought him furre and neere. This was ane effect of drinking, which I confesse, beside the snare against God, hath brought me in many inconveniences. This was the first time euer my blood was drawne, though I have hazarded it and my life very often, not onlie in battells, skirmishes, rencounters, sleges, sallies, and other publick duties of service, bot also in severall private duells."

We will here (thogh it happened afterwards) insert another, equally characteristic, of our hero's adventures.

"My tuo brigads lay in a village within halfe a mile of Applebie; my oune quarter was in a gentlemen house who was a ritmaster, and at that time with Sir Marmaduke; his wife keepd her chamber readie to be brought to bed. The castle being over, and Lambert farre enough, I resolv'd to goe to bed everie night, haveing had fatigue enough before. The first night I sleepd well enough; and rising next morning, I misd one linnen stockine, one halfe silke one, and one boot-hose, the accomptment under a boote for one leg; neither could they be found for any search. Being provided of more of the same

kind, I made myself reddie, and rode to the head quarters. At my returns I could hear no news of my stockings. That night I went to bed, and next morning found myself just so used; missing the three stockings for one leg onlie, the other three being left intire as they were the day before. A narrower search then the first was made, but without successe. I had yet in reserve one paire of whole stockings, and a paire of boothose greater then the former. These I put on my legs. The third morning I found the same usage, the stockings for one leg onlie left me. It was time for me then, and my servants too, to imagine it must be rats that had ahard my stockings so equallie with me; and this the mistress of the house knew well enough, but would not tell it me. The room, which was a low parlour, being well searchd with candles, the top of my great boothose was found at a hole, in which they had drawne all the rest. I went abroad and orderd the boards to be raised, to see how the rats had disposed of my moveables. The mistress sent a servant of her owne to be present at this action, which she knew concernd her. One board being bot a little open'd, a little boy of mine thrust in his hand, and fetchd with him foure and tuesitie old peeces of gold and one angell. The servant of the house affirm'd it appartaind to his mistress. The boy bringing the gold to me, I went immediatly to the gentlewoman's chamber, and told her it was probable Lambert having quartered in that house, as indeed he had, some of his servants might have hid that gold; and if so, it was lawfull mine; but if she could make it appear it belongd to her, I would immediatly give it her. The poore gentlewoman told me with many teares, that her husband being none of the frugallest men (and indeed he was a spendthrift) she had hid that gold without his knowledge, to make use of it as she had occasion, especially when she lay in; and conford me, as I lov'd the king (for whom her husband and she had sufferd much), not to detain her gold. She said, if there was either more or less then foure and tuesitie whole peeces, and two halfe ones, it could be none of hers, and that they were put by her in a red velvet purse. After I had given her assurance of her gold, a new search is made, the other angell is found, the velvet purse all gnaw'd in bits, as my stockings were, and the gold instantlie restord to the gentlewoman. I have often heard that the eating or gnawing of cloths by rats is ominous, and portends some mischance to fall on those to whom the cloths belong. I thank God I was never addicted to such divinations, or heeded them. It is true that more misfortunes then one fell on me shortly after; but I am sure I could have better forsoene them myselfe then rats or any such vermine, and yet did it not. I have heard, indeed, many fine stories told of rats, how they abandon houses and ships, when the first are to be burnt, and the second dround. Naturalists say they are very sagacious creatures, and I believe they are so; but I shall never be of the opinion they can foresee future contingencies, which I suppose the divell himselfe can neither forknow nor fortell; these being things which the Almighty hath kept hidden in the bosome of his divine prescience. And whither the great God hath preordained or predestinated these things, which to us are contingent, to fall out by an uncontrollable and unavoidable necessitie, is a question not yet decided."

"There are some appalling details of the Highland wars between the Covenanters and the

Royalists; and a very striking account of those between Cromwell and the Scots, to the decisive battle of Preston. Of the former, take the subjoined particulars of an action when the Campbell's went against Sir Alaster Macdonald:—

"We beseege Dunavertie, which kept out well enough, till we storm'd a trench they had at the foot of the hill, wherby they commanded two stripes of water. This we did take in the assault. Fortie of them were put to the sword. We load five or sixe, with Argiles Major. After this, inexorable thirst made them desire a parley. I was orderd to speake with them; neither could the lieutenant-generall be mov'd to grant any other conditions, then that they should yeeld on discretion or mercy; and it seemd strange to me to heare the lieutenant-generalls nice distinction, that they should yeeld themselves to the kingdome's mercy, and not to his. At length they did so; and after they were comd out of the castle, they were put to the sword, everie mothers sonne, except one young man, Mackoull, whose life I begd, to be sent to France with a hundred countrey fellows whom we had smoakd out of a cave, as they doe foxes, who were given to Captaine Cambell, the chancellors brother."

After the field of Preston, Turner was taken prisoner, and conveyed to Hull, where he was detained fourteen months, till November 1649, when his liberation was effected, and he sailed for Hamburg. Thus ending the first chapter of an eventful life, we are enabled to pause; but will take up this volume again (which must always be a scarce one) for the edification and amusement of our friends.

Specimens of American Poetry. With Critical and Biographical Notices by Samuel Kettell. 3 vols. 12mo. Boston, 1829. Goodrich and Co.

The first thing that must strike every reader of this collection is, its want of originality, and its deficiency in national character;—the last, by the by, a cause of the first. In the first two volumes, Pope and his school have been the inspiration—in the last, our present time has been the hippocrene. We know not how to account for this: their country is rich in the most magnificent beauty—deep forests, worthy to have held the oracles of old—lakes grand in their gathered waters—and a sky as glorious in sunshine as in storm;—intellect is on a throne among them; and the human heart has every where the same deep store of passion and sorrow:—and yet America has produced no great poet;—no one whose voice is answered every where, like an echo;—no one whose thoughts are beauty, even when divested of the music of their native tongue;—no one whose home is in every land, though his temple be in his own. In the volumes before us there is a great deal of graceful versification, some pretty imagery, much taste, and some feeling. Mr. Perceval and Mr. Willis are writers well deserving of praise; but certainly neither of them are first-rate: and the same criticism applies generally:—the stones are bright and sparkling, but they have been set before. One name, however, we do except—one whose fault is truly that with which his countrymen charge him—of having written too little: we need only mention Halleck, in whose compositions there is that originality which marks the true poet: but instead of criticising, we will quote his very spirited poem of "Alnwick Castle."

"Home of the Percys' high-born race,
Home of their beautiful and brave,

Alike their birth and burial-place,
Their cradle and their grave!
Still sternly o'er the castle gate,
Their house's lion stands in state,
As in his proud departed hour;
And warriors frown in stone on high,
And feudal banners 'flout the sky'
Above his princely tower.
A gentle hill its side inclines,
Lovely in England's fadeless green,
To meet the quiet stream which winds
Through this romantic scene
As silently and sweetly still.
As when, at evening, on that hill,
While summer's wind blew soft and low,
Seated by gallant Hotspur's side,
His Katharine was a happy bride,
A thousand years ago.
Gaze on the abbey's ruin'd pile:
Does not the succouring ivy, keeping
Her watch around it, seem to smile,
As o'er a loved one sleeping?
One solitary turret gray
Still tells, in melancholy glory,
The legend of the Cheviot day.
The Percys' proudest border story,
That day its roof was triumph arch;
Then rang, from aisle to vaulted dome,
The light step of the soldier's march.
The music of the trumpet and drum!
And babe and sire, the old, the young,
And the monk's hymn and minstrel's song,
And woman's pure kiss, sweet and long.
Welcomed her warrior home.
Wild roses by the abbey towers
Are gay in their young bud and bloom:
They were born of a race of funeral flowers
That garlanded, in long-gone hours,
A templar's knightly tomb.
He died, the sword in his mailed hand,
On the holiest spot of the Blessed Land,
Where the cross was damp'd with his dying breath;
When blood ran free as festal wine,
And the sainted air of Palestine
Was thick with the darts of death.
Wise with the lore of centuries,
What tales, if there be 'twixt in trees,
Those giant oaks could tell,
Of beings born and buried here!
Tales of the peasant and the peer,
Tales of the bride and the bier.
The welcome and farewell,
Since on their boughs the startled bird
First, in her twilight slumbers, heard
The Norman's curfew bell.
I wandered through the lofty halls
Trod by the Percys of old fame,
And traced upon the chapel walls
Each high, heroic name,
From him who once his standard set
Where now, o'er mosque and minaret,
Glitter the sultan's crescent moons;
To him who, when a younger son,
Fought for King George at Lexington,
A major of dragoons.

That last half stanza—it has dashed
From my warm lip the sparkling cup;
The light that o'er my eye-beam dash'd,
The power that bore my spirit up
Above this bank-note world—is gone;
And Alnwick 's but a market town,
And this, alas! its market day,
And beasts and borderers throng the way!
Oxen, and bleating lambs in lots,
Northumbrian boors and plaided Scots;
Men in the coal and cattle line,
From Teviot's bard and hero land,
From royal Berwick's beach of sand,
From Wooler, Morpeth, Hexham, and
Newcastle-upon-Tyne.
These are not the romantic themes
So beautiful in Spenser's rhymes,
So dapping to the dreaming boy:
Ours are the days of fact, not fable;
Of knights, but not of the Round Table;
Of Ballie Jarvie, not Rob Roy!
'Tis what 'our president,' Monroe,
Has call'd 'the era of good feeling.'
The Highlander, the bitterest foe
To modern laws, has felt their blow,
Consented to be tax'd, and vote,
And put on pantaloons and coat,
And leave off cattle-stealing:
Lord Stafford mines for coal and salt,
The Duke of Norfolk deals in malt,
The Douglas in red herrings;
And noble name, and cultured land,
Palace, and park, and vassal hand,
Are powerless to the notes of hand
Of Rothschild or the Barings.
The age of bargaining, said Burke,
Has come: to-day the turban'd Turk
(Sleep, Richard of the lion heart!
Sleep on, nor from your cements start)
Is England's friend and fast ally:
The Moslem tramples on the Greek,
And on the cross and altar-stone,
And Christendom looks tamely on.

And hears the Christian maiden shriek,
And sees the Christian father die;
And not a sabbre-blow is given
For Greece and fame, for faith and heaven,
By Europe's craven chivalry.
You'll ask if yet the Percy lives
In the armed pomp of feudal state?
The present representative
Of Hotspur and his 'gentle Kate'
Are some half-dozens serving-men
In the drab coat of William Penn;
A chambermaid, whose lip and eye,
And cheek, and brown hair, bright and curling,
Spoke Nature's aristocracy;
And one, half groom half seneschal,
Who bow'd me through court, bower, and hall,
From donjon-keep to turret-wall,
For ten-and-sixpence sterling."

How fine is the finale of "Marco Bozzaris!"

"Come to the bridal chamber, Death!
Come to the mother's when she feels
For the first time her first-born's breath;
Come when the blessed seals
That close the pestilence are broke,
And crowded cities wait its stroke;
Come in consumption's ghastly form,
The earthquake shock, the ocean storm;
Come when the heart beats high and warm
With banquet-song, and dance, and wine;
And thou art terrible—the tear,
The groan, the knell, the pall, the bier,
And all we know, or dream, or fear,
Of agony, are thine.
But to the hero, when his sword
Has won the battle for the free,
Thy voice sounds like a prophet's word,
And in its hollow tones are heard
The thanks of millions yet to be.
Come, when his task of fame is wrought—
Come, with her laurel-leaf, blood-bought—
Come in her crowning hour—and then
Thy sunken eye's unearthly light
To him is welcome as the sight
Of sky and stars to prison'd men:
Thy grasp is welcome as the hand
Of brother in a foreign land;
Thy summons welcome as the cry
That told the Indian isles were nigh
To the world-seeking Genoese,
When the land-wind from woods of palm,
And orange-groves, and fields of balm,
Blew o'er the Haytian seas.
Bozzaris! with the storied brave
Greece nurtured in her glory's time,
Rest thee—there is no prouder grave,
Even in her own proud clime.
She wore no funeral weeds for thee,
Nor bade the dark hearse wave its plume,
Like torn branch from death's leafless tree,
In sorrow's pomp and pageantry.
The heartless luxury of the tomb:
But she remembers thee as one
Long loved, and for a season gone;
For thee her poet's lyre is wreathed,
Her marble wrought, her music breathed;
For thee she rings her birth-day bells;
Of thee her babes' first lispings tell;
For thine her evening prayer is said
At palace couch and cottage bed;
Her soldier, closing with the foe,
Gives for thy sake a deadlier blow;
His plighted maiden, when she fears
For him the joy of her young years,
Thinks of thy fate, and checks her tears:
And she, the mother of thy boys,
Though in her eye and faded cheek
Is read the grief she will not speak,
The memory of her buried joys,
And even she who gave thee birth,
Will, by their pilgrim-circled hearth,
Talk of thy doom without a sigh;
For thou art Freedom's now, and Fame's—
One of the few, the immortal names,
That were not born to die."

Our best eulogy on this poet is to quote him.
We shall next select from Mr. Willis, a young
writer of great present sweetness, and we think
still greater promise.

"Better Moments."

My mother's voice! how often creeps
Its cadence on my lonely hours!
Like healing sent on wings of sleep,
Or dew to the unconscious flowers.
I can forget her melting prayer
While leaping pulses madly fly,
But in the still, unbroken air
Her gentle tone comes stealing by,
And years, and sin, and manhood flee,
And leave me at my mother's knee.
The book of nature, and the print
Of beauty on the whispering sea,
Give aye to me some likeness
Of what I have been taught to be.
My heart is harder, and perhaps
My manliness hath drunk up tears,

And there's a mildew in the lapse
Of a few miserable years;
But nature's book is even yet
With all my mother's lessons writ.
I have been out at eventide
Beneath a moonlight sky of spring,
When earth was garish'd like a bride,
And night had on her silver wing—
When bursting leaves and diamond grass,
And waters leaping to the light,
And all that makes the pulses pass
With wilder fleetness throng'd the night—
When all was beauty—then have I
With friends on whom my love is flung
Like myrrh on winds of Araby,
Gazed up where evening's lamp is hung.
And when the beautiful spirit there
Flung over me its golden chain,
My mother's voice came on the air
Like the light dropping of the rain;
And resting on some silver star
The spirit of a bended knee,
I've pour'd her low and fervent prayer
That our eternally might be
To rise in heavenly lights at night,
And tread a living path of light!
I have been on the dewy hills
When night was stealing from the dawn,
And mist was on the waking rills,
And tints were delicately drawn
In the gray east—when birds were waking
With a low murmur in the trees,
And melody by fits was breaking
Upon the whisper of the breeze,
And this when I was forth, perchance
As a worn reveller from the dance—
And when the sun sprang gloriously
And freely up, and hill and river
Were catching upon wave and tree
The arrows from his subtle quiver—
I say a voice has thrill'd me then,
Heard on the still and rushing light,
Or creeping from the silent glen.
Like words from the departing night,
Hath stricken me, and I have press'd
On the wet grass my fever'd brow,
And pouring forth the earliest
First prayer, with which I learn'd to bow,
Have felt my mother's spirit rush
Upon me as in by-past years,
And yielding to the blessed gush
Of my ungovernable tears,
Have risen up—the gay, the wild—
As humble as a very child."

The following very charming little piece
from Mrs. Embury, and we have done.

"Jane of France."

Pale, cold, and statue-like she sat, and her impeded breath
Came gaspingly, as if her heart was in the grasp of death,
While listening to the harsh decree that rob'd her of a throne.
And left the gentle child of kings in the wide world alone.
And fearful was her look; in vain her trembling maidens
Moved; with all affection's tender care, round her whom well they
Stirless she sat, as if enchained by some restless spell,
Till with one wild, heart-piercing shriek in their embrace
she fell.
How bitter was the hour she woke from that long dream-
less trance; France:
The veriest wretch might pity then the envied Jane of
But soon her o'erfraught heart gave way, tears came to
her relief; less grief:
And thus in low and plaintive tones she breathed her hope—
'Oh! ever have I dreaded this, since at the holy shrine
My trembling hand first felt the cold reluctant clasp of
thine; [heart
And yet I hoped—My own beloved, how may I teach my
To gaze upon thy gentle face and know that we must part!
Too well I knew thou lovedst me not, but ah! I fondly
thought [this had wrought:
That years of such deep love as mine some change ere
I dream'd the hour might yet arrive, when sick of pas-
sion's strife,
Thy heart would turn with quiet joy to thy neglected wife.
Vain, foolish hope! how could I look upon thy glorious
form, [wouldst cease to charm!
And think that ere the time might come when thou
For ne'er till then wilt thou be freed from beauty's magic
art,
Or cease to prize a sunny smile beyond a faithful heart.
In vain from memory's darken'd scroll would other
thoughts erase [face:
The loathing that was in thine eye, where'er it met my
Oh! I would give the fairest realm, beneath the all-seeing
sun,
To win but such a form as thou might'st love to look upon.
Wo, wo for woman's weary lot if beauty be not hers,
Vainly within her gentle breast affection wildly stirs;
And bitterly will she deplore, amid her sick heart's dearth,
The hour that fix'd her fearful doom—a helot from her
birth.
I would thou hadst been cold and stern—the pride of my
high race [ethic:
Had taught me then from my young heart thine image to

But surely even love's sweet tones could ne'er have power
to bless
My bosom with such joy as did thy pitying tenderness.
Alas! it is a heavy task to curb the haughty soul,
And bid 'th' unbending spirit bow that never knew control;
But harder still when thus the heart against itself must
rise, [fare dies.
And struggle on, while every hope that nerved the war-
Yet all this I have borne for thee—ay, for thy sake I
learn'd [heart spurn'd;
The gentleness of thought and word which once my proud
The treasures of an untouch'd heart, the wealth of love's
rich mine,
These are the offerings that I laid upon my idol's shrine.
In vain I breathed my vows to heaven, 'twas mockery of
prayer;
In vain I knelt before the cross, I saw but Louis there:
To him I gave the worship that I should have paid my
God, [giving rod!
But oh! should his have been the hand to wield the aven-

The biographical sketches are often very
amusing, as well as interesting; but we must
say, the worthy editor's forte seems to lie less
in taste than in industry; and his industry we
cordially thank for this considerable body of
American poetry.

The Waverley Novels: New Edition. Guy
Manning. Vol. III. pp. 311. Edinburgh,
1829, Cadell and Co.; London, Simpkin
and Marshall.

THE delivery of two volumes at a time of this
wonderfully popular edition having led to much
inconvenience and delay, the publishers have
now commenced with only one; and of that
one we have an early copy from the northern
Athens. It contains the author's Introduction,
which is not only interesting as coming
from his pen, and giving a portion of the his-
tory of compositions so greatly affecting the
literature of our times, but as being curious in
its own details.

"The novel or romance of Waverley (says
Sir Walter) made its way to the public slowly,
of course, at first; but afterwards with such
accumulating popularity, as to encourage the
author to a second attempt. He looked about
for a name and a subject; and the manner
in which the novels were composed, cannot be
better illustrated, than by reciting the simple
narrative on which Guy Mannering was ori-
ginally founded; but to which, in the progress
of the work, the production ceased to bear any,
even the most distant resemblance. The tale
was originally told me by an old servant of my
father's, an excellent old Highlander, without
a fault, unless a preference to mountain-dew
over less potent liquors be accounted one. He
believed as firmly in the story as in any part of
his creed. A grave and elderly person, ac-
cording to old John MacKinlay's account,
while travelling in the wilder parts of Gal-
loway, was benighted. With difficulty he
found his way to a country-seat, where, with
the hospitality of the time and country, he
was readily admitted. The owner of the house,
a gentleman of good fortune, was much struck
by the reverend appearance of his guest, and
apologised to him for a certain degree of con-
fusion which must unavoidably attend his re-
ception, and could not escape his eye. The
lady of the house was, he said, confined to her
apartment, and on the point of making her
husband a father for the first time, though
they had been ten years married. At such an
emergency, the laird said he feared his guest
might meet with some apparent neglect. 'Not
so, sir,' said the stranger; 'my wants are
few, and easily supplied; and I trust the pre-
sent circumstances may even afford an oppor-
tunity of shewing my gratitude for your hospi-
tality. Let me only request that I may be
informed of the exact minute of the birth;
and I hope to be able to put you in possession

of some particulars which may influence in an important manner the future prospects of the child now about to come into this busy and changeable world. I will not conceal from you that I am skilful in understanding and interpreting the movements of those planetary bodies which exert their influences on the destiny of mortals. It is a science which I do not practise, like others who call themselves astrologers, for hire or reward; for I have a competent estate, and only use the knowledge I possess for the benefit of those in whom I feel an interest.' The laird bowed in respect and gratitude, and the stranger was accommodated with an apartment which commanded an ample view of the astral regions. The guest spent a part of the night in ascertaining the position of the heavenly bodies, and calculating their probable influence; until at length the result of his observations induced him to send for the father, and conjure him in the most solemn manner to cause the assistants to retard the birth, if practicable, were it but for five minutes. The answer declared this to be impossible; and almost in the instant that the message was returned, the father and his guest were made acquainted with the birth of a boy. The astrologer on the morrow met the party who gathered around the breakfast-table with looks so grave and ominous, as to alarm the fears of the father, who had hitherto exulted in the prospects held out by the birth of an heir to his ancient property, failing which event it must have passed to a distinct branch of the family. He hastened to draw the stranger into a private room. 'I fear from your looks,' said the father, 'that you have bad tidings to tell me of my young stranger; perhaps God will resume the blessing he has bestowed ere he attains the age of manhood, or perhaps he is destined to be unworthy of the affection which we are naturally disposed to devote to our offspring.' 'Neither the one nor the other,' answered the stranger; 'unless my judgment greatly err, the infant will survive the years of minority, and in temper and disposition will prove all that his parents can wish. But with much in his horoscope which promises many blessings, there is one evil influence strongly predominant, which threatens to subject him to an unhallowed and unhappy temptation about the time when he shall attain the age of twenty-one, which period, the constellations intimate, will be the crisis of his fate. In what shape, or with what peculiar urgency, this temptation may beset him, my art cannot discover.' 'Your knowledge, then, can afford us no defence,' said the anxious father, 'against the threatened evil?' 'Pardon me,' answered the stranger, 'it can. The influence of the constellations is powerful: but he who made the heavens is more powerful than all, if his aid be invoked in sincerity and truth. You ought to dedicate this boy to the immediate service of his Maker, with as much sincerity as Samuel was devoted to the worship in the Temple by his parents. You must regard him as a being separated from the rest of the world. In childhood, in boyhood, you must surround him with the pious and virtuous, and protect him to the utmost of your power from the sight or hearing of any crime, in word or action. He must be educated in religious and moral principles of the strictest description. Let him not enter the world, lest he learn to partake of its follies, or perhaps of its vices. In short, preserve him as far as possible from all sin, save that of which too great a portion belongs to all the fallen race of Adam. With the approach of

his twenty-first birth-day comes the crisis of his fate. If he survive it, he will be happy and prosperous on earth, and a chosen vessel among those elected for heaven. But if it be otherwise—' The astrologer stopped and sighed deeply. 'Sir,' replied the parent, still more alarmed than before, 'your words are so kind, your advice so serious, that I will pay the deepest attention to your behests; but can you not aid me farther in this most important concern. Believe me, I will not be ungrateful.' 'I require and deserve no gratitude for doing a good action,' said the stranger; 'in especial for contributing all that lies in my power to save from an abhorred fate the harmless infant to whom, under a singular conjunction of planets, last night gave life. There is my address; you may write to me from time to time concerning the progress of the boy in religious knowledge. If he be bred up as I advise, I think it will be best that he come to my house at the time when the fatal and decisive period approaches, that is, before he has attained his twenty-first year complete. If you send him such as I desire, I humbly trust that God will protect his own, through whatever strong temptation his fate may subject him to.' He then gave his host his address, which was a country-seat near a post town in the south of England, and bid him an affectionate farewell. The mysterious stranger departed; but his words remained impressed upon the mind of the anxious parent. He lost his lady while his boy was still in infancy. This calamity, I think, had been predicted by the astrologer; and thus his confidence, which, like most people of the period, he had freely given to the science, was riveted and confirmed. The utmost care, therefore, was taken to carry into effect the severe and almost ascetic plan of education which the sage had enjoined. A tutor of the strictest principles was employed to superintend the youth's education; he was surrounded by domestics of the most established character, and closely watched and looked after by the anxious father himself. The years of infancy, childhood, and boyhood, passed as the father could have wished. A young Nazarene could not have been bred up with more rigour. All that was evil was withheld from his observation—he only heard what was pure in precept—he only witnessed what was worthy in practice. But when the boy began to be lost in the youth, the attentive father saw cause for alarm. Shades of sadness, which gradually assumed a darker character, began to overcloud the young man's temper. Tears, which seemed involuntary, broken sleep, moonlight wanderings, and a melancholy for which he could assign no reason, seemed to threaten at once his bodily health and the stability of his mind. The astrologer was consulted by letter, and returned for answer, that this fitful state of mind was but the commencement of his trial, and that the poor youth must undergo more and more desperate struggles with the evil that assailed him. There was no hope of remedy, save that he shewed steadiness of mind in the study of the Scriptures. 'He suffers,' continued the letter of the sage, 'from the awakening of those harpies, the passions, which have slept with him as with others, till the period of life which he has now attained. Better, far better, that they torment him by ungrateful cravings, than that he should have to repent having satiated them by criminal indulgence.' The dispositions of the young man were so excellent, that he combated, by reason and religion, the fits of gloom which at

times overcast his mind; and it was not till he attained the commencement of his twenty-first year, that they assumed a character which made his father tremble for the consequences. It seemed as if the gloomiest and most hideous of mental maladies was taking the form of religious despair. Still the youth was gentle, courteous, affectionate, and submissive to his father's will, and resisted with all his power the dark suggestions which were breathed into his mind, as it seemed, by some emanation of the Evil Principle, exhorting him, like the wicked wife of Job, to curse God and die. The time at length arrived when he was to perform what was then thought a long and somewhat perilous journey, to the mansion of the early friend who had calculated his nativity. His road lay through several places of interest, and he enjoyed the amusement of travelling more than he himself thought would have been possible. Thus he did not reach the place of his destination till noon, on the day preceding his birth-day. It seemed as if he had been carried away with an unwanted tide of pleasurable sensation, so as to forget, in some degree, what his father had communicated concerning the purpose of his journey. He halted at length before a respectable but solitary old mansion, to which he was directed as the abode of his father's friend. The servants who came to take his horse told him he had been expected for two days. He was led into a study, where the stranger, now a venerable old man, who had been his father's guest, met him with a shade of displeasure as well as gravity on his brow. 'Young man,' he said, 'wherefore so slow on a journey of such importance?' 'I thought,' replied the guest, blushing and looking downward, 'that there was no harm in travelling slowly and satisfying my curiosity, providing I could reach your residence by this day; for such was my father's charge.' 'You were to blame,' replied the sage, 'in lingering, considering that the avenger of blood was pressing on your footsteps. But you are come at last, and we will hope for the best, though the conflict in which you are to be engaged will be found more dreadful the longer it is postponed. But first accept of such refreshments as nature requires to satisfy, but not to pamper, the appetite.' The old man led the way into a summer parlour, where a frugal meal was placed on the table. As they sat down to the board, they were joined by a young lady about eighteen years of age, and so lovely, that the sight of her carried off the feelings of the young stranger from the peculiarity and mystery of his own lot, and riveted his attention to every thing she did or said. She spoke little, and it was on the most serious subjects. She played on the harpsichord at her father's command, but it was hymns with which she accompanied the instrument. At length, on a sign from the sage, she left the room, turning on the young stranger, as she departed, a look of inexpressible anxiety and interest. The old man then conducted the youth to his study, and conversed with him upon the most important points of religion, to satisfy himself that he could render a reason for the faith that was in him. During the examination, the youth, in spite of himself, felt his mind occasionally wander, and his recollections go in quest of the beautiful vision who had shared his meal at noon. On such occasions, the astrologer looked grave, and shook his head at this relaxation of attention; yet, on the whole, he was pleased with the youth's replies. At sunset the young man was made to take the bath; and, having

done so, he was directed to attire himself in a robe, somewhat like that worn by Armenians, having his long hair combed down on his shoulders, and his neck, hands, and feet bare. In this guise he was conducted into a remote chamber totally devoid of furniture, excepting a lamp, a chair, and a table, on which lay a Bible. 'Here,' said the astrologer, 'I must leave you alone, to pass the most critical period of your life. If you can, by recollection of the great truths of which we have spoken, repel the attacks which will be made on your courage and your principles, you have nothing to apprehend. But the trial will be severe and arduous.' His features then assumed a pathetic solemnity, the tears stood in his eyes, and his voice faltered with emotion as he said, 'Dear child, at whose coming into the world I foresaw this fatal trial, may God give thee grace to support it with firmness!' The young man was left alone; and hardly did he find himself so, when, like a swarm of demons, the recollection of all his sins of omission and commission, rendered even more terrible by the scrupulousness with which he had been educated, rushed on his mind, and, like furies armed with fiery scourges, seemed determined to drive him to despair. As he combated these horrible recollections with distracted feelings, but with a resolved mind, he became aware that his arguments were answered by the sophistry of another, and that the dispute was no longer confined to his own thoughts. The Author of Evil was present in the room with him in bodily shape, and, potent with spirits of a melancholy cast, was impressing upon him the desperation of his state, and urging suicide as the readiest mode to put an end to his sinful career. Amid his errors, the pleasure he had taken in prolonging his journey unnecessarily, and the attention which he had bestowed on the beauty of the fair female, when his thoughts ought to have been dedicated to the religious discourse of her father, were set before him in the darkest colours; and he was treated as one who, having sinned against light, was, therefore, deservedly left a prey to the Prince of Darkness. As the fated and influential hour rolled on, the terrors of the hateful Presence grew more confounding to the mortal senses of the victim, and the knot of the accused sophistry became more inextricable in appearance, at least to the prey whom its meshes surrounded. He had not power to explain the assurance of pardon which he continued to assert, or to name the victorious name in which he trusted. But his faith did not abandon him, though he lacked for a time the power of expressing it. 'Say what you will,' was his answer to the Tempter; 'I know there is as much betwixt the two boards of this Book as can insure me forgiveness for my transgressions, and safety for my soul.' As he spoke, the clock, which announced the lapse of the fatal hour, was heard to strike. The speech and intellectual powers of the youth were instantly and fully restored; he burst forth into prayer, and expressed, in the most glowing terms, his reliance on the truth, and on the Author, of the gospel. The demon retired, yelling and discomfited; and the old man, entering the apartment, with tears congratulated his guest on his victory in the fated struggle. The young man was afterwards married to the beautiful maiden, the first sight of whom had made such an impression on him, and they were consigned over at the close of the story to domestic happiness. — So ended John MacKinlay's legend. The author of *Waverley* had imagined a possibility of framing an interesting, and perhaps

not an unedifying, tale, out of the incidents of the life of a doomed individual, whose efforts at good and virtuous conduct were to be forever disappointed by the intervention, as it were, of some malevolent being, and who was at last to come off victorious from the fearful struggle. In short, something was meditated upon a plan resembling the imaginative tale of *Sintram* and his Companions, by Mons. Le Baron de la Motte Fouqué, although, if it then existed, the author had not seen it. The scheme projected may be traced in the first three or four chapters of the work, but farther consideration induced the author to lay his purpose aside. It appeared, on mature consideration, that astrology, though its influence was once received and admitted by Bacon himself, does not now retain influence over the general mind sufficient even to constitute the mainspring of a romance. Besides, it occurred, that to do justice to such a subject would have required not only more talent than the author could be conscious of possessing, but also involved doctrines and discussions of a nature too serious for his purpose, and for the character of the narrative. In changing his plan, however, which was done in the course of printing, the early sheets retained the vestiges of the original tenor of the story, although they now hang upon it as an unnecessary and unnatural encumbrance. The cause of such vestiges occurring is now explained, and apologised for. It is here worthy of observation, that while the astrological doctrines have fallen into general contempt, and been supplanted by superstitions of a more gross and far less beautiful character, they have, even in modern days, retained some votaries. One of the most remarkable believers in that forgotten and despised science, was a late eminent professor of the art of legerdemain. One would have thought that a person of this description ought, from his knowledge of the thousand ways in which human eyes could be deceived, to have been less than others subject to the fantasies of superstition. Perhaps the habitual use of those abstruse calculations, by which, in a manner surprising to the artist himself, many tricks upon cards, &c., are performed, induced this gentleman to study the combination of the stars and planets, with the expectation of obtaining prophetic communications. He constructed a scheme of his own nativity, calculated according to such rules of art as he could collect from the best astrological authors. The result of the past he found agreeable to what had hitherto befallen him; but in the important prospect of the future a singular difficulty occurred. There were two years, during the course of which he could by no means obtain any exact knowledge, whether the subject of the scheme would be dead or alive. Anxious concerning so remarkable a circumstance, he gave the scheme to a brother astrologer, who was also baffled in the same manner. At one period he found the native, or subject, was certainly alive; at another, that he was unquestionably dead; but a space of two years extended between these two terms, during which he could find no certainty as to his death or existence. The astrologer marked the remarkable circumstance in his diary, and continued his exhibitions in various parts of the empire until the period was about to expire, during which his existence had been warranted as actually ascertained. At last, while he was exhibiting to a numerous audience his usual tricks of legerdemain, the hands, whose activity had so often baffled the closest observer, suddenly lost their power, the cards dropped

from them, and he sunk down a disabled paralytic. In this state the artist languished for two years, when he was at length removed by death. It is said that the diary of this modern astrologer will soon be given to the public. The fact, if truly reported, is one of those singular coincidences which occasionally appear, differing so widely from ordinary calculation, yet without which irregularities human life would not present to mortals, looking into futurity, the abyss of impenetrable darkness which it is the pleasure of the Creator it should offer to them. Were every thing to happen in the ordinary train of events, the future would be subject to the rules of arithmetic, like the chances of gaming. But extraordinary events and wonderful runs of luck, defy the calculations of mankind, and throw impenetrable darkness on future contingencies. To the above anecdote, another, still more recent, may be here added. The author was lately honoured with a letter from a gentleman deeply skilled in these mysteries, who kindly undertook to calculate the nativity of the writer of *Guy Mannering*, who might be supposed to be friendly to the divine art which he professed. But it was impossible to supply data for the construction of a horoscope, had the native been otherwise desirous of it, since all those who could supply the minutiae of day, hour, and minute, have been long removed from the mortal sphere."

Sir Walter then points out his departure from this rude sketch, and mentions the prototypes of several of his principal characters; such as Jean (and her grand-daughter Madge) Gordon, of Kirk Yetholm, for Meg Merrilies; and a nameless individual for Dominie Sampson. Of the latter, the account is affecting:—

"Such a preceptor as Mr. Sampson is supposed to have been, was actually tutor in the family of a gentleman of considerable property. The young lady, his pupil, grew up and went out in the world, but the tutor continued to reside in the family, no uncommon circumstance in Scotland (in former days), where food and shelter were readily afforded to humble friends and dependents. The lady's predecessors had been imprudent, he himself was passive and unfortunate. Death swept away his sons, whose success in life might have balanced his own bad luck and incapacity. Debts increased and funds diminished, until ruin came. The estate was sold; and the old man was about to remove from the house of his fathers, to go he knew not whither, when, like an old piece of furniture, which, left alone in its wonted corner, may hold together for a long while, but breaks to pieces on an attempt to move it, he fell down on his own threshold under a paralytic affection. The tutor awakened as from a dream. He saw his patron dead, and that his patron's only remaining child, an elderly woman, now neither graceful nor beautiful, if she had ever been either the one or the other, had by this calamity become a homeless and penniless orphan. He addressed her nearly in the words which Dominie Sampson uses to Miss Bertram, and professed his determination not to leave her. Accordingly, roused to the exercise of talents which had long slumbered, he opened a little school, and supported his patron's child for the rest of her life, treating her with the same humble observance and devoted attention which he had used towards her in the days of her prosperity."

There are not many notes in this volume. In one, the author disclaims the drawing of *Dandie Dinmont* from any individual. The other notes we have anticipated in former *Gazettes*.

Cunningham's Lives of British Painters, &c.

WHEN we briefly noticed this (the fourth) volume of the Family Library, we more than half promised some extracts from its agreeable stores; and, with a short preface, we shall now fulfil that pledge.

In fifty-three pages we have a rapid survey of "the early painters," of the history of art in England during the middle ages, and through the times when we leaned entirely on eminent foreigners, Holbeins, More, Mytens, Rubens, Vandyke, Lely, Kneller, &c., down to the appearance of a native, "who sought lasting fame, and found it, in moral sentiment, nervous satire, sarcastic humour, and actual English life," viz. Hogarth. Cunningham gives fully 100 pages to this great original, as many to Reynolds, and the rest of his volume is divided pretty equally between the two founders of our landscape school, Wilson and Gainsborough. It will surprise no one to hear that the author's great favourites are evidently Hogarth and Wilson. The first was the pupil of nature and genius alone; and the second lived poor, and died neglected,—leaving his fame to be cared for by posterity. The life of Gainsborough is valuable, among other things, as containing more original anecdotes of him than had before been collected. The biography of Sir Joshua Reynolds is written with a colder pen than the others. Our author has not been able to get over that amiable man's one failing—his *stinginess*. As for the view of our first president as an artist, there is nothing to complain of. But it is in the accounts of Wilson and Hogarth that Cunningham puts forth his readiest hand, and produces the most pleasing effect. He is far, however, from joining in the cant of those (Ireland, for instance) who cannot praise Hogarth without taking a cut, *en passant*, at "what has obtained the name of learning." The following is a manly passage, and comes with a good grace from Allan Cunningham:—

"If Hogarth shewed little bias towards learning, it was because his powerful mind was directed to studies where the knowledge of actual life in all its varieties was chiefly essential—where an eye for the sarcastic and the ludicrous, and a mind to penetrate motives and weigh character, were worth all the lights of either school or college. But there is no proof that he was a man gross and uninformed, or that he thought lightly of learning. He was indeed a zealous worshipper of knowledge; but he loved to pluck the fruit fresh from the tree with his own hand. Of want of learning, no man of Hogarth's pitch of mind will boast; it is the *openess* which clears up the mysteries of ancient lore, and acquaints us with the lofty souls and social sympathies of the great worthies of the world. Our artist had not time for every thing; he could not, circumscribed as he was, have been both a scholar of any eminence, and the first man in a new walk of art. But it is unjust to set him down as despising in the abstract, what his own great natural genius enabled him to do without."

Equally shrewd is this account of Hogarth's ill success as a portrait-painter:—

"To be eminently popular in portrait-painting requires more than mere skill and talent. Hogarth was a man of plain manners, unpolished address, and encumbered with the dangerous reputation of a satirist. He was unacquainted with the art of charming a peer into a patron, by putting him into raptures with his own good looks. There were other drawbacks. The calm contemplative look, the elegance of

form without the grace of action, and motionless repose approaching to alumber, were not for him whose strength lay in kindling figures into life, and tossing them into business. A collection of isolated lords and ladies, each looking more lazily than the other into vacancy, compared with historical pictures, are as recruits drawn up in line, and put into position by the drill-sergeant, compared to soldiers engaged in the tumult of battle, animated with high passions, and determined to do or die. * * * Compared with the productions of the great masters of the art of portraiture, those of Hogarth are alike distinguished for their vigorous coarseness and their literal nature. They are less deficient in ease and expression, than in those studied airs and graceful affectations by which so many face-makers have become famous. Ladies, accustomed to come from the hands of men practised in professional flattery, with the airs of goddesses and sometimes with the name, would ill endure such a plain-spoken mirror as Hogarth's. Another circumstance must be mentioned. It was the practice of those days to see genius much more willingly and readily in the works of the dead than in those of the living; and perhaps the fashion is not yet gone out. There is no danger of making a mistake in praising a Raphael or Correggio; but there is some in determining the merits of any new production; and great lords—even now-a-days—are frugal of commendation, till the voice of the people gives confidence to their taste. With such men it was the fortune of our portrait-painter to come frequently in contact; disputes ensued; and he was no picker of pleasant words. None of these circumstances were very likely either to augment the numbers of Hogarth's sitters, or to cheat him into good humour with an originally uncongenial task."

Artists seldom do themselves much good by laying down the pencil to take up the pen—least of all, when they take it up to write about themselves. Hogarth was almost as great an offender in this way as our own ingenious contemporary Haydon, who, if he would stick to English life in painting, might, perhaps, rival even Hogarth's success and fortune. He announced the *Harlot's Progress* in an advertisement, most injudiciously and absurdly claiming for comedy in literature, and for comic paintings in art, "the highest place." On this Cunningham well observes:—

"Those who are not satisfied of the accuracy of Hogarth's notions by his prints and his pictures, have little chance of being overcome by the force of his written arguments. I am afraid few will be disposed to rank comedy above tragedy, or common life higher than the heroic. The actions of lofty minds, and the pursuits of inspired men, will always maintain a higher place in the estimation of mankind than the mere picturesque exploits of inferior characters. Entertainment and information are not all that the mind requires at the hand of an artist. We wish to be elevated by contemplating what is noble, to be warmed by the presence of the heroic, and charmed and made happy by the sight of purity and loveliness. We desire to share in the lofty movements of fine minds—to have communion with their images of what is godlike—and to take a part in the rapture of their love and in the ecstasies of all their musings. This is the chief end of high poetry, of high painting, and of high sculpture; and that man misunderstands the true spirit of those arts who seeks to deprive them of a portion of their divinity, and argues that information and entertainment constitute their highest aim. It was well for Hogarth

that he painted and engraved far beyond his own notions."

The *Harlot's Progress* was soon followed by the *Rake's Progress*; and, passing over Mr. C.'s detailed description of either series, we come to the following *résumé* of the moral purposes of both:—

"It was in vain that the lovers of classic beauty and the admirers of graphic grace contended against the imperfect drawing and the rough etching of these works. Hogarth's style of engraving is indeed rough; but it is vigorous and free. He accomplishes his aim by one or two fortunate and happy strokes—not by a multitude of small and timid touches which diminish the natural freedom of the original. Humour, satire, moral pathos, each singly unequalled, in their union unapproached, silenced criticism, if they could not satisfy it. In those fourteen plates are contained the stories of two erring creatures who run their own separate careers; and never did dramatist or painter read two such sharp, satiric, and biting lessons to mankind. In the first series a young woman is conducted from innocence through six scenes of woe, wickedness, and guilt;—coming pure from the country into the pollution of London, she is decoyed and deceived—she deceives in her turn—rises to guilty splendour, to sink in more guilty woe—and finally perishes amid wretches as guilty and as miserable as herself. In the other series of engravings a young man steps unexpectedly from poverty to fortune—from rustic dependence to lordly wealth, by heiring a sordid miser, of whose den and hoards the artist introduces him in the act of taking possession. He despises and deserts the woman whom he had wooed and vowed to marry—starts on a wild career of extravagance, dissipation, and folly—is beset and swindled by speculators of all kinds, from poets to punks, including rooks, and bucks, and bullies—passes through various haunts of sin and of splendour, till, with a fortune dissipated, a constitution ruined, his fame blighted, and his mind touched, he is left raving mad in Bedlam. Mirth and woe, humour and seriousness, a brilliant rise and a dark ending, are seen often together in this world,—and the painter has not separated them. The brief and agitated careers of two fellow-mortals are represented; the truth of nature is closely observed; a series of actions all conducive to the catastrophe are exhibited, and were they arranged for the stage and personated by first-rate actors, hardly could the impression be more vivid, or the moral strengthened."

We are now drawing near the end of Hogarth.

"The character of William Hogarth as a man is to be sought for in his conduct, and in the opinions of his more dispassionate contemporaries; his character as an artist is to be gathered from numerous works, at once original and unrivalled. His fame has flown far and wide; his skill as an engraver spread his reputation as a painter; and all who love the dramatic representation of actual life—all who have hearts to be gladdened by humour—all who are pleased with judicious and well-directed satire—all who are charmed with the ludicrous looks of popular folly—and all who can be moved with the pathos of human suffering—are admirers of Hogarth. That his works are unlike those of other men, is his merit, not his fault. He belonged to no school of art; he was the produce of no academy; no man living or dead had any share in forming his mind, or in rendering his hand skilful. He was the spontaneous offspring of the graphic spirit of

his country, as native to the heart of England as independence is, and he may be fairly called, in his own walk, the first-born of her spirit. He painted life as he saw it. He gives no visions of by-gone things — no splendid images of ancient manners; he regards neither the historian's page nor the poet's song. He was contented with the occurrences of the passing day — with the folly or the sin of the hour; to the garb and fashion of the moment, however, he adds story and sentiment for all time. The morality of Hogarth has been questioned; and indeed the like has befallen Crabbe. We may smile as we look at his works, and we may laugh — all this is true: — the victims whom Hogarth conducts pass through many varied scenes of folly, and commit many absurdities; but the spectacle saddens as we move along, and if we commence in mirth, we are overwhelmed with sorrow at last. His object was to insinuate the excellence of virtue by proving the hideousness of vice; — and if he has failed, who has succeeded? As to other charges, preferred by the malice of his contemporaries, time and fame have united in disproving them. He has been accused of want of knowledge in the human form, and of grace and serenity of expression. There is some truth in this, perhaps; but the peculiar character of his pictures required mental vigour rather than external beauty, and the serene Madonna-like loveliness could not find a place among the follies and frivolities of the passing scene. He saw a way of his own to fame, and followed it; he scorned all imitation, and by word and works recommended nature for an example and a monitor in art.

“As a painter,” says Walpole, “Hogarth has slender merit.” What is the merit of a painter? If it be to represent life — to give us an image of man — to exhibit the workings of his heart — to record the good and evil of his nature — to set in motion before us the very beings with whom earth is peopled — to shake us with mirth — to sadden us with woful reflection — to please us with natural grouping, vivid action, and vigorous colouring, — Hogarth has done all this — and if he that has done so be not a painter, who will shew us one? I claim a signification as wide for the word painter as for the word poet. But there seems a disposition to limit the former to those who have been formed under some peculiar course of study — and produced works in the fashion of such and such great masters. This I take to be mere pedantry; and that as well might all men be excluded from the rank of poets, who have not composed epics, dramas, odes, or elegies, according to the rules of the Greeks.”

We have quoted so largely from the life of Hogarth, that we have left ourselves very little space for the other worthies included in this volume: — and even this little we must reserve.

Sir Philip Gasteineys: a Minor. By Sir Roger Gresley, Bart. 12mo. pp. 229. London, 1829. H. Colburn.

“SAY, why bare-headed do you come?
Why do you come at all?”

Were the questions very pertinently put to the renowned John Gilpin, and which we are induced to repeat to Sir Roger Gresley —

Why doth he publish trash like this?
Why doth he write at all?

In his preface he tells us, it is “to deter young men of family from pursuing the track of Sir Philip Gasteineys;” and by way of so deterring them, he paints a successful intriguer

with beautiful women, single and married, English and foreign, who, after sowing his wild oats, is married to a lovely, affectionate, amiable, and virtuous creature, the daughter of a peer. Such is Sir Roger Gasteineys' or Sir Philip Gresley's recipe for frightening young sprigs of quality and fortune from gratifying their inclinations, and spending their early years in the dissipations of fashion! We are also told, that “the characters and incidents are purely fictitious;” which is really, for the honour of man, a gratifying assurance. Otherwise it might, from the close resemblance of the hero and of his circumstances to the actual condition of the author, have been supposed, that, under the shadow of a novel, he had been portraying his own course of life — making an apparent fiction the medium of boasting his successful amours, — and recommending vice by all the sophistry of fact and experience. For, like his hero, Sir Roger Gresley (as we see from Burke's Peerage) claims a descent of eight hundred years, from Malahuleius, the uncle of the Conqueror; like him was left a minor, with a considerable fortune, — and like him (taking all the intermediate period to be romance) married, soon after coming of age, the daughter of an Earl, Coventry in real life, Lincoln in the fabulous story. Therefore, had it not been for the assertion to the contrary, we should have fancied this a sort of autobiography of the worthy baronet, and one that did him very little credit. Bad as it is, it is better as it is; and we proceed, briefly, to treat it as a senseless, and, as far as a foolish trifle can be mischievous, a mischievous story. What can be more contemptible than an attempt to paint character like the following? The boy of fifteen —

“Having no real intention, no innate predisposition to be wicked, he committed every species of vice, because he could not abandon one object of gratification: but to the pliancy of his mind and the softness of his disposition, not to any natural depravity of heart, his errors must be attributed; from inability to repel the first impulse of desire, he trod in the steps of folly till he entered the path of guilt, and ran through a rapid succession of offences.”

A novice in delusion, and unversed in the mysteries of worldliness, with all the notions of a man, Sir Philip had not the prudence of a child. He was the deepest reader of the hearts of others; the most profound dissembler of his own.”

Such is the contradictory stuff and nonsense within four short pages: — the portrait is about as true to nature as if a limner painted a black man all white! Again:

“Accustomed always to try his powers upon some new object, and delighted with a fresh pursuit, he knew every channel, every secret winding of the female heart, every palpitation of the breast, every emotion of the countenance, every tone of the voice. He could mark with undeviating accuracy every stage, and the minutest progress in every stage, of the pending conflict between vice and virtue. He knew precisely what measures to adopt according to the character of her whom he wished to conquer, and he could calculate with certainty upon the proportionate success of his attempts.”

— And the proof of what this clever fellow fancied of himself, is supplied by one of his amours with an Italian lady. “Nor for a long time did Sir Philip Gasteineys, with all his knowledge of the various shapes which female sensibility assumes, entertain the most remote idea of Paulina's real character.”

But it would be absurd to dissect more than public exposure renders necessary of so worthless a publication as this is; and we only quote the following for more marked and severe reprobation. Having seduced a young girl, and abandoned her to infamy and death, this premature scoundrel commences a sap of his friend's wife, and we have an example of sentiment and cant at once odious and disgusting.

“The night before she was to depart, she went into his chamber to bid him farewell: she kissed him, and he kissed her, as in innocence apparently to all around they might well do, but felt what no one but themselves could either suspect or know; their hearts were silently plighted to each other: their affections tacitly exchanged. That night Sir Philip Gasteineys, whose mind was naturally given to devotion, and who invariably, under circumstances of despair or hope addressed his petition or his thanks to God, put up a prayer to the Supreme Being for her happiness, and vowed to her eternal and devoted love.”

And when these precious hypocrites had consummated their guilt, we are told in the same vile strain:

“The day passed wretchedly, they wandered on each other's arm in the most secluded places, and lingered in the most solitary spots. The bright sun of a July evening was retiring from the world, and they found themselves in the churchyard which I have described. The full tide of remorse and love came over them: they entered the house of God, they approached his altar, they asked forgiveness upon their knees, and swore in the same breath a vow of endless and immutable affection.”

No wonder that in one of his “affairs” this treacherous and heartless vagabond should cruelly betray the woman who had confided in him, and, by becoming informed after he had deserted her, prevent her union with another — which gentleman-like and generous act is vaunted as a model of integrity and honour! But we have done with the morals of this offensive volume, and have only one word to bestow on its ability!

“If any one (observes the intelligent writer) were to judge of the society of Rome from what he simply saw in a drawing-room, he would suppose that if the men were all Josephs, there was at any rate no Potiphars amongst the women.”

We should think a very natural conclusion; seeing that Potiphar's wife figures in sacred history: but we have now the higher authority of Sir Roger Gresley for the contrary; for he adds, “Yet the exact reverse of this is the fact:” and so we are forced to conclude that many of the women of Rome are Potiphars!!!
Ohe! jam satis.

SIGHTS OF BOOKS.

Civilisation among the Kalmucks. — Messieurs Zwick and Schill visited the Kalmuck tribes in the autumn of 1823, and have latterly published a very interesting narrative of their residence amongst them, from which we glean the subsequent report of the “progress of civilisation” in that quarter. The travellers sojourned with the Corschut horde for five days. Sereddachab, their sovereign, who is a colonel in the Russian service, and wears the insignia of several orders, excels all other Kalmuck princes in mental acquirements, and sedulously promotes the civilisation of his subjects. He has introduced European luxuries amongst them; he took an active part in the campaign against Buonaparte, and commanded the Kalmuck regiment. Since his return he has built himself

a large palace of wood; the furniture and every other appendage of which are in the best taste; and he never resides under a tent, excepting for a few weeks, which he spends in the steppe during the sultriest weather. He gave the travellers a most flattering reception; his table was served in the best Russian style; and, during the repast, a band of twelve Kalmucks, led by a Russian, played a variety of German symphonies and marches with perfect skill and precision. Besides Greek, Champagne and other French wines were placed before his guests. He accepted a present of ninety-six copies of the Evangelists, and several hundred copies of tracts, but not without pointing out mistakes in several passages of the translation; and, in every respect, proved himself possessed of great good sense and much humanity. His palace contained a collection of beautiful warlike instruments, and a small cabinet library of Russian books, particularly of the historical class; such as Karamsin's Annals, Karpin's Travels, Abulgasi, and other works on the Kalmucks and their domain. Who could have ventured to anticipate, as one of the fruits of the French revolution, that it should have introduced luxuries and social refinement among so remote a tribe of Asiatic barbarians?

ORIGINAL CORRESPONDENCE.

Paris, July 6th.

NOTWITHSTANDING that the English custom of inflicting gentle correction on wives, and administering poison to long-lived husbands, has been, of late years, successfully adopted in this country, neither sex are deterred from entering the holy bonds of matrimony; on the contrary, never were the marriage-lists so full! Yesterday eight weddings took place at one church, and seven of the fair brides had attained the tender age of *sixty-five*! How interesting to behold a set of superannuated coquettes kneeling before the hymeneal altar, and vowing truth and love when every trace of the latter sentiment is buried beneath *wrinkled ruins*! I expected that the priest would have suppressed part of the ceremony; but, with true French politeness, he prayed that these old witches might see their children's children, even to the fourth generation; and with equal gravity he enjoined them not to stray from the paths of constancy,—just as though wigs, false teeth, hollow cheeks, and shrivelled foreheads, were not preservatives against falling into temptation, and the *best* securities for woman's fidelity. Fortunately for the spectators of these antiquated unions, a youthful bride and bridegroom made their appearance; the former a daughter of a *marchand de beurre*, and the latter a knight of the lance. Unmonied nobles daily sell their old parchments to the highest bidder, and barter their titles for gold; therefore, *les dames de la halle* are generally the most liberal purchasers of rank and forefathers. The bride in question, with respect to personal attractions, was worthy of the homage of a prince, and, though of plebeian extraction, possessed the easy gracefulness of a woman of quality. Her parents accompanied her, but were dressed in the simple costume of their country, which formed a striking contrast to the elegance of their daughter's attire. Money was profusely bestowed; to each torch-bearer were given ten louis, and five thousand francs were deposited for the poor of the parish. Crowds waited outside the church to see the new-elected countess ascend to her carriage; and just as she was seated *vis-à-vis* her husband, a wag cried out, *Allez, allez, cocher; vous ne risquez rien; Mon-*

sieur a de quoi graisser les roues de sa voiture. This *bad bon mot*, which alluded to the butter-merchant, was worth twenty francs to him who said it, for the bridegroom immediately threw him a gold piece.

Bad news has reached the ladies of what they term *le petit couvent*. Yesterday an order arrived from the Pope to forbid them leaving their cloisters. I suppose his holiness feared that the poor wandering nuns might take a merry thought and throw aside their black robes for a wedding garment. *Propos* of the *petit couvent*: there is a hermit belonging to this establishment who lives in absolute retirement: I am told he paints in a most masterly style, and that the produce of his art is wholly expended in the service of suffering souls: he does not sell his drawings; but those to whom he gives them are obliged to pay for three masses, a number judged sufficient to release departed sinners from purgatory. Owing to the weather, our public amusements are interrupted. Tivoli has been quite deserted this season; but, on the other hand, the little theatres are crowded, and Tortoni doubles his fortune. No new works worthy of mention: it appears the human brain is at a stand; for all authors of the present day work on old materials, but cannot invent. M. de Villemain, M. Guizot, and M. Cousin, talk, write, and hold inquests on philosophy, but make no discoveries whatever; they all tell us what *was*, but not what *will be*: however, if they do not advance us in knowledge, they advance themselves in fortune; therefore their object is attained.

ARTS AND SCIENCES.

INSTITUTION OF CIVIL ENGINEERS.

JUNE 1.—Mr. Seaward read a paper on well-boring, and cited instances of the effect produced by sinking wells too closely adjacent beneath the blue clay. Mr. Simpson, in allusion to these facts, remarked on the quantity of water obtainable from a given bulk of sand, and on the constant decrease of supply by the gradual accumulation of deposit. He also noticed the method of sinking pipes by a leverage acting in a spiral direction. Mr. Nimmo submitted some correlative observations on the cause of quicksands, and on the method of driving piles in such localities, by the addition of heavy weights, and the action of light blows often repeated.

Mr. Palmer produced a model of the *caisson* for the London Docks, and explained its construction and use.

8th.—Mr. J. Donkin presented the valuable results of experiments conducted under his direction, and that of Mr. Brunel, on the ultimate strength of beams variously seasoned: he received the thanks of the Institution for his useful contribution.

Mr. S. Seaward gave a minute description and accurate dimensions of a high-pressure steam boiler of his manufacture, now in use at Antwerp, and particularly calculated to obviate the danger of explosion. The meeting and the session closed with a vote of thanks to Mr. Telford, the president. Mr. Atherton, an associate, also received this testimony of approbation for his voluntary and able offer to take notes of the conversations.

The conclusion to be derived from our notices of these meetings already premised in the *Literary Gazette*, is eminently favourable to the prosperity of the Institution. Success is naturally induced by the exertions of men, for whose profession is required more than the common ratio of mental qualification, of gene-

ral knowledge, and of aptitude to render that knowledge available. We presume to add, as our motto, the sentiment in which these notices have been given: "*Non ingenio, sed memoria, ac recordat.*"

INEFFICACIOUS POISONS.

[We differ from Anti-Humbig respecting Chabert: there may be trick and legerdemain, it is true—though we, watching narrowly observed none; but all we called for by our remarks is investigation by competent persons; and if the antidotes are good for any thing, that they should be disclosed, and their discoverer rewarded. We, however, insert his letter, though anonymous, as it contains some curious matter connected with the subject.]

To the Editor of the Literary Gazette.

SIR,—I regret to observe that your valuable periodical should condescend to become the vehicle for circulating "extraordinary" feats and "astonishing proceedings," unless with a view of explaining that which to the multitude appears bordering on the "miraculous." I am led to preface thus much by reading your detail of M. Chabert's "exhibition," which I view as less worthy of admiration than the dexterity of many professors of legerdemain, and therefore beneath the scientific feature you have thrown around the account of his performance.

With regard to his exposing himself to a temperature that would "destroy any other living creature," you will find in the Transactions of the Royal Society, that Sir Jos. Banks and others did, and any one may do, what Chabert does—that is, support (with impunity almost) an *atmosphere* where there is *LITTLE CIRCULATION* (as in an oven), heated to 550° Fahrenheit: this arises from air being so bad a conductor, and of small capacity for caloric, that it does not part with it readily to bodies in contact with it. You would find, by attentively examining *how* he does this, that he wears thick-soled boots, to prevent the too free contact of his feet with the heated brick, and a flannel dress to obviate as much as possible the perspiration. Chabert would as sensibly be affected by the heated floor of the oven as any other individual, or the beef-steak which he cooks there.*

Oil at 330° contains no greater quantity of caloric than water at 175°, and consequently in cooling to 280° gives out the same portion that water at 175° would do in cooling to 140°, and in the same proportion in cooling through any number of degrees. Silver abstracts heat rapidly from bodies in contact with it, and part of the apparent heat of the oil was employed in making the *spoon* "too hot for the hand to bear" before it passed into the mouth of the experimenter; his usual way, also, is to pass it rapidly through the air, by way of shewing the company the *quantity* he is going to take, and never suffers the *spoon* to touch his lips or tongue, which, to those *unwilling* to be duped, ought to expose the deception. Oil at 280° may be swallowed without inconvenience.

When I witnessed his experiments as above, and also holding his head over the *fumes* of arsenic, he poured at the same time upon the chafing dish some sulphuric acid, to increase, as he said, the deleterious effect; by this means he raised considerable fumes of sulphurous acid gas, which had instantly the effect of distracting the attention of all who were to *leeward* of him (it was done in the open air), and the greater portion of the fumes were, by the situation in which he placed himself, blown from him.

I hope Dr. Gordon Smith exercised a suffi-

* Chabert's first exhibition of staying in the heated oven is, we see, announced at the Argyle Rooms to-day.

cient degree of his usual penetration, to separate the really curious and novel from the deceptive part of this man's exhibition; and we may reasonably expect from him a scientific account of all that is worthy of attention, which the fact of his swallowing phosphorus must be deemed; but, as all the rest of his exhibition consists in practising on the ignorance or inattention of those present, I am not too harsh in thinking that this one experiment may consist in deception also. Of this I shall look anxiously for some notice by Dr. G. Smith.

Can any of your correspondents reply in defence of Chabert's "miracles" to these queries?—Does he do more than Sir Joseph Banks and his friends proved might be done by any person without injury? No.—Would he swallow a table-spoonful of water 212°? No.—Many persons will drink tea at 160° or upwards, and commonly do.—Does he actually inhale the garlic fumes of ARSENIC? No. The arsenic of commerce is generally half plaster of Paris, and the eye cannot detect the difference.—Is the phosphorus free from wax, or other similar substance, when cast into cylinders?

I trust my observations will induce you to investigate a subject in which you have been misled, with thousands of others, by APPEARANCES, and give the public, in some future Number, a correct estimate of Chabert's PRETENSIONS.

ANTI-HUMBUG.

July 12, 1839.

AFRICA.

Continuation of the Journal of the Expedition under Captain Owen.

ON completing the survey of these islands and shoals, we were joined by our consort, H.M.S. Conflict, to Sierra Leone, leaving a boat with our tender, the Albatross, to survey the intermediate shore, during which we were visited in the pitch-dark nights by regular gales of wind, tremendous thunder, and vivid lightning, with heavy and incessant rain; that, although all hands were roused, not a voice could be heard, or an individual seen on the deck, for several minutes together. The officers were thus obliged to rely on the good judgment and perseverance of the men in handling sail; and a blue light was kept burning on the stern, to warn our consort of too near approach, to which the gale, heavy sea, and darkness of the night, was liable to subject her: the favourable exertions of our seamen in this trying weather, upon such a coast, I deem worthy of remark. We came to anchor again off the Isles de Loss, opposite the garrison; and, again making observations, received on board a private of the African corps (a deserter) for Sierra Leone: he was a young man who had formerly held a commission in the army; but indifferent conduct, it appeared, from such as knew him in more prosperous days, had brought him to his present careless state of existence. I say "careless state of existence," because I have observed, and, upon inquiry, further convinced myself, that the generality of Englishmen thus doomed to part for ever from the land of their nativity, from all that was once dear to them, become sullen, obstinate, and indolent, take to drinking the cheap draughts of the colony, and, callous to every feeling but death, pursue a rapid but short-sighted course of life with surprising fortitude. Were we but to reflect, we should methinks more frequently sympathise with their situation, than that of the vilest culprit that ever graced the shores of New Holland;—at all events, we

may hope that ere long the great encouragement given to civilisation will gain such confidence, that native missionaries and native troops will soon be found to guard their country from slavery, and there will be no need of sending, as Mr. Sheridan suggested, excisemen to people that place: they, poor mortals, are perhaps no better off than the creatures alluded to. On our departure from these islands we met with similar weather day and night; but arrived all safe at Sierra Leone, our open boat along the coast having with difficulty weathered or evaded the gales, by occasionally making for shore: here the rain, thunder, and lightning, were tremendous, and had a most awfully grand appearance over the lofty woody mountains. This miserable weather tended to prompt every possible exertion to obtain the necessary supplies from the store-houses on shore; and, our farewell visits at an end, we were about to sail, when the sudden and welcome appearance of our long-expected consort, the Barraconta, Captain Vidal, hove in sight, and was soon recognised, among the many disputing voices, to be the long-despaired-of Barraconta, which was soon hailed with a degree of delight difficult to paint. She came nobly into anchor beside us on Sunday afternoon; and all hands having assembled on deck to view their old comrades and to hear the news, a request was made to Captain Owen by the seamen to give three cheers, which was acceded to; but before our seamen had arranged themselves for the same, those of the Barraconta had commenced; and the echo of each other's cheer resounded in the mountains nobly, and drew thousands of the inhabitants to the sea-side to witness the scene. The bustle being over, visits of congratulation were exchanged, and a relation of each other's adventures given, when every possible preparation was made, and assistance given to those poor fellows whose difficulties, through short provisions, had been tantamount to ours. They were enabled to depart in company with us from Sierra Leone for the survey of Cape Palma southward; but the wind blowing very strong against us for several days, our patience was at length cheered by recognising the signal for our consort to bear up and accompany us to St. Jago.

Arriving at Sierra Leone, all was anxiety to obtain a letter from old England, and hear the news of Europe. The gay and lively recollection which had previously existed among many with regard to the fair ones of the Cape, now seemed to be dying away; the tidings of something more dear with regard to the British fair, occasioned by a joke on a fictitious letter or two, supplied its place, reviving our almost worn-out feelings of affection, and cheering us for the better renewal of duty in the more arduous pursuits we were soon to enter upon. Here we found his majesty's frigate Maidstone, Commodore Bullen, the Esk sloop of war, our tender, Albatross, from St. Helena, a great number of prizes, several of which had still their cargoes of poor mortals on board, waiting the decision of the prize court, and a number of timber ships, the crews of which were all healthy. After congratulating ourselves upon another meeting in an English port, hastily replenishing our stock, and exchanging officers with the Maidstone, we set sail in company with our tender for the survey of the coast to the southward. On our arrival at Bannana isle, it was deemed expedient to despatch two boats to examine the shallow shore on to the river Sherbro, leaving the tender to co-operate with their observations, while the Leven was

engaged in making observations of the head and lofty lands. Opposite this island, on the main, is a missionary settlement (White's)—a neat little town upon the declivity of the hill, where the natives were busily engaged in cutting away the trees, burning the bushes, and cultivating the land for the distance of fifteen miles along the coast, southward, as far as the high land extended. This part of the shore is so very shallow, that at many places there is but a fathom and a half of water for three miles out. The hills, from the summit to the water's edge, are studded with trees and thick bushes; and in the flats and low land at the extremity of the chain of Sierra Leone hills the trees and bushes cover the land entirely from sight, and mangroves flourish a considerable distance out in the sea. Here is a diversity of wild fowl, especially the pelican and heron, which frequent the near rivers. Having occasion to land frequently for wood and water to cook our provisions in the boats, we sometimes amused ourselves by shooting birds of the most handsome plumage, which unfortunately we seldom had the means of preserving; but we often cooked and regaled ourselves on a bird similar to the snipe. We visited several small towns, and were cordially received by the natives: they were civilised, and, as at Sierra Leone, had cultivated little farms, and appeared more clean and industrious in making mats of the palm-tree leaf, and preparing cotton for market, than those in the more immediate neighbourhood of Sierra Leone. The natives of the surrounding villages, having but little or no intercourse with those near the sea-side, who trade with Sierra Leone, appeared a more rude and uncultivated set, following their original idle course of life.

[To be continued.]

LONDON IMPROVEMENTS.

WE have frequently adverted to and described the various new and important works carrying on in the metropolis. Covent Garden and Fleet Markets have long been noted as nuisances, rather than as places of convenience and comfort: respectable housekeepers, and even servants, have, consequently, avoided instead of resorted to them for the articles wanted in their families. These two important markets have lately undergone such alterations, and are so well provided with shops and commodities, that they must become more useful to the public and profitable to the tradesmen. Hungerford Market was formerly a place of much traffic: it now consists of a mass of old, dilapidated, and almost tenanted houses and sheds. By a prospectus and plans now before us, it appears that some noblemen and gentlemen of the first respectability have associated to purchase the whole property of this market,—construct a new series of shops and warehouses, with wharfs and taverns adjoining—form jetties for the accommodation of steam and pleasure boats—and by other novel plans to render this a place of great public convenience and utility: the buildings are also intended to participate in the architectural improvements of this part of London, which, from Charing Cross to Exeter Change, will very soon be made a wide and convenient street, with handsome shops on the whole of the north side.

WINDSOR-FOREST SPA.

A PAPER relative to the discovery last year of a spring at Winkfield, under the foregoing name, has been sent to us; but as the particulars have already appeared in several periodicals, we need not dwell on them here.

The spring, it seems, issues from a stratum about twenty-four feet from the surface; and the water possesses considerable aperient powers. About 4,400 persons have, it is stated, already taken these waters with very beneficial effects; and as they are situated in a salubrious and delightful part of the country, it is expected that they will soon become eminent as a spa, towards which a spacious pump-room has been built.

Professor Brande's analysis of one pint (7000 grains) gives—

Sulphate of magnesia	38
Muriate of magnesia	24.5
Sulphate of soda	10.8
Muriate of soda	9.3
Sulphate of lime	3.0
Carbonate of soda	2.4

Total in grains..... 88.0

The quantity of muriate of magnesia in the Forest spring is nearly double that of the Park.

LITERARY AND LEARNED.

KING'S COLLEGE.

It is gratifying to us to learn, that the promptitude with which the recent call upon the shareholders has been paid, has placed the erection of this noble institution beyond a doubt; and that the architect has been instructed to proceed forthwith in carrying his admirable design into effect. One of the peculiar characteristics of this design is, that the superstructure, by which the level with the Strand will be obtained, and on which the College itself will be raised, will, in every portion of its capacious extent, be rendered available to the purposes of the establishment. By this means, economy will travel hand in hand with the acquisition of conveniences and facilities in respect to general management, which scarcely any other site would have afforded in any thing like an equal degree.

We believe it is not generally understood, that, independently of the right possessed by the members of this corporation of nominating students, of voting at general meetings and at the election of certain officers, and of eligibility to the council of management, the students nominated by the members will be entitled to receive instruction and attend the various courses of lectures on lower terms than those which will be paid by students not so nominated. It will also be interesting to those shareholders who have not perused the Abstract of the Charter, to know from us, who have perused it, that it effectually protects them from all liabilities beyond the amount of their respective shares.

FINE ARTS.

NEW PUBLICATIONS.

England and Wales. From Drawings by J. M. W. Turner, Esq., R.A. With Descriptive and Historic Illustrations by H. E. Lloyd, Esq. No. VII. Jennings.

"LOUTH," "Great Yarmouth," "Stone Henge," and "Hampton Court Palace," form the subjects of this Number. They are all fine; that of "Yarmouth" is singularly picturesque and romantic. The awful character of "Stone Henge" is much increased by its being represented under the effect of a storm.

Miss M. Tree as Viola. Printed and engraved by J. Mills. Ackermann.

A FAITHFUL representation of Miss Tree's figure and action. There is much taste also in the general arrangement of the composition.

The British Diorama. T. Griffiths, London. WE have seen a little print, designed by A. P. Harrison (late inspecting clerk to the establishment), "representing the eight views which so much delighted all who visited the British Diorama," and intended for the illustration of scrap-books and albums. By the calamitous fire at the Royal Bazar in May last, Mr. Harrison was a severe sufferer, "having lost his property, as well as the situation that maintained him and his infant family." This print, which conveys a very pleasing reminiscence of the views in question, is published as "an introductory attempt to retrieve his losses;" and we sincerely hope the attempt may prove successful.

A Brief Account of the Colosseum in the Regent's Park.

To the visitors to this interesting exhibition this little publication will prove a most agreeable and useful companion. Besides a good general description of the picture, it contains eight outline plates, with references, comprehending the entire circle, and pointing out the various streets, squares, churches, public edifices, distant objects, &c., of which the vast view is composed.

Comic Composites for the Scrap-Book. With humorous Lines by Thomas Hood, Esq. W. B. Cooke.

FIGURES composed of household, gardening, and other utensils. Droll enough; but we have had almost sufficient of such things. The lines by Mr. Hood afford additional proof of his extraordinary facility in adapting expressions to purposes to which they certainly were never before applied. For instance, under a figure, the supporters of which are a mop and a broom, are these lines:—

"Like feet Camilla
In the poet's strain,
A pair of legs well form'd
To sweep the plain."

Another figure (by Cruikshanks) formed of guns, pistols, swords, &c. has this subscription:—

"The rise of Wellington was on this plan:
For arms have been the making of the man."

COLOSSEUM.

THIS novel and truly interesting exhibition is nearly completed. Mr. Parris has been indefatigable in finishing the picture; and it is really surprising to witness the rapid and successful execution of this scientific artist:—not only the local colouring and effects of the numerous objects are strictly defined, but an artist-like feeling is given to the whole, and to its infinite details.

BIOGRAPHY.

PAGANINI.

[From the correspondence of an Amateur.]
Paganini, 28th December, 1838.

My dear friend,—I am just returned from the Chevalier Paganini's great concert. Though the terms of admission were quintupled, a numerous audience were assembled; and, to my mind, they had every reason not to repent of the cost of the entertainment,—for Paganini is a meteor, even in these days of scientific refinement, whose splendour we are not likely to gaze upon again. I admit that his exterior is rather forbidding than inviting, and yet there is something very remarkable about it. He is thin; his clothes hang loose about his limbs; and when he stoops to make his bow, his body wriggles after so extraordinary a fashion that the spectator every instant expects

the upper part of his figure to sever itself from the lower, and both of them to tumble to pieces into a heap of bones. When playing, he throws his right foot forward, and, on the occurrence of lively movements, beats time with it in a most ludicrous manner. His features, however, never lose their livid look, save when thundering plaudits draw them up into a smile, and then his lips move about in every direction, and his eye beams with self-complacency, winking and leering from side to side, with a slight expression of good-humour. When intent upon a difficult passage, his body shapes itself into a sort of triangle, the stomach forming a sharp, indented angle, whilst the head and right foot are thrust outwards. A stranger would pronounce him to be in the last stage of starvation, were it not notorious that he often pockets three hundred pounds and more at a single concert. The sum total of his personal qualifications stamps him as having few corporeal endowments which are not his own peculiar property; it would grieve me if there were a larger sprinkling of human nature about him; he is technical dexterity personified; passion is the spring and soul of his every movement; and wretchedly would Mother Nature have blundered, had she gifted him with a pound weight more of fat.

I cannot fancy, my good friend, that you will feel much enraptured with this portrait, such as I give it you from the living model; but I venture to affirm, that you would instantly forget the absence of every external advantage so soon as your ear caught the first notes from the masterly hand of this locomotive skeleton. Never were movements, the most difficult which can be conceived, so perfectly, so gracefully, or so readily mastered; his violin emits tones such as never broke before upon mortal ear; at one time they resemble the chirp of the simplest of the feathered choir; at another, the strutting jug of the nightingale, or the round tone of the chiming bell; again, they melt into the soft, silvery tone of the flute; and then break out from his double chords with a burst which paralyses the accompaniment of the surrounding orchestra. His *cantabile* is inimitable. In a word, he stands alone and unrivalled; and I have heard the first violinists declare, that they could have formed no conception, before his appearance, of the perfection to which such an instrument could be raised. The only piece of his own composition which he gave us this evening was a concerto of three movements; 1. *Maestoso, adagio appassionato e brillante*; 2. *Sonata on the prayer of Moses, out of Rossini's *Mosè in Egitto*, (played entirely on the G string!); and, 3. a *larghetto* on Mozart's theme in Don Juan, "Give me thy hand, my life." I have now one event in my life to look back upon, to which I shall always recur with unmixed delight; and I feel confident, that Paganini's wonderful talent will not only create an epocha in that branch of the liberal arts, the rank and character of which his genius has so eminently exalted, but that his name will survive in the history of music, so long as "the concord of sweet sounds" shall undasp man's heart.*

12th December.

When I paid my first visit to Paganini, I found him in a black night-cap, fur boots, without a waistcoat, but with a species of brown hussar vest thrown over his shoulders, sitting on his bed, and busied in assisting his black, sparkling-eyed, dark-haired, cherub of a boy to draw on his little red boots. • • • Being anxious to listen, rather than to speak, I

endeavoured to lead him into topics connected with his own "sayings and doings."

The conversation naturally reverted to his last concert. "You are right," said he, in reply to an observation I had made; "I play at my concerts more than most other performers. But I take a delight in it, and should carry it still further if it did not affect my health,—so much so, indeed, that my breast and stomach are both the sufferers; I feel this particularly this morning, as I am but just recovered from a severe illness. I went through three operations, and think I bore myself like another Mutius Scaevola. I wanted nothing so much as rest: for the physicians were apprehensive my nerves would be so seriously injured that I should lose my left eye. Happily, however, I escaped this misfortune." Seeing a guitar lying upon the bed, and having heard of his masterly execution on that instrument, I asked him whether he ever played upon it in public? "No," he replied. "I do not like the guitar, but consider it a sort of guide to thoughts. I sometimes take it up, to give a stimulus to my powers of composition, or to accomplish those harmonious chords which I cannot produce on the violin. For any other purpose it is a thing of no value in my estimation. . . . I shall remain in Prague till my cousin arrives, and proceed with him to Berlin, and thence to Paris and London."

"You praise my powers of memory; they are undoubtedly excellent, for I play every thing, even the compositions of others, from recollection, and never from written notes. The larghetto, from Mozart's theme in Don Juan, which you heard yesterday, had half escaped my memory only the day before, but several hours' reading instantly set all to rights. Besides this, the accompaniment of the orchestra, while I am playing, always suggests to me what is to follow; so that I am never fearful of getting through a piece. You are much mistaken if you think I practise unremittingly. During the whole three months of my illness I never once took my violin in hand. People tell me that my name is up. I hope it will be spread far more widely when I have published my compositions; which I intend to do shortly. They will be prefaced by instructions for players on the violin, who will thus learn my method of dealing with it. They shall have a key to my play, and this will tend in part to remove the difficulties which have hitherto prevented the performance of my pieces."

Speaking of certain pursuits in the department of history, to which I was turning my attention, he raised his hand to his night-cap, (a salutation he had invariably performed whenever I had mentioned his playing,) and observed, "I am also a woer of the sciences, and have studied a little. My instructor in musical science was Paer."

DRAMA.

KING'S THEATRE.

SINCE our last publication, Cimarosa's celebrated opera of *Il Matrimonio Segreto* has been twice performed. This opera was wont to be considered the master-piece of the departed author. When Rossini was asked by an Italian prince, to which of his own compositions he gave the decided preference, with his usual quickness he replied, *Il Matrimonio Segreto*, inferring by this equivocal answer, the modest admission, that by the circumstance of taking this opera as a model for his buffo compositions,

he was indebted for the fame he acquired. There can be no doubt but to Cimarosa, Rossini is indebted for some few musical hints. His predilection for chromatic "distances" may be traced to its original source in some of Cimarosa's music; but still the disciple has far surpassed his predecessor. The affinity in the style of these composers is discoverable in the manner in which they conduct their concerted pieces, particularly their finales; but the orchestral accompaniments of Cimarosa are poor compared with those of Rossini; and in dramatic tact, the latter eclipses every composer, past or present. In operatic music, the instruments may occasionally produce those energetic and characteristic touches which give life to the whole composition: Rossini never loses sight of this. Cimarosa, with the exception of an orchestral passage in the quartette of the first act of *Il Matrimonio Segreto*, following the words "Così in poco il suo orgoglio," seldom produces the effect in which the living composer has so eminently succeeded. We witnessed the performance of *Il Matrimonio* on Saturday last: the house was crowded; and the buffoonery in which Zuchelli, and particularly Galli, indulged, appeared to please a great portion of the audience better than the music. Apropos: Galli, as *Count Robinson*, was attired more after the fashion of a French dancing-master than an English nobleman; and, indeed, in his dancing duett with Zuchelli, we for some moments began to suspect he had mistaken his profession. His limbs appear to be far more flexible than his voice. Sontag's *Caroline*, considering her clandestine conduct, was a most chaste performance; and Malibran's old maid was admirably conceived, and as well performed.

On Tuesday night *Semiramide* was given to a very full house. Sontag personated the *Queen of Babylon*; but there was a want of majesty—of royal dignity in her deportment, which depreciated much from her performance. Her singing was characterised by unusual energy, particularly in the second act. On the whole, the preference must be given to the *Semiramide* of Blasis: this donna, perhaps, walks the stage better than any artist on it, and, next to Pasta, is most graceful in action. Pisoni, as usual, delighted her audience. Our observations might be concluded by censuring the wretched performance of the cornos and trombone of the band. Spagnioletti, however, was sufficiently enraged, and would, we were afraid, destroy his equilibrium for ever by his fierce though vain gesticulations.

On Thursday, *Don Giovanni* was played to a crowded theatre, with some novelty of cast: Sontag performed *Zerlina* instead of Malibran, and Blasis taking Sontag's part of *Donna Anna*. The opera went off with great effect: had the original cast been preserved, with Blasis as *Elvira*, it would, we think, have been one of the finest productions of the season. As it was, the variety which Laporte has studied so successfully was not without its reward. This is the last night of the fair German, who bids, it is stated, a final farewell to England on the occasion. There will of course be a cram, and the pleasure she has afforded the public fully deserves that honour. We are not sure, however, that we can equally approve of the foreign fashion which we hear is to be introduced; namely, that there are to be crowns and chaplets, and that many of the ladies are to attend in Sontag dresses, ribands, and other et-ceteras à la Sontag.

Velluti has left London for the Continent. He returns for the Argyll Rooms next season:

De Bagnis, we are told, is not to be one of the managers (as formerly reported); but is engaged as the comic prop in singing.

HAYMARKET THEATRE.

MR. LISTON has made his appearance at the Haymarket, and we trust it is a signal for the abandonment of those attempts at opera which we have been so frequently compelled to deprecate. The last was too much even for the public, who had proved they could bear a great deal. *The Haunted Tower* was literally d-d on Monday week; and the disgraceful manner in which the very few pieces of music in *Sweethearts and Wives* were executed on Monday last, diminished greatly the effect of that very pleasant comedy, admirably acted as it is by Liston, Farren, and Vining. Fortunately, two principal pieces in which Liston acts are not musical; and what was not yielded to friendly remonstrance and common sense will now be exacted by necessity. *Charles the Twelfth* is announced for Monday here. We shall be curious to see the effect of Liston and Farren's perfect acting in this drama at this small theatre.

ENGLISH OPERA.

A NEW farce was produced here on Monday evening, called *Incoy, or What's in a Name?* The only incident in it, and not a very probable one, is borrowed from a French piece, called *Monsieur Jovial*, and has already formed the staple joke of two or three burlettas at the minor theatres. We understand that *Incoy* is from the pen of a noble lord; and, under the title of *Tied by the Leg*, had failed at Dublin. It was heard with patience; but met altogether with so unfavourable a reception, that we were surprised to see it announced for repetition.

MODEL OF YORK CATHEDRAL.

FEW now are the Sights of London, and many the flights from the metropolis. Among the former, however, we have to notice a neat and ingenious model of York Cathedral, exhibiting at the Western Exchange. It is on a small scale (about four feet in length), but executed with great industry and accuracy, from massive arch to fretted spiracle. The artist assured us that he had employed years on this performance, and used no instruments but a knife and two small punches. Nevertheless, he has succeeded in representing the magnificent structure to admiration. The walls, &c. in wood; the windows in glass, stained after the original designs, gauze, and other transparent substances. By placing a lighted candle within, under the tower, a very pleasing effect is produced; and, though hardly sufficient for an exhibition, we heartily wish the public to countenance and reward the patience and skill of the modellist.

There are other examples of his talents in the room; and in that adjoining, a collection of fine mineralogical and geological specimens, particularly of some lately acquired at the sale of Mr. Arliss's museum.

VARIETIES.

For some time past, artificial pinks, so manufactured as to resemble the riband of the order of the Legion of Honour, had been worn by most of the comcombs in Paris. The police, in order to do away with this paltry imitation, have adopted with success the following manoeuvre:—for several nights together, they sent into the saloons of the theatres about twenty very meanly dressed persons wearing the same sort of pink. After this, no person pretending,

in dress at least, to be a gentleman, was to be seen wearing the artificial pink.

New Bath.—A new shower-bath, so contrived as to throw the water equally upon every part of the body, with any degree of force required, is much spoken of in Paris, where it is said to have wrought cures in cases of debility almost approaching to miracles.

Influence of the French Clergy.—The "Gazette de l'Instruction Publique" says,—"We are told every day that the clergy have lost all influence in public instruction. The following list of the personnel which the University has borrowed from the clergy, extracted from the almanack of the University for 1829, will disprove this assertion;—2 members of the council-general; 3 inspectors-general; 5 rectors; 12 academy inspectors; 77 members of academic councils; 20 proviseurs (out of 38); 9 censeurs, or prefects; 3 économes of royal colleges; 136 directors, principals, or sub-principals; 269 deans, professors, or régents; and 92 institution chiefs or schoolmasters: forming a total of 627; to which may be added 97 almoners attached to different establishments for education. This is nearly one-fifth of all the persons employed, and it adds 940,000 francs to the budget of the clergy!"

The Osages, of whom so much has been said in the French papers, are about to return to their own country. A Paris paper says, "they consist of three men, one woman, and a child that was born at Liege after their arrival in Europe. Another child, twin of the former, has been adopted by a rich lady of the Netherlands, and will remain in that country. These poor strangers have been exceedingly unfortunate. Their guide, Colonel Delaunay, deserted them at Geneva; upon their first departure from Paris, their effects were detained by the hotel-keeper, where they lodged in the capital, as security for his rent, and he followed them from town to town to take the money they received for exhibiting themselves; since that period, the hotel-keeper has become a bankrupt, and their effects are still detained; and now they are about to return home they are destitute of resources. Mr. Barnet, American consul, has kindly opened a subscription to afford them assistance. Their interpreter, Paul Loyse, the son of an Osage woman by an European, continues with them, and will accompany them on their return."

Preservation of Eggs.—A person who dealt largely in eggs, at Paris, made some public experiments, in order to shew his manner of preserving them. A large number was placed in a vessel in which was some water saturated with lime and a little salt. They were locked up, and kept in that state for several years. The vessel in which they had been placed was opened in the month of January last, and the eggs, without one exception, were found to be in excellent preservation. An omelette was made for the company, and it was declared to be as good as if the eggs had only been kept two or three days.—*Journal des Connaissances Usuelles.*

Composition to destroy Corns and Warts.—Take one part of fine resin, four of linseed oil, and add a little litharge, which are to be well boiled together. This preparation, when wanted for use, must be heated with the hand, and spread upon gold-beater's skin, or sticking-plaster, and applied to the corn so that its surface may be completely covered. At the end of five or six days, the plaster is to be taken off, and the corn cut with a penknife as deeply as possible without touching the flesh, and in a few days the operation is to be repeated.

The corn must be again well covered with the plaster; and at the end of one or two months it will disappear entirely.—*Journal des Connaissances Usuelles.*

Monkeys.—In a Course of Lectures on Natural History, by M. Geoffroy Saint-Hilaire, recently published, it is stated that monkeys are susceptible of *ennui*. A celebrated philosopher of the last century, who was certainly much more of a man of talents than of a natural philosopher, pretended, in the first instance, that to his hands alone man was indebted for his superiority over other animals. It was objected to Helvetius, that monkeys, having four hands instead of two, ought, according to him, to be much superior to man in intelligence. But he replied, that monkeys, kept by the disposition of their bodies in perpetual motion, were not susceptible of *ennui*,—one of the principles, in his opinion, of human perfectibility. Helvetius would see in M. Geoffroy's work, that in this supposition he was again in error; and besides, that the organization of monkeys differs in so many important respects from that of man, that it is manifest the monkey species must for ever be at an infinite distance from the human. One curious fact, and which alone would determine that question, is, that it has been ascertained that the young monkey is much more intelligent than the adult. By a remarkable law of nature, the more the physical strength of the monkey increases, the more its intellectual power diminishes.

Swedish Iron.—The "Revue Encyclopédique" gives the following as the amount, in tons, of a thousand kilogrammes of iron exported from Sweden in the year 1828:—

To the United States.....	9,409 tons.
Germany.....	6,676
Great Britain.....	5,783
France.....	5,096
Portugal.....	3,900
Denmark.....	1,771
The Netherlands.....	1,436
The Indies.....	893
Russia.....	350
Brazil.....	289
Malta.....	142
Spain.....	64
The Antilles.....	58
Italy.....	40
Norway.....	35

Total.....35,912 tons.

LITERARY NOVELTIES.

Sir Walter Scott, both the old and young will delight to hear, is busily employed on his *Third Series of Tales of a Grandfather*. This series will, we hear, embrace accounts of both the *fifteen* and the *forty-five*.

Next Monday, we observe from the extensive catalogue, commences the sale of the late Mr. Heaviside's anatomical museum, which consists of an immense variety of natural and morbid preparations, well known to the medical world.

The following whimsical and characteristic "Announcement" has just reached us:—Many inquiries having been made by the readers of "Whims and Oddities," whether a *Third Series* would come forth?—in order to allay such doubts for the future, it has been determined by the author that the work in question shall become a periodical. His ensuing crop of conceits must therefore be looked for in the pages of "the Comic Annual," under which title they will aim—like Mr. Colman's "Broad Grins"—at creating a laugh from year to year. For those who have relished his cuts before, the designer has more cuts behind, with the addition of some head and tail-pieces which he has tossed up for the occasion. By way of variety, the pencil of Mr. Cruikshank will contribute some specimens of its comic power, and various graphic devices will be introduced from other sources. In short, there is a *Funny Club* established for the designs, and a *Cutter Club* for the wood engraving. In the literary part the entertainment will not be a monopolylogue, several gentlemen of a lively turn having promised to humour the design of rendering the work strictly *unserious*—a character that will be acceptable, it is presumed, in a volume which is to be read by the yellow, but not golden, light of November. Of course the perusal will be equally adapted to the fair sex and the unfair. The publication will take its Chance with Hurst, of 65, St. Paul's Churchyard,—that firm being empowered to dispose of the printed part of the property, in the hope that they will soon get rid of the *copyhold*.

In the list of his very valuable Cathedral Antiquities,

we observe that Mr. Britton is preparing for publication *The History and Antiquities of the Cathedral Church of Bristol*, in the same fine style with his preceding volumes.

Mr. Reynolds, writing-master, Christ's Hospital, announces the Scholar's Practical Introduction to Merchants' Accounts, on an improved plan; comprising the Waste-Book, with instructive notes for journalising and posting the same, without the necessity of having the journal and waste-book before the pupil for reference.

There is announced for publication a Picture of Australia, embodying in a small compass all that is known of the present state of New Holland and Van Diemen's Land.

In the Press.—The Rudiments of the Anglo-Saxon Language, by Joseph Gwilt, Esq.

LIST OF NEW BOOKS.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

Mr. Dance's communication on the Debtor Laws in our next.

If C. L.'s verses have been reserved for insertion, they will appear when opportunity offers. We do not undertake to give separate answers to poetical correspondents: if we did, we should occupy much space to little purpose.

London, July 18, 1829.

Sir,—In your Review of Mr. Madden's Travels in Turkey, &c., in this day's *Literary Gazette*, you give an extract to "warn travellers from the too frequent assumption of medical skill in those countries." Let me beg you also to warn the same class of persons from the too frequent misrepresentation of facts, lest their inaccuracies should be exposed. Imagining that the anecdote of "Mr. L." referred to Mr. Lane (whose name is mentioned in full in other parts of Mr. Madden's book), I inquired of that gentleman if my conjecture were true; and was surprised to learn from him that not one of his crew was "toothless"—for he "phyicked" none. The ointment of nitrate of mercury (from a mistake in the label, made at Apothecaries' Hall) was wrongly administered by Mr. Lane, but only to two persons (his own servant and a Turkish soldier), and the effects were not "terrible." Both were slightly salivated, but neither lost a tooth. Mr. Lane was never a "medical amateur," or pretended to practise physic; but travelling in countries where he could not obtain medical aid, he took with him a medicine chest; and had he neglected such precaution, he must have died of dysentery in Nubia. He very seldom gave any medicine, but when solicited for a simple aperient. Your insertion of the above (next week) will gratify Mr. Lane's friends; and of its accuracy you may have adequate testimony.—I am, sir, &c. R. J.

Orthography (from a Fruiterer).—Sir,—You complain of the Stray Berries and raspberries requiring so much sugar for want of flavour, which is by reason of the rane, and by-case they are not bean hot wether enuf to make them sweet [sweet].—Your humble servant, JOHN MORRIS.

THE COURT JOURNAL. The whole

Impression of this new and popular Weekly Journal being now stamped, Subscribers may receive and transmit it to their friends, postage free, throughout all parts of the Kingdom. The Proprietors of the Court Journal, with due acknowledgments for the highly gratifying reception their Work has already met with, beg leave to point out to readers in general the advantages of their publication in its present improved form. The occupations, engagements, and amusements of the higher classes of society had long required a record; they found it in the Court Journal. The fête champêtre, the sumptuous banquet, the concert, the soirée, the ball, the public and private habits of royal and noble life, those habits which give tone to manners throughout the empire, were depicted with a freshness and accuracy hitherto unattempted; and, in all instances, with the most extensive avoidance of injury to personal feelings. It may be easily imagined that these details could not have been supplied from ordinary sources,—thus the conceptions of the Proprietors afforded them peculiar opportunities, and many of the articles of the Court Journal were contributed by individuals whose rank and fashion gave even a pledge at once for the good taste and the truth of their descriptions.

But something more was still required to realise the original idea of the publication. It was hitherto the Journal of an elevated but exclusive class; the purpose was to render it available to all classes, retaining its anecdote, pleasant, and spirit of high life, to make it the vehicle of intelligence of every interesting kind; the companion not only of the boudoir but of the breakfast-table and the study. The Court Journal, in which the women of fashion might find the record of her engagements for the week brought gracefully before her eye; but the politician, the student, and the various orders of intelligent society, might find the species of information suited to their purposes;—to make the Court Journal a Weekly Newspaper of the most important and valuable nature.

For this object a Stamp was necessary, and the Proprietors did not hesitate to subject themselves to the serious additional expense, that they might give the public their paper in its complete state, feeling confident that the claims of the Work to great popularity and extensive circulation would be duly estimated by the public at large.

The Court Journal is regularly published every Saturday Morning, on a handsome sheet of 10 quarto pages, containing 48 columns, price 10d. and may consequently be received on Sunday in all parts of the Country. Published for Henry Colburn, by W. Thomas, at the Office, 19, Catherine Street, Strand. Orders are received by all Booksellers and News-vendors throughout the Kingdom; and those who desire to become Subscribers are particularly requested to give their orders to the Bookseller or News-vendor in their own immediate neighbourhood, as the best mode of receiving it regularly.

N.B.—Advertisements or orders sent from the country to the Office must be accompanied by a reference for payment in London.

THE COURT JOURNAL of Saturday,

July 18th, No. XII. contains, among other interesting Articles—Court and Fashionable Life—the Ring at Windsor—the Court of Wednesday last—Movements of all the Members of the Royal Family—a Marriage in High Life—Sketch of the Court of Russia; Leave and Ball at the Winter Palace—Original Letter from a Young Persian Noble—Glance at the Fashionable Assembly of the Week—the Gentleman—the Fairer's Complaint of the Weather in July—Political Mems of the Week—Literature—Frankland's Constantinople—Ruins of Banbuck—Russian Carnival—Princess Borghese and Lady Morgan—Memoir of Count Zenzendorf—Notes on the Newspaper—Theatricals—Dramatic Mems—Spectator's Correspondence—the Watering Places—Foreign News—Army and Navy—Universities—Literary Intelligence—Marriages, Deaths, &c.

The Court Journal is published every Saturday Morning, for H. Colburn, by W. Thomas, at the Office, 19, Catherine Street, Strand, price 10d. stamped, and supplied, free of postage, by all Booksellers and News-vendors.

The Manual of Rank and Nobility, 15s.

In 1 vol. royal 18mo. 5s.

THE FAMILY LIBRARY, No. III.;

containing the Life of Alexander the Great.

By the Rev. JOHN WILLIAMS, M.A.

Rector of the Edinburgh Academy.

John Murray, Albemarle Street.
"Whatever new light could be thrown on any particular point of Alexander's career, by a most strict examination of all the original writings of the Greeks and Romans—whatever could be gathered from the literature of the Arab and Persian—above all, whatever the works of modern Sanskrit scholars could supply, all this may be found condensed in one handy little volume, the 'Family Library.' We are greatly mistaken if this little volume does not become a school book. It is far better suited for that purpose than any one of recent publication, with which we have had to contend. It will no doubt become a great favourite among young persons engaged in the delightful career of classical study; but we are bound to add, that it deserves a place in the collection of the more mature reader, and is in fact a permanent addition to the stock of standard histories in the English tongue."—*Literary Gazette*.

The present biography, from the pen of that well-known scholar and estimable gentleman, the Rev. Mr. Williams, is an attempt to supply, and we believe for the first time, that desideratum in English classical literature, a correct history of Alexander the Great. The task, one of no slight difficulty, has been executed with consummate skill, and with a variety of detail, no less originality of matter, force of argument, depth of research, and elegance of style, in among the most fascinating specimens of biography we have ever had the good fortune to peruse."—*Sun*.

Constable's Miscellany.

Price 3s. 6d. or on fine paper, price 4s. Vol. 45, containing

nia. By Robert Southey. Foolscep 8vo. 7s. 6d.
 "In the ease of its structure and verification, and the straight-
 forward simplicity of its narrative, it classes with the *Minstrel*
Ballad. We thank Mr. Southey for giving to the friends of the

public a trifle originally intended for his own; and glad we are that after so long a course of arduous and useful labour he still retains the life and vivacity of his youthful heart, and the merry versatility of his boyish fancy."—*Blackwood's Magazine*.

THE VILLAGE NIGHTINGALE; or,
the Story of Esther Wallis; and other Tales.
By ELIZABETH FRANCES DAGLEY,
Author of the "Birth-day," "The Fairy Favour," &c.
Published by N. Halls, 108, Piccadilly, opposite Bond Street.

New edition, corrected to the present period, inscribed, by permission, to His Most Gracious Majesty, bound in 1 very large vol. price 1s. 15s.

BURKE'S DICTIONARY of the
PEERAGE and BARONETAGE of the BRITISH EMPIRE.

Compiled from the Communications of the Nobility, with upwards of 1600 Plates of Arms, and containing Descriptions of the Armorial Bearings of each House.

"The work which Mr. Burke has just given to the public is equally well planned and well executed. Great ability is shown in the condensation of all the requisite matter into one thick volume, which, owing to the clear and beautiful mode of printing and engraving, is justly entitled to be called a cheap one, not only in comparison with the tedious and expensive works on the same subject, but in reference to the quantity of reading it contains, and the superior style of its execution."—*Examiner*.
Printed for Henry Colburn, 6, New Burlington Street.

A POCKET DICTIONARY of the
SPANISH and ENGLISH LANGUAGES, new edition, considerably enlarged, and improved from the last edition of Neuman and Barrett.

London: Printed for Harding and Lepard; T. Cadell; Longman and Co.; Bossey and Sons; J. Nunn; J. Cuttill; John Richardson; J. M. Richardson; Baldwin and Craddock; J. E. Hooker; Whittaker, and Co.; T. Fisher and Son; J. Simpkin and Marshall; J. Collingwood; Dulau and Co.; Cowie and Co.; Parbury, Allen, and Co.; J. Duncan; R. Scholey; Hurst and Co.; W. Joy; E. Hodgson; Smith, Elder, and Co.; Trevellick and Co.; V. Salva; and G. and J. Robinson, Liverpool.

Of whom may be had, price 1s. 4s. boards.
Neuman and Barrett's Spanish and English Dictionary, in 2 vols. 8vo. a new edition, with very considerable Additions and Alterations.

A GUIDE to the LAKES of CUMBER-
LAND, WESTMORELAND, and LANCASHIRE.
By JOHN ROBINSON, D.D.
Rector of Clifton, Westmoreland.

Illustrated with 30 Views of Scenery, and a Travelling Map of the adjacent Country.
London: Printed for Harding and Lepard, Pall Mall East.

Mavor's Eton Latin Grammar, with the Accents and Quantity marked.
Price 8s. 6d. a new and greatly improved edition, being the 13th, of

DR. MAJOR'S ETON LATIN GRAM-
MAR, with Explanatory Notes, and useful Additions to assist the Learner. This edition has been most carefully revised, and the Accents and Quantity marked.
By D. CAVEY.

The sale of twelve very large editions, within a few years, is the best evidence of the value and estimation in which the Notes of Dr. Mavor are held; and the patronage so liberally given, has induced the Proprietors to spare no expense in rendering this edition in every way worthy of their support.

London: Printed for Harding and Lepard; Longman, Rees, Orme, Brown, and Green; Baldwin and Craddock; Whittaker, Treacher, and Co.; J. Richardson; T. Bossey and Sons; Simpkin and Marshall; J. Duncan; Hamilton, Adams, and Co.; E. Williams; Hurst and Darton; Poole and Edwards; Baker and Fletcher; Hurst, Chance, and Co.; Cowie and Co.; Sutherland and Stretch; J. Collingwood; and C. J., G., and F. Rivington.

Of whom may be had,
Perrin's French Spelling, the 21st edition,
edited by C. Gros. Price 2s.

Beck's Medical Jurisprudence, new edition.

In 8vo. price 12s. 3d. edition of

ELEMENTS of MEDICAL JURISPRU-
DENCE.

By THEODORIC ROMEYN BECK, M.D.
Lecturer on Medical Jurisprudence in the College of the Western District of New York, &c. &c. Brought down to the present time by JOHN DARWALL, M.D.
London: Printed for Longman, Rees, Orme, Brown, and Green; S. Highley; Simpkin and Marshall; and W. Blackwood, Edinburgh.

A JOURNAL through NORWAY, LAP-
LAND, and PART of SWEDEN, with some Remarks on the Geology of the Country, its Climate, and Scenery; and the Ascent of some of its principal Mountains; the present Political Relations of the two Countries; Statistical Tables, Meteorological Observations, &c.

By the Rev. ROBERT EVEREST, A.M. F.G.S.
Late of University College, Oxford.
Printed for Thomas and George Underwood, 25, Fleet Street.

BOOKS IN THE PRESS.

On the 1st of August will be published, price 2s. 6d. No. I. of
THE GARDENS and MENAGERIE of
the ZOOLOGICAL SOCIETY DELINEATED, being Descriptions and Figures in Illustration of the Natural History of the Living Animals in the Society's Collection. Published with the sanction of the Council, under the superintendence of the Secretary and Vice-Secretary of the Society.
London: N. Halls, 108, Piccadilly.

On Friday the 31st will be published, No. II. price 2s. 6d.
SHARPE'S LONDON MAGAZINE, for August 1850. With an Engraving by John Fye, Esq. from a Drawing by George Barnett, Esq.
Contents: I. Notice, an unpublished Tragedy, by Chatterton; and—II. Evening, by George Darley—III. Lines, by Miss Withard—IV. Libel—V. The Prayer for Love, by Mrs. Hemans—VI. Duke de Simon's Memoirs—VII. The Vision of the Pictures—VIII. The Guard—IX. Address to the Ocean—X. Capt. Basil Hall's American Travels—XI. Sonnet—XII. Katie Cleverly, by James Egge—XIII. How to make a Poem—XIV. The Illustrations Vindicated, concluded—XV. Song—XVI. The Trimmer's Song, by Wm. Kennedy—XVII. Political Reflections—XVIII. The Monthly Club.
London: Published by John Sharpe, Duke Street, Piccadilly.

In the press, in 1 vol.
HISTORICAL RECOLLECTIONS of
HENRY of MONMOUTH, the HERO of AGINCOURT, and other eminent Characters.
London: Printed for Baldwin and Craddock.

Early in August will be published, by Messrs. Carpenter and Son, Old Bond Street; and Colnaghi and Son, Pall Mall East, Part I. of

A SERIES of SUBJECTS from the
WORKS of the late R. P. BONINGTON. To be drawn on Stone by J. D. HARDING.

The object of this undertaking is to meet the anxiety of many persons to possess the works of this distinguished and highly gifted painter, but who, from his early death, were unable to obtain them,—by giving, as nearly as may be, fac-similes in lithography of such of his works as shall show the variety and extent of his talent in every class of subject, historical, domestic, landscape, marine, and architectural, both by sketches and pictures.

The Work will be published in Four Parts, each containing Five Subjects; to which will be added, a Portrait of Mr. Bonington, from a Picture by Mrs. William Carpenter, accompanied by a Biographical Memoir.

India paper Proof, 4to. 16s. per Number; Prints, Imperial 4to. 12s. per Number.

LONDON: Published every Saturday, by W. A. SCRIPPS, of the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand; and, 7, South Molton Street, Oxford Street; sold also by J. Chappell, 98, Royal Exchange. E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburg; Smith and Son, Edinburgh; and Robertson and Aitken, Glasgow; and J. Cunningham, Dublin.
J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

Journal of Belles Lettres, Arts, Sciences, &c.

AND

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 654.

SATURDAY, AUGUST 1, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

The History of the Hebrew Commonwealth, from the earliest Times to the Destruction of Jerusalem. From the German of John Jahn, D.D.; with a Continuation to the Time of Adrian. 2 vols. 8vo. London, 1829. Hurst, Chance, and Co.

It is seldom the case that knowledge in a country makes equal progress with theory and invention. A learned visionary is among the anomalies of human character. The light which springs up in the mind, and results from its own supposed energy of perception, is generally too vivid for the steadier but less dazzling light of knowledge: it keeps burning without imposing upon us the labour of seeking for fresh oil; and whenever it does go out, most commonly leaves us indifferent whether we walk in light or in darkness. But Germany, and German poets, philosophers, and divines, offer a singular exception to this observation. In their case, the boldest theorist is the profoundest scholar; the quickest imagination is coupled with the most industrious application; and the bright and splendid fancies of poetry are made the covering and the emblazonry of heavy folios of metaphysics and antiquities. No department of German literature affords a stronger illustration of this fact than the different branches of its theology. Far as the divines of this country have ventured into the deep sea of mysticism—wild as have been the theories of some, and the interpretations of others,—they can be charged at no time with a want of research. The errors into which they have fallen, have been encountered while in the stern and patient inquiry after truth. Their distinguished men have in scarcely an instance become so without having spent years in hardy toil, as well as having manifested originality of intellect. The consequence of all this has been, that theology is pursued in Germany as a science, which it is not at present in hardly any other country; that the greatest men have shown themselves awake to its different topics; and that whenever the opposite and equally indefensible errors of rationalism and mysticism are removed, there will be a ground for religious feeling to work on, a strong-hold for its defence amid those who are best able to defend it.

Professor Jahn is esteemed in Germany as a highly eminent Biblical scholar. His several philological works on the Arabic and Hebrew languages have been long celebrated there; but the production for which he is best known in this country is his *Archæologia Biblica*, a work which has obtained the approbation of some of the most learned of our own theologians. It is divided into three parts, treating respectively of the domestic, political, and ecclesiastical antiquities of the Jewish nation; and is esteemed one of the best books on the subject which could be put into the hands of the student or the general reader.

The work at present before us appears to have been written as a companion to the one we have been mentioning, and, together with

that, gives a complete view of the extraordinary nation of which it treats. The retrospect which it enables us to take of those ages, each year of which was as a visible footstep of the Almighty on the great abyss of futurity, is full of deep and thrilling interest,—not various, perhaps, as that attaching to the history of other nations; but solemn and impressive, filling the mind, independent of its religious regards, with a vague but irresistible awe,—an awe which infidels have acknowledged themselves unable to overcome.

We cannot do better with these excellent volumes than give one or two of the striking facts which are interwoven with the discussions on the more abstruse parts of Jewish history. They will serve to shew how important a part of ancient history is that of Judea. The commencement of Alexander's connexion with the Jews is thus related:

"That Alexander, when he invaded Syria, summoned all the cities in that region to surrender, to pay to him their usual tribute, and to furnish his army with provisions, is in itself very probable. Josephus testifies, that during the siege of Tyre, a written order of this kind came to Jerusalem, directed by Alexander to the high priest Jaddua, as the chief magistrate of the nation. Jaddua returned answer, that he had sworn fealty to Darius, and could not violate his oath so long as that prince was living. Alexander, naturally of a furious and impetuous temper, was highly irritated by this reply, and threatened that as soon as he had completed the conquest of Tyre, he would, by the punishment of the Jewish high priest, teach all others to whom they must keep their oaths. After the reduction of Gaza, B. C. 332, Alexander proceeded towards Jerusalem. Jaddua and all the citizens were thrown into the greatest consternation; they offered many sacrifices, and earnestly entreated God for deliverance. Josephus farther relates, that God then appeared to the high priest in a dream, bade him be of good courage, to adorn the city in the most magnificent manner he was able, and to go out fearlessly and meet the conqueror, arrayed in his official robes, attended by the other priests in their sacerdotal garments, and by the citizens clothed in white. Every thing was done according to these directions. The solemn procession advanced as far as the hill Sapha, which overlooks Jerusalem, and commands an extensive prospect of the country. As Alexander approached and saw Jaddua in the robes of his office, he went forward alone towards the high priest, adored the name of God, which was engraved on the golden frontal-plate of his turban, and then saluted Jaddua. Immediately the priests and citizens surrounded the king and welcomed him with joyful acclamations. All the Greeks were astonished at the conduct of Alexander; and Parmenio asked him how it happened that he, to whom all others did homage, should now himself do homage to the high priest of the Jews. Alexander replied: 'I did not adore the man, but that God who hath honoured him with the

priesthood: for I saw this very person in a dream, and clothed in this same habit, when I was at Dios in Macedonia. I was considering with myself how I might obtain the dominion of Asia, and this man exhorted me to make no delay, but boldly to pass over the sea thither, for that he would conduct my army, and would give me the dominion over the Persians. Whence it is, that having seen no other in that habit, and now seeing this person in it, and remembering that vision and the exhortation I had in my dream, I believe that I have undertaken this campaign by divine direction, that I shall conquer Darius, annihilate the dominion of the Persians, and successfully accomplish my whole design.' Alexander then gave his hand to the high priest, attended him into the city, went to the temple, and there offered sacrifices in the manner which the priests directed. When they afterwards shewed him the prophecies of Daniel respecting himself, he was highly gratified, and readily granted the request of the high priest, that the Jews might be free from tribute on the sabbatical year, and every where have liberty to live according to their own laws. Of his own accord, he promised the same indulgence to those Jews who would join his army; upon which many entered the service. Hecateus also, as quoted by Josephus, testifies that there were Jews among the soldiers of Alexander."

No people in the world ever suffered more from civil dissensions within, and wars without, than did this chosen nation during the last three hundred years of its history. It was at the commencement of this dark period that Simon the Just died: he is among the greatest worthies of the Hebrew annals.

"This Simon is said to have been the last of the great *synagogue*, in which are included one hundred and twenty men; and among others, Ezra, Haggai, Zechariah, Nehemiah, and Malachi. Hence it is plain, that this great *synagogue*, so celebrated among the Jews, is nothing more than that succession of patriots after the captivity, who distinguished themselves by their labours towards the collection and revival of the sacred books, and the settlement and improvement of the civil and religious constitution of their country. Indeed, the Jewish traditions maintain that Simon the Just, as he was the last of the great *synagogue*, closed the sacred canon. The notices on this subject are so recent that they cannot be relied upon as historical evidence; but as such traditions are generally founded on some truth, it is very probable that Simon did complete the collection and revision of the sacred books, and even add some things respecting events of more recent occurrence. Some of the apparent additions in the Old Testament well correspond to the age of Simon. The genealogical register of David in the first Book of Chronicles, comes down to about the year B. C. 300; and in the catalogue of high priests in the Book of Nehemiah, Jaddua is mentioned in a manner which seems to intimate that he had been dead for some time."

The history is continued from the destruction of Jerusalem to the time of the Emperor Adrian. This part of the volumes, which is given, rather absurdly, under the title of an appendix, is translated from Baanage's famous work on Jewish history, a work of ability and learning, as the editor observes;—but which ought not to have been employed as a continuation of Jahn. It is, however, replete with entertaining matter. Among other particulars we find the following respecting the Jews in Italy, about the fifteenth century.

"The synagogue at Rome possessed some degree of authority over the rest. There was an instance of their exercising this authority in the last century. Rabbi Nathaniel Tribotti, in a treatise on the bathing of women, advanced several propositions which were objected to by the other rabbins, who wrote an answer to his work. Their controversy was carried on with great warmth, and was decided by the synagogue and academy at Rome in favour of the opinions of Tribotti. The rabbins acquiesced in their decision. I do not say that the authority of the synagogue at Rome was founded on any right which they claimed. It was the natural consequence of the superior power of the Jews in the capital of the empire. Great bishoprics have thus subjected the weaker to their power, and thus papal Rome has obtained its boasted superiority. Rome was the nursery of the Jews, and thence they spread through the rest of Italy. They sent their donations to Jerusalem from Rome and the other Italian cities; and we shall find, as we proceed, that they had established themselves at Cremona, Mantua, Bologna, Ferrara, and throughout the ecclesiastical states."

The annexed, also, respecting the very early establishment of a number of these people in Germany, is highly curious.

"The Jews of Worms pretend to have produced convincing proof to the emperor and to the states of the empire, that they had inhabited that city from time immemorial; and, therefore, that they could have taken no part in the crucifixion of Christ. Thus they obtained privileges which were not granted to other Jews. It was with a view to ingratiate themselves with the emperor, that they inserted in the Toldos Jeschu an extract from a letter which was written by the sanhedrim of Worms to the King of Judaea, to prevent the death of Christ: 'Set this Jesus at liberty, and do not put him to death. Let him live until he has contracted some stain, and has become polluted.' Huldreich, who published the above treatise with learned notes, observes, that the expressions respecting our Saviour are borrowed from sacrifices. The Jews did not eat, nor offer on the altar, any sacrificial animal which was thought to be impure or diseased. It was fed with great care until some symptoms of disease appeared. Thus the Jews of Worms advised that Jesus Christ should be left to commit some crime, and then be put to death. But he adds, that this extract was inserted by the author of the treatise, to render the Jews of Worms odious to their countrymen. I am persuaded, however, that the writer of this work was a member of the synagogue of Worms, to whose prejudices he has conformed, in order to gain the favour of the emperor. In fact, the synagogue boasted that they had protected our Saviour; and this writer, one of their number, probably adopted their views. If they were rendered odious in the opinion of their countrymen, they were amply compensated by the superior privileges which they obtained from Christian princes. Another rabbi has

made the Caraites say, that 'Jesus Christ approved of their doctrines, and wished his disciples to practise their rites; and that he was slain by the Jews on account of their hatred to the law of Moses.' This doctor makes but a slight difference between the sentiments of Christ and those of the Caraites, and that difference to refer to the manner in which the dead are to rise. But the rabbi of Worms has attributed a different sentiment to his ancestors. According to him, they held nearly the language of Gamaliel: 'Let him alone; if this work be of man, it will come to naught.' It is of little importance for us to ascertain what was the intention of the above rabbi in writing his treatise. It is sufficient to remark, that there is no foundation for the pretensions of the Jews of Worms, who assert that they established themselves in Germany before the destruction of the second temple, and possessed a venerable council, which was consulted by the king of the Jews on important matters. The Jews in the bishopric of Mersburg make equal pretensions to antiquity; but they produce no proofs of the validity of their claims."

After what we have already said respecting Professor Jahn, it is only necessary for us to state, that the present publication is calculated to make his name still better known, and his talents more generally appreciated, in England. The translation appears to be very fairly executed; and we recommend the work to the general attention of our readers.

The Davenels; or, a Campaign of Fashion in Dublin. 2 vols. 12mo. London, 1829. Colburn.

THERE is nothing either very original or very striking in these volumes, but they are entertaining; and if there is little to interest, there is somewhat to amuse. "Manœuvring" would have been a most expressive title,—mamma against mamma, daughter against daughter; with all the balls, concerts, &c. which form the staple commodities of our fashionable novels. We must choose our extracts at random: the following sketch, for example, is lively enough.

"Mrs. O'Brien will serve as a specimen. Having most successfully married off her three eldest daughters, she now brought out her fourth; a pretty-looking girl, with an air of innocence and ignorance of the world which were to be very attractive. She was dressed with great simplicity, and had the appearance of having outgrown her clothes: she was perpetually pulling them up on her shoulders, which would, in spite of her efforts, make their appearance; and her petticoats were rather shorter than the fashion demanded. Mrs. O'Brien affected to scold her for her little awkward ways; and frequently occupied herself in settling some part of her dress; her daughter looking all the time as if she was unconscious what her mother was about, and talking over her shoulder to some one behind her. Mrs. O'Brien would then say to any man near her, 'I declare that child no more knows how she is dressed, or what to put on!—if I did not watch her, I really believe she would go out half naked.' A gentleman to whom she said this one evening, remarked that her mother's care seemed to be thrown away. Mrs. O'Brien was piqued to conquer Captain Villiers's reserve. She addressed the chamberlain, with whom she was intimate: 'Pray, does Captain Villiers mean to stand all night like a stick, without dancing?' The chamberlain smiled, for it was a part of his office to smile whenever a lady spoke to him; but answered in a confidential tone, 'I really

do not know—but I am inclined to think he has not engaged himself to dance; perhaps he may in the course of the evening.' 'De now,' said she in a coaxing tone, 'just ask him, would he like to dance?' and, glancing back at her daughter, 'you can offer to present him, you know.' The chamberlain, who was not unused to these delicate commissions, merely gave her a look expressive of the tenderest friendship, and then took a circuitous route to where Villiers stood. He passed him a few steps, speaking to various persons as he went; then, as if he suddenly thought of it, he turned back to him, and Mrs. O'Brien could perceive that he spoke, and that in consequence of something he said, Villiers moved his eyes in the direction where she was with her Miranda. His lips moved in reply, but so slightly, that they could have formed but one syllable; and to judge from his countenance, that was a negative. The chamberlain moved on without encountering Mrs. O'Brien again; and she took her daughter on her arm, and passed close under the eyes of our hero, without looking at him; but Miranda, with the utmost *coquetterie*, looked up in his face as she passed, and turned her head back to gaze at him. He was speaking at the time to another aide-de-camp, the Honourable Somerset Hardyng, a very young man—the reverse of Villiers in colour and character. 'A pretty innocent-looking girl,' said he; 'do you know her?' 'No; I have just declined the honour of being presented to her as a partner, by the chamberlain.' 'What a savage you must be!' said Hardyng, laughing; 'I'll profit by your laziness;' and following Mrs. O'Brien and her daughter, and not waiting for the form of introduction, which he thought could not be necessary with an Irish girl, he bowed, first to the mother, and then asked Miss Miranda to dance. She twisted and writhed like a child that is uncertain whether to accept the toy that is offered it, until her mother said, 'You may dance, my dear, with Captain Hardyng.' He was a tall, fair-haired, gentlemanly-looking young man, with a very animated manner; and he and Miss Miranda *got on*, as the phrase is, amazingly. Mrs. O'Brien then walked about, telling every one how confounded poor Miranda was at Captain Hardyng's admiration; and nobody believed her, though nobody had the rudeness to tell her so."

Two or three bits of the fancy ball are amusing:—how many, by the by, are in the same condition as the Frychuits!—

"The fine people of the neighbourhood contented themselves with adding some magnificence to their usual ball-dresses; or, at most, with some dress which might by courtesy be called Spanish, eastern, or peasant: having no idea, as they said, of taking trouble to cut a figure amongst the lesser squires and their families. But the inferior gentry were more ambitious of distinction. Ingenuity was racked; and as talent is not confined to rank, some certainly made up in humour and truth of representation what was wanting in refined taste. Some characters, however, excited nothing but disgust. A party of tall young men, dressed as a troop of charity girls, conducted by a little woman, the sister of one of them, paraded the room, were stared at, and then avoided wherever they appeared. Girls would not dance with them; and though a few boys did for a short time, the exhibition was declared to be so vulgar and unpleasant, that they were reduced to dance with each other, or to remain still. Two young men, of rather good appearance, walked about dressed in short green coats, ornamented with buttons and braids and tags;

hunting-caps, covered with plumes of black feathers, and small bugle-horns, which, however, they could not sound, in their hands. As they neither sang nor spoke, it was not easy to guess what this meant: at length Wharton took the liberty of asking one of them. He laughed, and answered with the most good-humoured and undisguised brogue, 'Why indeed, sir, my brother and me, we are in the character of the Fryschuitz.' 'I shall inform the company, sir,' said Wharton. 'Thank you, sir,' said the young man."

We should say, from internal evidence, that the report which assigns this work to Lady Morgan is erroneous. We have heard another, which gives it to the sister of a countess, and the widow of a man of great eminence in Dublin. But be the author who she may, she is obviously quite at home in Irish society, and has made as good a sketch of it as the subject admits.

Journal of an Embassy from the Governor-General of India to the Court of Ava, in the Year 1827. By John Crawford, Esq. F.R.S. &c. late Envoy. With an Appendix, containing a Description of Fossil Remains, by Professor Buckland and Mr. Clift. 4to. pp. 605. London, 1829. Colburn.

THE first four hundred pages of this ponderous quarto volume consist of a rather dry, and frequently a superfluous, detail of occurrences during Mr. Crawford's mission to Ava, for the purpose of negotiating a treaty of commerce between that court and the East India Company. The passages to and from the capital, by the river Irrawadi, are, for popular reading, however useful in a scientific light, most laboriously rendered: not a sand-bank does the steam-boat on its tedious way strike upon, but we have a full description of its inconveniences; every wretched temple or pagoda that rears its umbrella-head delays us with its probable chronology, the barbarous name that reared it, and we are cloyed with the repeated delineations of structures so generally unvaried in form and fabric. The negotiation presents nothing of such sufficient novelty, variety, or importance, as to demand so elaborate an account: the delays, doubts, suspicions, and artifices of the Burmese authorities were not otherwise than might be expected from a rude and semi-barbarous people, who, conscious of the presence of a superior, sought by every clumsy chicanery to disguise the acknowledgment of it. If the Burmese negotiations proceeded but slowly, Mr. Crawford has caught the spirit of them in the volume before us; and we have rather a difficulty in selecting a sufficiently amusing extract, but, at venture, give the account of the envoy's presentation to his Majesty of Ava, and the courtly amusement of taming the wild elephant.

"Our promised presentation to the king took place this forenoon. A suitable number of boats were sent to receive us; and at twelve o'clock we crossed the river, and arrived at the Elephant Palace, which is about a mile below the town, and close to the banks of the Irrawadi. The Elephant Palace and its appurtenances is a place appropriated for exhibiting, for the king's diversion, the taming of the wild male elephant. This place is a square enclosure, surrounded every where by a double palisade, composed of immense beams of teak timber, each equal in diameter to the mainmast of a four hundred ton ship. Between the palisades there is a stone wall, about fourteen feet high and twenty thick. On the top of this the spectators are seated to view the sport. The

palace is situated on the south-west angle of the square, and is upon a level with the highest part of the wall. The enclosure has two entrances, the gates of which are composed of beams, which can be moved at the bottom by means of ropes. The centre of the enclosure is a greensward, in the middle of which there is a temple surrounded by a palisade. This temple is dedicated to a Nat, named by the Burmans Udin-main-so. This personage is said to have been king of a country called Kosambi in Majima Desa, or the 'middle land'—that is to say, Western India, or the country of the Hindoos. He was contemporary with Gautama; and in his transmigration became, in consequence of his skill in taming elephants, a king of Nats, and the guardian and protector of elephant-hunting. We were received under a shed which represents the Lut-d'hau, and which is situated on the north side of the enclosure. We had not been here above a few minutes, when we were summoned to the western side of the enclosure, where the gate is, at which the elephants were about to enter. We left our shoes behind us in the hall, and proceeded along the top of the wall, to within no great distance of his majesty; when we sat down, making our obeisance by touching the forehead with the right hand. A cloud of dust announced the approach of the elephants, about twenty in number: these, with the exception of the captive, were all females, several of them with their young following them. A few of the best broken-in only were mounted. Partly by persuasion, and partly by force, there was seen driving before them a small male elephant, not, as we were told, above thirteen years [?] old: it required at least half an hour to induce him to enter the gate of the enclosure. A very docile female elephant led the way, conducted by her keeper; but the half-tamed females were nearly as reluctant to enter as the wild male himself: they went five or six times half-way in, before they were finally entrapped; and, twice over, the male had run off to the distance of a quarter of a mile from the enclosure, but was again brought back by the females. A message was sent to us by the king to say that we were at liberty to stand up to view this part of the sport, but unluckily we were already standing when it reached us. The elephants having entered, we were requested to come into the king's presence, in which situation we should have a better view of the sport. We walked round accordingly by the southern and eastern angles of the enclosure, and seats were assigned to us in the same line with, and next to, the princes; not only the most distinguished, but the most convenient situation. We made a bow as before, and the sport went on. From the smallness of the elephant, there was neither much danger nor amusement in it. The females were withdrawn from the enclosure one by one, and then the elephant-catchers, who are a distinct race, went into the square unarmed, and provoked the wild elephant to pursue them, which he did with great fury. The keepers took shelter from his pursuit within the palisade, through the apertures of which he lashed his trunk in vain. The elephant-keepers exhibited much boldness and agility; but from what we saw, I should conceive that they ran very little risk. Accidents, however, sometimes occur. A few years ago, one of the hunters, when pursued by the elephant, tripped and fell: he was killed on the spot by the enraged animal. The king, who was present when this happened, immediately retired, the sight of blood not being fit for him to behold, either as a sovereign, or

a votary of Gautama. Some goats were put into the square, and these were pursued by the elephant in the same way as the keepers, and with as little effect. These animals eluded his pursuit with the utmost ease; and were so little concerned at his presence, that they soon began to quarrel amongst themselves. When the elephant was sufficiently tired, three huge tame male elephants were brought in to secure him, each mounted by his keeper, who had in his hand a rope with a noose, which one of them, after the second or third effort, succeeded in casting round the foreleg. The animal made comparatively very little resistance, appearing to be quite subdued by the presence of his three powerful antagonists, who, after the noose was fixed, drove him by main force into a pen at the south side of the enclosure, from which he was afterwards withdrawn, and tied to a post by a comparatively slender rope put round his neck, through his mouth, and round his tusks. We saw him in this situation, under a shed, as we were returning home, very restless and sullen. He was so closely tied to the post, that he could scarcely move, and had no power to do any mischief. We were told by the keepers, that the male elephants, when thus secured, refuse food for about five days. It takes six or seven months to tame them effectually, and occasionally as much as a whole year, for their dispositions are very various."

In the hope of its doing benefit elsewhere by its example, we cannot resist the insertion of a punishment inflicted upon one of the public functionaries for a simple neglect of duty.

"Through the night of the 1st, a fire broke out in the populous suburb which lies between the walls of the town and the little river, and property to a considerable value was destroyed. The house of the widow of the Saya-wungyi, who had been the king's tutor and favourite, was in great danger; and this old lady, who had the reputation of being very frugal, if not avaricious, irritated at her loss, repaired forthwith to the king, and made complaint that, during the conflagration, the ministers, and especially Kaulen Mengyi, who was her husband's successor, and of whom she was very jealous, were not at their posts; for it appears that it is their special duty to attend upon such occasions. The king, who was still very much out of humour, summoned the ministers before him; sent for a sword, drew it, and ordered them, one by one, to come forward and swear upon it that they were present at the conflagration, and assisting in extinguishing it. Kaulen Mengyi came forward and avowed that he was not present; but that he had gone as far as the rung-d'hau, or town-hall, to give the necessary instructions upon the occasion. He was immediately ordered to be taken out of the audience-hall; and, to avoid being dragged thence by the hair of the head, according to usage, voluntarily made as rapid a retreat as could be expected from a man between sixty and seventy, and of a weakly constitution. An order was given that he should be punished after a manner which I shall presently describe. The other ministers, none of whom were present at the fire, escaped under various pretexts of business or sickness. The punishment now awarded to the first minister is called, in the Burman language, *ne-pu m'ha Phan the*, or, 'spreading out in the hot sun.' The offender who undergoes it is stretched upon his back by the public executioners, and thus exposed for a given number of hours in the hottest part of the day, with a weight on his breast, more or less heavy according to the nature of the offence, or rather according to the king's opi-

nion of it. It was at first thought that the sentence, on the part of the king, was a mere threat. Not so; the most faithful and zealous of his ministers underwent the punishment this afternoon, from one to three o'clock, and not, as is customary on such occasions with culprits of distinction, within the palace enclosure, but in the public road between the eastern gate of the palace and the town-hall, and in the view of a multitude of spectators."

The concluding part of the volume consists of a general description of the Burman empire and its resources, and forms the redeeming portion of the work; from it we arrive at the conclusion, that the East India Company will not have acquired any thing of great value by the cession of territory made to them at the peace. As in other portions of the East, so we find it here, the clog to improvement is in the despotism of the rulers, who repress every impulse that might tend to it by their rapacity and outrage. That the lower orders of the Burmese are capable of better things, this convincing fact must speak for them, that under European artificers at Rangoon, they were found to be the most dexterous and laborious of artisans, indeed greatly surpassing all the other natives of our Indian provinces. We must, however, allow that despotism is not, in this instance, an unmixed evil, as by its check to population, the physical comforts of the few are improved; and for the satisfaction of those who support this doctrine, we quote from Mr. Crawford its confirmation.

"An instructive example of the beneficial effect of high wages is afforded by comparing wages at Calcutta and Rangoon. A carpenter of the best description, at Calcutta, earns only twenty shillings a-month, while one at Rangoon will earn thirty. The wages of the native of Bengal will purchase about eight hundred pounds of rice; that of the Burman, about eleven hundred and twenty. Beggary, as may be readily inferred from these statements, is very unfrequent among the Burmese; and, with the exception of the voluntary mendicancy of the priesthood, is confined to a few unfortunate persons, driven to it more by superstition than necessity. Under the very favourable circumstances now described, nothing seems wanting to insure a great increase of population in the Burmese dominions, but a moderate share of peace, tranquillity, and security. In the cessations made to ourselves, those benefits may be safely calculated upon; and in such of them as enjoy the advantage of a good climate and fertile soil, we may, with some abatement for the stubborn habits of a semi-barbarous people, expect to see here a rapidity of increase in population, more resembling that of an American colony, than what we have been accustomed to in our old Indian possessions. The capital and example of strangers will not only accelerate this increase, but insure its being accompanied by improvement. In the meanwhile, it is some satisfaction to find that the high rate of wages among the Burmese tends greatly to mitigate the despotism which, by repressing population, gives rise to it. Owing to high wages, and probably to this alone, the labouring classes are, upon the whole, well-fed, clad, and housed; a fact which is soon observed by a stranger, and, taking place under such apparently inauspicious circumstances, appears at first view so unaccountable. In fact, the Burmese peasantry are in more comfortable and easy circumstances than the mass of the labouring poor in any of our Indian provinces; and, making allowance for climate, manners, and habits, might bear a comparison with the

peasantry of most European countries. As long as land capable of yielding corn with little labour continues to bear the same large proportion to the population as at present, the government cannot rob the peasantry of the mere wages of personal labour; nay, its interference tends only to enhance or insure them. The scantiness of the population is in this manner an advantage to the people. Were the country, for example, inhabited in the same ratio as the neighbouring one of Hindustan generally, it would contain about one hundred inhabitants to the square mile; or its population would be 20,000,000, or five times more than its present amount. Were it peopled in the same proportion as Bengal, that part of India to which in soil and climate it bears the closest analogy, it would contain double this number, or ten times the number of its present inhabitants. The consequence of this would be, supposing no corresponding improvement in the government, that wages falling, and the price of corn rising, the people would be reduced to a state of poverty and misery, of the most abject and degrading description. That such is not now the case, but, on the contrary, that labour is well rewarded, affords of itself a sufficient presumption that former estimates of the populousness of the country were prodigiously exaggerated."

A most excellent map of the Burmese dominions, and several well-executed engravings, embellish this volume; of which we now take leave, recommending it to the perusal of all who are connected by the ties of commerce with the East, or who are solicitous for information on this not new portion of our oriental relations.

Autographs of Royal, Noble, Learned, and Remarkable Personages conspicuous in English History; accompanied by concise Biographical Memoirs, and interesting Extracts from the Original Documents. By John Gough Nichols. Part XI.

THE present Number, which contains fifty-eight autographs, many of them singularly interesting (among them, that of Shakespeare), concludes this very amusing and valuable publication; a publication of which it is truly asserted, "that it cannot be equalled by any collection of originals alone." Prefixed to the No. is an Essay on Autographs; in which there is much curious and amusing information, and from which we extract the following passages:—

"The first collections of autographs were probably those entitled 'Alba Amicorum.' The fashion appears to have originated in Germany, towards the close of the sixteenth century. A remarkable incident in the Life of the celebrated Sir Henry Wotton was the result of a sentence which he wrote in one of these books; and his biographer, Izaak Walton, in relating the story, defines an 'albo' to be 'a white-paper book which the German gentry usually carry about them for the purpose of requesting' such eminent characters 'to write some sentence in.' In Humphrey Wanley's Catalogue of the Harleian Manuscripts we find a more full description. No. 993 of that collection is 'a paper book in octavo, bound long-wise [this seems to have been for some time the general form], being one of those which the Germans call albums, and are much used by the young travellers of that nation, who commonly ask a new acquaintance (even at the first meeting) to write some sentence therein, with a compliment to the owner's learning, good sense, &c.; which done, the names gotten are laid before the next

new face, and the young man upon all occasions, especially at his return, by these hands demonstrates what good company he has kept. Nevertheless, in England there may be some good use made of these books (besides the benefit of some wise and uncommon sentences to be found therein), I mean by the original hands of foreigners of the highest quality of both sexes, of other noblemen, ladies, learned, and otherwise eminent persons, whose hands perhaps cannot otherwise be come at.' * * *

Wanley wrote this in the true spirit of an autograph collector. Whether his masters the Earls of Oxford, or Sir Robert Cotton, whilst amassing manuscripts for the superior object of their valuable contents, collected any merely as specimens of 'original hands' does not appear. In the middle of the seventeenth century Sir Symonds D'Ewes was such a collector, and a queen contributed to his collection. The letter of Elizabeth, queen of Bohemia, of which part is engraved in the present work, accompanied three letters of her husband, her eldest son, and her cousin the Duke of Brunswick, sent as specimens of their hand-writing. The preface to Thane's Autography furnishes an enumeration of several subsequent collectors. 'The fac-similes given in this work,' it says, 'are from the originals which formerly were in the collections of those well-known antiquaries, Ralph Thoresby, Esq., Peter le Neve, Esq., James West, Esq., Rev. Mr. Ives, Mr. Bartelet, Gustavus Brander, Esq., &c.' The first of these collections will be found fully described in a distinct chapter of the Museum Thoresbyanum. After mentioning that he had a copy of Camden's Britannia in quarto, 'which I bought for the sake of the learned author's autograph,' Mr. Thoresby continues, 'this reminds me of another branch of the curiosities that I begun to collect of late years; viz. original letters, and other matters of the proper hand-writing of persons of all ranks, eminent in their generations;' of which he proceeds to give a catalogue, the names only of the writers occupying more than three large folio pages. * * * In more recent days, collections of autographs have been formed by Sir William Musgrave, who bequeathed to the British Museum, among several other volumes of valuable MSS., a large quarto full of signatures detached from the original documents; and by the late James Bindley, Esq., F.S.A., the sale of whose library in 1820 was concluded with 108 lots of autographs. Among the names which are at present best known as the possessors of extensive collections are those of John L. Anderdon, Esq., which is particularly rich in original letters of distinguished foreigners, and has become of great extent by the conjunction of several entire collections; Dawson Turner, Esq., F.R.S. and S.A. of Yar-mouth; J. B. Williams, Esq., F.S.A. of Shrewsbury, the author of the Lives of the Rev. Matthew and Philip Henry; John Wild, Esq., of the Albany, whose miscellaneous volumes are appropriately enriched with portraits; Miss Hutton of Birmingham, daughter of the well-known historian of that town; the Rev. Dr. Raffles, and Thomas Thompson, one of the Society of Friends (possessing a very extensive and highly interesting series of papers illustrative of the history of the Society to which he belongs, as well as copies of Junius's Letters and Clarkson's History of the Slave Trade, enriched by autographs and portraits), both at Liverpool; the Rev. Robert Bolton, and Mr. Peter Benwell, both at Henley-on-Thames; Charles Britiffe Smith, Esq., very complete in musical characters; Mr. Jewer Henry Jewer,

of Kentish Town; Mr. Edward Skegg of the Adelphi, very complete in franks in various parliaments; Mr. Mathews the comedian, and Mr. Winston the late stage-manager at Drury Lane Theatre, both very extensive, and comprising materials, original and valuable, for a complete history of the English stage; and Lord William Fitzroy should be mentioned as the possessor of the most extensive series of franks of both houses of parliament, chronologically arranged from the time of Charles II. to the present day; whilst the very voluminous collection of Mr. William Upcott, of the London Institution, is decidedly unrivalled, not only for its magnitude, but for its utility and the style of its illustration, and has been the happy means of preserving and making known to the world some historical records of the highest value. Several collections have been dispersed by auction; and it has been a matter of astonishment to perceive the high prices which documents, of very trifling interest in their contents, have produced from being regarded as autographs."

An Inquiry into the Place and Quality of the Gentlemen of his Majesty's most Honourable Privy Chamber. By Nicholas Carlisle, F.R.S., M.R.I.A., F.S.A., one of the Gentlemen of the Privy Chamber. Royal 8vo. pp. 366. London, 1829. Payne and Foss.

THIS book is one of the consequences of Mr. Carlisle's appointment to office; and although we presume that many of our readers are not wholly unacquainted with the etiquette of the court, yet as some persons may desire to have their curiosity gratified as to the nature of this nearly obsolete branch of the royal household, we will endeavour very briefly to condense the volume before us for their satisfaction. After great facilities afforded by the clerks of the Board of Green Cloth, and of the Lord Chamberlain's office, to his researches, the author learned that the *place and quality* is held without fee, it being long since the ordinary duties of the office entirely ceased. It was not one of those branches likely to be affected by Burke's celebrated bill, as the feudal ostentation of state, which required these gentlemen's constant attendance, had already been abolished; while their names and office, an unexpensive formality, was retained in the household roll with purely nominal advantages, the only writ of privilege being, as Mr. C. has informed us, the warrant of appointment.

The precise origin of the office is left unexplained, but it is here derived from valet and varlet, terms now very distinct from that of gentleman; and the esquires of the body, personal attendants of the king in the field, are supposed, we think improbably, to be the actual precursors of the gentlemen of the privy chamber. The first time the office is mentioned is in the ordinances made at Eltham in the 17th year of Henry VIII.; their number was then six, although, like other branches of the household, it was often enlarged, and as often retrenched, according as the exigencies of the state required, and varied considerably in the several reigns.

To explain the place and quality of these gentlemen of the privy chamber, it may not be unnecessary to describe the disposition of the state-rooms, which in all the royal palaces is uniform, and leads *en suite* through the great chamber, the presence-chamber, privy chamber, withdrawing-room, and bed-chamber. In the first room, during all ceremonies, the yeomen of the guard give attendance; in the second, the band of gentlemen

pensioners: these were offices of a military origin, and their privilege of entry did not extend to the privy chamber, where the gentlemen of whom we now speak were the only attendants; and their duty, at least in the reign of Charles I., will be found sufficiently explained in the following extract.

"No person, of what estate or condition whatsoever, shall presume to come into our privy chamber, but only noblemen and those that are sworn of our privy chamber,—and our cup-bearers, carvers, and sewers, onely when we eate here,—and our equerries onely upon riding daies. And no man shal presume to come in *booted*, except it be at such time as they are to ride with us. No privy chamber man, or other allowed to come into the privy chamber, shal presume to come into any of our privy lodgings further than our privy chamber, except onely the lords and others of our privy council,—and permitting bishops and other lords to come *into the outer withdrawing room*, next to the privy chamber at *White-Hall*. The gentlemen that wait in quarter shal attend six of them when we eate in our privy chamber, for the bringing in of our meale to the board, and doing of their other services to us,—and four of them by turne shal lodge every night within our privy chamber."

The gentlemen likewise attended at coronations, public entries of foreign ambassadors, royal funerals, and all state ceremonies: their last attendance was at the coronation of his present majesty, when nine gentlemen of the privy chamber walked between the solicitor and attorney-general, far removed from the person of the sovereign. A blue satin dress, prepared for the occasion, we are here informed, cost eighty guineas. With a little innocent vanity, the author enlarges upon the honour of his appointment, which he declares has been "coveted not only by men of the highest rank, but of the greatest talents;" when the office could only have been used as an introduction to court by men whose abilities were afterwards developed in their country's service: neither has he the fortitude to suppress his lamentation at the invasion of rights and privileges which took place soon after the late coronation, in the decision upon Dr. Battine's case.

The royal household, in which offices are held by patent, sometimes for life, sometimes by inheritance, is formed upon manners and customs that have long since expired: even Burke, that arch innovator, admitted there was some reason in ancient necessities for their ancient customs. Protection, he says, was wanted; and the domestic tie, though not the highest, was the closest.

The post of gentleman of the privy chamber is a trace of this feudality, which in the ancient tables of precedence enjoyed a degree of rank that had gradually declined; at this our author very naturally repines. It is indeed one of those subjects that have embarrassed a court from the earliest periods. King Stephen, it is well known, established a round-table at his palace at Winchester, solely to prevent the disputes of this kind amongst his attendants—*Bouche of court*, we cannot help admiring the term, and heartily participate with the author in his regret at its abolition. The six gentlemen of the privy chamber, he informs us, had formerly diet for two meases. A mess of meat, we believe, generally meant a fit proportion for four persons; and, we are told by Howell, who wrote in the reign of Charles II., that every dish at court was computed to cost the king a hundred pounds a dish; but, he continues, now the purveyance is taken

away, every dish doth stand in four times as much at least. Now no royal revenue could be raised adequate to the support of such an accumulated charge upon the ancient establishment.

Mr. Carlisle's book is, in truth, a book of detail, wanting in clearness,—a merit we really ought to expect from the antiquary; and deficient in that which would make it more useful as a book of reference, viz. a good index.

Cunningham's British Painters, &c. Part IV. of the Family Library.

[Conclusion of our notice.]

Of the account of Richard Wilson one specimen must suffice.

"It was the misfortune of Wilson to be unappreciated in his own day;—and he had the additional mortification of seeing works wholly unworthy of being ranked with his, admired by the public, and purchased at large prices. The demand for the pictures of Barret was so great, that the income of that indifferent dauber rose to two thousand pounds a-year; and the equally weak landscapes of Smith of Chichester were of high value in the market—at the time when the works of Wilson were neglected and disregarded, and the great artist himself was sinking, in the midst of the capital, under obscurity, indigence, and dejection. He was reduced, by this capricious ignorance of the wealthy and the titled, to work for the meanest of mankind. Hogarth, as we have seen, sold some of his plates for half-a-crown a pound weight—and Wilson painted his Ceyx and Alcyone for a pot of beer and the remains of a Stilton cheese! His chief resource for subsistence was in the sordid liberality of pawnbrokers, to whose hands many of his finest works were consigned wet from the easel. One person, who had purchased many pictures from him, when urged by the unhappy artist to buy another, took him into his shop-garret, and, pointing to a pile of landscapes, said, 'Why, look ye, Dick, you know I wish to oblige, but see! there are all the pictures I have paid you for these three years.' To crown his disappointments—in a contest for fame with Smith of Chichester—the Royal Society decided against Wilson. To account for the caprice of the public, or even for the imperfect taste of a Royal Society, is less difficult than to find a reason for the feelings of dislike, and even hostility, with which Wilson was regarded by Reynolds. We are told that the eminent landscape-painter, notwithstanding all the refinement and intelligence of his mind, was somewhat coarse and repulsive in his manners. He was indeed a lover of pleasant company, a drinker of ale and porter—one who loved boisterous mirth and rough humour: and such things are not always found in society which calls itself select. But what could the artist do? The man whose patrons are pawnbrokers, instead of peers—whose works are paid in porter and cheese—whose pockets contain little copper and no gold—whose dress is coarse and his house ill-replenished—must seek such society as corresponds with his means and condition—he must be content to sit elsewhere than at a rich man's table covered with embossed plate. That the coarseness of his manners and the meanness of his appearance should give offence to the courtly Reynolds is not to be wondered at—that they were the cause of his hostility I cannot believe, though this has often been asserted. Their dislike was in fact mutual; and I fear it must be imputed to something like jealousy.

"Of his own future fame he spoke seldom;

for he was a modest man; but, when he did speak of it, he used expressions which the world has since sanctioned. 'Beechey,' he said, 'you will live to see great prices given for my pictures, when those of Barret will not fetch one farthing.' The salary of librarian rescued him from utter starvation; indeed, so few were his wants, so simple his fare, and so moderate his appetite, that he found it, little as it was, nearly enough. He had as he grew old become more neglectful of his person—as fortune forsook him, he left a fine house for one inferior—a fashionable street for one cheap and obscure; he made sketches for half-a-crown, and expressed gratitude to one Paul Sanby for purchasing a number from him at a small advance of price. His last retreat in this wealthy city was a small room somewhere about Tottenham-court-road;—an easel and a brush—a chair and a table—a hard bed with few clothes—a scanty meal and the favourite pot of porter—were all that Wilson could call his own. A disgrace to an age which lavished its tens of thousands on mountebanks and projectors—on Italian screamers, and men who made mouths at Shakspeare."

Without going into the lives of Reynolds and Gainsborough, we trust we have done enough to justify the language with which we began. This is the work of a writer of vigorous sense as well as lively imagination, intimately conversant with art, as it has been and is—and, what we value still more highly, deeply skilled in human nature, and sympathising acutely with the hopes, fears, struggles, disappointments, and triumphs of genius. We look forward with great pleasure to the completion of the task. Mr. Cunningham, when that is done, will find himself in possession of a very enviable station among English biographers; and we cannot too warmly congratulate the editors of the Family Library, on the acquisition of such a powerful coadjutor in the walk of art.

With respect to embellishments, this cheap *duodecimo* might stand a comparison with some of our handsome Annuals.

Thompson's Visit to Guatemala.

[Third notice.]

THOUGH it is so long ago as May 2d, since our preceding notice of this volume appeared, the accounts of the capture of Guatemala, which have arrived within these few days, have imparted so fresh an interest to the work, that we are induced to resume its review with, simply, a reference to No. 641, page 285, of the *Literary Gazette*, where we left off with the author's return to the capital from a country excursion.

"All the houses were thrown open; garlands of ribands and flowers were streaming from the windows or suspended across the streets: at four different stations, each of them at the farthest angle from the centre of the town, were erected temporary altars, ornamented with cut glass, looking-glasses, large silver salvers, together with other articles of gold and silver, and in short every species of wealth and finery that the inhabitants possessed. The principal families who live near the particular station undertake, by turns, the fitting up of these altars; but it is customary for every one to contribute something towards their ornament. During the procession, in particular, these temporary altars are illuminated with a profusion of wax candles: the same are also kept burning on them for a day or two previous, and it is usual to see the young ladies of the family occupied in the office of

trimming them, and, in fact, taking charge of the whole arrangement. In all the several ceremonies, both in and out of the church, the civil authorities were much employed: church and state were intimately blended. The president was conveyed to and from the cathedral in a state carriage, drawn by four mules; two young lads of family, Zaravia and Aguirre, acting as postilions. In the procession there were included all the religious orders of the place. Of the order of Carmen there were forty monks, of our Lady of Mercy thirty, Franciscans forty, Dominicans thirty, Recollects fifty, Collegians thirty; in all about two hundred and twenty: these were followed by four hundred soldiers, and fifty or sixty other persons, who also formed part of the procession. I was invited into the house of the Marquess of Ayzena. The large rooms looking into the street were full of company; the windows were all open, and the ladies were disposed in groups on the window-seats; and their mothers, many of whom were indisposed by colds, which they were thus increasing, were seated in chairs behind them. As the Host passed, the whole company knelt down, and after a minute's silence and recollection, the buzz of mirth and business again filled the apartment. On one of the pier tables was a representation in wax-work of the shepherds coming to adore our Saviour: the rooms of all the houses, from the first to the lowest class, are so filled with these images and representations, that I should not have mentioned this circumstance in particular, had not my attention been arrested by some beads on the neck of one of the shepherds which looked like pearls, but which I thought, of course, could not be so, from their extraordinary size: I found, however, that I was mistaken. I had hardly supposed it possible that such enormous pearls existed; and, wishing to ascertain their value, I guessed them at ten thousand pounds: the marquess, I understood, had given more for them. The necklace consisted of twenty-one pearls, the centre one being in the shape of, and as large as, a pigeon's egg, and the others large in proportion, but round, and decreasing in size gradually towards each end."

These immense pearls are perhaps hardly less remarkable than the state of the arts, as thus spoken of:—

"Visited the convent of San Francisco. The church is one of the handsomest buildings in the town. The monks do not exceed fifty, but they are rich, and outvie the other ecclesiastical establishments in the grandeur of their processions, and the internal decorations of their temple. I was much struck by some of the pictures, especially one of Lazarus on the point of rising from the grave. Whether it was from the disposition of the light, or the excellence of the execution, I could not decide; but I could hardly persuade myself that it was not a real human being I was contemplating. I frequently afterwards visited the church, purposely to look at this picture: the impression of its excellence increased with my future observations. In the midday glare, and in the sombre shades of the evening, it still preserved its character of reality; and I do not remember, in all the churches which I have since visited in the Netherlands, having ever seen any thing more awful and impressive. What is most extraordinary, it is said to be the production of a native artist."

Man has been defined to be a cooking animal, and it is therefore fitting to inquire what sort of cooks they are in the new countries of the New World.

"We returned home to dinner about mid-day. I went into the kitchen to view the preparations, for the purpose of observing the style of cooking. The whole was effected by charcoal stoves: there was no open fire-place for roasting, and about half a dozen earthen pans, with handles, formed the whole *batterie de cuisine*. On the floor was lying a turkey, as if it were in a fit; and another was standing over it, evincing the greatest distress at its situation. I hardly ever remember having witnessed so much feeling in any animal as that exhibited in the action and manner of this disconsolate bird. Its companion, which, it seems, had been dosed with brandy so as to stupify it, was destined to die under the paroxysms of intoxication, for the purpose of rendering its flesh immediately available for the table. I had always remarked, both here and at Mexico, that the turkeys were delicately tender. We all remember that Horace prescribes a little vinegar for the purpose; but, perhaps, the plan of deadly intoxication is not so generally known."

What would our friend Mr. Ude say to this? After dining on drunken turkeys, the annexed is a pretty picture of the retirement of a lady from table, (though taken from a distant page of the volume, relative to Mexico).

"The bride was a small, shy little girl, about fifteen years of age, but plump and healthy, with a pair of bright black eyes, which made up, by the force and variety of their expression, for the silence and reserve of her general manner. The high tables, of which I have before spoken, render eating exceedingly awkward, even to a tall person; but with regard to one so short as was our amiable little hostess, it seemed to be a matter of the utmost convenience: for, laying her chin down on the edge of the plate, with her elbows poised on the table on each side of it, her hands moved alternately from the plate to her mouth, with the slightest possible exertion, like two reversed oars, rowing steadily, out of time. As during this operation her eyes fulfilled the office of her tongue, and no time was lost in conversation, she was enabled to work double tides, and always left us, as soon as she had done, to finish the rest of the business by ourselves. Opposite the door-way, in the centre of the large hall in which we dined, and in front of the place which I occupied at the table, was suspended one of those hammocks of which I have often spoken: it was hung under an awning which surrounded the internal part of the building, and encircling the court-yard. Into this she flung herself with a sort of patient indifference, which had something, however, of an air of listlessness; and, striking one of the pillars of the colonnade with her foot, and the wall on the other side with her hand, she dashed off, all at once, into a full swing. One of her maids immediately came up to her with a paper cigar, which she was smoking to keep alight, and, watching her opportunity, popped it into the hand, which was mechanically held out, and which transferred it, in a twinkling, into the mouth of the mistress. The operation was so neatly performed, that the oscillation of the swing was not in the slightest degree deranged. A subsidiary kick or thump kept it going for a quarter of an hour, when it gradually stopt. The cigar was smoked, the lady was asleep, and our dinner was almost finished."

We have only room for another sketch. A large party of ladies and gentlemen met on the road (in Mexico) are thus described:

"They were all mounted on mules, some of

these with single, and others with double saddles. The lady's single saddle consists of a small diekey, or three-sided cushioned seat, with a step for the feet; in short, it is a lady's Brighton donkey-saddle. When they ride double, the gentlemen sit on the male's hanches, with a saddle properly shaped for the purpose, having a flat square surface in front, on which his fair companion is seated, with her legs on the off-side, or rather shoulders, of the animal. In this case, she has no step or stirrup to support her feet, but generally sits cross-legged, trusting for her equilibrium to the good offices of the gentleman, whose left arm thus naturally surrounds her waist. His bridle is held in the right hand, which, as all my readers know, is the wrong one; but the other being engaged, he has no opportunity of helping himself, or even of lighting his cigar—as that this business devolves, as a matter of course, upon his companion: and thus the journey is accompanied, as might be expected, with a general interchange of mutual good offices. I never passed a party of these travellers, but I remarked that those who were riding in this fashion seemed to be the most cheerful and contented amongst them, and the least tired with the journey: a circumstance very difficult to account for, since the position of each is thus rendered very cramped and uncomfortable."

Our countryman is a bit of a wag! Witness for us, in conclusion, his idea of what an ambassador to any of these new states ought to be.

"They are (he assures us) obliged to evince, equally, physical and mental exertion; to combine the activity of the courier with the sedateness of the statesman; they should possess expansiveness of mind, with solidity of outline; a pliancy of character, with obduracy of epidermis; and a delicacy of sensibility, with a stomach for the black vomit."

Where are such men to be met with, to uphold the British interests in Central and South America? The thick heads, hard skulls, and powerful stomachs, we have no doubt, may be found among our suckling politicians in Downing Street and the Treasury; but the mind, the character, and the delicacy of sensibility, (aith it must be so), alas! where are they?

On Aneurism and its Cure, by a new Operation, &c. dedicated, by permission, to the King.
By James Wardrop, Surgeon to his Majesty.
pp. 117. London, Longman and Co.

ANEURISM is that dreadful disease where, from the rupture or dilatation of an artery, a pulsating swelling, filled with blood, is formed, which gradually enlarges, till at length the thin and soft parts, which have been stretched to the uttermost, give way, and the patient dies of a frightful bleeding. This disorder, so steady in its course, so invariably certain in its fatal issue—it may well be supposed, has engaged the attention of surgeons from the remotest antiquity. It was, however, generally considered beyond the reach of art, or at most only to be remedied by the hazardous operation of opening the swelling, or by amputation of the limb, till half a century ago, when John Hunter, the father of modern surgery, turned his splendid talents to the investigation of the disease, and proposed the method of tying the artery between the heart and the aneurism, and thus preventing the blood from reaching the tumour. The principle of this operation, which now bears the name of its founder, has been extended to other arteries besides that

of the thigh, for which it was originally intended, and has been adopted throughout Europe; and in practice found so successful, that it is at present universally admitted to be one of the grandest and most useful discoveries which have ever shed a lustre over surgical science, or conferred important benefits on the human race. It is evident, however, that the *Hunterian operation* can only be employed in those cases of aneurism where, from its superficial course, the artery can readily be reached by the knife of the surgeon: but a vast number of instances unfortunately occur, where the disease is situated so high up in the groin, or so deeply at the root of the neck, that it is physically impossible for the best anatomist to secure the vessel. These cases have hitherto been considered beyond the reach of art, and regarded as the opprobria of surgery.

Mr. Wardrop, on taking a philosophical review of the data which led John Hunter to propose his operation, was led to conceive, that if the artery were tied beyond the tumour—i. e. further from the heart than the disease itself, or, as he terms it, "on the distal side of the aneurism"—a cure might be effected. For he believed that the circulation through the disease would in that way be prevented, and the blood already filling the tumour allowed to coagulate. Being convinced of the truth of these pathological views, he proceeded to put them to the test of experience, and tied the carotid artery in the middle of the neck for an aneurism at the root of that vessel. The successful result of the case was the best proof of the propriety of the operation, which he has since repeated with the same happy result. He has also tied the subclavian artery (which is situated below the collar-bone) for an aneurism of the arteria innominata—a vessel which emerges almost from the heart itself—and the patient was cured. Mr. Wardrop's operation has since been repeated by Dr. Bush, Professor of Anatomy in New York; and by Messrs. Gambert and Evans. The result of all these cases has been such as completely to establish the propriety of his new operation.

Mr. Wardrop's work contains a full account of the history of his views—minute details of the cases and of the operations—with his reasoning on the subject.

The author is certainly entitled to the gratitude of the public at large for thus boldly establishing a method whereby a dreadful and hitherto intractable disease may be cured; and of the medical profession in particular, for thus wiping off one of the opprobria of their science, and for making one of the greatest improvements in the treatment of aneurism which has been introduced into this department of practical surgery since the time of the illustrious Hunter.*

* The discovery of the principles of uniting living surfaces, divided by accident or by operations, the basis of which are felt in every branch of surgery, as, until then, this department of the healing art was scarcely entitled to the name of science, for the exertions of the surgeon must have been very unsuccessful,—the operation for aneurism, as well as healing by the first intention, are both the fruits of the same mind, which was marked by original genius, and by the most persevering and patient industry. These exertions will ever render the name of Hunter immortal; and it becomes the public, the army, and the navy, to erect a monument to his memory,—as these results of his genius have done more towards the alleviation of human misery than all the systems of medicine that have been written. The successful performance of amputation at the hip-joint, by Sir Astley Cooper,—an operation that was, by the authority of Pott, discarded from surgery;—the introduction of single ligatures in securing arteries, with the mode of arranging them, rendered the principle of the illustrious Hunter complete, which was imperfect in its influence until this improvement was accomplished; so that the surgeon, possessing dexterity and anatomical information, has, with the knowledge of these discoveries by Hunter, Wardrop, and others,

ORIGINAL CORRESPONDENCE.

Paris, July 25.

NEVER were the inhabitants of this city at such a loss for expedients to make away with time as at present, for wind and rain most provokingly oppose every effort to banish spleen and get rid of one's self: Ranelagh balls, however, offer a resource to yawning ladies and gentlemen, and have latterly been a *grand repairs* for loungers and loungereses. Unfortunately, Mammion (come in what shape he may) finds entrance to these assemblies; so that, as nature provides high-toned gentry with no distinguishing mark of superiority, they are jostled, squeezed, and shouldered, by the plebeian race; and rich dames run the chance of being whirled round in a waltz by a soap-dealer, chandler, or some low son of commerce. It must be truly mortifying for the *superfines* of the age to find formidable rivals in measurers of tape, weighers of snuff, sugar, &c.; for these latter can flatter, babble, flutter, dance, swagger, and ogle, with as much ease and grace as the first red-ribanded count; and when decked in a fashionably cut coat, their heels ornamented with bright brass spurs, and their faces set in a frame of black beard shorn after the *Guiche* fashion, may vie with the greatest heroes of the age for preferment in ladies' hearts.

On Sunday last I felt much surprised at seeing a pragmatic-looking English parson and his three sisters make their appearance, and join the other sinners in sabbath-breaking; but, to do them justice, their feet and consciences appeared at open war: nothing could be more grave or solemn than the countenances of these individuals; they looked as though they imagined the black gentleman was close behind, and that each step brought them nearer to hot quarters. But fashion, it appears, is irresistible, or curiosity—for, even in this light land, a clergyman never partakes of trivial amusements, or is seen at any public place on Sundays.

The museum of the Louvre is about to be shut, on account of repairs, and will not be reopened till October.—Amongst the curiosities of the day is a tooth of Napoleon, which a dentist is said to have sold for five thousand francs to a rich Jew, who has had it set in diamonds, and wears it as a brooch. The bones and the hair of that extraordinary man are in the possession of so many, that he must have had a rare quantity, and in time no doubt they will increase and multiply, as has the holy cross and other holy relics, of which every nun, priest, and friar, possesses a relic.

Wit is grown very thread-bare: we have new publications by hundreds, but on turning over the leaves you meet with nothing but old acquaintances modernised by some pilfering author.

M. Antommarchi has presented a memoir to the Royal Academy, to prove that it has awarded unjustly the prize of experimental physiology to M. Lippio, for that his doctrines admit of being refuted.

Great preparations are making for the approaching fêtes at Tivoli, her Royal Highness Madame having announced her intention of visiting them the ensuing week: the weather, however, appears determined to counteract M. Robertson's efforts to amuse the public, for we have constant rain and hail, and are shivering and shaking as in the month of November.

extraordinary resources for averting the fatal effects of wounds and accidents. Indeed, unto such men as Bell, Cooper, Wardrop, and Lawrence, who have heads to conceive and hands to execute, no man, unless mortally wounded in the head, heart, or great arterial trunk, ought to be despaired of.

IMPRISONMENT FOR DEBT, &c.

To the Editor of the Literary Gazette.

33, Lincoln's Inn Fields, July 23d, 1829.

Sir,—You took such very favourable notice of a small pamphlet of mine on Imprisonment for Debt and the Law of Insolvency, that I am induced to request space for a few remarks on the same subjects, arising out of a part of your Saturday's publication. In your Review and analysis of a Treatise on the Police and Crimes of the Metropolis, you say—"Among the promotives of crime the debtor laws are enumerated, and their operations shewn to be chiefly profitable to the legal profession, and comparatively of little utility to creditors. Thirty-four debts of 15,259 discharged insolvents amounted to nearly eleven millions sterling, and the whole property got in by the assignees left only one penny-farthing in the pound to the creditor, without deducting court-fees, &c." I must presume the words "thirty-four" to be a misprint, and that the author wrote "the whole debts," or some equivalent expression, so as to make it intelligible. The statement itself is founded upon a return made to the House of Commons in the year 1823; but it contains not only a misrepresentation of the return (unintentional, no doubt), but also a most erroneous inference therefrom, which it is very material to explain. The number of insolvents (15,259) is nearly correct: it should be 15,696. The amount of debts as appearing upon their schedules, is correct enough for this purpose: it is something under ten millions and a half. The return does not pretend to give an account of "the whole property got in by the assignees;" nor was any such return ordered. It was required to contain "an account of the amount of assets divided among the creditors;" but this could not be done, and therefore the following explanation was appended to the return:—"It is important to observe, that the sum stated under this head is made up from only seventy accounts of assignees in town cases and thirty in country cases, which are all that have been filed wherein any dividends are shewn to have been made." It is therefore quite evident that it is most erroneous to divide the total of the debts in 15,696 cases by the total of the dividends paid in 100 of the cases, and then infer the quotient to be the average dividend of the whole. If any such arithmetical process were fairly admissible, I should have a right, after explaining this mistake, to multiply the "penny farthing" by 156, being the proportion which 100 bears to the whole, and then assert the average dividends to be sixteen shillings and threepence in the pound. But as I will not admit an unfair argument on the one side, so I reject the advantage derivable from it on the other. The truth is, that the "penny farthing" is in itself a mistake, the real result of the unfair process being only about one farthing and a quarter of a farthing in the pound; and even this, multiplied by the 156, would make the average dividends exceed four shillings in the pound. Still, however, I refuse to admit that averages so taken prove any thing. My object is to shew that arguments founded on such data cannot operate either for or against the principle of the law of insolvency. If this principle be not demonstrably good in itself, no such results ought to support it; and if it be, they ought not to shake it. The author proceeds (as you state) to propose "abolishing compulsory process for recovering sums below a certain amount;" I suppose this must mean raising the sum for which an arrest on mesne process may be made, from 20*l.* to some higher sum. I entirely agree with the author in his object; but I as entirely disagree with him as to the means of effecting it. Merely to raise the amount for which arrest may be made, is to take from a debtor for 20*l.* his present option of surrendering to prison after incurring about 5*l.* costs, and to send him there a few weeks later at three times that expense. The author objects to the increase of law costs; and it is because I do so likewise, that I cannot coincide with him in this proposal. The true way to attain our common object, as I have elsewhere endeavoured to shew, is to permit debtors to subject themselves to the law of insolvency without going to prison at all, unless under sentence, after fraud or other improper conduct proved against them. Let as much as possible of the present expenses be saved to both creditor and debtor, and let the most efficient means be adopted for making an early and equitable distribution of the property of the latter. It should not be forgotten, that a large proportion of the debtors committed annually to the prisons in London are not inhabitants of the metropolis, but are those who, having been arrested in various counties and liberated on bail, cannot surrender in their discharge except in town. If they then seek the relief afforded by the law of insolvency, it is a general and a just complaint that they are heard at a distance from their creditors, who must forego opposition, or incur large and needless expense. My proposal would be a complete remedy, by freeing this class from the necessity of surrendering at all; and this, again, would so reduce the numbers committed to the King's Bench and Fleet prisons, as to leave the former quite equal to the reception of the whole. If this were done, the country might save the large expense now proposed to be incurred in building the new Fleet prison in St. George's Fields, except so much as might be a compensation to the officers displaced, until by succession they should be provided with equivalent appointments at the King's Bench. I have only to add my hope that a measure in the support of which humanity and policy are united, and which has been so powerfully advocated by a large portion of the enlightened public press, must at no great distance of time be carried into effect.—I am, sir, &c.

HENRY DANCE.

ARTS AND SCIENCES.

RUSSIAN VOYAGE OF DISCOVERY.

Further particulars.*

In the middle of June 1828, the *Siniävin* had left, for the second time, the harbour of St. Peter and St. Paul, and sailed, with a favourable wind, on its voyage to examine Behring's Straits. The coast of Kamtschatka afforded the navigators a very striking prospect. From the centre of Avatscha Bay they had a view of five immense mountains, which rise, insulated and steep, above some lower eminences. On the south side of the bay stands Viluschinskaja, a magnificent peak, covered with eternal snow, which, by trigonometrical measurement, is 6342 feet in height. The Kamtschadale relates with dread the traditions relative to the subterraneous spirits in the interior of this mountain; but the mind of the spectator who visits these countries for the first time is seized and enchained by very different feelings, which no language can express. These are mountains which rise singly from the plain, on a level with the sea, and whose ice-crowned summits are lost in the azure vault of the firmament. The heart throbs with double violence, a hitherto unfelt and almost painful emotion overpowers the astonished spectator; yet he cannot tear himself away from this sublime scene. In the starry night, in which the contours of the mountains are strongly marked, in consequence of the dazzling whiteness of the snow, he appears to forget the stars of heaven, because he cannot abstract his eyes from the colossi of the earth. One of these mountains, the Karazkaja, which is but little inferior in elevation to the Peak of Teneriffe, as it measures 11,468 feet—constantly emits columns of smoke from its northern side, though profound silence and tranquillity prevail in its interior. This is not the case with its next neighbour, the Avatschankaja (the burning), whose top, enveloped in thick clouds of smoke, threw out, so recently as last year, immense masses of fire, and spread terror and consternation among the inhabitants. The lowest mountain, which slopes down to the sea-coast, is the Kaselskaja. But the most gigantic of them, which is visible at a distance of 160 sea miles, and which, at the same time, announces the terrible revolutions which this peninsula has undergone, is the Kluschefskaja, or Kamtschatskaja, which has but very lately thrown out ashes and lava. Its summit, which is involved in thick clouds of smoke, is more elevated than that of Mont Blanc, being 16,542 feet above the level of the sea. But the Swiss mountain must make a very different impression from that which this Asiatic volcano excites, because the latter rises immediately from the ocean, while the foot of Mont Blanc is concealed by considerable mountains which stand before it.

On the 23d of June they reached the rocky island of Kavaga, in lat. 58° 59' north, which has no trees, but is covered with thickets, that afford a retreat, but very seldom disturbed, to innumerable bears, foxes, and marmots. In the bay of the same name is the small and almost inaccessible island, called Werchaturafskaja, where the valuable black foxes are said to abound.

On the 11th of July they observed Cape Thadeus, which forms the southern point of the Sea of Anadir, and was found by observation to be in 61° 40' north latitude. On the 14th they descried the snowy plains of the Island of St. Lawrence; on the 15th they enjoyed the view of both continents at

once on Gwoedef's Islands, which lie between them; and on the 16th they cast anchor in St. Lawrence Bay, in latitude 65° 37'. Here they for the first time had some intercourse with the Tchoukches, a fine vigorous race of men, who received them very kindly, and during their temporary stay kept up a most friendly intercourse with them. This nation is usually divided into two tribes, distinguished by the name of the Sitting, and the Reindeer Tchoukches. The former dwell in the most sterile spots on the sea-coast, and in their leather boats navigate the ocean, which affords them every thing they need. The sea furnishes them the materials for their boats, their houses, and their clothing; food, arms, and fuel, by the capture of whales, walrus, and seals. The Reindeer Tchoukches traverse the continent with their numerous herds; they differ both in language and manners from the others. They are far more warlike, but carry on in an amicable manner the intercourse and trade between the Russians living on the Kolyma and elsewhere, and the tribes dwelling on the coasts, the produce of whose fishery is absolutely necessary to them. There is no difference between the two tribes, either in external appearance or in dress. The intercourse with the Russians is indispensable to both, partly to obtain iron and copper goods, and partly, and indeed chiefly, for tobacco, of which both sexes are passionately fond. For a few leaves of Russian tobacco and some needles, any thing may be obtained from them.

Thick fogs prevented them from continuing their operations on the coast. After cruising about a long time, they at length cast anchor on the 27th, at the entrance of the Bay of Metschigimskenski, intending, as it was then late in the day, to enter the port next morning; but a very violent wind blowing from shore would not permit it; and after losing a whole day, they found it necessary to abandon the attempt and steer to the south, having little time to spare. In lat. 64° 47' they came to an apparent inlet, which had been already observed by Clarke. They immediately sent out boats to look for a harbour, in which they succeeded. The following day the naturalists made an excursion, and convinced themselves that what had hitherto been taken for a part of the continent, was in fact an island. On the 29th they changed their anchoring-place, and perceived, from the hills, that they were in a considerable channel, formed by two large islands and the continent of Asia. This channel, which contains a number of excellent harbours, received the name of *Siniävin Straits*; and in the time that intervened to the 6th of August, it was accurately surveyed by the captain and the officers. Cape Mertens forms the southern entrance of this channel, which ever since the time of Cook has been taken for a bay. Here they left Behring's Straits, sailed on the 9th of August round Cape Ischakotak, and were again in the Sea of Anadir. On the 14th they were off a cape where Behring had been exactly 100 years before, on the same day at noon; for which reason Captain Litke called it Behring's Cape. On the 16th they reached the great, and hitherto undescribed, bay of the Holy Cross, where they remained till the 5th of September, and made an accurate survey of it; from which it appeared, that it extended further to the north than East Cape in Behring's Straits, and reached the polar circle. Here, however, the winter overtook them with all its northern terrors—violent storms, heavy snow, and thick fogs; and they were compelled, to their great regret, to

* See *Lit. Gaz.* Jan. 30, 1830.

leave these dangerous coasts, on which they had remained longer than any preceding navigators. It was not till the 23d that they happily arrived in the harbour of St. Peter and St. Paul, where, to their great joy, they found the Moller, which had returned to that place on the 20th of August. They intended to put to sea again on the 28th of October, to survey some of the western Carolines, and then return to Europe by the way of Manilla and the Straits of Sunda. Not a single man had died on board the *Siniavin* during this long voyage.*

SCIENTIFIC EXPEDITION IN GREECE.

June 21.

THE members of the scientific commission are all engaged in excursions. Colonel Bory St. Vincent, accompanied by four of his colleagues, Messrs. Virlet, Baccuet, De Launay, and Brule, has succeeded in travelling through Maina, where he was very well received by all the chiefs, especially by Captain Mourtzinos. He took advantage of these favourable circumstances to ascend Mount Taygetus, which had never before been done by any known traveller. These gentlemen, after four days' extreme fatigue, and in spite of the snows with which Taygetus is still covered, reached the summit, and were able correctly to measure the highest mountain in the Morea. They are at present in the heart of Arcadia; and have measured Mount Lyceus and the ancient Cotyllus. Messrs. Blouet, Dubois, and Amaury Duval, with their assistants, are at Olympia, where some excavations have afforded them very satisfactory results. They have discovered a temple, which they suppose to be that of the Olympian Jupiter. The length of this monument appears to be two hundred and forty feet; the columns are twenty-one feet in circumference. M. Baroisier, one of the members of the section of architecture, came, a fortnight ago, to Modon, to ask of General Schneider for a supply of tools, to be able to continue, with more activity, the interesting excavations which they intend to make.

CELESTIAL PHENOMENA FOR AUGUST.

22d day, 23 hrs. 33 min.—the sun enters the sign Virgo, according to the fixed Zodiac; its true place in the heavens will be in Leo, about two degrees east of Regulus, a star of the first magnitude, situate nearly in the ecliptic.

Lunar Phases and Conjunctions.

	D.	H.	M.
○ First Quarter in Libra	7	10	13
○ Full Moon in Capricornus	14	10	26
● Last Quarter in Taurus	21	1	35
● New Moon in Leo	28	20	53

The moon will be in conjunction with

	D.	H.	M.
Venus in Leo	1	0	20
Jupiter in Scorpio	9	1	0
Saturn in Cancer	26	20	0
Mars in Leo	28	13	52
Mercury in Leo	29	16	30
Venus in Virgo	31	12	30

11th day, 8 hrs.—Mercury in conjunction with Saturn; 19th day, 23 hrs.—with Mars; 20th day, 12 hrs. 15 min.—in superior conjunction with the sun. Venus is approaching the earth, its brilliancy and diameter increasing; it will soon be conspicuous as an evening star. 15th day—11 digits west illuminated, and apparent diameter 11".

18th day, 15 hrs. 45 min.—Mars in conjunction. Jupiter still continues to send forth its streams of radiance soon after sunset, and, as the darkness increases, forms a remarkable contrast of colour with the red star Antares, which is to the south of the planet. 29th day,

19 hrs. 15 min.—in quadrature. The following are the only visible eclipses of the satellites during the month:—

	D.	H.	M.	S.
First Satellite, Emerson	20	9	4	11
Third Satellite, Emerson	8	9	7	28

19th day, 8 hrs. 30 min.—a curious configuration will occur of the satellites; the first satellite will be on the disc, the fourth in the shadow, and the second and third at an equal distance east and west of the primary.

Saturn is too near the sun to be seen.

Uranus is in a favourable position for telescopic observation; the two stars in the head of the Goat point nearly to it in a southern direction. This planet passes the meridian at the following times respectively:—

D.	H.	M.	D.	H.	M.	D.	H.	M.
1	11	40	11	11	0	21	10	21

Occultation of Aldebaran.—21st day—this beautiful star, and some small ones near it, will be occulted: the moon will rise a short time after midnight, when the star will be observed a little to the east of it. As the immersion will not occur till after the sun has risen, a telescope will be necessary to observe the phenomenon. The following will be the times of occultation, as computed for four principal observatories:—

	Sidereal Time.	Mean Solar Time.
Greenwich	3 45 17	Immersion.
	5 2 19	1 Emerison.
Bedford	3 45 17	44 Immersion.
	5 2 19	1 Emerison.
Edinburgh	3 30 17	20 Immersion.
	4 46 18	45 Emerison.
Dublin	3 12 17	11 Immersion.
	4 28 18	27 Emerison.

Deftford.

J. T. B.

LITERARY AND LEARNED.
ASIATIC SOCIETY.

JULY 25. Sir Alexander Johnston, V.P. in the chair.—Mr. J. F. Davis, late of China, read the second part of his Essay on the Poetry of the Chinese: in the course of which he introduced the translation of a Chinese poem, descriptive of London, written in 1813 by a Chinese who had visited the metropolis; and an abstract of another poem, illustrative of some peculiarities in the manners of Europeans, written by a Hong merchant who had never been out of China. The latter, as might be expected, excited the risible muscles of the members who heard it read. Sir Alexander Johnston presented to the Society a continuation of the series of maps and charts of Ceylon, formerly presented by him. Colonel Fitzclarence presented his *Hussar's Life on Service*; Mr. Ackermann, of the Strand, a very elegant engraving, representing the introduction of Trial by Jury and the Abolition of Domestic Slavery in the Island of Ceylon; Mr. Klaproth, his *Critical Observations upon some recent Discoveries in Egyptian Hieroglyphics: the Transactions of the Medico-Botanical Society*, and several other works of literature and art, were likewise presented. The Rev. Dr. Mill, principal of Bishop's College, Calcutta, was introduced, and took his seat as a member. M. Cesar Moreau was elected a foreign member; Don N. Pereira, Dr. Waitz, and Lieutenant Rowlandson, were elected corresponding members. The worthy chairman then declared the meeting adjourned till the first Saturday in December.

THE NIGER.*

Margate, July 24, 1829.

SIR,—An article has appeared in the last *Quarterly Review*, which conveys so erroneous

* The question discussed in Sir Rufane Donkin's letter is of such general interest, that we cheerfully afford it a

a view of what a late publication of mine—the "Course and probable Termination of the Niger"—really is, that I beg leave, through your Journal, to make the following observations, in the hope that they may meet the eyes of some of those who may see the critique and not my book.

My censor begins by stating, that my "conclusions are contrary to known facts;" and soon after we are told, that "the Greek, Roman, and Arab (authors), having no personal knowledge of this subject, ran riot in speculative geography, and, for want of facts, indulged in the wildest fancies."

Now, many of the facts on which I have reasoned were drawn from those Greek, Latin, and Arab writers; I supposing, as others had done before me, that those writers were entitled to some credit; but I find myself suddenly deprived of all aid from them by the above sweeping anathema, and Herodotus and Ptolemy fall out of my hands, as insignificant personages as

"—fortemque Gyan, fortemque Cloanthum."

Here then I err—not in drawing "conclusions contrary to facts," but in citing as facts the "fancies" of dreaming authors! This is a destruction of literary material for which I confess I was not prepared: but as a considerable portion of my work is founded on facts taken from these condemned authors, I hope and believe it will not be found that I have come to false conclusions on those facts.

But it appears afterwards, that some of the "known facts," in defiance of which I have come to my conclusions, relate to the course of the Niger as detailed in Captain Clapperton's last journey; and my censor contends, that the Niger or Quorra does not flow into the Tchad by the Yeon, but, if at all, by the Shary. I need hardly say, that before I published a work on the Niger, I had read what Denham and Clapperton had written; and, as well as I recollect here, Denham was so convinced that the Yeon was the Niger, that he sent a bottle of its water to a friend as the true Niger water; and the weight of testimony that the Yeon is the Niger still appears to me to be so strong, that my opinion remains unshaken. Indeed, if any reliance is to be placed either on Major Denham's map, or on his account of his journey to Mandara, the junction of the Quorra or Niger with the Shary is impossible. However, let the Niger run into the Tchad by the Shary—all I ask is, let it run into the Tchad by *any* channel—for a most material part of my Dissertation turns on the channel which I think I have proved to flow out of the Tchad to the eastward—a circumstance of the greatest importance; for, if I have shewn the existence of such a channel, whither does it conduct the Niger? I thought I had found an undoubted recipient for it in the Nile of Bornou; but the Quarterly Review tells me, to my surprise, that I must not reckon on any such river (p. 225)! for that the only known rivers in Bornou are the Yeon and the Shary; at the same time, too, the lake Dombou is pronounced a non-entity! To be thus deprived of rivers, lakes, and authors, to which all writers on African geography have hitherto been accustomed to look up as entities and certainties, leaves me with very scanty materials indeed for a dissertation on the Niger; and all I can do is to appeal from such a dictum to the authorities I have cited on the subject of the Nile

place, entertaining great esteem for the talents of the writer; though, while we give publicity to his able and gentlemanlike defence, we take no part as combatants against our brother Reviewer.—Ed. L. G.

of Bornou and the lake Dombou, in the existence of both of which I continue to believe.

Next comes a remark—parenthetically—that the Niger and Nile of Bornou must “run a little up hill, to be sure,” to reach the Gulf of Sidra. We are not told how this slope upwards towards the coast is known or has been ascertained. My belief is, that Africa, like most other countries, *falls* towards its coasts; and in my hypothesis of the Niger running into the Gulf of Sidra—for I give it as an hypothesis only, even in my very title-page, although I am dealt with as if I had advanced it as a fact—I suppose that river to be still in its ancient deep bed, though covered over with sand in the catastrophe described by Herodotus, but of whose authority I have been deprived in the general prescription of the Greeks and Romans. A river so covered over by sand may surely be supposed to continue its way to the sea in its old bed, *without running up hill*. And as to the state in which Messrs. Beechey are said (Quarterly Review, p. 238) to have found the coast, I have no where implied that *now* the influx of the Niger was visible from “pleasant quicksands:” on the contrary, if the river be there at all, it must be covered over by hills of consolidated sand, the accumulation of ages, and which are still accumulating; and any one who will look into my Dissertation will see a river, not “running up hill,” but *hills running over a river*; or, in plain words, hills of sand have come to and covered the river. But this notion of water “running up hill” was too good a joke to be lost, although to me it had not the charm of novelty, having been let off on me many weeks ago, and answered by me at the time as I have here answered it. I wish when the writer of the article in the Quarterly was pleased to designate me (p. 237) as “Amicus Plato,” he had recollected that there was a still more important personage in the sentence—an “Amica”—but who appears to have been sacrificed for a joke, and that a stale one!

As I have not Messrs. Beechey's work here, nor indeed have I any books—I cannot say how far off, nor in what direction, is placed the rocky range, 400 or 500 feet high, on the skirts of the Desert (p. 258); but if these rocky hills be continuous, and if they cross my assumed course of the river, there is an end of my hypothesis, and I shall abandon it as readily as I took it up, whenever it is disproved by facts: but if this range be, as I conjecture it to be, at a considerable distance from the coast, nothing short of an actual inspection of the range itself can prove it to be continuous. And, after all, supposing this range really to be in the way, have I not as great a claim to an opening in it as my censor has to suppose one in the great central chain, which is many thousand feet high, and above a hundred miles broad, to let through the Quorra into the Bight of Benin (p. 239) to join the Formosa, which makes such advances up the country, by what authority I know not, in the map appended to Captain Clapperton's book?

I am further censured for speaking slightly of D'Anville and Rennell. I appeal to my book in proof of my having spoken of them with the greatest respect. But when I have shown, that in regard to the Ptolemaic geography these distinguished geographers have committed no fewer than ten material errors (I could have much increased the number), citing Ptolemy as their authority—surely when I saw that Ptolemy gave no such authority, I was not to be deterred by great names from doing justice to the Alexandrian philosopher.

But I must hasten to conclude, and leave many points unanswered; particularly the attack on my rectification of Ptolemy's longitude. The merits of this part of the subject can be understood only by reading what both have said. I must just observe, however, that my reasonings and facts on this subject are by no means confined to the western coast, but affect the whole of the interior of Africa, the geography of which I have rectified, as far as Ptolemy is concerned, by drawing his first meridian through the westernmost of the Cape Verde; and the number of concordant instances cited by me seems to place this part of my Dissertation on a foundation little short of demonstration; whereas, if the first meridian be drawn through Ferro, my censor will find, if Ptolemy is to be listened to at all, that a number of places mentioned by that geographer, some of which I have noticed, would be transferred into the valley of the Nile of Egypt; and this will still be the result, even after admitting the proposition made in the Quarterly Review, of paring away several degrees of longitude from the western coast (p. 231); for, however this paring away may affect the coast and the mouth of the Salathus, it leaves all my reasoning on the interior untouched.

I have now only to notice two complimentary passages which have got, I know not by what chance, into the phial of wrath which has been poured out on my small octavo, and which appear like oases in the desert,—but like oases which are not presented to the African wanderer until every attempt had been made to beat out his brains and to render him insensible to even the most refreshing breeze. But one of these compliments is loaded with a rider—it is that in which the writer is pleased to say that I am “a scholar;” but immediately to this supposed scholarship is attributed my predilection for “ancient classical authorities.” Although I feel that my title to scholarship is very slender, I plead guilty to the charge of the predilection of which I am accused; but not guilty to the charge of “disregard to modern authorities.” If I have cited in my work Herodotus and Ptolemy, I have also cited Denham and Clapperton, and, unhappily for him, Browne, who, though a modern, falls under the anathema (p. 235). However, my scholarship, humble as I know it to be, will not allow me to subscribe to the critique on the word *συμβάλλω*. I have no Greek author or lexicon with me, but, taking the word *συμβάλλω* as it strikes me now, I cannot persuade myself that it means to “suppose” or to “conjecture,” in the sense given to it in the Quarterly Review. The preposition and the verb composing the word mean neither more nor less than “to throw together,” in Latin *con* and *jacio*—out of which I cannot, by any analogy, make any thing like “conjecture” or “supposition.” I believe, indeed, the word sometimes means to “consider,” but then the word “consider” has no reference to opinion or “conjecture,” but to a deep operation of the mind when it is wholly condensed and fixed on one subject; in which sense I think I have met with it either in Aristotle or Thucydides: but I here speak under correction, as I trust wholly to memory and a faint recollection.

But I will here finish by expressing my hope that those who may read the critique will forbear to make up their minds till they have looked into the work criticised. I hope and believe that it is written without any thing like pretension, and I cannot help flattering myself, that those who may read my Dissertation will acquit me of the sweeping accusation

of having “come to conclusions contrary to known facts.” I remain, &c., &c.

R. S. DONKER.

FINE ARTS.

NEW PUBLICATIONS.

Scraps, “to drive away the heavy thought of care.” Designed, etched, and published, by D. C. Johnston, Boston.

MR. JOHNSTON appears to be the American Cruickshanks: undoubtedly much inferior to our witty and celebrated countryman, particularly in his qualifications as an artist; but by no means destitute of humour, for all that. Of course, the most entertaining of his “scraps” on this side of the water will be those which relate to Transatlantic manners. Among the best of these is, “A fancy ball, given by ‘the fast coloured circles’ at Philadelphia.” It represents one of those *sabornalia*, at which the American slaves lose, in the exuberance of their temporary gaiety, all sense of their real condition. One “little nigger, wid de big oifer coat on,” is “Gineral Washington.” Another, dressed like Napoleon, and taking a crony,—“Cuff,” what crackter you tink I am?” is answered, “Why, you lege looks like Bony-parts.” A third accosts a sort of Hostetot angel,—“Miss Philisee, shall I hab de facility ob you hand? I spose by you beautiful wings you stain de crackter ob de butterfly:”—on which a dingy rival of the lady's observes, aside,—“De butterfly! de lord know she looks more like de butterflykin.”—“A New Way to pay Old Debts,” is comical enough. “Here's a your bill, sir,” exclaims an urchin, cap in hand, to a lanky creditor, who seems to be a Frenchman without a sou; “master says will you please to pay it, cause he kind a wants the money?” “You littel impertinent jak-mokey,” is the courteous reply, “go tell you master for pay his own debts, and no trouble himself bout mine.”—“Making use of a friend” is no bad exhibition of contrasted impudence and meekness: “I've broke your rotten wheelbarrow, usin on't; you'll please to git it mended right off, cause I'll want to borrow it agin this arternoon.” “Friend, it shall be repaired and sent to thee.” There are in all thirty-six “scraps;” and although some of them are rather tame, they manifest upon the whole considerable talent.

Sketches of Cattle. Drawn from Nature and on Stone by J. F. Herring, Animal Portrait Painter, Doncaster. S. and J. Fuller. Five lithographic plates, full of character, and highly creditable to Mr. Herring's talents.

The Right Hon. Caroline Harriet, Viscountess Eastnor. Engraved by Scriven, from a Painting by Mrs. Carpenter. M. Colnaghi. A FINE little specimen (being the fifty-eighth of Portraits of the Female Nobility in *La Belle Assemblée*) of Mrs. Carpenter's power and taste as a painter, and of Mr. Scriven's talents as an engraver.

Caricatures.—Great political struggles and changes make the harvest for the caricaturist; and the late season has been prolific of these whimsical signs of the times. Among the best which have appeared is a series by Paul Fry (an anagram of potency in this career of art), referring to coach-driving, the Premier being “the man vot drives the Sovereign;” Mr. Peel, his cad; a lady, the guard; Lord Eldon, driver of the opposition; and the King himself, a swell.

* Not the slightest resemblance of our portly and hospitable friend at the Freemason's.—*Ed. L. G.*

The popularity of this set has stimulated the amusing Paul to try his hand, and very successfully, on another class of ten characters, *i. e.* making his majesty, his ministers, &c. parish officers. These are very clever;—the present Lord Chancellor is beadle; Prince Leopold, a charity boy; the Duke of Wellington, Caleb Quotem, parish clerk; Brougham, one of the poor mending the highways; Mr. Peel, Dusty Bob; the Attorney-General, the attorney in general to the parish; Lord Eldon, watchman; and the King, overseer. The drollery of these representations, and the smartness of their accessories, even after the tug of the party war is relaxed, bid fair to render them equally successful with their precursors; and, indeed, though we rarely notice such things, the talent displayed by this Mr. Pry is deserving of record, as restoring something of the better days of caricature.

ORIGINAL POETRY.

LINES

Written in a Copy of Milton with Illustrations by JOHN MARTIN, Esq.

POET of glorious dreams!
I gaze upon thy page with deep delight,
Feeling as if the rush of mighty streams
Dazzled my sight.

Poet! what soul, save thine,
Was ever filled with such imaginings?
Who ever sought so closely to entwine
Earthly with hidden things?

Is there a brain on earth
In which such gorgeous fancies e'er have
wrought?
Is there a spirit that could e'er give birth
To such o'erpowering thought?

There is:—turn to this page,
And look on the rich visions pictured there;
An equal genius of an after age
Hath risen thy fame to share.

Poet! thou didst but give
The outline of the beings of thy brain;
Painter! 'twas thine to bid them rise and live,
And o'er our senses reign.

For there is a strong spell
In their deep, voiceless language to our hearts;
We gaze upon them till our bosoms swell,
And the slow tear-drop starts.

Painter! thy heart is cast
In the same heavenly mould as was his own;
From him to thee his mighty spirit past,
That thou might take its tone,
And seize the thoughts that were
In quick creation thronging in that soul,
And subject all their will and feverish stir
To thy control.

Thy name shall ever be
Mingled with his beside his hallow'd shrine,
And glory such as his, immortally,
Painter! is thine.

M. A. BROWNE.

Worton Lodge, Iaincorth.

SKETCHES OF SOCIETY.

To the Editor, &c.

REGAL FRATRICIDE LEGALISED IN TURKEY.

"Le lâche et cruel Mahomet III fit périr ses dix-neuf frères."

SIR,—In your recent extracts from Macfarlane's Constantinople, I observe that the writer dwells with just indignation on the sanguinary character of the Ottoman rulers, and quotes Mahomet III. as its signal exemplar.* The

unnatural practice of princely fratricide, however, was legalised by the Turkish legislators more than 130 years before his time, and was obviously borrowed from the bloody precedents established by their eastern forefathers.

The ancient annals of commonwealths, as well as despotic governments, afford numerous instances of fratricides committed with a view to political ends. Few will have forgotten how warmly some writers have sought to extenuate, whilst others have indignantly condemned, Timoleon's slaying of Timophanes, the Athenian tyrant; or how every pen has sentenced to unqualified abhorrence Gentius the Illyrian, and Perseus the Macedonian, who steeped their swords in a brother's blood, "quo tutius regnarent." But the Eastern satraps far outdid their rivals in the West, and the mighty monarchs of Persia, in particular, outraged the laws of nature without a scruple, whenever they deemed the death of a brother calculated to enhance the stability of their blood-stained sovereignties. One of the earliest tales of horror which disgraces the page of Persian story, records the parricide perpetrated by Darius and his fifty brothers on his aged parent Artaxerxes; in retaliation for which, we are told that Ochus, who had seized upon the vacant crown, put the fifty murderers, his brothers, and their wives and children, without distinction of age or sex, to instant death. Again, as Justinus informs us, Ferhad, or Phrahates IV., united in his single person the execrable pre-eminence of being a parricide, filicide, and fratricide; for his father, son, and thirty brothers, fell victims to his remorseless cupidity. It is observed by the historian on this occasion, that it would seem as if increased lustre shone from the Persian diadem whenever it begirt a parricidal or fratricidal brow. The code of Persian despotism was, however, a stranger to any legislative enactment by which the murder of a man's nearest kin was adjudged to be a justifiable means of giving stability to thrones; such a doctrine as this was reserved to form a horribly-distinguishing feature of the canons of Turkish jurisprudence, as propounded by the conqueror of Constantinople, Mahomet II. "*The learned in the law*," he decreed, "*have in general declared, that whosoever amongst my illustrious children and descendants shall hereafter wield a sceptre, may cause his brothers to be put to death, in order to provide for the peace of mankind; and they are to govern themselves accordingly.*" Othman, the founder of the Ottoman empire, had set the first example of ridding one's self of troublesome kindred, by the assassination of his uncle; and Bajazet, "the lightning-flasher," the first example of fratricide, by murdering his brother upon his accession to the imperial turban. Mahomet the Second, his great grandson, however, was not content with simply treading in his steps, but determined that fratricide should thenceforwards be perpetrated according to law, and that his own example should stand forth as its earliest precedent.

The melancholy history of Zizim, the brother of Mahomet's successor, Bajazet II., by whom the infamous Alexander VI., Borgia, was bribed to administer a poisoned chalice to the persecuted prince, must be familiar to your readers. But less so, in all likelihood, the atrocious conduct of Selim I. towards his brothers and nephews, of whose melancholy fate I claim the privilege of presenting you with a brief narrative.

"Selim," says his historian, Dachenabi, "was a man of lofty bearing, an enterprising

spirit, and a ready judgment, with much genius for poetry, and of deep penetration; but fiery, irritable, and overbearing in his temperament." We require no better illustration of the latter qualities in his character, than what passed between him and Pirpasha, his grand vizier, when the minister once observed to him, between earnestness and joking, "I am aware, my lord Padishah, that some day or other you will take occasion to put an end to your poor slave; could you not vouchsafe me four-and-twenty hours' notice or so, that I may set my account in order with this world and the next?" The sultan laughed aloud at Pirpasha's well-founded apprehensions, and replied,—"*It's very true, I have long had this thing in mind, but I have no one fit to replace you in the grand viziership; otherwise it would be an easy matter for me to accede to your wishes!*"

The cool-blooded ferocity with which this ruffian set about the murder of his five nephews, is thus narrated by Menavino:—"On the Turkish sabbath (November 27th, 1512) five chiefs of the janissaries received orders to seize upon the five princes at Brusa, and bring them to the palace. One was seven years of age, and the others twice and thrice as old. The whole of them were entrapped and confined in a palace, and kept ready for slaughtering the next day. The youngest fell upon his knees before the two executioners and entreated his life might be spared, as he was ready to serve the sultan faithfully for an asper a-day. Mohammed (a youth of great promise, about twenty years old), when his executioners approached him, broke the arm of one of them, and with a knife inflicted a mortal wound on the other. Selim, who was feasting his eyes on the slaughter of his nephews from the adjoining apartment, sent additional assassins to complete the tragedy; the princes' hands were bound, and the bloody deed consummated without further peril to the assassins' own lives."

Selim's brother, Korkud, having been hunted from his palace at Magnesia, was discovered in a cavern with his faithful companion Piale, and conducted to Brusa. "As he drew near to the city," say the Turkish annalists, "the Kapidshibaah Sinan was despatched to meet him, apparently as the harbinger of a fraternal welcome, but, in truth, as the bearer of sentence of death. Sinan contrived to get Piale away from his lord during the night, and then roused the prince with the tidings of his doom. Korkud solicited an hour's delay, set himself down, and composed a poetical plaint to his brother, upbraiding him bitterly with his treachery. On the ensuing morning he was laid a corpse at his brother's feet, and the verses were delivered to his murderer, as his last bequest. Tears, such as the remorseful or hypocrite can summon at command, fell down his cheeks: mourning for three days was ordered; and fifteen Turkomans, who had betrayed the prince's place of refuge, and arrived at Brusa to claim their recompense, were executed. The faithful Piale never ceased to deplore the loss of his master; nor, until the last hour of his life, to watch on the spot where Korkud's remains were entombed."

Selim's only surviving brother, Achmet, the governor of Amasia, having raised the standard of revolt, was encountered and defeated by him not far from Brusa, and in his flight fell into a stream, when he was captured. He requested to be conducted into his brother's presence; but his captor refused the request, saying,—"*he should receive investiture of a sand-*

shak" (or principality), "as befitted an Ottoman prince." These words were his death-warrant; and the same Sinan who had been Korkud's executioner was now employed to perform a similarly bloody office. Achmet drew from his finger a costly ring, esteemed equal to a year's tribute from Rumili in value, and delivered it to his executioner, as a legacy to his unnatural brother. His body was deposited beside the remains of his five nephews, in the tomb of Amurath II., at Brusa.

These anecdotes will suffice as a passing comment on Mahomet's law of regal fratricide; and I add, that the reigning sultan also "has governed himself accordingly."—I am, sir, &c.

Q. E. D.

July 27th, 1829.

HORTICULTURAL SOCIETY.

THE accounts of the late aquatic Horticultural fête have been produced, examined, passed, and published; and certainly they appear to be such as not to justify any repetition of these silly exhibitions. The pecuniary part of the transaction is, briefly, that 4,438 tickets were sold at various prices, (from the original price of a single guinea to the huckster-like advance of two guineas, when the state of the market supported an increase,) and produced 5,185*l.* 8*s.* 6*d.* Of the purchasers, only 3,644 presented themselves at the gardens; some 800 persons having the good sense to put up with their first loss and stay away. Mr. Gunter received 3,106*l.* 12*s.* for the provender; *other expenses were estimated* at no less than 1,594*l.* 19*s.* 4*d.*, "including 346*l.* for work done expressly for the fête;" (what was the rest for, if not for the fête?!) and the Society netted a nominal balance of 123*l.* 17*s.* 6*d.*

Such are the results of an affair which is not so much to be regretted for the trouble and expense incurred for so trifling a profit, as for its inconsistency with the character of the Society, and its sure tendency to lower it, not only in the opinion of the most judicious of its friends, but in that of the public at large. What is the design of this national Institution? To improve the horticultural productions of the country—to introduce new fruits, and vegetables, and flowers, and to cultivate the best of those which are already in existence, till our gardens should boast of all that was gratifying to the taste, beautiful to the sight, and useful for consumption, which our climate permitted us to enjoy. And what connexion can such shows have with such objects? None whatever. On the contrary, they tend to retard, if not destroy them. For months previous to the fête, and for months after, the gardeners, instead of attending to their duties, are employed in preparations for the entertainment: pitching tents, making promenades, dressing borders, and other ridiculous as well as injurious works; and for months after, they are employed in remedying the damages done by several thousand persons trampling over the grounds, and (when wet, as is usual) reducing them to the state of a morass, unfit for the growth of the commonest and hardiest plants. The 123*l.* 17*s.* 6*d.* will go a very small way towards repairing the damages done in every corner of the garden. Far better would it be to afford some proofs of the scientific success of this Institution, than to be frittering away its interests in fêtes, which can only enhance the consequence of a few busy individuals, while it offends the judgments of a majority of the oldest members, who care not for seeing a display of fine fruits, &c. from every garden round

but from their own, which costs so much, and, as far as we can perceive, has literally done nothing for our national horticulture.

DRAMA.

KING'S THEATRE.

ON Thursday Cimarosa's *Gli Horaxi e Curiasj* was produced here with considerable éclat: so that it cannot justly be said we have been doomed to hear nothing but the compositions of Rossini this season. On the contrary, with a laudable zeal to produce novelty, the manager has given the lovers of Mozart the music of that great composer, and has agreeably varied the performances with Cimarosa and Zangereilli. Pisaroni and Curioni sustained the brunt of this opera in a very able manner; though the beautiful trio, "O dolce Caro i' stante," was the only piece which obtained an encore. To-night finishes these entertainments.

HAYMARKET THEATRE.

A VERY pleasant translation of *Le plus beau Jour de ma Vie* was produced here on Wednesday evening, by Mr. Buckstone, the author of *Luke the Labourer*, and several other very clever pieces, at the minor theatres. His style is scarcely polished enough for Haymarket comedy; and were we inclined to be hypercritical, we might point out many discrepancies in the drawing of the principal personages of his drama. The effect of the whole, however, acted so admirably as it was by Liston, Mrs. Glover, Mrs. Humby, and, we are bound to say, Mrs. Tayleure, who filled up a natural little sketch in the most natural and, consequently, most perfect style, was so amusing, that we only allude to the blemishes as trifles to be avoided in future; and heartily subscribe to the very favourable opinion which was unequivocally expressed by "a numerous and fashionable audience." The play-bills themselves cannot say more, and may certainly say as much, for *The happiest Day of my Life*.

FRENCH OPERA.

THE French papers deny the accuracy of the report that M. Laurent will cease from this year to be the manager of the Théâtre Italien in Paris. They say that his contract will not expire until October 1830; when he will be succeeded by M. Robert, who has for a long time been attached to the theatre in the quality of inspector, and who is an enlightened amateur, sufficiently zealous, musically speaking, to regard his speculation less as the source of suddenly becoming rich, than as affording him the means of furnishing the Parisians with an excellent Italian opera. The Théâtre Italien will open on the 15th of August, with Donzelli, Zuchelli, Sontag, and Pisaroni. Malibran will not appear until a later period, wishing for some rest, and also being engaged, it is said, at three concerts, for the benefit of the poor, which are to take place in the neighbourhood of London, and for which she is to receive the moderate sum of 25,000 francs—1000 guineas! The French critics urge M. Laurent to endeavour to exchange Donzelli and Zuchelli for Rubini and Lablache; and assert that the latter two, with Tamburini, are the only singers for the possession of whom Italy is at present to be envied. Madame Fodor, who is at Naples, is beginning to recover her voice, which her visit to northern climates had veiled.

PAPAL THEATRES.—A work published in Rome, in 1827, contains the following passage:

"What keeps the public away from the theatres here is the new papal regulation respecting theatrical performances. According to these, if any person sitting in the pit should rise and remain standing, he is liable to a penalty of five crowns; any person keeping on his hat is to be immediately expelled from the theatre; and any actor guilty of an indecent manner or expression, is liable to be sent to the galleys for five years; for a blow given in the theatre, the punishment is ten years at the galleys; for entering the theatre armed, the galleys for life; and for an armed person wounding another in the theatre, the punishment of death; and every expression of applause or censure is prohibited, on pain of six months' imprisonment."

THE MELODISTS' CLUB.

THE last meeting of the Melodists' Club for the season took place on Thursday at Freemasons' Tavern, where fifty members and their friends sat down to dinner. The musical entertainments of the evening, under the direction of T. Cooke, were of the most delightful description: glees by Leete, King, Taylor, &c., were varied with comic and other songs by Weekes, Blewitt, &c., and two masterly performances on the flute by Nicholson.

M. CHABERT.

ON Saturday we again witnessed this person's swallowing a grain of phosphorus, in the presence of Mr. Farraday, Mr. Petigrew, and other scientific individuals, who were all perfectly convinced that no deception was used. No ill results ensued.* M. Chabert next entered an oven, in which he remained within a few seconds of eight minutes; during which two dishes of beef-steaks, in tin covers, which he took in with him, were completely cooked. Some burning wood-ashes remained in the oven, and might assist this process; but still the heat was excessive, and apparently above the power of a human creature to bear; for after Chabert came out, a thermometer placed on an iron stool in the centre rose to 230°, or full 50° higher than any former experiment of the kind with which we are acquainted.

VARIETIES.

Crabs migratory through the air.—The newspapers have got hold of a strange story of three live crabs having fallen amidst a shower of rain near Ryegate in Surry. The fact, as the tellers of extraordinary tales sometimes say, stands in need of confirmation.

Jews.—The persecutions to which the Jews were exposed in Europe about the middle of the fourteenth century are well known. A history of the charter of Fribourg, recently published by Dr. Schreiber, contains, among much curious matter, a *procès-verbal*, dated the 30th of January, 1349, by which it appears that all the Jews in the Brigau were burnt on the Friday before Candlemas, in that year! This document states, that one of them admitted that he had poisoned the wells. It is difficult indeed to imagine how many absurd confessions were wrung from these miserable creatures by torture.

Cachemire Shawls.—Madame Buonaparte received from Egypt two cachemire shawls, sent to her by her husband. Mesdames Bourienne, Hamelin, and Visconti, had some also.

* A chemist at Biel has not been so fortunate with his experiments: having taken on three successive days, one, two, and three grains of phosphorus, he died in less than a week, of inflammation of the alimentary canal and spasms.

These ladies wore them merely because it was a fantastical dress—for they were thought frightful, and unfit to be adopted. Nevertheless, ere long all the women in Paris were anxious to appear in such shawls, ugly as they were; and it was a great misfortune for an *élégante* to be without one. The Empress Josephine had a passion for them, and I doubt whether any body else had so rich a collection. When at Navarre she possessed a hundred and fifty, of incomparable beauty, and of very high price. She had sent to Constantinople drawings, from which shawls were manufactured for her, equally charming to the eye as they were valuable. Every week M. Lenormand came to Navarre, and sold to her whatever he had remarkable of the kind. I have seen there white shawls, ornamented with roses, parrots, peacocks, &c., which I believe were unique in Europe. They were estimated at from 15 to 20,000 francs each. The empress also wore gowns of cachemire. One day, M. Portalès, after having admired a very beautiful one, observed that the pattern would look well on a waistcoat. Her majesty took a pair of scissors, cut up her gown, and gave the pieces to Messrs. Portalès, de Turpin, and de Vieil-Castel. She retained only the *corsage*; which, worn with the white under-petticoat, marked still more distinctly her beautiful shape. That which with her was only a spontaneous act of gracious generosity, might have appeared an artifice of coquetry; for I never saw any dress become her better than this extemporaneous spencer.—*Mémoires sur Joséphine*, tome iii.

Memorials, Monuments, &c.—We see it noticed in the Western Journals, that the inhabitants of Penzance and its neighbourhood are about to erect a monument to the memory of their distinguished compatriot, Sir H. Davy. We are also informed, that at a meeting of members of the medical department of the navy on Monday last, a subscription was entered into, for a bust to commemorate their grateful sense of the services rendered to their corps by the late Lord Melville. It is to be placed in the museum at Haslar Hospital. We wish the hint thrown out in our review of Wardrop's valuable work (page 503) might have the effect of producing some memorial of the late John Hunter.

Le Voleur, a Paris paper, of the 15th inst. says: "The celebrated Lady Morgan visited, yesterday, the archives of the kingdom. MM. Cor-Sarthe, secretary-general, and Alexandre le Noble, one of the historiographers of this noble establishment, had, in the absence of the keeper-general, the honour to conduct this lady through the institution. She appeared highly pleased with the chart of Childbeart upon the bark of a tree; and with an immense roll of parchment, shewing the genealogy of the world from the creation to the period of its date, which is the fourteenth century. M. Alexandre le Noble, the young and skilful archaeologist, explained the different objects to Lady Morgan. Before she left the Palais des Archives she saw the famous iron cupboard in which are contained many treaties of peace with the Kings of England, the keys of the Bastille, the model in platina of the *mètre* and of the *kilo*, the autograph will of Louis XVI., &c. &c. Lady Morgan was accompanied by Sir Charles Morgan and the beautiful Miss Sidney Clark, her niece. Several members of the Chamber of Deputies, some literary men, and many of the most celebrated artists, were present."

French Peerage.—The feudal origin of the French peerage was under the second race of

the kings of France. Among the characteristic circumstances of the first age of that institution was the regulation that peeresses in their own right should be entitled to sit in the high court, and to participate in its judgments. In the second age of the peerage, which dates from the year 1297, and which was marked by the elevation of the princes of the blood to the dignity of peers, under Philippe-le-Bel, took place the union of the court of peers with the court of parliament; a union which was the result, not of any law, but of usage, and the force of events. The third age of the French peerage, comprehending the period between the years 1505 and 1550, exhibited the spectacle of foreign princes invested with the dignity. Finally, during the last age, from 1550 to 1789, simple gentlemen became peers; and the first was Anne de Montmorency, constable and high steward of France. The revolution swallowed up both the peerage and the monarchy. The restoration could not revive the ancient peerage; but a new one was created; and the conservative senate of the empire seems like a kind of bond among them.—*Essai sur l'Institution et l'Influence de la Pairie en France*, par C. O. Barbarous.

Fossil Bones.—Two caves have been discovered in the department of the Gard, in France, in which the remains of human bones are, it is said, mingled with the remains of the bones of various antediluvian animals. A letter on the subject from M. de Christol, the secretary of the Natural-History Society at Montpellier, has been referred by the French Academy to the committee already appointed to investigate the facts connected with similar caves at Bire.

William Tell.—The chief topic of conversation in Paris appears to be the new opera of *William Tell*; the first representation of which was to take place on Monday last at the Académie Royale. At the last full rehearsal, which was attended by all the amateurs and connoisseurs in Paris, after a trio by three Swiss characters, there was an enthusiastic burst of applause, the audience rising at the same time and bowing to Rossini, who was present. The other pieces of music which excited most interest, were a duet between Dabadie and Nourrit; an air by Mlle. Cinti, beginning "Sur la rive étrangère;" and the air of the famous apple scene, "Mon fils, reste immobile." A Tyrolean chorus and a characteristic dance were also much applauded.

Classical Fragments.—It is stated in a letter from Rome, that Father Angelo Mai, librarian of the Vatican, has just discovered some valuable fragments of Cornelius Nepos, Tacitus, and Sallust.

A few evenings ago I went to see *Merino's Batiéro*, and was provoked with myself for being delighted. Nothing can be more *spirituel* or ludicrous than this parody on M. de la Vigne's *Marino Faliéro*; in fact, no doctroinal nostrum could be equally efficacious in its effects on hypochondriacs as this *jeu d'esprit* by M. Honoré Lagrange (at least this is the name the author adopts).—*Paris Letter*.

In this season of literary famine, a work has appeared which puzzles the opinions of the literati: it is entitled, "Le Nouveau Monde industriel et sociétaire, ou l'invention du Procédé d'Industrie attrayante et naturelle, distribuée en séries passionnées, par Charles Fourier." Some of the *cognoscenti* of the age charitably adjudge the author worthy of the highest story in Bedlam, and pronounce him the maddest of the mad; whilst others assert, that in a few centuries he will be adored as the true interpreter of the divine code.—*Paris Letter*.

LITERARY NOVELTIES.

An Account of the Early Reformation in Spain, and the Inquisition, translated from the French by the late Dr. A. F. Ramsay, with a Memoir of the Translator, will shortly appear.

Mr. Swan is preparing for publication a Demonstration of the Nerves of the Human Body, founded on the subjects of the two Collegial Anatomical prizes adjudged to him by the Royal College of Surgeons.

Mr. Bernays, the editor of the German Poetical Anthology, is preparing for the press a History of Germany, from the earliest period to the present time.

The Library of Entertaining Knowledge.—A translation of this very interesting work is about to appear in France. A History of the Revolution of Spain and Portugal, as well as of the war which followed, written by Colonel Schepeler, ci-devant chargé d'affaires from the court of Berlin to that of Madrid, and translated under the author's eye, has been published at Liege. The situation in which Colonel Schepeler was placed has enabled him to enrich his work with a number of new and important documents.

Manou.—A new edition of the Manava-Dharma-Sastra, or the Laws of Manou, in Sanscrit, accompanied by a French translation, is at present publishing in Paris. This ancient code of legislation is very different in its character from modern codes. It regards not only the duties and rights of man in society, but his duties to the Deity and to himself. Revealed to the father of the human race by Brahma, the first god of the Indian triad, it is to the Hindoos what the Pentateuch is to the Jews, or the Zend-Avesta to the followers of Ormuzd.

Alfred.—A tragedy has been published at Rome, entitled "Alfred the Great." It is written by M. J. B. Maruzzi, the author of several dramatic productions. The subject is certainly a very proper one to be treated at Rome, where this great prince was educated under the guardianship of Pope Leo the Fourth, and where he acquired that intelligence, and that vigour of character, which he afterwards so admirably exhibited in his native country: but, unfortunately, M. Maruzzi, instead of confining himself to the simplicity of history, has introduced into his work a number of fictitious and improbable incidents, which give it the air of a melo-drama.

In the Press.—Illustrations of the Parts concerned in the Lateral Operation of Lithotomy, with a Description of the Mode of performing it, by Edward Stanley, Lecturer on Anatomy and Physiology at St. Bartholomew's Hospital.

Wind variable, prevailing S.W.

Except the 29th, generally clear; frequent heavy showers of rain.

A tremendous storm of thunder and lightning visited this neighbourhood on the morning of the 25th, from half an hour after midnight till two, the thunder scarcely ceasing, and an almost incessant flashing of lightning till near three; happily, however, there was not, with the exception of a few sheep, any loss of life. During the former part of the storm the rain and hail fell in torrents, though the latter was not here sufficiently large to be so destructive as we are informed it was in the neighbourhood of St. Martin's Lane.

Rain fallen, .95 of an inch.

Edmonton.

CATALOGUE OF NINETY NEW BOOKS, published during the present Season, by Mr. C. G. B. Country Booksellers are requested to apply, through the medium of their respective London Agents, for the Copies they may require for distribution.

A DICTIONARY OF LATIN QUANTITIES; or, Freeston's Guide to the different Quantities of every Syllable in the Latin Language, alphabetically arranged, with Authorities from the best Poets. To which is prefixed, a Treatise on Quantity.

By WILLIAM MOSELEY, LL.D.
This is the only book in any language in which reference can be made for the precise quantity of every syllable in the Latin Language.

Printed for T. Cadell, Strand; and W. Blackwood, Edinburgh.

A CHRONICLE of the CONQUEST of GRANADA

By WASHINGTON IRVING.
New Work by the Author of the *Sketch Book*.
On the 14th of April, in 3 vols. 8vo. 9s.
"Mr. Irving, by assuming the scintillating character of Frey Antonio Aguilera, has at once given to his story a picturesque and even a poetic interest; he has enabled himself to dwell on minute incidents with gaudy and agreeable fullness, and avoided, without impugning, the most elaborate disquisitions deeper studies, and more profound reflections, which are deemed necessary in modern history. Collecting his materials from various historians, and adapting in some degree the tone and manner of a monkish chronicler, he has embodied them in a narrative which in manner remains as of the rich and storied pages of Froissart. The narrative presents an historical picture which can never fail to claim attention."—*American Quarterly Review*.

By the late WILLIAM BUTLER.
Price 2s.
The 10th edition, enlarged by his Son, JOHN OLDING BUTLER, and having an entirely new Set of coloured Maps, with Questions adapted to the new Geography.

"As a correct delineation of the great outlines of the four quarters of the world, and of the British Isles, these maps are entitled to much praise."—*Literary Gazette*.
Printed for John Harris, Corner of St. Paul's Churchyard.

SECOND LATIN DELECTUS, with English Notes, designed to be read in Schools after the "Latina Delectus," and before the "Analecta Latina."

By the Rev. F. E. J. VALPY, M.A. Trin. Coll. Camb.
From the great success which has attended the publication of the second *Great Delectus*, the editor was induced to undertake a second *Latina Delectus*, on the same plan; and he has consequently made selections from the following classic authors:—*Caesar*, *Cicero*, *Cornelius Nepos*, *Horace*, *Julianus*, *Lucian*, *Plinius*, *Plutarchus*, *Quintilian*, *Sallustius*, *Sextus*, *Seneca*, *Terentius*, *Valerius Maximus*, *Varro*, *Vegetius*, *Vergil*, *Virgil*, *Ysidorus*, *Zonaras*, and *Zoroaster*. The editor's object has been that of facilitating the beneficial study of the Latin language, and he trusts that the selections which he has made will be a sufficient introduction to the reading of the authors themselves; at the same time he has added, at the end of each lesson, explanatory notes in English, in which any deviations from the common rules of syntax have been properly accounted for, and the allusions constantly supplied.

Sold by Longman and Co.; Baldwin and Cradock; C. and J. Whittaker; Whittaker and Co.; Simpkin and Marshall; J. Sotheby; and all other Booksellers.

By the same Author,
Second Greek Delectus; or, new *Analecta Græca*, with English Notes, 8vo. 2s. 6d.

Greek Exercises, 8s. 6d.

Epitome Sacra Historie, with English Notes, price 2s.

New Work on Chemistry.
Just published, in 1 large vol. 8vo. price 10s. boards, with Engravings.

A CHEMICAL CATECHISM, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained. Illustrated by Notes, numerous Engravings, Select Chemical Experiments, and a Vocabulary of Terms.

By T. J. GRAHAM, M.D. &c.
"We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 31st Dec. 1839.

"Every thing is here laid out to the latest date, and the work comes far, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Farley's book."—*Weekly Magazine*, 1st March, 1839.
The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the learner. It is very superior to Farley's."—*Atlas*, 1st March, 1839.

"For the purposes of tuition, as well as private study, this book, from its plan, will be found of uncommon utility."
London: Published by Simpkin and Marshall, Stationers' Court; and by all Booksellers.

Improved Edition of *Blind's Farriery*.
In 1 thick vol. with 24 Engravings, price 12s. in cloth,
VETERINARY SURGERY AND PRACTICE OF MEDICINE; or, Farriery taught on a new Plan; being a familiar practical Treatise on the Structure, Functions, and Diseases of the Horse. Being an improved edition of the *Veterinary Surgeon*.

Geography and Atlas on a new Plan.
2d edition, in royal 12mo. price 3s. 6d. neatly bound and lettered, containing numerous Engravings, illustrating Mountains, Customs, and Cartouches.

RUDIMENTS OF GEOGRAPHY, on a New Plan; designed to assist the Memory by Comparison and Classification.

By W. C. WOODBRIDGE, A.M.
The Geography is accompanied by an Atlas, exhibiting, in connexion with the Outlines of Countries, the prevailing Religions, Forms of Government, degrees of Civilization, the comparative Abundance of Towns, Rivers, and Mountains; and the Climate and Productions of the Earth, in royal 4to. coloured, price 6s. half-bound.

This Atlas has been compiled from the best Authorities, and contains all the late Discoveries of Perry, Weddell, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan: each Map presents, not only the geographical outlines of countries, but a series of numbers alluded to the Mountains, Rivers, and Cities, which indicate their comparative rank, and enables the Student, by reference to the Table of Classification, to discover their actual magnitude. The Isothermal Chart exhibits the Climate of different Regions, as determined by Thermometrical Observation, with their most important productions, and presents a striking illustration of the diversity existing in the same Latitudes according to the situation of Countries.

In the Moral and Political Chart, the Outlines of every Country contain a number, shewing its Population, and several emblems indicating its Government, Religion, and State of Civilization; and forms, in effect, a Moral Picture of the World.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Of whom may be had,
A Complete School Catalogue.

In 3 vols. post 8vo.

GERALDINE DE DESMOND; or, Ireland in the Reign of Elizabeth. An Historical Romance.

"A work which the grave may read for instruction, and the gay for amusement."
"The subject is singularly well chosen, both with relation to its own capabilities, and the powers of the writer to deal with it."—*Calcutta Mercury*.

Printed for Henry Colburn, 9, New Burlington Street.

"These memoirs are invaluable."—*Literary Gazette*.

"The duke's memoirs possess much of the dignity and importance of history, and will take their enduring place in all historical libraries, when other perishable memoirs of the day shall have sunk into oblivion."—*New Monthly Magazine*.

Printed for Henry Colburn, 9, New Burlington Street.

GREEK TESTAMENT, with English Notes, 2d edition. Containing copious Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics, and with References to the Vulgate for Idioms, and Bos for Ellipses. To which is prefixed, a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Granville Sharpe, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indices are added. Two Plates are added, one illustrative of the "Travels of the Apostles," and the other, a "Map of Judea, and a Plan of the City and Temple of Jerusalem."

By the Rev. E. VALLPY, B.D.
This Work is intended for the Use of Students in Divinity, as well as for the Library.
"After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition of the 'Greek Testament.'—*Horne's Introduction to the Bible.*"

Greek Septuagint, with the Apocrypha, from the Oxford edition of Bos and Holmes. 21s. boards.
This edition is hot-pressed, and handsomely printed in 1 vol. 8vo. For use in Churches and Chapels, as well as the Library.
"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is so reasonable as to place it within the reach of almost every one."—*Horne's Introduction to the Bible.*
* * * The Septuagint and Testament may be had uniformly bound in Four handsome Volumes.
Sold by Longman, Baldwin, Whittaker, Harding, Rivington, J. Richardson, and all other Booksellers.

In 8vo. 7s. 6d. boards.
HOOGEVEEN on the GREEK PARTICLES. Translated into English, and abridged for the Use of Schools.

By the Rev. J. SEAGER,
Author of "Critical Observations on Classical Authors," and several Greek Criticisms in the "Classical Journal."
Vigor on the Idioms of the Greek, by the same Author, on the same Plan. Price 9s. 6d.
"When you have a spare half-hour read Vigor. Consult him again and again, and find him a third time while you are in statu pupillari. Have the book almost by heart."—*Dr. Parr's Letter to Dr. C. P. Bursey.*
"This volume is compiled with much industry and judgment, and altogether, a more valuable service could not well have been rendered to the inquiring student of the classics. We have great satisfaction in seeing that the same able editor is about to favour us with the critical works of Bos and Hermann, executed on a similar plan."—*Oxford Literary Gazette*, No. 3.

Bos and Hermann are under abridgment on the same plan, and will form about 300 pages each. The Four Works may be purchased separately or together, in 1 vol. 8vo. Bos is expected to be published in December.
Printed by A. J. Vallpy; sold by Longman and Co.; Baldwin and Co.; Simpkin and Marshall; and all other Booksellers.

In 12mo. price 8s. 6d. boards.
AN ACCOUNT OF PERSONS REMARKABLE FOR HEALTH AND LONGEVITY, exhibiting their Habits, Practices, and Opinions in reference to the best means of preserving Health, improving a bad or impaired Constitution, and prolonging Life. To which are added, authentic Cases of Recovery from many severe and protracted Diseases, with the means successfully employed; a definite Plan for the Removal of that peculiar Affection of the Throat to which Clergymen and other Public Speakers are liable; and Maxims of Health for the Gouty, Paralytic, and Asthmatic.

By a PHYSICIAN.
"Knowledge and power."—*Lord Bacon.*
"It is drawn up with great knowledge of the subject, and we have seldom met with a production calculated to entail greater benefits on the community."—*Swa*, 1st July, 1839.
"The motto of this book is, 'Knowledge is power'; but its tendency is to show that 'knowledge' is even something better than 'power'—that is, health, and long life, and happiness."—*Court Journal*, 4th July, 1839.

Published by Simpkin and Marshall, Stationers' Court, London; sold by all Booksellers.
Of whom may be had, by the same Author, 3d edit. price 9s.
2. Sure Methods of Improving Health and Prolonging Life, by regulating the Diet and Regimen, &c. &c. Illustrated by Cases.

"It is the most useful and rational work of the kind we have met with, and is altogether an admirable code of health."—*Atlas*, 9th Sept. 1837.
"The tendency of this volume to advance the important objects which it proposes is unquestionable, and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, 23d Sept. 1837.

THE UNITED SERVICE JOURNAL, and NAVAL and MILITARY MAGAZINE for August, price 2s. 6d. contains, among other interesting Papers,—On the Establishment of a United Service Museum—Account of the British Campaign of 1839, (concluded)—a Midshipman's Life on the Coast Blockade, by Lieut. Brand—Notes of a French Officer taken Prisoner by the Guerrillas—Naval and Military Biographies—Sketch of Paul Jones—Memoirs of the Emperor Jahangir, written by Himself—Traits of a Private Soldier—Military Surveying, No. 2.—On the Naval Controversy continued—Hydrography, No. 6.—The Works of the late Captain James Cook, R.N. F.R.S.—The East India Company's Military Seminary—Royal Naval Annuitant Society—Spanish National Song—Designs for a Pendulum Pump, by Mr. Leith, of Deal—on the use of Howitzer Cannon and Sea-batteries in Naval Warfare—Elegy of a Subaltern in Cantonments on the Banks of the Coe—New Plan for arming Line-of-Battle-Ships' Launches, by Commander Philip Graham, R.N.—Cavalry Alterations in the present System—Original Correspondence—Talavera—on Twenty-eight-gun Ships and Ten-gun Frigates—Military—Religio militis—Congress Rockets—Discipline—New Publications—Editor's Portfolio—General Orders and Circulars—Monthly Naval Register—Annals of the Fleet, from 1793—Annals of the British Army, from 1793—Change in the Distribution of Corps—Gazettes, Births, Marriages, and Deaths, Meteorological Register, &c. &c.
Printed for Henry Colburn, 6, New Burlington Street; and to be had of all Booksellers and News-men.

Albemarle Street, July 1.
Mr. Murray has published during the Season the following Works:—
A CHRONICLE of the CONQUEST of GRANADA
By the Author of the "Sketch Book."
In 8 vols. 8vo. 34s.

2. **Colloquies on the Progress and Prospects of Society**. By Robert Southey. In 3 vols. 8vo. with Engravings, 20s.
3. **All for Love, and the Pilgrim of Compostella**. By Robert Southey. Foolscap 8vo. 7s. 6d.
4. **The Life and Services of Captain Philip Beaver**, late of H. M. Ship Nisus. By Captain Smyth, R.N. 8vo. 8s. 6d.

5. **The Life of Buonaparte**, forming Numbers 1. and 11. of the Family Library. 2 vols. small 8vo. 15 Plates, price 10s.
6. **The Life of Alexander the Great**, by the Rev. John Williams, Rector of the Edinburgh Academy. Forming No. III. of the Family Library. Small 8vo. 3s.

7. **Lives of the most eminent British Painters, Sculptors, and Architects**. By Allan Cunningham. Vol. I. (to be completed in 3 vols.) Small 8vo. 11 Plates, 5s. Forming No. IV. of the Family Library.

8. **Lectures on Sculpture**. By John Flaxman, M.A. 54 Engravings from Drawings of the Professor. Royal 8vo. 21s. 8s.

9. **The Life of Belisarius**. By Lord Mahon. 8vo. 12s.

10. **An Account of some of the most important Diseases peculiar to Women**. By Robert Gooch, M.D. In 8vo. 12s.

11. **Forest Scenes and Incidents in the Wilds of North America**. By George Head, Esq. Post 8vo. 8s. 6d.

12. **Journal of a Passage from the Pacific to the Atlantic**, crossing the Andes, and descending the River Amazon. By Henry Lister Wad, Lieut. R.N. 8vo. 12s.

13. **Salmonia; or, Days of Fly-fishing**. By an Angler. 2d edition, illustrated with Engravings. Foolscap 8vo. 12s.

14. **Outlines of Geology**. By Professor Brande. 3d edition, with numerous Woodcuts, post 8vo. price 7s. 6d.

15. **A Companion to Pope's Homer**, and Dryden's *Æneid* of Virgil. 8vo. 12s.

16. **Narrative of a Journey from Calcutta to England**, by the Way of Egypt, in the Year 1827-3. By Mrs. Charles Lushington. 2d edition, post 8vo. 8s. 6d.

17. **A Dissertation on the Course and probable Termination of the Niger**, by Lieutenant-General Sir Rufane Donkin, G.C.H. K.C.B. and P.R.S. 8vo. 9s. 6d.

18. **Mary, Queen of Scots; a Poem**. By John Hennege Jesse. Post 8vo. 7s. 6d.

19. **Days Departed; or, Banwell Hill. A Lay of the Severn Sea**. By the Rev. William Lisle Bowles. 3d edition, post 8vo.

20. **The Journal of a Naturalist**, 2d edition, post 8vo. with Plates, 15s.

21. **Oxford and Locke**, by Lord Grenville. 8vo. 4s.

22. **The Botanical Miscellany**, by Professor Hooker. No. 1, royal 8vo. 94 Plates, 10s. 6d.

23. **Account of Guatemala**, by G. A. Thompson, Esq. Foolscap 8vo. 10s. 6d.

24. **L'Oratore Italiano**, by the Marquess Spineto. 2d edition, 12mo. 7s. 6d.

25. **Second Expedition into the Interior of Africa**, by the late Captain Clapperton; with the Journal of Lander, his faithful Servant. 4to. 6d. 8s.

26. **Illustrations of the Geology of Yorkshire**. 4to. with a Geological Map, Sections, and Plates of Fossil Plants and Animals. By John Phillips, F.G.S. 11. 11s. 6d.

27. **The Zoology of North America**, Part I. containing the Quadrupeds. By John Richardson, M.D. Surgeon of the late Expedition under Captain Franklin. Illustrated by 36 spirited Etchings, by Thomas Landseer. 4to. 11. 11s. 6d.

28. **Memoirs of the Affairs of Europe**, by Lord John Russell. Vol. II. 4to. 21. 10s.

29. **On the Effect ascribed to the Resumption of Cash Payments on Currency**. By Thomas Tooke, Esq. 8vo. price 4s.

30. **Protestant Securities Suggested**, by the Right Hon. R. Wilmot Horton, M.P. 8vo. 6s.

31. **Speech of M. T. Sadler, M.P. on the Catholic Question**. 2s.

32. **Ireland; its Evils, and their Remedies**, by M. T. Sadler, M.P. 3d edition, 8vo. 12s.

33. **Sermons preached in England**, by Reginald Heber, Lord Bishop of Calcutta. 8vo. 9s. 6d.

34. **Sermons preached in India**, by Reginald Heber, Lord Bishop of Calcutta. 8vo. 9s. 6d.

35. **Poems and Translations**, by Reginald Heber, 3d edition, 6s.

36. **Transactions of the Royal Society of Literature of the United Kingdom**. Vol. I. Part II. In 4to. price 2s. 2s.

37. **Asiatic Researches**, Vol. XVI. In 4to. price 2s. 2s.

38. **Records of Mining**, edited by John Taylor, F.R.S. F.G.S. Part I. with Plates, 4to. 36s.

To Engineers, Mechanics, &c.
A new edition, embellished with 16 superior Engravings, price 10s. 6d. in cloth.
STUART'S HISTORY of the STEAM-ENGINE, giving a full Description of every Invention and Improvement, from the earliest Age to the Year 1839. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

THE MONTHLY MAGAZINE for August.
An entirely new Series, price 2s. 6d. contains—*I. Ireland; the Orangemen and the Papists II. The late Prosecutions against the Priest III. A Chapter from the Memoirs of the late Mr. Hermann Alcazar, Student of the University of Stockholm IV. Turkey, Constantinople, Egypt, Nubia, and Palestine V. Fairies' Song—VI. Walks in Ireland, No. 3; the City of the Seven Churches—VII. Course and probable Termination of the Niger VIII. Theatrical Matters—IX. Affairs in general—X. Engineer's Bill of Costs—Earthquakes and the Gout at Jamaica—XI. Eunon Basilike, and the Unicorn—Popish Election Fraud—Rowland Stephenson a Favourite in America—Marie Martono Father—a Suicide's Skull and Chumy's Skeleton—the last new Work—Lies of the Day—La Fayette and Six Feet of Robert's Egg—Lord Lowther and Starvation—Orway Cave and the Silly Old Slavery Woman of Leicester, &c. &c.—Reviews of New Books—Lists of Works published and in preparation—Scientific Varieties—Patents, Reports, &c. &c.
Published by Whittaker and Co. London; Waugh and Innes, Edinburgh; and may be had of all Booksellers.*

8, New Burlington Street.
Mr. Colburn has just published the following interesting Works:
TRAVELS to CONSTANTINOPLE, in the Years 1827 and 1828.

By Capt. CHARLES COLVILLE FRANKLAND, R.N. In 2 vols. 8vo. with 38 Engravings.

2. **Life of John Locke**, with Extracts from his Correspondence, Journals, and Common-place Books. By Lord King. In 1 vol. 4to. with Portrait.

3. **The Loves of the Poets**. By the Author of the "Diary of an Ennuyé." In 2 vols. post 8vo. 71s.

4. **The Empress Josephine's Memoirs**, the third and concluding Volume, comprising her Private Correspondence with Napoleon. In post 8vo. 10s. 6d.; French, 9s.

5. **Travels in Turkey, Egypt, Nubia, Palestine, &c.** In 1824, 1825, 1826, and 1827. By R. B. Madden, Esq. M.R.C.S. In 2 vols. 8vo. 24s.

"Mr. Madden's volumes are replete with entertainment. The details respecting Constantinople, a place to which the eyes of the whole civilised world are just now directed, with extraordinary interest, are full, lively, and descriptive."—*Swa*.

6. **Dr. Granville's Travels to St. Petersburg**, 2d edition, considerably improved, in 2 vols. 8vo. with a Map and 70 Plates.

7. **Mexico**. By H. G. Ward, Esq. late His Majesty's Charge d'Affaires in that Country. 3d edition, revised, with an Account of the Mining Companies and of the Political Events in that Republic, continued up to the present day. In 2 vols. 8vo. with numerous Plates, from Drawings by Mrs. Ward. Also, nearly ready.

8. **The Book of the Boudoir**. By Lady Morgan. In 2 vols. post 8vo.

9. **The Correspondence and Diary of Dr. Doddridge**, illustrative of various Particulars in his Life hitherto unknown, with Notices of many of his Contemporaries, and a Sketch of the Ecclesiastical History of the Times in which he lived. Edited from the Originals, by his Great-grandson, John Doddridge Humphreys, Esq. In 3 vols. 8vo. with a Portrait.

10. **Travels in Mexico**, in 1826, 1827, and 1828. By Lieut. R. W. H. Hardy, R.N. 1 vol. 8vo. with Plates.

11. **A History of the late Catholic Association of Ireland**, from its Institution in 1790 to its final Dissolution in 1829. By a Member of that Body. In 8vo.

Dedicated, by special permission, to His Grace the Duke of Norfolk, Earl Marshal of England.

Vol. I. (containing 400 pages of letter-press, 14 Tables, and 35 Plates), price 11s. 6d. boards.

THE ARCHITECTURAL DIRECTOR. By JOHN BILLINGTON,

Of the Royal Academy of Architecture at Paris. This work will be found particularly useful to Architects, Draughtsmen, Students, Amateurs, and Builders, as well as to the general reader; presenting a comprehensive and complete Treatise on Architecture.

The Second Volume is now in the press. London: Published by John Richardson, Royal Exchange; and Josiah Taylor, High Holborn.

BOOKS IN THE PRESS.

THE FAMILY LIBRARY, No. V. (being the First Volume of the History of the Jews), will be published on Friday next.
John Murray, Albemarle Street.

Dr. Mason Good.
THE IMPERIAL MAGAZINE for August. price 1s. will contain a Memoir and Portrait of John Mason Good, M.D. engraved by Picart. With the usual quantity of Religious and Literary Information.
Fisher, Son, and Co. 38, Newgate Street, London.

Library of Entertaining Knowledge.
THE PURSUIT of KNOWLEDGE under DIFFICULTIES, illustrated by Anecdotes, will be published on the 10th of August.

This Part of the Library of Entertaining Knowledge will contain two Portraits, engraved on Steel, of John Hunter and James Ferguson.

London: Charles Knight, Pall Mall East.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 99, Royal Exchange; E. Marlborough, Ave Maria Lane; Ludgate Hill; A. Black, Edinburgh; Smith and Son, 4, and Robertson and Alkenham, Glasgow; and J. Cunningham, Dublin.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 655.

SATURDAY, AUGUST 8, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Napier's History of the Peninsular War.
8vo. Vol. II. Boone.

WE are enabled to indulge our readers with a few, but we trust interesting, extracts from the second volume of Lieutenant-Colonel Napier's History of the Peninsular War, and which will not be published till towards the end of the ensuing week.

The first volume closed with the death of Sir John Moore and the retreat from Coruña; the one before us opens with a brief political digression on the state of public opinion in Great Britain when apprised of this disaster. In a former review we recorded our dissent from the political opinions of the gallant author; nor should we again have paused to notice them, were it not for his unceasing—we had almost said unmanly—animosity to one who, unhappily for the welfare of this country and its literature, is no more: we should have thought that the correcting influence of time had done its work; but we have seldom witnessed, in the most excited periods, a stronger indulgence of acrimonious feeling than in the following extract:

"The effect produced in England by the unfortunate issue of Sir John Moore's campaign, was not proportionable to the importance of the subject. The people, trained to party politics, and possessing no real power to rebuke the folly of the cabinet, regarded disasters and triumphs with factious rather than with national feelings; and it was alike easy to draw the public attention from affairs of weight, and to fix it upon matters of little moment. In the beginning of 1809 the Duke of York's conduct being impeached, a parliamentary investigation followed; and to drag the private frailties of that prince before the world, was thought essential to the welfare of the country, when the incapacity which had caused England and Spain to mourn in tears of blood was left unproved. An insular people only, who are protected by their situation from the worst evils of war, may suffer themselves to be thus deluded; but if an unfortunate campaign were to bring a devastating enemy into the heart of the country, the honour of a general, and the whole military policy of the cabinet, would no longer be considered as mere subjects for the exercise of a vile sophist's talents for misrepresentation. It is true that the ill success of the British arms was a topic upon which many orators in both houses of parliament expatiated with great eloquence; but the discussions were chiefly remarkable as examples of acute debating, without any knowledge of facts. The opposition speakers, eager to criminate the government, exaggerated the loss and distress of the retreat; and comprehending neither the movements nor the motives of Sir John Moore, urged several untenable accusations against their adversaries. The ministers, dissuained by personal feelings, did not all adopt the same ground of defence. Lord Castlereagh and

Lord Liverpool, passing over the errors of the cabinet, by which the general had been left only a choice of difficulties, asserted, and truly, that the advantages derived from the advance to Sahagun more than compensated for the losses in the subsequent retreat. Both those statesmen paid an honourable tribute to the merits of the commander; but Mr. Canning, unscrupulously resolute to screen Mr. Frere, assented to all the erroneous statements of the opposition, and endeavoured with malignant dexterity to convert them into charges against the fallen general. Sir John Moore was, he said, answerable for the events of the campaign, whether the operations were glorious or distressful—whether to be admired or deplored, they were his own—for he had kept the ministers ignorant of his proceedings. Being pressed closely on that point by Mr. C. Hutchinson, Mr. Canning repeated this assertion. Not long afterwards, Sir John Moore's letters, written almost daily, and furnishing exact and copious information of all that was passing in the Peninsula, were laid before the house."

The injustice and cruelty of these observations, and coming from such a source, appeared to us, *prima facie*, worthy of confutation; but the gallant colonel has himself happily saved us from the toil of reference to parliamentary reports, by a little sentence, which appears to us of easy and felicitous application to himself: it is from page 104, speaking of Marshal St. Cyr, and as follows: "*The injurious force with which personal feelings act upon the judgment is well known, or it might excite wonder that so good a writer and so able a soldier should advance such fallacies.*" How Mr. Canning thought and expressed himself on the subject of Sir John Moore's campaign, may be gathered from the following brief quotations of his parliamentary language, which chance has this moment laid our hands upon: he said, "For himself, as a humble individual of the government, and having a share in these transactions, the recollection would be a source of gratification which he should carry with him to the grave. If we had been obliged to quit Spain, we had left that country with fresh laurels blooming upon our brows; and whatever failure there had been, upon the whole, might be repaired." Again, in a subsequent debate, Mr. Canning declared, "that, considering Sir John Moore's advance in a military point, in his poor judgment he could not but think it a wise measure; but in every view which ennobles military objects by exalting military character, he was sure it was so."

To the military History of the Peninsular War we have no hesitation in affixing the impress of unreserved approbation: seldom have we risen from the perusal of a volume which has afforded us so much satisfaction. The author's faculty of description is admirable; we are possessed at once with his meaning, and almost seem to behold the movement of the troops, to be acquainted with the locale of the country, to feel the *certaminis gaudia*, and enter with all the soldier's earnestness into his

observations on the strategy of the different commanders, and in general close with the conclusiveness of his arguments on the conduct of these ever-memorable campaigns. The arrangement is clear and perspicuous; the style and language, though peculiar, and perhaps sometimes bordering on affectation, come upon us with a freshness which in this book-making and book-mending age is quite delightful. The want of a national military classic, which might be placed in the hands of our English youth destined for the profession of arms, and which the wars of Marlborough and Eugene afforded so splendid an opportunity of furnishing, has long been felt; and this gap in the literature of the country is, we think, by the present publication, on the eve of being satisfactorily filled up. To officers of all ranks, from the subaltern to the commander, in garrison or in camp, these volumes should be a constant companion. Lieut.-Col. Napier pursues his way boldly and fearlessly, sparing neither friend nor foe; and perhaps some may deem his pen as keen, if not as polished, as his sword, and be led to fight their battles o'er again. To the world at large we recommend a perusal; and we are quite sure, that, when they become acquainted with the deep attainments of science, and the genius, requisite for those who follow the profession of arms, they will divest themselves of any lingering prejudice, and bestow their unqualified admiration on the British army.

The oft-repeated tale of Zaragoza's fall, which we select for our extract, is delineated simply as a military exploit, and, stripped of the trappings of the chronicler's fancy, becomes a subject of novel interest and reflection.

"The war being now carried into the streets of Zaragoza, the sound of the alarm-bell was heard over all quarters of the city; and the people, assembling in crowds, filled the houses nearest to the lodgements made by the French. Additional traverses and barricades were constructed across the principal streets; mines were prepared in the more open spaces; and the communications from house to house were multiplied, until they formed a vast labyrinth, of which the intricate windings were only to be traced by the weapons and the dead bodies of the defenders. The members of the junta, become more powerful from the cessation of regular warfare, with redoubled activity and energy urged the defence, but increased the horrors of the siege by a ferocity pushed to the very verge of frenzy. Every person, without regard to rank or age, who excited the suspicions of these furious men, or of those immediately about them, was instantly put to death; and amidst the noble bulwarks of war a horrid array of gibbets was to be seen, on which crowds of wretches were suspended each night, because their courage had sunk beneath the accumulating dangers of their situation, or because some doubtful expression or gesture of distress had been misconstrued by their barbarous chiefs. From the heights of the walls which he had conquered, Marshal

Lasnes contemplated this terrific scene; and judging that men so passionate and so prepared could not be prudently encountered in open battle, he resolved to proceed by the slow, but certain process of the mattock and the mine: and this was also in unison with the emperor's instructions. Hence from the 29th of January to the 2d of February, the efforts of the French were directed to the enlargement of their lodgements on the walls; and they succeeded, after much severe fighting and several explosions, in working forward through the nearest houses; but at the same time they had to sustain many counter-assaults from the Spaniards,—especially one, exceedingly fierce, made by a friar on the Capuchins' convent of the Trinity. It has been already observed that the crossing of the large streets divided the town into certain small districts, or islands of houses. To gain possession of these, it was necessary not only to mine, but to fight for each house. To cross the large intersecting streets, it was indispensable to construct traverses above, or to work by under-ground galleries; because a battery raked each street, and each house was defended by a garrison that, generally speaking, had only the option of repelling the enemy in front or dying on the gibbet erected behind. But as long as the convents and churches remained in possession of the Spaniards, the progress of the French among the islands of small houses was of little advantage to them, because the large garrisons in the greater buildings enabled the defenders not only to make continual and successful sallies, but also to countermine their enemies, whose superior skill in that kind of warfare was often frustrated by the numbers and persevering energy of the besieged. To overcome these obstacles, the breaching batteries opposite the fourth front fired upon the convents of Saint Augustin and Saint Monica, and the latter was assaulted on the 31st of January. At the same time a part of the wall in another direction being thrown down by a petard, a body of the besiegers poured in, and taking the main breach in rear, cleared not only the convent but several houses around it. The Spaniards, undismayed, immediately opened a gallery from St. Augustin and worked a mine under St. Monica; but at the moment of its being charged, the French discovered and stifled the miners. The 1st of February, the breach in St. Augustin also became practicable, and the attention of the besieged being drawn to that side, the French sprung a mine which they had carried under the wall from the side of St. Monica, and immediately entered by the opening. The Spaniards thus unexpectedly taken in the rear, were thrown into confusion, and driven out with little difficulty. They, however, rallied in a few hours after, and attempted to retake the structure, but without success; and the besiegers, animated by this advantage, broke into the neighbouring houses, and, at one push, carried so many as to arrive at the point where the street called the Quemada joined the Cosso, or public walk. The besieged rallied, however, at the last house of the Quemada, and renewed the combat with so much fury, that the French were beaten from the greatest part of the houses they had taken, and suffered a loss of above a hundred men. On the side of San Engracia a contest still more severe took place; the houses in the vicinity were blown up; but the Spaniards fought so obstinately for the ruins, that the Polish troops were scarcely able to make good their lodgement—although two successive and powerful explosions had, with the buildings, destroyed

a number of the defenders. The experience of these attacks induced a change in the mode of fighting on both sides. Hitherto, the play of the French mines had reduced the houses to ruins, and thus the soldiers were exposed completely to the fire from the next Spanish posts. The engineers, therefore, diminished the quantity of powder, that the interior only might fall and the outward walls stand; and this method was found successful. Hereupon, the Spaniards, with ready ingenuity, saturated the timbers and planks of the houses with rosin and pitch, and setting fire to those which could no longer be maintained, interposed a burning barrier, which often delayed the assailants for two days, and always prevented them from pushing their successes during the confusion that necessarily followed the bursting of the mines. The fighting was, however, incessant; a constant bombardment, the explosion of mines, the crash of falling buildings, clamorous shouts, and the continued echo of musketry, deafened the ear, while volumes of smoke and dust clouded the atmosphere, and lowered continually over the heads of the combatants, as, hour by hour, the French, with a terrible perseverance, pushed forward their approaches to the heart of the miserable but glorious city."

After further details, the wretched city falls: and the following observations occur:—

"1. When the other events of the Spanish war shall be lost in the obscurity of time, or only traced by disconnected fragments, the story of Zaragoza, like some ancient triumphal pillar standing amidst ruins, will tell a tale of past glory; and already men point to the heroic city, and call her Spain, as if her spirit were common to the whole nation: yet it was not so, nor was the defence of Zaragoza itself the effect of unalloyed virtue. It was not patriotism, nor was it courage, nor skill, nor fortitude, nor a system of terror; but all these combined under peculiar circumstances, that upheld the defence: and this combination, and how it was brought about, should be well considered; because it is not so much by catching at the leading resemblances, as by studying the differences of great affairs, that the exploits of one age can be made to serve as models for another. 2. The defence of Zaragoza may be examined under two points of view—as an isolated event, and as a transaction bearing on the general struggle in the Peninsula. With respect to the latter, it was a manifest proof, that neither the Spanish people nor the government partook of the Zaragozaan energy. For it would be absurd to suppose, that in the midst of eleven millions of people, animated by an ardent enthusiasm, fifty thousand armed men could for two months be besieged, shut in, destroyed, they and their works, houses, and bodies, mingled in one terrible ruin, by less than thirty-five thousand adversaries, and that without one effort being made to save them! Deprive the transaction of its dazzling colours, and the simple outline comes to this: Thirty-five thousand French, in the midst of insurrections, in despite of a combination of circumstances peculiarly favourable to the defence, reduced fifty thousand of the bravest and most energetic men in Spain. It is true, the latter suffered nobly; but was their example imitated? Gerona, indeed, although less celebrated, rivalled, and perhaps more than rivalled, the glory of Zaragoza; but elsewhere her fate spoke, not trumpet-tongued to arouse, but with a wailing voice, that carried dismay to the heart of the nation. 3. As an isolated transaction, the siege of Zaragoza is very remarkable; but it would be a great error to

suppose that any town, the inhabitants of which were equally resolute, might be as well defended. Fortitude and bravery will do much; but the combinations of science are not to be defied with impunity. There are no miracles in war! If the houses of Zaragoza had not been nearly incombustible, the bombardment alone would have caused the besieged to surrender, or to perish with their flaming city. 4. That the advantage offered by the peculiar structure of the houses, and the number of the convents and churches, was ably seized by the Spaniards, is beyond doubt. General Rogniat, Lacoste's successor, indeed, treats his opponents' skill in fortification with contempt; but Colonel San Genis' talents are not to be judged of by the faulty construction of a few outworks, at a time when he was under the control of a disorderly and ferocious mob. He knew how to adapt his system of defence to the circumstances of the moment; and no stronger proof of real genius can be given. 'Do not consult me about a capitulation,' was his common expression: '*I shall never be of opinion that Zaragoza can make no further defence.*' But neither the talents of San Genis, nor the construction of the houses, would have availed, if the people within had not been of a temper adequate to the occasion; and to trace the passions by which they were animated to their true causes, is a proper subject for historical and military research. 5. That they did not possess any superior courage is evident from the facts, that the besieged, although twice the number of the besiegers, never made any serious impression by their sallies, and that they were unable to defend the breaches. In large masses, the standard of courage which is established by discipline may be often inferior to that produced by fanaticism, or any other peculiar excitement; but the latter never lasts long, neither is it equable, because men are of different susceptibility, following their physical and mental conformation. Hence a system of terror has always been the resource of those leaders who, engaged in great undertakings, have been unable to recur to discipline. Enthusiasm stalked in front of their bands, but punishment brought up the rear; and Zaragoza was no exception to this practice. 6. It may be said, that the majority of the besieged not being animated by any peculiar fury, a system of terror could not be carried to any great length; but a close examination explains this seeming mystery. The defenders were composed of three distinct parties,—the regular troops, the peasantry from the country, and the citizens; but the citizens, who had most to lose, were naturally the fiercest, and, accordingly, amongst them, the system of terror was generated. The peasantry followed the example, as all ignorant men, under no regular control, will do; the soldiers meddled but little in the interior arrangements, and the division of the town into islands of posts rendered it perfectly feasible for violent persons, already possessed of authority, to follow the bent of their inclinations: there was no want of men, and the garrison of each island found it their own interest to keep those in front of them to their posts, that the danger might be the longer staved off from themselves. 7. Palafox was only the nominal chief of Zaragoza; the laurels gathered in both sieges should adorn plebeian brows, but those laurels dripped with kindred as well as foreign blood. The energy of the real chiefs, and the cause in which that energy was exerted, may be admired; the acts perpetrated by this ruling band were, in themselves, atrocious; and Palafox, although un-

able to arrest their savage proceedings, can claim but little credit for his own conduct. For more than a month preceding the surrender, he never came forth of a vaulted building, which was impervious to shells, and in which, there is too much reason to believe, he and others, of both sexes, lived in a state of sensuality, forming a disgusting contrast to the wretchedness that surrounded them. *Observations on the French Operations.*—1. Before the arrival of Marshal Lasnes, the operations were conducted with little vigour. The want of unity, as to time, in the double attack of the Monte Torro and the suburb, was a flagrant error, that was not redeemed by any subsequent activity; but after the arrival of that marshal, the siege was pursued with singular intrepidity and firmness. General Rogniat appears to disapprove of Suchet's division having been sent to Calatayud; yet it seems to have been a judicious measure, inasmuch as it was necessary,—first, to protect the line of correspondence with Madrid; secondly, to have a corps at hand, lest the Duke of Infantado should quit Cuenca, and throw himself into the Guadalaxara district, a movement that would have been extremely embarrassing to the king. Suchet's division, while at Calatayud, fulfilled these objects, without losing the power of succouring Tudela, or, by a march on the side of Daroca, of intercepting the Duke of Infantado if he attempted to raise the siege of Zaragoza; but when the Spanish army at Cuenca was directed on Ucles, and that of the Marquess of Lazan was gathering strength on the left bank of the Ebro, it was undoubtedly proper to recall Suchet. 2. It may not be misplaced here to point out the errors of Infantado's operations. If, instead of bringing on a battle with the first corps, he had marched to the Ebro, established his depôts and places of arms at Mequinenza and Lerida, opened a communication with Murcia, Valencia, and Catalonia, and joined the Marquess of Lazan's troops to his own, he might have formed an entrenched camp in the Sierra de Alcubierre, and from thence have carried on a methodical war with, at least, twenty-five thousand regular troops; the insurrections on the French flanks and line of communication with Pampluna would then have become formidable; and in this situation, having the fortresses of Catalonia behind him, with activity and prudence he might have raised the siege."

We have only, in conclusion, to express our regret that the strong way in which the author allows himself to speak of others, (such as Marshal Beresford, Sir Hudson Lowe, Mr. Frere, &c. &c.) seems calculated to excite angry feelings, and bring his labours, if not himself, into vexatious question.

Adra; or, the Peruvians. By the Author of "the Ruined City."

THERE are some sweet descriptions—some passages of touching pathos; but, as a whole, we do not think the *Peruvians* equal to the *Ruined City*; and this we ascribe to the choice of subject: the great charm of poetry is association—the lute it sweeps is that of memory, and a thousand feelings leap up, like living waters, at the very mention of Greece, which have no affinity with the shores of Peru. The fearful scene of crime and bloodshed attendant on the conquest of America is too uniformly painful; it wants the relief of moral excellence and of sentiment; and thus the most beautiful passages of *Adra* are those which have the least relation to their subject. The following is a touch of true poetry, speaking of love—

"A better spirit, that refines his will—
A touch of angel and of Eden still."

We like the next much:—

"'Tis in such moments that the human mind
Feels the full blessing a good God designed,
When to his strayed and erring flock he left
Love, the best gift, of Paradise bereft—
Touch of that attribute whereby his will
Created, blessed, redeems, protects us still.
Sweet, in the flush of joy, in hope's smile sweet,
With those we love, the coming hours to greet!
Sweet with the loved, when through time's wastes we
stray.

To look on things that were, though past away,
And call on memory, with reflection bright,
To gild the gone with grand and moonlike light.
'Tis sweet to stand where past and future meet,
With hearts attuned, and bid the moments fleet
But as they've fled; and, thankful, to the skies
Raise up in gratitude communal eyes:
But when love comes in sorrow, to divide
Woes whose approach dim man must blind abide,
Then, then, it proves the blessing it was given,
And points the full beneficence of Heaven."

We have praised the descriptions—to one of them belong the ensuing lines:—

"There is a hue, a soft and mellowing shade,
Steals o'er the forest, and embrows the glade,
Long ere the rugged hand of winter drear
Tears from the wither'd branch its garment dear:
Scarce shalt thou see it on the yellowing edge
Of each green leaf; and yet the certain pledge
Is there, that the year's youth is past,
And cold decrepitude is coming fast.
It speaks of bright things fading, and of light
Shrinking away in the dark arms of night;
It shadows forth man's ever-withering state,
With dim prophetic comment on his fate;
It counsels hope—since things that fade on earth,
Light, seasons, flowers, all know a second birth."

We think we leave our readers under favourable impressions; and have only ourselves to add the more mechanical praise of good versification: Mr. James's metre is as polished as it is musical.

The Library of Entertaining Knowledge.
Vol. III. Part I.—*The Pursuit of Knowledge under Difficulties; illustrated by Anecdotes.*
London, 1829. C. Knight.

THOUGH we have expressed much approbation of this work as it has proceeded from the press, and enriched our columns by extracts from it when these fell readily within the scope of our own publication,—we are free to say that the present Part meets with a still higher share of our applause than any of its predecessors,—amusing and instructive though they have been. But the end proposed by this little volume, and the means by which it is enforced, meet equally with our entire concurrence. To make the reader in love with knowledge for its own sake—to encourage its cultivation by eminent examples—and to exalt the pursuit above the debasing idea that it is followed for what may be its worth in a mere worldly sense, are laudable and beneficial objects. And the book which impresses them on the public mind with spirit, taste, and judgment, as this does, is most deserving of encouragement and popularity. It has our warmest good wishes.

"We are about to select," says the editor, "from the records of philosophy, literature, and art, in all ages and countries, a body of examples, to shew how the most unpropitious circumstances have been unable to conquer an ardent desire for the acquisition of knowledge. Every man has difficulties to encounter in this pursuit; and therefore every man is interested in learning what are the real hindrances which have opposed themselves to the progress of some of the most distinguished persons, and how those obstacles have been surmounted."

And the example of a hundred distinguished individuals is brought into notice, under circumstances all well calculated to illustrate this design, and at the same time making a chapter of very amusing anecdote. We quote almost at random.

"The late Professor Heyne, of Gottingen, was one of the greatest classical scholars of his own or of any age; and during his latter days enjoyed a degree of distinction, both in his own country and throughout Europe, of which scarcely any contemporary name, in the same department of literature, could boast. Yet he had spent the first thirty-two or thirty-three years of his life, not only in obscurity, but in an almost incessant struggle with the most depressing poverty. He had been born, indeed, amidst the miseries of the lowest indigence, his father being a poor weaver, with a large family, for whom his best exertions were often unable to provide bread. In the 'Memoirs of his own Life,' Heyne says, 'Want was the earliest companion of my childhood. I well remember the painful impressions made on my mind by witnessing the distress of my mother when without food for her children. How often have I seen her, on a Saturday evening, weeping and wringing her hands, as she returned home from an unsuccessful effort to sell the goods which the daily and nightly toil of my father had manufactured!' His parents sent him to a child's school in the suburbs of the small town of Chemnitz, in Saxony, where they lived; and he soon exhibited an uncommon desire of acquiring information. He made so rapid a progress in the humble branches of knowledge taught in the school, that, before he had completed his tenth year, he was paying a portion of his school fees by teaching a little girl, the daughter of a wealthy neighbour, to read and write. Having learned every thing comprised in the usual course of the school, he felt a strong desire to learn Latin. A son of the schoolmaster, who had studied at Leipsic, was willing to teach him at the rate of four-pence a week; but the difficulty of paying so large a fee seemed quite insurmountable. One day he was sent to his godfather, who was a baker in pretty good circumstances, for a loaf. As he went along, he pondered sorrowfully on this great object of his wishes, and entered the shop in tears. The good-tempered baker, on learning the cause of his grief, undertook to pay the required fee for him; at which, Heyne tells us, he was perfectly intoxicated with joy; and as he ran, all ragged and barefoot, through the streets, tossing the loaf in the air, it slipped from his hands and rolled into the gutter. This accident, and a sharp reprimand from his parents, who could ill afford such a loss, brought him to his senses. He continued his lessons for about two years, when his teacher acknowledged that he had taught him all he himself knew. At this time, his father was anxious that he should adopt some trade, but Heyne felt an invincible desire to pursue his literary education; and it was fortunate for the world that he was at this period of his life furnished with the means of following the course of his inclination. He had another godfather, who was a clergyman in the neighbourhood; and this person, upon receiving the most flattering accounts of Heyne from his last master, agreed to be at the expense of sending him to the principal seminary of his native town of Chemnitz. His new patron, however, although a well-endowed churchman, doled out his bounty with most scrupulous parsimony; and Heyne, without the necessary books of his own, was often obliged to borrow those of his companions, and to copy them over for his own use. At last he obtained the situation of tutor to the son of one of the citizens; and this for a short time rendered his condition more comfortable. But the

period was come when, if he was to proceed in the career he had chosen, it was necessary for him to enter the university; and he resolved to go to Leipsic. He arrived in that city accordingly with only two florins (about four shillings) in his pocket, and nothing more to depend upon, except the small assistance he might receive from his godfather, who had promised to continue his bounty. He had to wait so long, however, for his expected supplies from this source, which came accompanied with much grudging and reproach when they did make their appearance, that, destitute both of money and books, he would even have been without bread too, had it not been for the compassion of the maid-servant of the house where he lodged. What sustained his courage in these circumstances (we here use his own words) was neither ambition nor presumption, nor even the hope of one day taking his place among the learned. The stimulus that incessantly spurred him on was the feeling of the humiliation of his condition—the shame with which he shrunk from the thought of that degradation which the want of a good education would impose upon him—above all, the determined resolution of battling courageously with fortune. He was resolved to try, he said, whether, although she had thrown him among the dust, he should not be able to rise up by his own efforts. His ardour for study only grew the greater as his difficulties increased. For six months he only allowed himself two nights' sleep in the week; and yet all the while his godfather scarcely ever wrote to him but to inveigh against his indolence,—often actually addressing his letters on the outside, 'To M. Heyne, Idler, at Leipsic.' In the mean time, while his distress was every day becoming more intolerable, he was offered, by one of the professors, the situation of tutor in a family at Magdeburg. Desirable as the appointment would have been in every other respect, it would have removed him from the scene of his studies; and he declined it. He resolved rather to remain in the midst of all his miseries at Leipsic. He was, however, in a few weeks after, recompensed for this noble sacrifice, by procuring, through the recommendation of the same professor, a situation similar to the one he had refused, in the university town. This, of course, relieved for a time his pecuniary wants; but still the ardour with which he pursued his studies continued so great, that it at last brought on a dangerous illness, which obliged him to resign his situation, and very soon completely exhausted his trifling resources; so that on his recovery he found himself as poor and destitute as ever. In this extremity, a copy of Latin verses which he had written having attracted the attention of one of the Saxon ministers, he was induced, by the advice of his friends, to set out for the court at Dresden, where it was expected this high patronage would make his fortune; but he was doomed only to new disappointments. After having borrowed money to pay the expenses of his journey, all he obtained from the courtier was a few vague promises, which ended in nothing. He was obliged eventually, after having sold his books, to accept the place of copyist in the library of the Count de Brühl, at the miserable annual salary of one hundred crowns (about 17*l.* sterling)—a sum which, even in that cheap country, was scarcely sufficient to keep him from perishing of hunger. However, with his industrious habits, he found time, beside performing the duties of his situation, to do a little work for the booksellers. He first translated a French romance, for

which he was paid twenty crowns. For a learned and excellent edition which he prepared of the Latin poet Tibullus, he received, in successive payments, one hundred crowns, with which he discharged the debts he had contracted at Leipsic. In this way he contrived to exist for a few years, all the while studying hard, and thinking himself amply compensated for the hardships of his lot, by the opportunities he had of pursuing his favourite researches, in a city so rich in collections of books and antiquities as Dresden. After he had held his situation in the library for above two years, his salary was doubled; but before he derived any benefit from the augmentation, the Seven Years' War had commenced. Saxony was overrun by the forces of Frederick the Great, and Heyne's place, and the library itself to which it was attached, were swept away at the same time. He was obliged to fly from Dresden, and wandered about for a long time without any employment. At last he was received into a family at Wittenberg; but in a short time the progress of the war drove him from this asylum also, and he returned to Dresden, where he still had a few articles of furniture, which he had purchased with the little money he saved while he held his place in the library. He arrived just in time to witness the bombardment of that capital, in the conflagration of which his furniture perished, as well as some property which he had brought with him from Wittenberg, belonging to a lady, one of the family in whose house he lived, for whom he had formed an attachment during his residence there. Thus left, both of them, without a shilling, the young persons nevertheless determined to share each other's destiny, and they were accordingly united. By the exertions of some common friends, a retreat was procured for Heyne and his wife in the establishment of a M. de Leoben, where he spent some years, during which his time was chiefly occupied in the management of that gentleman's property. At last, at the general peace in 1763, he returned to Dresden; and here ended his hard fortunes. Some time before his arrival in that city, the professorship of eloquence in the University of Göttingen had become vacant by the death of the celebrated John Mathias Gesner. The chair had been offered, in the first instance, to David Ruhnken, one of the first scholars of the age, who declined, however, to leave the University of Leyden, where he had lately succeeded the eminent Hemsterhuys as professor of Greek. Fortunately, however, for Heyne, Ruhnken was one of the few to whom his edition of Tibullus, and another of Epictetus, which he had published shortly after, had made his obscure name and great merits known; and with a generous anxiety to befriend one whom he considered to be so deserving, he ventured, of his own accord, to recommend him to the Hanoverian minister as the fittest person he could mention for the vacant office. Such a testimony from Ruhnken was at once the most honourable and the most efficient patronage Heyne could have had. He was immediately nominated to the professorship; although so little known, that it was with considerable difficulty he was found. He held this appointment for nearly fifty years; in the course of which, as we have already remarked, he may be said, by his successive publications, and the attraction of his lectures, to have placed himself nearly at the head of the classical scholars of his age; while he was at the same time loved and venerated as a father, not only by his numerous pupils, but by all ranks of his fellow-citizens, who, on his death,

in 1812, felt that their University and city had lost what had been for half a century its chief distinction."

Among the memoirs of self-educated men, the notice of Thomas Simpson, the celebrated mathematician, is peculiarly striking; and the following is a fitting sequel:

"We have remarked that the book from which Simpson acquired his first knowledge of fluxions was a work by Edmund Stone. Stone affords us another instance of a self-educated mathematician. Neither the place nor the time of his birth is exactly known; but he was probably a native of Argyleshire, and born a few years before the close of the seventeenth century. He is spoken of as having reached an advanced age in 1760, and he died in 1768. The only account we have of his early life is contained in a letter, which is to be found prefixed to a French translation of one of his works, from his contemporary, the Chevalier Ramsay, who knew him. His father, Ramsay tells us, was gardener to the Duke of Argyll, who, walking one day in his garden, observed a Latin copy of Newton's 'Principia' lying on the grass; and thinking it had been brought from his own library, called some one to carry it back to its place. 'Upon this,' (the narrative proceeds,) 'Stone, who was then in his eighteenth year, claimed the book as his own. 'Yours?' replied the duke; 'do you understand geometry, Latin, and Newton?' 'I know a little of them,' replied the young man. The duke was surprised; and, having a taste for the sciences, he entered into conversation with the young mathematician. He asked him several questions, and was astonished at the force, the accuracy, and the candour, of his answers. 'But how,' said the duke, 'came you by the knowledge of all these things?' Stone replied, 'A servant taught me ten years since to read. Does one need to know any thing more than the twenty-four letters, in order to learn every thing else that one wishes?' The duke's curiosity redoubled: he sat down on a bank, and requested a detail of the whole process by which he had become so learned. 'I first learned to read,' said Stone; 'the masons were then at work upon your house. I approached them one day, and observed that the architect used a rule and compasses, and that he made calculations. I inquired what might be the meaning and use of these things, and I was informed that there was a science called arithmetic. I purchased a book of arithmetic, and I learned it. I was told there was another science called geometry; I bought the necessary books, and I learned geometry. By reading, I found that there were good books in these two sciences in Latin; I bought a dictionary, and I learned Latin. I understood, also, that there were good books of the same kind in French; I bought a dictionary, and I learned French. And this, my lord, is what I have done: it seems to me that we may learn every thing when we know the twenty-four letters of the alphabet.'"

A Journey through Norway, Lapland, and part of Sweden, &c. By the Rev. Robert Everest, A.M., F.G.S., late of University College, Oxford. 8vo. pp. 383. London, 1829. Underwood.

We were prepared by report to expect that the subject of this work would, almost exclusively, have been geology, or some branches of science connected with that interesting and useful study; but its perusal enables us to state, that the general reader may also derive consider-

able gratification from Mr. Everest's volume. The ingenious author left London on the 1st of May (1827), in a Norwegian merchant vessel, commanded by a little captain, who had not seen much of England, but "quite enough, as he thought, to give a very good opinion on it. He had rambled through some streets in the neighbourhood of the Tower, and was satisfied that the English ladies were very dirty and immodest. There were, however, some points that counterbalanced these disadvantages. He had been to Greenwich fair; Greenwich fair was delightful: there was nothing like it in Norway."

So much is the coast of Norway indented by creeks, that the eye cannot trace their various entrances, and ships seem to steer directly for the breakers.

"It almost alarmed us," says Mr. E., "to find ourselves in a large ship, winding at full sail among the rocks (of the Glommen), which were so near occasionally, that we fancied we might have leapt on shore. We could at any time have held a conversation with a person there. In this manner we proceeded five or six miles."

Some former traveller declares, that a northern town reminded him of a parcel of large deal boxes huddled together: and this description our author thinks perfectly applicable to the Forstadt, or sea-port of Frederickstadt; although he found, on approaching the place, that several houses were neatly painted and tiled, and exquisitely clean. Some Norwegian newspapers at Arendal, noticing the exports and imports of the last three months, mentioned that from one place *forty-eight thousand lobsters* had been sent. "And who—(was naturally the inquiry that followed)—who were the lobster-eaters? Why, the Londoners. John Bull is a good fellow, but he will certainly take more pains for his stomach than for any other earthly object. There is an English lobster-company, and their agents are busy all along the coast. Twice or thrice a week their packets sail from Christiansand."

Extreme poverty, in some parts of Norway, produces much filth, and a paucity of articles that may be almost regarded as necessary to the comforts of life. In some houses the whole stock of utensils were one large iron pot, an axe, one knife, and half-a-dozen wooden bowls and spoons. The moss that stuffs the seams between the trees of which the waincots are composed, harbours much vermin: the severity of the climate obliges the people to sleep in their only room that has a fire-place, and in one large bed, like a deal box, into which they all creep: some straw is spread at the bottom, and sheep-skins serve for covering. They seemed to have scarcely a fixed hour for sleep, "but each got in by day, as he found himself tired. At Dal none of us were much at home, except our great dog, who was hospitably received into the family bed, and the next morning we found him asleep between the children and their parents. The swampy land they labour in, prevents the women's bare feet, or their miserable remnants of shoes and stockings, from ever being clean; but their tables, and what utensils they have, are generally spotless. On the Saturday night we passed at Dal, the children (three or four girls) were washed clean, and with their rosy cheeks, and long brown hair flowing over their shoulders, after the manner of all the Norwegians, seemed worthy of a better lot. The next day I saw one of these little things reading the prayer-book to its mother. Destitute as they were of every worldly comfort, we found two or three

religious books in every house. The hope of the weary and heavy-laden in every clime is not denied to these poor sojourners in the valley of tears."

A remarkable circumstance is mentioned in page 40, respecting the great Mios lake, which is, in fact, an extensive inland sea, its banks fringed, not with fir-trees, but with alder, birch, and mountain-ash, hazel and poplar. At the time of the memorable Lisbon earthquake this lake was violently agitated, and its water is said to have risen twenty feet, and then suddenly retreated, leaving high and dry all the fishermen's boats that were upon it.

Having informed us that the clowns of Gulbrandsdalen stalk about in good shoes and stockings, while their wives and daughters go barefoot, our author, aware that the notion may be regarded as fanciful, thinks it possible to trace a resemblance "in the manners and customs of these people to the ancient Greeks; for it is well known that from thence they derived the mythology of Odin; and if so, why not trifles, which would naturally accompany it, and be preserved among a people that live so much secluded from the rest of the world? The women in Gulbrandsdalen wear their hair in the manner we see in ancient figures, none in front, but all drawn back from the forehead, and fastened in a small knot behind. One imagines a rude likeness in the wooden bowls and cups, which they carve for themselves, to many of the Etruscan models; and in a garden south of the Dovrefieldt, a stuffed figure not unsightly represented the rural god yet 'terrens aves.'"

Many instances are recorded in this volume which place the character of the Norwegians in a very favourable point of view. Indeed, Mr. Everest, in his preface, describes their country, which, though he was a stranger, had linked his best hopes and wishes to its cause, as one "where," says he, "I have often felt that I could live and die contented among its rocks and woods and dales, in the midst of its quiet and virtuous people." He thinks that the Laplanders, those children of nature, are rather to be envied than pitied. Their high state of health and spirits he ascribes to the total absence of mental anxiety, their few and simple wants, and their hardy habits. A Laplander will go for thirty miles through swamps and rocks, take a draught of milk, sleep in his wet clothes, and rise the next morning as fresh as when he began his journey. Having seen at Hammerfest many drunken Fins rolling in the mire, Mr. E. remarks, that this beastly exhibition seldom occurs oftener than once in three months, when these people visit the warehouse; for they do not keep any fermented liquors in their own huts, where they drink only milk and water; but they are like children, without disguise,—what little vice they have, is shewn in the face of day. At Fuglencos the bears are sometimes so pressed by hunger, that they come to the huts, attracted by the smell of flesh and blubber. "I never could learn that they had actually carried a man off; but a story is told of two Russians who were playing at draughts by the window, when a great white paw pushed through a pane, seized one of them by the nape of the neck, and endeavoured to drag him out; but the man escaped with the loss of a handful of his shaggy hair."

We have already noticed the considerable number of lobsters exported to England. The host at Walderhong addressed our author—"So, you are an Englishman; come, I suppose, to inquire about lobsters." "I after-

wards found," says Mr. E., "the trade in these creatures with London is so great, that all the way from Stadland to Lindenes an Englishman and a devourer of lobsters are almost synonymous terms."

A traveller might pass (on the way between Christiania and Stockholm) from Norway into Sweden without observing the circumstance, were it not for a boundary mark. "No one ever left Norway without regret. It is a country in many parts of which a child might walk about with a bag of gold, and no one would molest it—where the stranger, by day or by night, may knock at any door he comes to, and be welcome."

If drunkenness prevailed in Norway, it appeared still more universal in Sweden; and the approach to Stockholm exhibited the lower classes dissolute and brutal, as they usually are in the neighbourhood of great cities. This capital consists of narrow streets and high houses, and contains nothing comparable to the palace, which frowns upon the subject town, fit for "Augustus Caesar—*dicum genus*."

"The crown princess of Sweden is said to be one of the most amiable women that ever lived. As the same thing is always asserted of those in her rank, it is difficult to know when we ought to believe it. But I have heard it in Norway from people who would not have said it if it had not been true. Among the few and rare that good fortune cannot spoil or power corrupt, she is the same unostentatious creature which she would have been in humbler life. She is the idol of the Norwegians, as the composure of the Swedes is their aversion. The cavalier of Stockholm is indeed a rich figure. The solemn deportment of the rider, the worthless animal which he bestrides, and the mountebank tinsel with which it is covered, lead to the irresistible conclusion that he must be advancing to the attack of the windmills. Manners seem to be on a par throughout the peninsula. The detestable practice of spitting is carried to a much worse extent in Sweden than in Norway."

Our author's partiality to Norway is strongly expressed near the conclusion of his work, where he addresses that country, the very thought of which kindles his spirit. "I know (says he) every mountain in her long-extended range, and every mountain recalls the name of some one who has treated me with kindness."

The last hundred pages of this work comprise notes on the geology of Norway, Sweden, and Lapland,—zoological and thermometrical observations,—tables of revenue, exports, and population,—a meteorological journal,—and other articles which will prove highly interesting to a numerous class of readers. Besides the frontispiece (a view in the *Vest fiord dal*), this volume is embellished with five folding plates of coloured sketches illustrating the geological observations.

Family Library. Vol. V. *History of the Jews.* London, 1829. Murray.

THIS is the first of three volumes which it is intended to devote to the History of the Jews; and it is calculated fully to sustain the popularity which the previous Numbers of this miscellany have acquired. It embraces the history of the Jews from the time of Abraham to the Babylonian captivity. The subject, as we had only last week occasion to observe in our Review of Jahn's valuable work, is one of deep, general, and permanent interest; and it appears to us that ample justice has been done to it, as far as he has gone, in his popular form, by the author of this volume.

The plan of the work has been conceived with great judgment; and what has been thus judiciously conceived, has been also ably as well as agreeably executed. The author has very adroitly shunned the error into which unskilful writers of historical compendiums too frequently fall;—he has not sunk into a mere annalist, transcribing a dry register of facts arranged in chronological order; but he either passes over entirely, or touches very slightly, events which appear to him of minor importance, and reserves both his space and his fire for those more momentous and interesting transactions which require to be fully displayed. The narrative is rapid and extremely clear; and the language is always neat, generally nervous, and frequently eloquent:—indeed, the character and execution of this interesting and delightful little volume cannot fail to make a very enviable addition to the already well-established reputation of its accomplished and very estimable author. We consider it a valuable acquisition to our literary stores, and peculiarly adapted to give clear and correct views of the leading characters and more important events which figure in the records of the Old Testament. We are acquainted with no volume which we can more heartily recommend to our readers: to the younger part of them more especially, we are sure it will prove a most acceptable present. The interest of the narrative is indeed sustained throughout; and if we had room, we would transfer to our pages several of its beautiful passages; but as want of space compels us to content ourselves with a specimen, we shall select the following striking account, which the author gives of the magnificent scene that immediately preceded the death of Moses.

“As his end approached, he summoned the assembly of all Israel to receive his final instructions. His last thoughts were the welfare of the commonwealth and the permanence of the constitution. Already the people had been numbered for the third time; they were found not to have increased or decreased very materially since the departure from Egypt. Moses recounted their whole eventful history since their deliverance—their toils, their dangers, their triumphs; he recapitulated and consolidated in one brief code the book of Deuteronomy, the whole law, in some degree modified and adapted to the future circumstances of the republic. Finally, he appointed a solemn ratification of the law, which although it was not to take place, nor did take place, till after the conquest, yet is so deeply impressed with the genius and lofty character of the lawgiver, that it may be better to relate it here than at the time when it was fulfilled under the direction of Joshua. Never did human imagination conceive a scene so imposing, so solemn, so likely to impress the whole people with deep and enduring awe, as the final ratification of their polity, as commanded by the dying lawgiver. In the territory, afterwards assigned to the tribe of Ephraim, a central region, stand two remarkable mountains, separated by a deep and narrow ravine, in which the ancient Shechem, the modern Naplous, stands. Here all Israel was to be assembled, six tribes on one height, six on the other. In the open day, and in a theatre as it were, created by the God of nature for the express purpose, after a sacrifice offered on an altar of stones, the people of Israel testified their free and deliberate acceptance of that constitution which their God had enacted. They accepted it with its inseparable conditions, maledictions the most

awful, which they imprecated on their own heads, in case they should apostatise from its statutes—blessings equally ample and perpetual, if they should adhere to its holy and salutary provisions. The type of either destiny lay before them: Mount Ebal was a barren, stony, arid, and desolate crag; Gerizim, a lovely and fertile height, with luxuriant verdure, streams of running water, and cool and shady groves. As God had blasted Ebal, so he would smite the disobedient with barrenness, hunger, and misery; as he crowned Gerizim with beauty and fruitfulness, so he would bless the faithful Israelites with abundance, with peace, with happiness. On Mount Ebal—as the Levites read the heads of the prohibitory statutes, and denounced the curse against the idolater, the oppressor, the adulterer, the unnatural son, the incestuous, the murderer—the tribes of Reuben, Gad, Asher, Zebulun, Dan, and Naphtali, with one voice, which was echoed back from the opposite height, responded Amen, so be it. On Gerizim stood the tribes of Simeon, Levi, Judah, Issachar, Joseph, and Benjamin; as the blessings of the law were recited, to give the same unreserved assent. Having thus appointed all the circumstances of this impressive scene, the lawgiver himself enlarged on the blessings of obedience; but with a dark and melancholy foreboding of the final destiny of his people, he laid before them still more at length the consequences of apostasy and wickedness. The sublimity of his denunciations surpasses any thing in the oratory or the poetry of the whole world. Nature is exhausted in furnishing terrific images; nothing, excepting the real horrors of the Jewish history—the miseries of their sieges, the cruelty, the contempt, the oppressions, the persecutions, which for ages this scattered, and despised, and detested nation have endured—can approach the tremendous maledictions which warned them against the violation of their law. *The Lord shall smite thee with a consumption, and with a fever, and with an inflammation, and with an extreme burning, and with the sword, and with blasting, and with mildew; and they shall pursue thee until thou perish. And the heaven that is over thy head shall be brass, and the earth that is under thee iron. The Lord shall make the rain of thy land powder and dust; from heaven shall it come down upon thee till thou be destroyed. . . . And thou shalt become an astonishment, and a proverb, and a byword among all nations whither the Lord shall lead thee. A nation of fierce countenance. . . . shall besiege thee in all thy gates, . . . and thou shalt eat the fruit of thine own body, the flesh of thy sons and thy daughters, which the Lord thy God hath given thee, in the siege and in the straitness wherewith thine enemies shall distress thee. . . . And among the nations shall thou find no ease, neither shall the sole of thy foot have rest; for the Lord shall give thee there a trembling heart, and failing of eyes, and sorrow of mind; and thy life shall hang in doubt before thee, and thou shalt fear day and night, and shalt have none assurance of thy life. In the morning thou shalt say, Would God it were even! and at even thou shalt say, Would God it were morning! for the fear of thine heart wherewith thou shalt fear, and for the sight of thine eyes which thou shalt see.”*

The death of the Jewish lawgiver is thus described:—

“Moses ascended the loftiest eminence in the neighbourhood, in order that he might once behold, before his eyes closed for ever, the land of promise. From the top of Mount

Abarim, or Nebo, the former of which names may perhaps be traced in Djebel Attarous, the highest point in the district, the lawgiver, whose eyes were not yet dimmed, and who had suffered none of the infirmities of age, might survey a large tract of country. To the right lay the mountain pastures of Gilead, the romantic district of Bashan; the windings of the Jordan might be traced along its broad and level valley, till, almost beneath his feet, it flowed into the Dead Sea. To the north spread the luxuriant plains of Esdraelon, the more hilly yet fruitful country of Lower Galilee. Right opposite stood the city of Jericho, embowered in its groves of palms—beyond it the mountains of Judea, rising above each other till they reached the sea. Gazing on this magnificent prospect, beholding in prophetic anticipation his great and happy commonwealth occupying its numerous towns and blooming fields, Moses breathed his last. The place of his burial was unknown, lest perhaps the impious gratitude of his followers might ascribe divine honours to his name, and assemble to worship at his sepulchre.”

His character is then sketched with great force and discrimination: he is stated to be “a man who, considered merely in an historical light, without any reference to his divine inspiration, has exercised a more extensive and permanent influence over the destinies of his own nation and mankind at large, than any other individual recorded in the annals of the world. Christianity and Mahometanism alike respect, and, in different degrees, derive their origin from the Mosiac institutes. Thus throughout Europe, with all its American descendants—the larger part of Asia and the north of Africa—the opinions, the usages, the civil as well as religious ordinances—retain deep and indelible traces of their descent from the Hebrew polity. To his own nation Moses was chieftain, historian, poet, lawgiver. He was more than all these—he was the author of their civil existence. Other founders of republics, and distinguished legislators, have been, like Numa, already at the head of a settled and organised community, or have been voluntarily invested in legislative authority, like Charondas, Lycurgus, and Solon, by a people suffering the inconveniences of anarchy. Moses had first to form his people and bestow on them a country of their own, before he could create his commonwealth. The Hebrews would either have been absorbed in the population of Egypt, or remained a wretched Pariah caste, had Moses never lived. In this condition he took them up, rescued them from captivity: finding them unfit for his purpose, he kept them for forty years under the severe discipline of the desert, then led them as conquerors to take permanent possession of a most fruitful region. Yet with singular disregard to his own fame, though with great advantage to his design, Moses uniformly referred to an earlier and more remote personage the dignity of parent of his people. The Jews were children of Abraham, not of Moses; they were a distinguished nation as descendants of the patriarch, not as compatriots of the lawgiver. The virtue of pure and disinterested patriotism never shone forth more unclouded. The permanent happiness of the whole people was the one great object to which the life of Moses was devoted; so that if we could for an instant suspect that he made use of religion for a political purpose, still that purpose would entitle him to the highest rank among the benefactors of mankind, as having been the first who at-

tempted to regulate society by an equal written law. If God was not the sovereign of the Jewish state, the law was: the best and only safe vicegerent of Almighty providence to which the welfare of human communities can be intrusted. If the Hebrew commonwealth was not a theocracy, it was a nomocracy. On the other hand, if, as we suppose in the Mosaic polity, the civil was subordinate to the religious end, still the immediate well-being of the community was not sacrificed to the more remote object. Independent of the temporal blessings promised to the maintenance of the law, the Hebrew commonwealth was so constituted, as to produce (all circumstances of the times, the situation and character of the people considered) as much or more real happiness and independence than any existing or imaginary government of ancient times. Let Moses be judged according to his age, he will appear not merely the first who by his single genius founded a commonwealth on just principles, but a lawgiver who advanced political society to as high a degree of perfection as the state of civilisation which his people had attained, or were capable of attaining, could possibly admit."

We would willingly transcribe an equally eloquent passage describing the splendid scene which accompanied the dedication of Solomon's Temple; but our limits warn us that we must desist. This, however, we the less regret, as we have no doubt that our readers will gratify themselves by a perusal of the work itself. The volume contains three excellent maps: one of the wanderings of the Israelites—another of Palestine—and a third of the dominions of David and Solomon: it is also illustrated with several beautifully executed engravings on wood, representing various objects connected with the ritual and ceremonies of the Jews.

The Book of the Boudoir. By Lady Morgan. 2 vols. H. Colburn. London, 1829.

CERTAINLY there are no works more delightful than auto-biographical ones; they carry into the regions of imagination and invention that spirit of gossiping which fills up more pauses in conversation than anything else; they subtilise and refine our love of that species of extra knowledge which consists of the affairs of others; they give us that kind of mirror-like look into the hearts of our acquaintance, which reflects so much of our own; and, above all, they usually add to the dazzle and show of a great name all the interest of that familiar life with which every one is familiar. After all, vanity is the great charm, *la fée lumineuse*, the genius of these works; not that vanity which, like an unskilful mail-driver, must have all the road to itself,—but that pleasant social vanity, like the bee living on honey—gathering, or seeking to gather, "golden opinions from all ranks of men," and willing to give a fair exchange for value received: add to this, a keen perception of the ridiculous, a little in ourselves, a great deal in others; the gracefulness of narrative which, like our complexion, must be born with us:—But we must stop in our list of qualifications, lest we should be told, like the lady who was setting forth her string of acquirements for a governess,—"Madam, you must have an impossibility created for you." We must say that Lady Morgan has the necessary ingredients to make an amusing auto-biographer: very lively,—telling a story well,—pleasantly egotistical and conceited,—we have not for some time met with a more readable book.

As the best quotations seem to have already run the round of the newspaper press, we have for the present only to leave this work with a cordial recommendation to our readers, as one of those light, spirited comedies which ought to put the public in good humour at the close of what has been a somewhat dull publishing season. We abjure Lady Morgan's politics, we protest against her philosophy; but we like these sketches of her life, and advise her to sit down and write the whole of it with all possible speed,—if not as an example to all female talent, at least as a beacon in many instances of the first importance to female happiness. In this light we may resume these volumes.

Thompson's Visit to Guatemala.
(Concluded.)

THE reasons which induced us to resume the analysis of this volume last week, incline us to pursue the subject through one other paper. Describing a conversation with the principal persons then in power, the author says:

"The conversation now turned on the central position of the republic, its consequent facilities for commerce and intercourse, not only with Jamaica and the British islands, but also, through her medium, with Peru and Chile. The proposed navigation by the lake of Nicaragua was also discussed, by which the British intercourse with China and the East Indies would be so much facilitated,—together with other subjects of equal political and commercial importance as well to the republic as to the empire of Great Britain. I had the pleasure of being told by the president, on this occasion, that he had been informed by Don Juan de Mayorga, their minister at Mexico, of the interest I had taken in favour of their republic. He had heard, he said, that I had, on many occasions, spoken in support of its new organisation, in answer to parties at Mexico who had wished Guatemala to be still dependent upon that republic; and he concluded by drinking my health, and hoping that I might return and *radicate* (that was his expression) myself in the country."

Near the old city of Guatemala are three grand conical mountains, of which we are told: "The most beautiful is to the east: it is called the Water Mountain, as emitting, at times, cold water from its northern side: the other two, to the south, also emit water, but as the same is always hot, they have acquired the designation of the Fire Mountains. The hot water, which flows from the north side of them, is very medicinal, and is called De Bartolomé Acatenango. There is a larger mountain to the south of these volcanoes called Pacaya, and another to the west called Atitani. The three largest mountains are, in fact, quite close to the city, and they rise with gentle, uniform slopes from the very streets of it, being cultivated nearly half the way up with the nopal or cochineal plant and indigo, and interspersed with luxuriant gardens and grotesque Indian villages; having the remainder of their heights adorned, to their very summits, with trees of an exuberant growth. The height of the plain of Old as well as New Guatemala is about 1,800 feet above the level of the sea: the tops of the mountains, taken from the same level, are about a league, or 15,000 feet, high. They therefore rise, from their base, to the height of about 13,200 feet, which, although it is 2,547 feet lower than the inferior limit of perpetual snow, is (I shall presently shew) from 1000 to 3000 feet higher from the level of their base than any other mountains in

North or South America. The loftiest mountain, and nearest to the city of Mexico, is that of Ajusco, towards the south; its main height is 12,052 feet; but, standing on the verge of that table land, which is itself elevated 7,470 feet, its actual height from its base to its summit is only 4,582 feet. Ajusco, seen at the distance of ten leagues from the city of Mexico, is a noble sight; how then must I have been struck with the mountains of the Antigua, whose bases arise from the verge of its streets to an elevation nearly three times as great as that of Ajusco; and which, from their relative elevation above the level of the sea, and on account of their being situated under a warmer latitude, are covered with perpetual verdure to their very summits! Chimborazo, the highest peak of the Andes in South America, is 21,441 feet; but it rests upon a plain of 9,514, leaving for its actual height from its base only 11,927 feet, 2,700 of which are covered with snow. The two highest of the Mexican mountains Popocatepetl and Ixtacihuatle, viewed from a distance, present, with their snow-clad summits, a grand and terrific appearance. The loftiest, which is 17,710 feet above the level of the sea, rises from its base to the height of about 10,000 feet, whereas the three indestructible volcanoes of Guatemala (it is extraordinary that they have no names,—perhaps Shadrach, Meshach, and Abednego, might do) are elevated, as we have seen, 13,000 feet. There is not, probably, in the whole world, so perfect a cone as the Water Mountain of the three in question; and, although it does not appear terrifically grand, like the other mountains of these regions, it is pre-eminently beautiful, and strikes the imagination with sensations of amazement and delight."

Having departed for the coast, we select the following description of a part of the country near the sea:—

"Previously to arriving at Mico, the last evening, we had passed through a grove of the most magnificent palms that I had ever seen; mackaws and various other parrots, with different birds of splendid plumage, studded the loftier trees, and startled, at intervals, the deep solitude of the scene with their appalling screech. Here and there a large monkey darted across the path, and peeping round the trunk of a tree, made hideous faces at us as we passed: amidst the high matted reeds, sometimes, we observed, or fancied we observed, the rustling of some animal, when we instinctively put our hands upon our holsters: it might be a tiger, for these animals are not wanting to this wild seclusion: the poor mules, in the meanwhile, were plunging, every few paces, up to their girths in deep morass, and, if the ground was hard, it was so slippery with the wet that they could scarcely maintain a footing."

Arrived at Belize, our author's journal continues to afford more light and pleasant sketches, which are very agreeable reading: and his volume closes with documents of greater political importance. The subjoined table and details are useful:—

Table of the Conquest and Liberty of America.

Names of the States.	Years of conquest.	Days of declaring Liberty.	Duration of slavery.
Venezuela	1596	19 April, 1810	283
Buenos Ayres ..	1516	25 May —	393
Santa Fe	1538	20 July —	271
Cartagena	1520	18 August —	189
Chile	1535	18 Sept. —	374
Peru	1531	15 July, 1821	289
Mexico	1520	24 August —	300
Guatemala ..	1524	15 Sept. —	397
Panama	1518	28 Nov. —	302

"The mahogany exported by British settlers

may be calculated at about sixty square-rigged vessels, at 120,000 feet each, value about \$400,000 annually; and the value of Guatemalan produce, such as indigo, cochineal, &c., exported, amounts to three times as much again. It is supposed that the sales of one commercial house at Belize average £15,000 currency per month, which is one-twentieth part of what is sold, and would make the sales of British dry goods imported for the supply of that colony and Guatemala at least £2,500,000 currency, or about £1,500,000 sterling. The greatest part of the import and export trade of Guatemala is carried on by the port of Izabal, at the bottom of the Golfo Dulce, and by that of Omoa, on the left of the entrance of that gulf. The goods are conveyed between the English settlement of Belize and those parts in small schooners drawing about seven feet water, from four to seven tons burden, and charging for the freight from 150 to 200 dollars per trip each way. They average from four to ten days in making the voyage; being incommoded one way by the stream running out of the gulf, and the other by the north-east wind which blows down it nine months out of the year. The distance, which is about 200 miles, might be performed by a steam-boat in twenty-four hours."

Our concluding extracts treat of a subject of the greatest interest—"the feasibility of establishing a water-communication between the Atlantic and the Pacific;" respecting which Mr. Thompson says: "It is an important feature in the history of this republic, that she has been the first, and indeed the only one of them all, that has taken any decided steps in the matter. Most writers have considered the river San Juan as one of the most advantageous, as well as most likely, points for establishing the communication alluded to: the Guatemalan-government have, naturally, been no less impressed with that opinion; and the following particulars will shew in what manner they have met the propositions which have been made to them, as well as the specific objects which they entertain in carrying the plan into execution. There were, at this time, two companies formed in England for the general purposes of effecting, by steam-navigation or otherwise, a water-communication between the two oceans; but the only proposals that had been made to the government by British merchants were proffered by the respectable firm which I have above mentioned. The purport of those proposals, bearing date the 18th September, 1824, was to form a navigable communication by means of the lake of Nicaragua and the river San Juan, without any expense to the government, provided the latter would give the projectors every necessary assistance. On the 2d of February, 1825, other propositions were made to the government by some merchants of the United States of North America, and signed by Colonel Charles Bourke and Mr. Matthew Llanos. They observe, that 'on the strength of statements, which manifested the practicability of the enterprise, they proceeded to New York, in the month of March 1824, for the purpose of forming a company for defraying the expenses of such a work; that, having formed the company, which consisted of some of the strongest (that was their expression) houses of the northern federation, they returned to the central republic with an armed brig; on board of which they brought engineers to level the grounds and survey the lake of Nicaragua and St. John's river.' The letter continues, 'We, having despatched the said brig to her destination, at the end of last De-

cember, and being now about to proceed by land in order to examine the local situations of the territory, pray this government, in consideration of the advances already made, and the advantageous nature of the subjoined propositions (than which, we believe, none more favourable can be offered to this republic) to secure to us their realisation, by granting the exclusive privileges which we solicit.' The terms proposed to give to the government, for the exclusive privilege of navigation, twenty per cent on the annual product of the toll to be paid by vessels passing through the canal, and after the expiration of the term (the period is not mentioned) the canal to become the exclusive property of the government. The projectors required to have, '1. An exclusive privilege for the purpose; 2. An exclusive privilege for navigation by steam-boats on the rivers, and on the waters of the three provinces, as far as the lake where the said canal is to be opened; 3. Permission to cut wood in the said province; 4. Exemption from duty on the introduction of goods on account of the company, until the canal be completed.' Of the above propositions, on the part of Messrs. Barclay and Co., and of the merchants of the United States, no specific notice appears to have been taken; but on the 16th June, 1825, the Congress passed a decree which obtained the approbation of the senate on the 11th July, and was confirmed by the executive on the 12th of that month,—which promises the sanction and assistance of the state to any parties who would undertake the project, and to recognise, as a public debt, the money expended in the execution of it; the passage dues to be applied to paying off the capital sunk in its opening, and to satisfying the interest thereon, deducting, first, the expenses which the repairs of the said canal shall require; the costs of collecting the dues, and of a garrison for its defence; the navigation to be free to all nations, friendly or neutral, without any privilege or exclusion. On the 1st August, 1825, the executive extended the time for receiving proposals to six months longer. The consequences have been, that the Dutch, as I have before stated, stepped in and possessed themselves of the undertaking. When I left the republic, I felt assured that it would have been carried into execution by the British; and I cannot suppress my mortification that foreigners should have the exclusive honour, to say nothing of the advantage, of so great an enterprise; for it is one which can be but *once* effected amidst the noble achievements of eventful time."

We believe this prodigious plan to be perfectly practicable.

SIGHTS OF BOOKS.

The Scottish Songs. Collected and Illustrated by Robert Chambers, Author of "Traditions of Edinburgh;" "The Picture of Scotland," &c. 2 vols. 12mo. Edinburgh, 1829. Tait. *The Scottish Ballads.* Edited by the same. Same publisher. 1 vol. pp. 399.

NUMEROUS as have been the collections published of Scottish Ballads and Scottish Songs, we feel very great obligations to Mr. Chambers for this new work in the same class, handsomely printed at the Ballantyne press, of a neat form and convenient size, and in every way well adapted for popularity. Indeed, these volumes possess, above all others with which we are acquainted, one of the highest requisites for general circulation: without injuring the authenticity or spirit of the original compositions, they have been purified from grossnesses which never could produce any

other effect upon the mind of the reader, except regret that the pathos and beauty of ancient poetry should be so defiled by the juxtaposition of immodest thoughts and indecent expressions. The public owe Mr. Chambers especial thanks for the good taste he has displayed in this respect; and, looking at both his publications together as a whole, we think he has evinced as much judgment and discretion in the prevailing tone of his selection. There are a few of the songs, perhaps, which we would hardly have admitted—but they occupy no vast space, and do no harm, if they fail to charm us, among their more happy companions; and we confidently anticipate that future editions will put it in the editor's power to add other pieces, of which we miss a considerable number well deserving of that distinction.

A production of this kind does not invite extract, and therefore we have only to say, that it is at once a very complete, and a very cheap, and a very excellent collection. Oral tradition, the consultation of preceding writers and records, great assiduity, and much good sense, characterise Mr. Chambers's performance; and we are sure it will be a particular favourite, not only with the high and rich, but with the middle and even lower orders throughout the country.

Knight's Scroll Ornaments, &c. Part I. 4to. London, 1829. Griffiths.

WELL-selected and well-drawn specimens of Roman scroll friezes and other ornaments,—suitable to all the purposes for which they are designed.

Corpus Juris Civilis, &c. &c. Ediderunt C. J. Albertus et C. Mauritiu, fratres Kriegerlii. Lipsiæ, 1829. Imperial 8vo.

THIS very valuable work of reference seems to be proceeding with due diligence, care, and ability, if we may judge by the two fascioli which have just reached us from Leipzig. They extend to 224 pages, and bring the Institutes of Justinian, with digests, synoptical tables, comparisons with annotators, &c. &c. in a learned and excellent form, before the legal world.

Mexico. By G. H. Ward, Esq. Second edition, enlarged. 2 vols. 8vo. London, 1829. Colburn.

WE are glad to see this second and enlarged edition of the most systematic and complete work of which we are in possession respecting Mexico. Mr. Ward, as British chargé d'affaires, for more than two years, enjoyed the best opportunities for acquiring the first intelligence; and he as evidently possessed the ability to make the best use of these advantages. Thus his work is of very great value; and at this time, when the political fate of Mexico is again in the balance,—when an attempt is making to retrieve it for a Spanish dependency, and when union with North America and separate existence are equally spoken of,—it is important to have reference to a work of that high authority which these volumes possess. Not only their matter, but their maps and illustrations, render them of sterling worth and utility.

Pugin's Gothic Ornaments, selected from various Buildings in England and France. Drawn on Stone by J. D. Harding. 4to. London, 1829.

FROM the first Number of this publication we were led to expect, as the title-page sets forth, that the ornaments were to be drawn by Mr. Harding; but we see with regret, that of the

twenty plates comprising this Number, eight only are from the pencil of that artist, the others being productions of Mr. Pugin's pupils. Having noticed this departure from the terms of the prospectus, of which we hear complaints, we proceed to the more agreeable task of expressing our admiration of Mr. Pugin's useful and interesting volume, adding this admonition,—that it will be as well in future to avoid subjects which have recently appeared in other publications. The Gables at Eltham have already been accurately given in "Hunt's Parsonage Houses;" and on comparing the two works, we find that Mr. Pugin has supplied the mutilated parts of the pendant,—a very dangerous experiment, and one which, if often repeated, will invalidate his work as a book of authorities.

Disipation in the West. By Ironicus.
London, 1829. Brookes.

A SATIRICAL pamphlet in verse; but too weak to effect any reform in the frivolous manners or vices of the fashionable world.

ORIGINAL CORRESPONDENCE.

Paris.

THE English actors and actresses have arrived in a *mauvais moment*. To endure theatrical heat at this season of the year, one must either have been born beneath the torrid zone, or have submitted to the baking experiments of the incombustible man. Mrs. West has by no means answered expectation; the French audience give a decided preference to Miss Smithson. Wallack is the rising favourite, though he is reckoned rather too *academical* in his positions; but, *en revanche*, he dies à *merveille*.

"L'Espion de Vienne" is the novel of the day most enlorged by critics: its title excites curiosity too; and half the success of an author depends on his being able to create this sentiment. M. Alfred de Vigny has given a severe correction to his former poems, and presented the public with a second edition of them. Reviewers insist on his again chastising his muse; which is rather ungrateful on their parts, as he has already effaced and defaced the original, to please these verse-judging gentlemen, who perhaps could not compose three lines themselves. We are improving in our caricatures: five hundred were purchased the other day, called "La Marché." The subject is a lover, who sells himself to the *old gentleman*, in order to possess his mistress; but as soon as she becomes his wife, he sells her to get rid of the married chain. The conversation on the occasion between his infernal majesty and the bridegroom is truly *spirituel*.

The caprice of the weather here can only be compared to the variability of ladies' tender *penchans*; consequently, *le beau sexe* are obliged to stay at home and waste their charms on their husbands, instead of displaying them *à la promenade*, and captivating some lackadaisical exquisite. A summer lost to chance conquests is not easily regained; and no spot is more favourable to impromptu love than the shady alleys of the Tuilleries, when wind and rain do not oppose stolen interviews. It is, indeed, truly melancholy to behold some twenty tight-laced, mustachioed, strutting transcendents, frizzled and twizzled in val, and looking, peeping, and watching for their *beloveds*; these latter wisely deem their crape bonnets of infinitely more value than the smiles and protestations of an *amant*; therefore never keep a rendezvous at the risk of injuring their dress, or catching a *rhume*; in fact, what is termed *la belle passion* here is almost always

in subjection to prudence; and, generally speaking, after the age of one and twenty, all those volcanic feelings are evaporated which in other countries outlive Time's rude marks, and lead to so many Werter-like catastrophes. I am happy to say, however, that the English custom of running fairly off with other men's wives is beginning to be adopted. Last week le Colonel de B—r-t and le Capitaine C—g-h bore triumphantly away the spouses of two rich *marchands*. The distracted husbands (for husbands always prize deserting wives) set out, post haste, on the wings of jealousy, hoping to recapture their treasures: but, whether the green-eyed monster changed colour *en chemin*, or that *Messrs. les Marchands* deemed their *aunes* unequal to measure the swords of these enterprising knights, they only went half-way, and discovered during their journey the possibility of replacing the fragile partners of their affection. This is true philosophy, and the only method to be happy, in spite of fate.

I was not a little surprised the other day, when passing through the Champs Elysées, to hear a young man of the lower class resolving the most difficult problems in mathematics: he never hesitated a moment, or waited to reflect, but replied instantaneously to the question put. What was most extraordinary, he could neither read nor write, and his eyes possessed the same calculative faculty as his mind. A gentleman who was present asked him how many were the people who surrounded him? He merely raised his head, seemed scarcely to look, and gave the exact number. His mother, who was with him, said he never could be made to learn any thing; but that he was peculiarly fond of conversing with astronomers; and sometimes of a star-light night would sit whole hours in contemplating the heavens, instead of partaking of rest. She by no means seemed proud of her son's talents; but, on the contrary, spoke of them as a proof of insanity: "*Pauvre garçon, il est bien à plaindre*," was her observation, as she terminated her relation of his singularities of disposition. Contrary to all calculators whom I have seen, he is handsome; neither does the form of his lips in the least indicate his talent—they are quite out of Lavater's rules, and within those of beauty.

ARTS AND SCIENCES.

MEDICO-BOTANICAL SOCIETY.

JULY 28.—The last meeting for the season took place; Dr. Theodore Gordon, one of the vice-presidents, in the chair. The Grand Duke of Baden, and two of his royal highness's brothers, and his Royal Highness the Prince of Calabria, were elected honorary Fellows. Dr. M. Doyle of Quebec, Dr. Gladstone of Greenwich, and George Hume, Esq. were severally balloted for and elected Fellows. Mr. Frost, Dr. Sigmond, and Dr. Whiting, were re-elected Professors of Botany, Toxicology, and Materia Medica. These gentlemen severally returned thanks. Dr. Whiting stated, in particular, that though, during the past year, he had not been enabled to impart much information to the Society, yet he had derived great benefit from its proceedings; of which he had availed himself not only in his lectures to his pupils, but at the bed-sides of his patients. The chairman announced that the annual oration would be delivered on the 10th of November, and that candidates for the Society's gold and silver medals must send in their communications before the first of January, 1830. P. Sandoz, Esq. was admitted a corresponding

member. On the table was placed a fine collection of plants, most of them rare, and many of them unique, from the King's Gardens at Kew; presented by Mr. Aiton, and well-arranged by Mr. Cunningham.

St. Petersburg, July 21.

BARON ALEXANDER VON HUMBOLDT arrived at Perm on the 13th of June.

As the baron is going to examine the mines of the Oural, the following particulars of the elevation of the mountains will be found interesting.

Colonel Terletzky of Catherineburg, the first who has measured the elevation of the summits of the southern chain of the Oural, by means of the barometer, has communicated the following results of his operations to the *Northern Bee*.

Names of the Mountains.	Perpendicular height in English feet.
Great Taganai, eighteen wersts from the works of Zlatoust; the centre peak is above the level of the sea, at 45° latitude	3675-9
Above the level of the river Al, at the sluice of the works	3566-3
The level of the Al at Zlatoust is therefore above that of the ocean	1109-4
Little Taganai, the centre peak above the sea	3375-6
Above the Al at Zlatoust	2200-2
Ouvet Tass, the extinct volcano in the curl of the ridge, twelve wersts from Zlatoust, towards Minsk, above the sea	2584-0
Above the Al at Zlatoust	1423-6
Yourma Mountain, the most elevated extinct volcano, above the sea	3367-3
Above the river Siksaelga, before the gold mine of Solimonooff	2263-0
Above lake Oufa,* whence the river of the same name issues	1645
Ourenges, at Zlatoust, above the sea	1587-2
Above the Al	503-4

LITERARY AND LEARNED.

BURTON'S TRILINGUAL TABLET:

Hieroglyphics.

THE rising importance of the investigation of the hieroglyphical literature and inscriptions of the ancient Egyptians has been rapidly extending the interest in this subject, from being confined to the learned and curious, throughout every rank of intellectual society. It has spread all over the continent of Europe; and now not only occupies a marked share of the attention of the studious inquirer and antiquary, but engages the active enterprise of scientific expeditions, and of many intelligent individuals of different nations. Among the latter, the *Literary Gazette* of the 4th ult. distinguished the name of Mr. James Burton; and established his claim to the discovery of a very important memorial connected with the explanation of hieroglyphic characters. Referring to that statement (explaining as it did the means by which this memorial had passed from the knowledge of the English discoverer into the possession of the French Consul at Cairo, Drovetti), we have here to resume the matter, and are happy to have it in our power to afford additional information respecting this transaction, and throw further and interesting light on the general inquiry.

We have on our table the lithographed copies of the hieroglyphic and Greek portions of the Trilingual Inscription (the tablet containing which we have, in honour of its discoverer, taken upon us to name the *Burton Tablet*); neither the enchorial, or middle, division (between the hieroglyphic and the Greek), nor the plaster-cast of the whole fragment, having yet reached

* Thus it appears that the level of Zlatoust and lake Oufa is nearly the same as that of the lake of Geneva, about 1230-6 English feet above the sea.

this country, though both are daily expected, and will probably arrive under the care of Lord Prudhoe, who has taken so prominent a part in the exploration of Egyptian antiquities.

This fragment occupied the threshold of a doorway, at the top of a broken flight of steps in a ruinous part of the Mosque Giamma Emir Yakoor; and it is of the same kind of rock as the famous Rosetta Stone. Mr. Burton's discovery of it was not casual, but the result of an active search, continued at intervals during five successive years; and during the few days he was allowed to retain it, he experienced considerable difficulty in making these copies, owing to the labour of moving so ponderous a body in the changes of position requisite for deciphering the more obscure letters and figures.

A transcript, similar to that which we possess, having been presented to the Royal Society of Literature, a special council of that Society was immediately convened, to consider of the expediency of publishing so remarkable a document;* and a committee, consisting of the Right Hon. C. Yorke, Col. Leake, Mr. Baber, and other members, was appointed to take the proper measures for that purpose. In their opinion—(which they have permitted us to insert in our journal, and for which we are the more indebted to them, seeing that the two first-mentioned gentlemen are of the highest authority which could be quoted on any question of hieroglyphic learning)—the two imperfect inscriptions were not sufficient to call for immediate publicity; and it was resolved to wait for the arrival of the enchorial or demotic part—of the plaster cast—and of the more complete copies of the portions already received, before resorting to ulterior measures. Thus the matter rests at present.

With regard to the specimens now in England, we may briefly describe their appearance. The first (or hieroglyphic) sheet is about 6½ inches wide, and eleven inches high on one side, ten inches on the other; for it should be observed, that the top is part (half) of an arch, and that the fragment appears to be half of the original tablet, broken or cut off through the centre perpendicularly. About five inches of this superior arc is occupied with the figures in the procession, with indications of their names (as usual) over their heads, which, we regret to say, are, here, too indistinct to allow us to make them out. Below follow thirty hieroglyphic lines, the first twenty almost utterly illegible, but the last ten in better preservation. In the fifth of the latter we perceive the name of Berenice twice, and in the sixth the same name once, quite plain and obvious. [The enchorial and "least injured" part, in twenty-seven lines will, when the impression comes, interpose between the hieroglyphic and Greek.] Our copy of the Greek is nearly the same size as the preceding, and consists of seventy-three lines, or rather indications and ends of lines, towards the outer edge of the tablet, of which we can merely decipher a few letters, or a word here and there, affording us no insight into the import of the record. Nor could this well be expected; for our readers should be aware (as was ingeniously seen at a glance, and pointed out by Mr. Yorke) that the hieroglyphics being read from right to left, and the Greek from left to right, these scanty terminations of the latter were not likely to furnish

much information. Under these circumstances, we wait the next arrivals with much impatience; trusting that, as far as we have gone, we have made the subject as intelligible as could be done without engravings, and promising to give the latter gratuitously to our subscribers in an extra sheet of the *Literary Gazette*, should future intelligence* render it expedient, either for their instruction, or to establish our national claim to the honour of resuscitating this interesting monument of remote antiquity.

It is very agreeable to us to be able in the same Number of our publication to pursue this theme still farther, by the addition of the most recent intelligence connected with it, that has transpired;—and the following extract of a letter from the Austrian Consul-general, Acerbi, on the Obelisks of Cleopatra, *vulgo*, "Cleopatra's Needles," possesses great interest:—

"The first visit which our friend Champollion paid to the various ruins in this quarter was devoted to the obelisks still existing amongst them: one of them makes a handsome appearance when viewed even at a considerable distance, and this one has been christened by the name of Cleopatra's Needle. At first sight, Champollion remarked a circumstance which had escaped every former observer, namely, that the hieroglyphics which cover these two obelisks (the one of which is standing, and the other lying upon the ground) appertain to three different periods. The most ancient occupy the column or space in the middle of each face, and were wrought when the obelisks themselves were erected, by order, or rather in honour of the sovereign, who caused these superb monuments to be constructed. These inscriptions, on which we will bestow the name of *primitives*, in reference to the lateral columns, inform us that king Thouthmosis III. directed the two obelisks to be set up before the temple of the god Phrè (Sol) at Eliopolis, in honour of his parent, the Sun himself. This sovereign lived about 1700 years before the vulgar era. All the lateral columns of characters are of some centuries' later date. They contain the titles and panegyric of Rhameses the Great, the Sesostris of western historians. This prince embellished the temple of Eliopolis, imitating the example set him by his ancestor, and thus deserved both the royal legend as well as the praises bestowed upon him, which stand beside those of Thouthmosis III., the Mæris of Greek writers. Finally, on the eastern and northern faces, and inserted betwixt the columns in honour of Rhameses the Great and the corners of the obelisk, stand two inscriptions in diminutive characters, which have never been detected before. They contain the royal legend of Rhameses VII. (Pharaoh or Sesostris II.), the son of Rhameses the Great, who, having conferred munificent donations, and made several additions to the temple of Eliopolis, which was one of the most celebrated in Egypt, caused his name to be inscribed by the side of that of his father.

"Our viceroy, Mehemet Ali Pasha, who is by no means indifferent to whatever attracts the attention of Europeans, was desirous of receiving some information regarding these monuments, one of which, as you are probably aware, was placed at the disposal of the English government, whenever they might choose to pay the expense of transporting it. Mehemet

All, therefore, requested M. Champollion to acquaint him with the meaning of the signs with which the obelisk is loaded; and M. C. did not omit to satisfy his highness' curiosity before he took his departure for Cairo. I have obtained, and now enclose, a copy of the explanation itself, which is thus worded:—
'Translation of the principal face, repeated on the two obelisks of Alexandria, which are vulgarly styled the Needles of Cleopatra. 'The powerful sovereign of divine race, the friend of justice, the king of Upper Egypt and of Lower Egypt, he who has defended his country with his arm, the resplendent monarch, the head of the public assemblies, like the Deity who has established the order of the world, the lord of the universe who watches over the peace of the globe, the son of the Sun, *Thouthmosis*, has made rich offerings to the Supreme, to the King of the heavenly hosts. The princely lord of the universe who watches over the repose of the world, the son of the Sun, and lord of diadems, has raised these two obelisks before the temple of the Sun at Eliopolis (*Matharich*), in honour of the Sun, his father, who has given him being, to day and for ever.' M. Champollion has not hitherto given us any translation beyond that of the two principal faces.

"P. S.—Before I despatch this letter by the captain of an Austrian vessel, I shall pay another visit to the site of the obelisks, and leisurely examine every part of them *de novo*.—
• • • And now, having once more considered all the circumstances with greater attention, I think I may draw the following conclusions: The guasto at the base of the obelisk was not made in Alexandria, but in Eliopolis; and it was not the work of the Romans, but of the Persians. The obelisks were secured to the pedestal, not with their present pivots, but with others; the Persians, for the purpose of upsetting them, having cut away their bases, so that they might the more readily apply a lever. The Romans found them handsome and prostrated at a time when they were desirous of applying them to the embellishment of Caesar's temple; otherwise they would not have treated them so merclessly. The metallic pivots, which exist at this day, were inserted by those who erected the obelisks on the spot where they now stand."

We have also seen M. Klaproth's very curious *Observations critiques sur la Découverte de l'Alphabet Hieroglyphique*, published about a month ago in Paris, and we take this early opportunity of noticing them, because that distinguished antiquary and linguist has ably contended for the right of our lamented countryman, the late Dr. Young, to the honour of having first discovered the key to Egyptian hieroglyphics. The *Observations* above mentioned are intended as an introduction, or preface, to a very splendid work, entitled, *Collection d'Antiquités Egyptiennes, recueillies par M. le Chevalier de Palin, publiées par M.M. Dorus et Klaproth*.—Another work of great merit has just appeared, in which the lights thrown by these Egyptian monuments on Scripture history are ably demonstrated. We trust to give an ample and early account of this production.

FINE ARTS.

BRITISH INSTITUTION.

THE Murillo lately exhibited at the British Institution (No. 167), has been removed; and St. Chrysogonus carried up to Heaven by Angels, introduced. This picture originally filled a

* This seemed to be peculiarly fitting for a Society whose publication of hieroglyphic inscriptions (separately from its own transactions) has done so much for their study, and so greatly excited the public mind. Copies of these fasciculi (not confined to members), we should add, for general information, are yet to be procured.

* Though this is the only trilingual memorial which has been brought forward since the Rosetta Stone led to Dr. Young's important theory, and M. Champollion's improvement thereon, we trust that others will yet be found. Colonel Leake, already mentioned, saw one in a house in Cairo; but unfortunately lost sight of it during the military operations that ensued. Where it is now, is unknown.

compartment in the church dedicated to the saint in Rome, and may be considered as the master-piece of Guercino. It is in the most perfect state of preservation, and forms a new and splendid feature in the present exhibition.

BRISTOL INSTITUTION.

WE are informed by a correspondent that the Exhibition of Paintings and Sculptures in this place closed on Saturday, the 25th of July, and that it had been well attended, and contained works of the highest merit—among which were the portrait of Lord Eldon, and the Flower-Girl, by Sir Thomas Lawrence; several by the late Edward Bird, R.A.; others by W. Daniel, R.A.; also by T. Stothard, R.A.; the late President Benjamin West; Sir Joshua Reynolds; J. M. Turner, R.A.; W. Etty, R.A.; R. Smirke, R.A.; F. Danby, R.A.; H. P. Briggs, R.A.; Sir W. Beechey, R.A.; Henry Howard, R.A.; Benjamin and Thomas Barker; T. C. Hofland; H. P. Bone; and others of high class and character in art. Among the sculptures were, E. H. Bailey's enchanting figure of Eve, and a bust of the late James Watt, Esq. by Chantrey. In all there were 149 performances, out of which 45 only were for sale. The number sold is not generally known—for no mark is put, as in other exhibitions. Upon the whole, the collection afforded a fair sample of native talent as well as of native patronage, as may be inferred from the proportion of pictures sent by their liberal proprietors, in aid of the promotion of taste, and the encouragement of the fine arts, in the city of Bristol and its surrounding neighbourhood.

NEW PUBLICATIONS.

Engraved Illustrations of Ancient Arms and Armour. From the Drawings, and with the Descriptions, of Dr. Meyrick; by Joseph Skelton, F.S.A. Part XIX.

"INDIAN Arms and Armour;" "Jaserine Armour, A.D. 1486;" "Two Patrons and a Touch-box;" "A Long Sword, with Double Guard, A.D. 1615;" "Crossbows, called Latches;" and "Armour of the Infantry, A.D. 1625;" are the illustrations, and the explanations of them form the descriptions, of this Part. The plate of Indian armour is peculiarly rich and beautiful. Dr. Meyrick says, with reference to it: "At Mundavie, in the Gulf of Cutch in the north part of India, is a manufactory for making armour and shields of rhinoceros' and buffaloes' hides. The pieces are boiled in oil till they become transparent; and such is the process, that they are rendered proof against the edge of a sabre, and, it is asserted, even against a bullet. The splendid suit of armour exhibited in this plate being of that description, in all probability belonged to the Rajah of the Guzerat; and from the inscription upon it, beginning with an invocation to Ali, we find he was a Sheer, a religious sect violently opposed to the Sunia. The Persians are of the former class, the Turks of the latter. It was once in the collection of his Royal Highness the late Duke of York."

Hall's Atlas. XV.

ANOTHER excellent Part of this excellent publication, containing, 1. the Western Hemisphere, 2. Asia, and 3. North America. We cannot help noticing, with much praise for their liberality, that the proprietors announce four maps, instead of three, in each of the two concluding Parts (to be published this year); thus giving their subscribers eight instead of six expensive engravings without any addition to the cost. The work, indeed, has been very

widely encouraged; but it is not often that public favour meets with so grateful and pleasing a return.

Picturesque Views on the River Clyde. Engraved by Joseph Swan, from drawings by J. Fleming: with Historical and Descriptive Illustrations by J. M. Leighton. Part IX. "Clock Light-House," "View of Dunoon and Castle," and "Kelly House," form the embellishments of the ninth Part of this pretty publication.

Charles V. visiting Francis I. after the Battle of Pavia. R. P. Bonington; J. D. Harding lithog. From a drawing in the possession of Clarkson Stanfield, Esq. Carpenter and Son.

AN admirable specimen of poor Bonington's high talents, and an additional proof of what he must have accomplished had his life been prolonged. This fascinating little sketch (for, powerful as it is, it is still but a sketch) unites some of the finest qualities of the Venetian and Flemish schools. Mr. Harding also has acquitted himself in a masterly manner. It is really surprising to see of what lithography, when in the hands of an able artist, is capable. The print has all the facility yet firmness, delicacy yet depth, of the original drawing.

ORIGINAL POETRY.

HANNIBAL CROSSING THE ALPS.

"*Prægressus signa Hannibal in promontorio quodam, unde longè et latè prospectus erat, consistere jussit milibus Italianis ostentat, subjectosque Alpibus montibus circum Padanos campos.*"—*Lit. lib. xvi.*

HE stood—earth's mightiest rampart gain'd at length,

Where, proudly rising with its crest of snow,
The rifted mountain rears its giant strength,
In stern defiance of the tempest's blow:
Above him shine the eternal heavens—
below, [steep;
The avalanche thunders from the yielding
And with wild voice, ascending as they flow
From rock to rock, the maddened waters leap,
To hide their sullen wrath, where night and
horror sleep.

A thousand are at hand—the warlike boast
Of sultry Africa's yet unbending pride,
Dark-featured leaders of that countless host
Which throngs from echoing wood and tor-
rent's side—

Numidia's horseman, swift and falcon-eyed;
The fierce Getulian, with his lance of cane,
Thy chosen, queenly Carthage! peril-tried;
Joined with the gleaming helms, and blades of
Spain;
And, like a breathing flood, fair Gaul's embat-
tled train.

Before him, in the fading distance, lies
Italia—glorious as a summer-dream,
With fields which laugh beneath those cloudless
skies;
And haunted grove, and ever tuneful stream;
And hills, where, brightening in the sportive
beam,
The vine's light gems their liquid hues unfold;
And all that meets the vision might bescem
The guiltless time by poets sung of old,
Ere banished Saturn fled, and waned his age of
gold.

On, Warrior, on! even now thy dread career
Demands thee. Trebia's dim and wintry
day,

And Thrasimene with her lake of fear,
And that red plain and desolating fray,
When War's avenging Deity shall lay
Rome's first and proudest as the nameless low;

And Tiber, winding on his rippling way,
Shall hear the midnight wail ascending slow
From lips which breathe despair—a nation's
cry of woe!

A light is on thy path of danger now,
Where Hope, the phantom, iris-throned
appears:

A little while, and that forsaken brow
Shall droop—though not beneath the weight
of years;

Affliction, anguish, shame, and fruitless
tears,

The tyrant's menace, and the poisoned bowl:

Alas! not such the pile which Fancy rears
Within the workings of the lofty soul
Which spreads o'er subject earth its measure-
less control.

Chorus.

J. F. HOLLINGS.

SONG:

Set to Music by Dr. Esser.

AH, no! she loves me not; those eyes
Too plainly say my hopes are vain:
She pities not a lover's sighs,—
She never felt a lover's pain.

No! she, like night's all-beauteous queen,
Smiling o'er ocean's troubled breast,
Bereaves this troubled heart of rest,—
Herself unmoved, untouched, serene.

SKETCHES OF SOCIETY.

THE KING: ROYALTIES.

WE do not believe there is an individual in the British empire at this period (and it is an extraordinary thing to say) who does not take an interest in the personal happiness of our popular and gracious Monarch, and wish him long to enjoy life and health. Our present little peep, therefore, behind the curtain cannot but be acceptable. At his cottage at Windsor, when relaxing from the weighty affairs of state, the King almost daily goes out in his pony phaeton, drawn by a pair of as beautiful and perfectly trained animals as could well be fancied. His Majesty drives himself, and generally sweeps along at the rate of ten miles an hour; shewing himself a dexterous as well as graceful charioteer. To vary this exercise, riding on horseback has been mentioned, and some preparations made: but even kings are not omnipotent; and it is curious to find that a difficulty of procuring a horse powerful enough, and yet of a kind to suit the royal rider, has hitherto prevented this design from being carried into effect. To drive merely, without an object, would soon become tiresome; and we rejoice to hear that our Sovereign devotes himself with great ardour and pleasure to the superintendence and direction of various improvements continually making in his fine and noble park. The formation of new roads, the laying down of lawns, the erection of tasteful buildings, alteration in lakes and waterfalls, planting, and all those other quiet and charming pursuits which occupy the well-disposed time of a country gentleman, and employ without wearying the mind, are the favourite recreations of his Majesty in retirement, and contribute greatly to that state of vigour which he so happily possesses.* At this particular moment, too, we are glad to find his Majesty engaged in a work not only congenial to such occupations as we

* Among other reports respecting his Majesty's movements, it was confidently said that a visit to Paris was contemplated, and had been almost positively promised to the Duke of Orleans: it would be a glorious thing, and we regret to hear that it is not very certain, now, to be carried into effect, though the month of October is yet mentioned as the period, should his Majesty find it agreeable to perform this welcome journey, and renew the days of the cloth of gold.

have described, but partaking of a higher character, as a tribute of filial affection and lasting national remembrance. We allude to the grand equestrian statue of George III. which has been so long under the able hands of Westmacott, and for the elevation of which the site was last week directed to be prepared. It is generally known that this production of the sculptor's art is designed by our illustrious King to commemorate the virtues of his good and venerable father. It is to be placed on a certain spot in that superb vista called the Long Walk, which is seen with so much advantage from the towers of Windsor, and leads towards the rural residence of his present Majesty; so that whenever he passes to and from his abode and his palace, this object will strike his attention. The site will in itself be commanding, and the statue, from its position and magnitude, have a grand effect. The ground, enclosed by a palisade, is to be 150 feet square; and within this there is to be a platform of masonry, forty feet square in the base, and elevated about thirty feet. Surmounting this will be the statue, about twenty-five feet in height, the figure of our late revered King on horseback, with his arm extended and pointing to Windsor, as if still protecting the place which in life he loved. We have only seen drawings of this; but if we may judge from them, the monument, which is nearly finished, will be the most impressive erection of the kind (even independently of its high associations) which has ever been executed in this country:—a great effort of art, a just tribute to a lamented monarch, and an immortal honour to the heart of his son and successor.

DRAMA.

KING'S THEATRE.

ON Saturday last, or, more properly speaking, on Sunday morning, to the great mortification of many a *Masaniello*-mad miss, and *Desdemona*-mad dandy, the doors of Laporte were closed for the season. The *Gli Oraxj e Curiasj* of Cimarosa was the fashionable finale. In a former Number, our opinion of the departed composer will be found. Had this opera been produced earlier in the season, we should have suggested to the management the propriety of reforming the cast altogether. The part of *Curiatius* was originally composed for a voice like that of Velluti; and though we think the composer was in error in not assigning that character to a tenor, and the part of *Horatius* to a basso-cantante, (inasmuch as we think no opera can be perfect without its vocal base); yet, for musical, though perhaps not for dramatic effect, the preference must be given to the original cast. Two tenors and one contralto approximate too nearly in tone to produce in concerted pieces striking and effective harmony. To have made, as it is technically termed, "a decided hit," this opera should have been cast as follows:—*Horatia*, Blais—the part having been originally composed for a soprano; *Marcus Horatius*, Donzelli—with strict injunctions to moderate his tone* and spare his lungs; and *Curiatius*, either by Malibran or Pisanoni; though, perhaps, where so much would depend upon declamation, and particularly a judicious conception of the character, the part had been safer in the hands of the latter.

* This artist forces his voice, and that too most unnecessarily, to a fault; the consequence is, that he not unfrequently sings excessively sharp, a defect unpardonable in a vocalist. A singer, from temporary indisposition, or from the pitch being above his reach, may sing flat—but to sing sharp, no physical defect can be pleaded in excuse, but that of want of ear.

We cannot, on looking back through the season, retract a single opinion which we have as cautiously as conscientiously advanced respecting these performances. They have never been precipitately made, nor are they characterised by any thing bordering upon indiscriminate praise. We have neither favoured this artist nor that; but have studied the interest of all, and have throughout acted the part of real friends, by pointing out faults, and censuring in the right, instead of flattering the vanity of individuals by applauding in the wrong, place.

In conclusion, we are happy to inform our readers, that Laporte has already made some of the most attractive engagements. Lalande, and the celebrated base La Blache, (a colossus in stature,) together with Donzelli, Curioni, and though last, not least, Blais, are retained for the ensuing season. There is also some prospect of Pasta returning in the month of May. We are sorry to hear that the season which has just closed has not been a profitable one to the manager, and we are astonished to learn, from an authentic source, that the season of 1828, which was said to be so very productive, did not yield a profit to the then managers, Messrs. Laurent and Laporte, although the rent was several thousand pounds lower than that of 1829, of more than 1,800*l.* in which sum was included the additions to the wardrobe, scenery, &c. If, as is stated, but we know not how truly, the receipts of the past season were less than those of 1828, M. Laporte must have sustained a considerable loss.

So: *Fermes La-porte!*

HAYMARKET THEATRE.

Nothing Superfluous—a one-act drama, from the French, was produced here on Wednesday. It is the work of Mr. Thompson, an actor, who played in it, and embodies the ancient story of a sultan, who proves, by experiment on Sadi, (a poor wretch whom he raises gradually to the highest power and enjoyment,) that there is no bound to human desires. Mr. Thompson was the *Sultan*, J. Reeve *Sadi*, and Mrs. H. Corri his pretty wife:—the first was guilty of that considerable force which, upon the stage, is usually called ranting; the second, of giving the coarsest point to situations and equivoques (if unequivocal pruriencies may pass under that name); and the third, of nothing but looking, acting, and singing, in a very pleasing manner. Notwithstanding the offence which the mincing of modern morality has softened into the phrase of being rather too broad—i.e. rather indecent—this piece was not condemned; but we should be sorry to see it, or any thing like it, keep possession of these boards. Nor is such prop necessary: for the remaining entertainments of the evening were more than sufficient to amuse and gratify any audience, as they certainly did the crowded house assembled on this occasion. *Charles XII.* extremely well performed; with Farren and Liston making every theatrical hit, and it is full of them, tell to the utmost;—the *Happiest Day of my Life*, improving as it runs, being indeed one of the cleverest farcical travesties of human nature which has appeared for a long while;—and *Manœuvring*, an established favourite; in which three pieces, Mrs. Glover, Mrs. Humby, Mr. Cooper, and other good actors, have efficient parts, and are enough to satisfy any expectations of a merry night at the Haymarket.

THE revival of *Der Freyschütz*, and the acting of Miss Kelly in the *Sister of Charity*, continue to crowd the English Opera House. An opera on a very grand scale, and which has

produced a great sensation in Germany, is in rehearsal here. Drury Lane is beautifying for the winter campaign; and Covent Garden remains *in statu quo*. There is no certainty yet of its opening at all: Mr. Laurent, and Mr. Davidge of the Coburg, it is reported, have made offers; but nothing definitive has taken place.

VARIETIES.

Monuments.—An easy and cheap mode of cleaning old monuments has been invented by a French chemist. He scrubs them with a brush dipped in water, sharpened with hydrochloric acid—twelve ounces of the acid to twelve (French) pints of water.

Elocution.—Among our Advertisements this week, we notice the name of Mr. Jones from Edinburgh, as a teacher of this necessary branch of liberal education; and have merely to observe, that our letters from the Modern Athens speak in very high terms of the eminent success that has hitherto attended this gentleman's labours.

A curious exhibition is now attracting the public at Agen, in France. Two Italians have a number of pigeons which are placed in cages, and from ten to twelve of the same colour are put together. By dint of great patience and perseverance they have been taught several feats of the most varied nature, and quite opposed to their usual habits. As soon as the cages are opened, the pigeons ascend, mix together, and fly away; but, on a signal, those of the same colour separate from the rest and come back together, each flight entering the appropriate cage. Carpets of different colours are placed upon the ground; and nets being spread, each flight, on a given signal, go to the carpet or to the net pointed out for it. A flight of pigeons is next let loose, and a sportsman having fired over them, they instantly fly to him and enter his game-bag. This bird, which never before has been seen to mix in martial exercises, upon this occasion places itself before the gun which is about to be fired at it, and does not move when it is discharged; it even takes a lighted match in its beak, and perches itself upon a cannon, which it discharges by applying the match to the touch-hole.

A watchmaker of Memmingen lately announced in the *Courrier Commercial de Dantzig*, that he had just finished a watch of his invention, at which he had worked for thirteen consecutive years. It is made of wood, and not the smallest quantity of metal was used in its composition. The watch, it appears, only requires to be wound up once in three months; and when it is necessary to do so, it makes a report as loud as that of a twelve pounder. The inventor, M. Pippen, will give a twenty years' warranty, and the price he asks for it is 6000 ducats. He states that the Grand Duke of Hesse offered him 5000 ducats for it, which he refused.

Flying!—It is stated, in a letter from Vienna, that a Frenchman is now in that city who has really brought to perfection the long-desired art of flying in the air. He is said to have reached, in his last essay, a height of more than nine hundred feet, and to have then proceeded, with perfect ease, for a great distance, horizontally. No particulars are given, to enable us to judge of the merits of this pretended invention, nor is it stated when the experiment in question was performed.

Announcement.—The following curious notice appeared in a French paper of the 25th ult.: "Nautical Carriages.—To-morrow, at six o'clock in the evening, and on Monday the

27th, at seven o'clock, several nautical experiments will be made at the basin of Villette. A man will walk upon the water in such a way, that his feet will not go below the surface; and several nautical tilburys will traverse the basin. An experiment was made with one of these carriages at Bagatelle on the 20th of April last, in the presence of the Duke of Bordeaux, who walked some time upon the water. The inventor, who has obtained a patent, received the most flattering testimonies from his royal highness and all the persons of the court, of the satisfaction which they had derived from this ingenious invention."

Sicily.—The Gazette of the two Sicilies announces, on the authority of letters from La Pomille and Calabria, that the crops of corn and oil promise to be extremely abundant this year.

New Post-Office.—This fine building will not be opened so early as the 12th, but it is expected in the course of the month.

The fashionable novel is "*La Femme du Monde*:" it is said to possess much merit. Reviewers rate it high; but to me it appeared, not "a twice-told tale," but a thousandfold tale.—*A propos*, a new work is about to appear, "*La Vie du Diable*;" and I trust, at all events, that the life of his infernal majesty will be more interesting than that of earthly sovereigns.—*Pæris Letter*.

March of the Pencil!—Ye Granbys and Marlboroughs! ye Green-men and Duke's heads! away with your quainting glories to the tombs of your parish limpers! For the Austrian has trod upon your necks; and the same pencil which has adorned the imperial palace with the effigy of its living master, has immortalised the shop-front of Mr. Joseph Moser, a practitioner of pharmacy at Vienna, by whole-length figures of Hygeia, Flora, Hippocrates, and Galen, with which the admirers of the plastic art are said to be, justly, in raptures. We are unable to decide whether this new tide in the affairs of sign-painting have been blown up by a "puff direct" from Mein herr Moser, or "a puff oblique" from Ferdinand Waldmüller, who is in high repute as a portrait-painter in the Austrian metropolis.

French Roads.—The expense of maintaining a good road in France is 82*l.*, and in England 123*l.*, for every three miles; and our French neighbours ascribe the difference to the partial and jobbing spirit of our two or three thousand highway despots, who cry reform over public grievances, whilst they are swelling the catalogue of local wrongs and corruptions. The public roads of France extend over a surface of 20,047 miles, and the total cost of maintaining that portion of them (*viz.* 10,720 miles) which is in a finished state, is 879,040*l.*; but the repairs of a similar line in England would amount to 1,372,160*l.*, or more than half as much again! It is stated that the system of Macadamising had been practised long before the time of M'Adam, by one Favier in the Haute-Saône, and one Husson in the Ain.

Irish Loyalty.—The newspapers have lately teemed with stories of disaffection and insurrection in Ireland; to balance which, in some degree, we beg to revive a characteristic anecdote of Hibernian loyalty. A true-hearted son of the sod, who had by pushing hard obtained the distinction of shaking hands with the King on his visit to Ireland, in a moment of elevation held up his honoured *manus*, exclaiming, "Lak there! that is the very right hand which the King, God bless him! shuk; and, by my soul! it is as clane there as ever; for—I have never washed it since"!!

Crabs migratory through the air.—The miracle has been explained: the crabs which fell in a shower of rain at Ryegate, were stolen by a fellow, who, being rather closely looked after by the original owner, swore to him that they had dropped into his garden during the storm!

At a recent sitting of the Academy of Sciences in Paris, a paper was read by M. Roulin on the ergot in Indian corn (*maïs*); in which it was stated, that the use of the corn in this state in South America produces epidemic diseases, and has the singular property of causing the hair of the head to fall off. Pigs fed with this corn also lose their hair, and shew symptoms of paralysis in the hind quarters.

It is stated in a French paper, that by removing the flowers from the potato-plant as soon as they are fully blown, the quantity of the crop of the potato is increased one-fourth.

At the last sitting of the Paris Academy of Sciences, a paper was read on the pasture lands of France; in which it is stated, that if the 5,775,000 hectares of pasture-land now used in France were properly improved, they would give, instead of the present net revenue of 282,000,000 francs, no less a sum than 863,000,000 francs!

Pruning.—A Belgian horticulturist announces that he has discovered a perfect cure for the injury inflicted upon fruit-trees in pruning, to prevent the flow of sap, or, as it is called in Belgium, gum. He cuts with a sharp instrument, in shape like a spatula, immediately round the wound, and having removed all the injured part, washes it with the juice of sorrel, and fills up the cavity with a kind of paste made from the pounded leaves of the same plant: this is then covered over with any substance, to exclude the external air; and the application is considered complete.

Large Fruit.—It is stated in a French horticultural work, that at the last exhibition of the Horticultural Society at Courtrai, nine pears of the *bons-chrétiens* species were exhibited, which weighed from fifteen to seventeen French ounces each; a Colmar pear weighed one pound and a half; and an English rennet one pound and two ounces.

Union of Humanity and Recreation.—Our friends of the Printers' Pension Society have invited us to embark in the Venus steam-packet for an excursion to the Nore, with Admiralty leave to visit a ship of war in the Medway, on Monday, for the benefit of the Institution and of our own health. Sorry are we that our labours for the printers in another way deny us this trip; but we do not the less advise luckier people to have a sail, a sight, a dance on board, and a day of social enjoyment.

Gurney's Steam-Carriage.—A rather long journey has been performed, by way of experiment, with this carriage: the account published complains of many delays in procuring the supplies of fuel, &c., and of a savage attack of the populace near Devizes; but asserts, that in every respect the machinery wrought well, and answered the hopes of the proprietors. — A steam-carriage on a different principle is also vouched for by another inventor, as being perfectly successful; and Mr. Brown likewise offers to shew his gas-engine power complete to any philosophical or mechanical inquirer.

LITERARY NOVELTIES.

Messrs. Whittaker and Co. are, we understand, making arrangements for the regular publication of three Series of Popular Histories, under the respective titles of the Cabinets of Literary, Philosophical, Scientific, and Political

History. The co-operation of very distinguished writers has been either promised or procured; and the collection bids fair to be a valuable addition to our national literature.

Early in next season will appear the History of the Arab Domination in Spain, by William Fraser, Esq.: the work is already in great forwardness, and is expected to make about two octavo volumes.

The Memoirs of the celebrated Dr. Doddridge is, we learn, postponed till next season: from a copy in our possession, we can speak highly of it, appear when it may.

A prospectus has been issued of a new publication, which, from the names attached to it, greatly excites our expectations. It is to be entitled Italy, and consist of a new illustrated Road-Book of the Route from London to Naples; with Twenty-four highly finished Views, from Original Drawings by Prout, Stanfield, and Brockedon (the editor); engraved by William and Edward Finden. It is to appear in various sizes, and in Parts, probably at intervals of two months—not exceeding three.

A collection of Spanish and Portuguese Airs, by the most esteemed Composers of those Countries, is announced for publication by subscription. It is to be called Peninsular Melodies; the poetry principally by Mrs. Hemans; and selected and compiled by George Lloyd Hodges, Esq.

There is preparing for publication, Tales of an Indian Camp, by J. A. Jones, Esq., who long resided among the Indian tribes of North America.

Natural History.—M. Michel Carrier, an eminent naturalist of Savoy, has issued proposals for forming, by subscription, a Geological Collection of the whole range of the Alps. The collection will contain all the Minerals, Metals, and Fossils, which have already been found, or which M. Carrier may discover, in the Alpine Chain; a space occupying 2,600 square leagues, in which are situated the highest mountains of Europe, and which contains formations the most rich in objects of inorganic nature, as well as in the spoils of primeval ages, and composed of strata the most varied, and abounding in interesting geological facts of every kind! Eight years will be necessary to finish this great work; and eighty subscribers at 190*l.* each are required.

In the Press.—Blackstone's Commentaries, brought down to 1839.

LIST OF NEW BOOKS.

Hosack's Memoir of De Witt Clinton, 4to. 3*l.* 2*s.* 6*d.* — Turner's (Sir James) Memoirs, 4to. 1*l.* 15*s.* 6*d.* — Carpenter's Orthographical Assistant, 3d edition, 18mo. 2*s.* — Merry Thoughts for Merry Moments, plain, 5*s.*; coloured, 7*s.* 6*d.* — Book of Fate, 18th edition, 8vo. 5*s.* 6*d.* — Watkin's Conveyancing, by Morley Cooft, &c. 8vo. 14*s.* 6*d.* 6*d.*

Wednesday 5	— 48. — 65.	29.77 to 29.94

Prevailing wind, S.W.

Alternately clear and cloudy; a thunder-storm on the afternoon of the 30th ult., and a remarkable heavy shower of rain about ten o'clock in the evening of the 4th inst.

Rain fallen, 1*l.* inch, of which .475 fell during the heavy shower above mentioned.

Meteors.—Scarcely an evening passes without innumerable small meteors: in the evening of the 3d instant, about half-past ten, a meteor of extraordinary brilliancy traversed a few degrees of the north-eastern part of our hemisphere: the meteor itself disappeared in about two seconds, though the countless sparks of light left in its track remained visible about five seconds.

CHARLES H. ADAMS.

Latitude..... 51° 37' 38" N.

Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

An Extract from the Genealogy of the Swan Family.—"Another Sir William Swan, who was the chief ornament of this family, was an eminent man of King Charles the Second's party, on whom he attended during his exile abroad; and after the king's restoration was created a baronet: this was in 1664. He was sent envoy to the court of Brandenburg and some other German courts, and was accompanied by (as his secretary) the celebrated John Locke, Esq., author of the Essay on Human Understanding, &c. &c. His son William dying without issue male, the title became extinct." [Is not this the person called Sir W. Vane in Lord King's Life of Locke?—Ed. L. G.]—*Vide* Philpot's Survey and Harvey's History of the County of Kent, under the head Southfleet Hooke, a parish in that county, the seat of the Swan family. We are sorry we cannot find room for C. L.—for W. R. M.—for W. A. S.

To F. A. We cannot ascertain any thing respecting Dr. Maginn's announced Tales of the Talmud. Herbert's Bibliothèque Orientale, valuable as it is, has not, as far as we know, been translated into English. A great portion of its matter, however, is to be found in Calmer and other authors. Steadlin's is, we believe, the only translation of the Talmud.

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION,
FALL MALL.

The Gallery, with a Selection of the Works of the Italian, Spanish, Flemish, Dutch, and English Schools, is open daily, from Ten in the Morning till Six in the Evening.

Admission, 1s. Catalogue, 1s. 6d.

WILLIAM BARNARD, Keeper.

ROYAL MANCHESTER INSTITUTION.

The Opening of the Fourth Exhibition of Oil Paintings and Sculpture is postponed to the latter end of August, and pictures will be received until the 15th of that month, instead of the 1st, as originally advertised.

T. W. WINSTANLEY, Hon. Sec.

27th July, 1889.

Lessons in Elocution.

MR. JONES, TEACHER OF ELOCUTION, from Edinburgh, begs leave to acquaint the Nobility, Gentry, and Public in general, that, during the Edinburgh College Vacation, he will remain a few Weeks in London, for the purpose of receiving Pupils in this important Branch of Education.

Terms and other Particulars may be known of Mr. Jones, No. 24, Golden Square.

PRIVATE TUITION, preparatory to the Universities. A married Clergyman of the Established Church, a Graduate of Oxford, resident in a very salubrious and romantic Part of North Wales, is desirous of taking Three or Four Pupils, between the Ages of 12 and 16. The Number being limited to Four, the Terms, including every ordinary charge, are 100 Guineas. French will be taught (if required) by a Native of France.

Address, B. A., to the care of Mr. Phoenix, Bookseller, No. 17, Fleet Street, London.

PRIVATE TUITION. A married Clergyman of the Established Church, Graduate of Oxford, residing in a pleasant and healthy part of Hampshire, receives a limited Number of Pupils in Home. The highest References as to Character and Abilities will be given.

Address to B. A., in care of Messrs. Rivington, Waterloo Place, London.

THE PASSES OF THE ALPS.

Just published, No. XI. of

By WILLIAM BROCKEDON.

Containing the Fables of the Col de Tende and the Argentières.

To be had of the Author, 20, Devonshire Street, Green Square; and of the Booksellers.

No. XII. which will complete the Work, will be published in November, and contain the Pass of the Simplon.

From the unprecedented success of the Passes of the Alps, now on the point of completion, early application is necessary to complete Sets, and ensure Proof Impressions.

Views in North Wales.

This day is published, in atlas 4to. price 11s. 6d. boards.

MUSIC.

Just published by Hime and Son, Liverpool, price 2s.

THE CAMBRIAN BARD'S ADDRESS

TO HIS COUNTRY, most respectfully dedicated to the Most Noble the Marquess of Anglesea. The Words by CAMBRIA JONES, Author of the "Bard's Dream," "Mortality," &c. The Music by R. HAYDEN, of St. Asaph.

A Beautiful and poetic libretto.—"North Wales Chronicle."

BOOKS PUBLISHED THIS DAY.

Latest published by Mr. Murray, Albemarle Street,
COLLOQUIES ON THE PROGRESS AND PROSPECTS OF SOCIETY.

By ROBERT SOUTHEY.

3 vols. 8vo. with Engravings, 2s.

"These volumes will supply considerable entertainment to every order of thinkers, who like to have their faculties called into exercise by power and accomplishments of no common description, however singularly exhibited. To a fine display of copious and commanding eloquence, supported by much felicity of expression, and adorned by most of the graces which attend on practiced composition, is united a variety of illustration and allusion, which a reading experience of Dr. Southey's could alone supply. His books are worth reading, and should be read accordingly."—*Westminster Review*, No. XXI.

"This is a beautiful book, full of wisdom and devotion—of poetry and feeling; and altogether in the spirit of other times, such as the wise men of our own day may scoff at, but such as Beryl, or Isaac Walton, or Herbert, would have delighted to honour."—*Quarterly Review*.

2. All for Love, or the Pilgrim of Compostella. By Robert Southey. Foolscap 8vo. 7s. 6d.

"In the ease of its structure and versification, and the straightforward simplicity of its narrative, it classes with the Minstrel Ballad. We thank Mr. Southey for giving to the freedom of the public a trifle originally intended for his own; and glad we are that after so long a course of arduous and useful labour he still retains the life and vivacity of his youthful heart, and the merry versatility of his boyish fancy."—*Blackwood's Magazine*.

Yesterday was published,
THE FAMILY LIBRARY, No. V. (being the First Volume of the History of the Jews).

John Murray, Albemarle Street.

Second edition, with numerous Engravings and Woodcuts, post 8vo. 15s.

THE JOURNAL of a NATURALIST.

Plants, trees, and stones, we note,
Birds, insects, beasts, and rural things.

"We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely than they have been accustomed to do, into the objects of animated nature; and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's boudoir, for her rank and station in life what they may."—*Quarterly Review*, No. 70.

"We think there are few readers who will not be delighted (we are certain all will be instructed) by the 'Journal of a Naturalist.'"—*Weekly Review*.

"This is a most delightful book, on the most delightful of all subjects. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selbourne,'—the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—*Athenaeum*.

John Murray, Albemarle Street.

New Work by the Author of the Sketch Book.

On the 14th of April, in 2 vols. 8vo. 36s.

A CHRONICLE of the CONQUEST of GRANADA.

By WASHINGTON IRVING.

John Murray, Albemarle Street.

"Mr. Irving, by assuming the fictitious character of Frey Antonio Agapida, has at once given his story a picturesque and even a poetic interest; he has enabled himself to dwell on minute details, without impropriety, these elaborate descriptions, deeper studies, and more profound reflections, which are deemed necessary in modern history. Collecting his materials from various historians, and adapting in some degree the tone and manner of a monkish chronicler, he has embodied them in a narrative which in manner reminds us of our countryman, the author of *Fraser's*. The narrative presents an historical picture which can never fail to claim attention."—*American Quarterly Review*.

Mr. William Butler's Outline Maps.

Price 4s.

GEOGRAPHICAL and BIOGRAPHICAL EXERCISES, designed for Young Persons.

By the late WILLIAM BUTLER.

The 16th edition, enlarged by his Son, JOHN OLDING BUTLER, and having an entirely new Set of coloured Maps, with Questions adapted to each Map, is published.

"As a correct delineation of the great outlines of the four quarters of the world, and of the British Isles, these maps are entitled to much praise."—*Literary Gazette*.

Printed for John Harris, Corner of St. Paul's Churchyard.

In 2 vols. post 8vo.

GERALDINE OF DESMOND; or, Ireland in the Reign of Elizabeth. An Historical Romance.

"A work which the grave may read for instruction, and the gay for amusement."

"The subject is singularly well chosen, both with relation to its own capabilities, and the powers of the writer to deal with it."—*Caledonian Mercury*.

Printed for Henry Colburn, 8, New Burlington Street.

American Poetry, &c.

Just imported by R. J. Kennett, 55, Great Queen Street, Lincoln's Inn Fields.

SPECIMENS OF AMERICAN POETRY.

With Critical and Biographical Notices, containing Extracts from about 300 Authors, in 2 vols. 8vo. 36s. boards.

Common-place Book of Prose, extracted from the Writings of the best American Authors. 2d edition, 18mo. 6s. boards.

The Legendary; original Pieces in Prose and Verse, illustrative of American History, Society, and Manners. 2 vols. 8vo. 14s. boards.

The Token; Verse and Prose, with Fifteen beautiful Engravings. 8vo. half-bound in silk, 10s. 6d.

Where may be had, gratis.

A Catalogue of Miscellaneous Old Books, at the low Prices affixed.

Just published, price 21s. boards.

GREEK SEPTUAGINT, with the Apocrypha, from the Oxford edition of Bos and Holmes.

This edition is handsomely printed in 1 vol. 8vo. hot-pressed. For use in Churches and Chapels, as well as the Library.

"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is so reasonable as to place it within the reach of almost every one."—*Horne's Introduction to the Bible*.

Mr. Valpy has printed this second edition in an economical form, to suit the use of the upper classes of schools, into whose hands many tutors are desirous of placing it.

Sold by Longman, Baldwin, Whitaker, Harding, Rivington, J. Richardson, and all other Booksellers.

Also, 3 vols. 8vo. 12s. boards.

Greek Testament, with English Notes.

Second edition. Containing copious Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics, and with References to Virgil, for idioms, and Bos for Ellipses. To which is prefixed a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Granville Sharpe, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded, and the Text, Greek and English indices are added. Two Plates are added, one illustrating the "Travels of the Apostles," and the other, a "Map of Judea, and a Plan of the City and Temple of Jerusalem."

By the Rev. E. VALPY, B.D.

This Work is intended for the Use of Students in Divinity, as well as for the Library.

"After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to pursue only one edition of the 'Greek Testament.'"—*Horne's Introduction to the Bible*.

The Septuagint and Testament may be had uniformly bound in Four handsome Volumes.

For Travellers on the Continent.

INFORMATION and DIRECTIONS for TRAVELLERS on the CONTINENT.

By MARIA STARRKE.

6th edition, thoroughly revised, and with considerable Additions. Post 8vo. 12s.

2. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Matthews, A.M. 2d edit. 2 vols. post 8vo. 15s.

3. Antiquities, Arts, and Literature of Italy. By Joseph Forryth, Esq. 2d edition, 2 vols. post 8vo. 12s.

4. Rome in the Nineteenth Century. 4th edition, 2 vols. 8vo. 11s. 6d.

5. Switzerland; or, a Journal of a Tour and Residence in that Country. Followed by a general View of its History, brought down to the present time. By S. Stumme, 2d edition, 2 vols. 8vo. 24s.

6. An Autumn near the Rhine; or, Sketches of Coeur, Society, and Scenery, in Germany near the Rhine, the 2d edition, 8vo. 14s.

John Murray, Albemarle Street.

Popular Books for Schools and Private Tutorial.—Works by the late Mrs. Trimmer.

Just published, by John Harris, St. Paul's Churchyard; and J. Hatchard and Son, Piccadilly.

NEW and SUPERIOR EDITIONS of the following POPULAR WORKS:—

1. English History, brought down to the present time, with 48 Engravings on Wood. 2 vols. 18mo. price 3s. neatly bound in red sheep.

2. Ancient History, with 40 Engravings, 1 vol. price 4s. 6d. bound.

3. Roman History, with 40 Engravings, 1 vol. price 4s. 6d. bound.

4. Lessons from the Old Testament, with 40 Engravings. 1 vol. 18mo. price 3s. bound.

5. Lessons from the New Testament, with 40 Engravings. 1 vol. 18mo. price 3s. bound.

Just published by A. J. Valpy, M.A. price 5s. each, and may be had of all Booksellers.

SCHOOL and COLLEGE GREEK CLASSICS, with English Notes, Questions, &c.

The following are already published:

Euripides, *Hecuba*. By the Rev. J. R. Major, Master of Wistech School, and of Trin. Col. Cam. &c.

Medea. By the same. 5s.

Phœnissæ. By the same. 5s.

(Will be published in September.)

Sophocles, *Edipus Tyrannus*. By the Rev. J. Brans, D.D. late Fellow of Trin. Col. Cam. &c.

Edipus Colonus. By the same. price 5s.

This is, beyond all comparison, the best student's edition of a Greek play which has ever been given to the public. The original edition of Forster, which formed the ground-work of the present, is, after all, a book more adapted to the finished scholar and classical critic, than to those who are only pursuing the studies which are to render them worthy of a station within the sacred pale.—"Literary Chronicle," Jan. 1827.

Thucydides, Herodotus, Xenophon, Demosthenes, &c. will be published during the present year.

At the express desire of many eminent Schoolmasters, Mr. Valpy has commenced the publication of Series of each of the Greek Authors as are chiefly read in the upper Classes of Schools and in Colleges. The best Texts are adopted, and the Critical and Explanatory Notes are presented, in a more inviting and accessible form than those of Latin Commentators, by adding that profusion of annotations which frequently anticipates the ingenuity, surpasses the industry, and confuses the retards rather than promotes the improvement of the pupil. Examination Questions, adapted to the points discussed in the Notes, and indexes, are also added; and the Series, it is hoped, will constitute a convenient Introduction to the studies and elegance of Greek Literature, and to the perusal of that portion of the relics of antiquity which is best calculated to interest a youthful mind.

Each Play may be had separately, and it is intended that all shall be published in a cheap duodecimo form.

Sold by Baldwin, Longman, Whitaker, and all other Booksellers.

In 2 vols. post 8vo.

ECARTE; or, the Salons of Paris.

"The novel under this title must not be considered as a fiction. It was sketched in the midst of the dispirited scenes which form its subject. We are assured that imagination has not been called in aid, for every incident and scene was witnessed, and every character is from the life."—*Morning Paper*.

Printed for Henry Colburn, 8, New Burlington Street.

In 1 vol. small 8vo. price 7s. 6d.

TALES OF PERPLEXITY, containing the Rendezvous, Disinheritance, and Cross Purposes.

Published by Sampson Low, 47, Lamb's Conduit Street.

A New Arithmetic.—Just published, price 3s. bound.

THE THEORY and PRACTICE of ARITHMETIC, in which the subject is treated as a Science, established on its own Principles, illustrated by its own Evidence, and made effectually subservient to an Attainment of the Mathematics.

By GEORGE HUTTON.

Also,

An Abridgment of the above, for the Use of Ladies' Schools, Private Governesses, and Families. 2s. bound.

"A very excellent system of arithmetic, on entirely new principles, which render it far superior to most others now in use. We strongly recommend it to the notice and patronage of schoolmasters and tutors in general. It may also be a desirable manual for private reference among the commercial classes."—*Literary Gazette*, Dec. 27.

For the convenience of Teachers, the Answers to the Questions contained in the above Work will be published in a few days.

London. Printed for Poole and Edwards, (late Scott and Sons) and Lettman, 15, & 7, Mark Lane.

MEMOIRS OF HIS OWN LIFE AND TIMES.

In 1 vol. 4to. price 12s. 6d.

By **MR. JAMES TURNER.**

1682-1670. From the original Manuscript, containing a full Narrative of the Intervention in Scotland in 1666.

Adam Black, Edinburgh; and Longman and Co. London.

Important Works just published by Henry Colburn, 5, New Burlington Street; and to be had at all respectable Libraries.

BURCKHARDT'S TRAVELS IN ARABIA, comprehending an Account of those Territories which the Mohammedans regard as Sacred. In 2 vols. 8vo. with 24 Plates.

2. **Buckingham's Travels in Assyria, Media, and Persia.** In 1 vol.

This volume concludes the series of the author's journeys in the East, which present the reader not only with the present condition of the interesting countries described, but with the results of personal investigations as to their antiquities, which enable the author to throw light upon ancient history, and also upon the inspired writings.

3. **Letters from the Egean**, by James Emerson, Esq. containing, among other interesting Narratives, the singular History of Crevelier, the Pirate, the Original of Lord Byron's Corsair. In 2 vols. post 8vo.

4. **Memoirs of Lady Fanshawe, Wife of the Right Hon. Sir Richard Fanshawe, Bart. Ambassador from Charles II. to the Court of Madrid.** Written by herself. New first published from the original MS.; to which are added, Extracts from the Correspondence of Sir Richard Fanshawe. Handsomely printed in 1 vol. 8vo. with a Portrait, 14s.

5. **The Loves of the Poets**, by the Author of the "Diary of an Emuysie." In 2 vols. post 8vo. 12s.

6. **The Empress Josephine's Memoirs**, the third and concluding Volume, comprising her private Correspondence with Napoleon. Post 8vo. 16s. 6d.; French, 8s.

7. **Letters addressed to John Ellis, Esq. Secretary to the Commissioners of His Majesty's Revenue in Ireland, during the Years 1680, 1687, and 1690**, comprising many particulars of the Revolution, and Anecdotes illustrative of the History and Manners of those Times. Now first published from the originals, with Notes and a Preface. By the Hon. George Agar Ellis. In 2 vols. 8vo.

8. **Nollekens and his Times**, 2d edition, in 2 vols. 8vo. with a fine Portrait, from a Drawing by Jackson, price 36s.

9. **The Living and the Dead**, Second Series, in post 8vo. 10s. 6d.

10. **A Second Judgment of Babylon the Great; or, More Men and Things in the British Capital.** In 2 vols. post 8vo. 21s.

11. **Memoirs of Scipio de Ricci, Minister of the late Grand Duke Leopold of Tuscany.** Containing an exposé of the Romish Church Establishment during the 18th Century, and of the Abuse of the Jesuits throughout the greater part of Europe. Edited by Thomas Roscoe, Esq. In 2 vols. 8vo. with Portrait, 21s.

The leading feature of this important work is its close application to the great question now at issue between our Protestant and Catholic fellow-subjects. It holds forth a most impressive and instructive lesson to both parties, and contains a fund of curious anecdote and information.

Price 8s.

INTRODUCTION to the TEACHING of CHILDREN the DIFFERENT PARTS of SPEECH, by the Use of marked Words and engraved Counters or Cards.

By J. R. P. M.M.

TWO DISCOURSES on PUBLIC BEREAVEMENTS in the CHRISTIAN CHURCH, occasioned by the Death of a Minister and a Missionary.

By JOHN SHEPPARD, of Frome.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Of whom may be had, by the same Author, Thoughts preparatory or persuasive to Private Devotion. 5th edition, 6s.

The Divine Origin of Christianity, deduced from some of those Evidences which are not founded on the Authority of Scripture. 2 vols. 14s.

CONSTANTINOPLE in 1838.

By CHARLES MACFARLANE, Esq.

"This very interesting and important work contains the latest observations made in Turkey by two or three years."—*Courier.*

"The details which the writer gives cannot fail to be read with peculiar interest at the present moment."—*Times.*

"Mr. Macfarlane is an acute, discriminating traveller, and seems to have been exceedingly diligent in pursuing his inquiries into the condition and resources of Turkey."—*Morning Chronicle.*

"We have here a simple and faithful record of the author's impressions, and they are made up of his own mind; and the volume abounds with anecdotal and piquant details, which readily assist our judgment upon the existing situation and probable future destinies of this remarkable empire and curious people."—*Literary Gazette.*

Printed for Saunders and Otley, Conduit Street.

Price Six Shillings.

THE FOREIGN REVIEW,

No. VII.

London: Black, Young, and Young, 2, Tavistock Street, Covent Garden; and Bosange, Barthés, and Lowell, Great Marlborough Street.

"We feel ourselves bound to compliment the conductors of this periodical on their punctuality and activity; but the present Number has yet higher claims on our attention, it gives us a comprehensive view of continental literature. From France we have intelligence of its ancient and modern juridical oratory, and of the present state of philosophy in that country. From Germany we have an account of one of its most amiable mystics, Novalis, by one who is more conversant with German literature than any Englishman of the day,—Thomas Carlyle, Esq. The short review, and continental literature, contain much that is interesting and amusing."—*The Edinburgh Literary Journal.*

American Review.—8vo. price 6s. 6d. sewed.

THE AMERICAN QUARTERLY REVIEW. No. X. is just received, containing the following Articles:—I. Clapperton's Discoveries in Central Africa.—II. Milton's Letters.—III. Astronomy of Laplace.—IV. Containing also a copious Collection of approved Prescriptions, Medical Management of Children, Rules of Diet, Virtues and Doses of all Medicines, &c. The whole forming a comprehensive Medical Guide for the Use of the Clergy, Physicians, and Invalids.

By T. J. GRAHAM, M.D. &c.

"We conscientiously recommend it. It is very far superior to the celebrated Buchan's, and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need, without any doubt of being benefited by its wisdom."—*Literary Chronicle.*

"In the opinion of a respectable physician, well known in our connexion, it is enriched with much of that modern practice has ascertained to be valuable, and is not only incomparably superior to Buchan's, but also to every similar work in our language."—*Medical Magazine.*

"It will be found a very valuable acquisition to the family library."—*Imperial Magazine.*

"It is altogether deserving of permanent popularity."—*London Weekly Review.*

"It is by far the very best and most useful books published in modern times."—*Monthly Observer*, No. 16.

Published by Simpkin and Marshall, Stationers' Court, London; and sold by all Booksellers.

Also, by the same Author, 2d edition, revised and enlarged, price 8s. 6d.

2. **A Treatise on Indigestion**, illustrating the Symptoms, Varieties, Causes, and Treatment, of the prevailing Disorders of the Stomach and Liver, with Practical Observations on some painful Complaints originating in these Disorders, as the Douleur, Gout, Flatulency of Blood in the Head, &c.

"We sincerely recommend it, and have long been convinced that such a work was imperatively called for."—*London Medical Journal.*

* A variety of Works for Travellers on the Continent.

RUDIMENTS of a GRAMMAR of the ANGLIO-SAXON TONGUE.

A knowledge of the Anglo-Saxon language is indispensable in elucidating the history and antiquities of our own island, in explaining our proper names, and in illustrating our provincial dialects and local customs; all which are the memorials of the ancient manners and character of our ancestors, and without it every Englishman must be imperfectly acquainted with the etymology of his own language.

Printed for William Pickering, 57, Chancery Lane.

In 3 large vols. 8vo. with a Map and 70 Plates, price 2l. 2s. bound and lettered.

ST. PETERSBURGH, 2d edition, comprising an Account of its Manners, Customs, Institutions, Amusements, State of Society, Literature, &c.

By A. B. GRANVILLE, M.D. F.R.S. F.L.S. M.R.S. &c.

"A book which contains a great deal of useful information."—*Times*.

"He enjoyed opportunities of seeing more than any writer upon that city with whom we are acquainted."—*Literary Gazette*.

"It contains infinitely more intelligence with respect to the Russian capital, than has yet been impartially conveyed to the English reader."—*John Bull*.

"His picture of St. Petersburg contains the most copious and detailed description of the gigantic edifices of this extraordinary city, which has hitherto been laid before the public."—*Quarterly Review*.

"We are not in possession of any work that exhibits such a desire to place clearly before the public all matters that can be considered interesting relative to the present state of Russia."—*Atlas*.

Printed for Henry Colburn, 8, New Burlington Street.

Standard School Books.

Just published, by A. J. Valpy, M.A. Red Lion Court, Fleet Street, London; and may be had of all Booksellers.

GREEK GRADUS; or, Greek, Latin, and English Prosodial Lexicon, containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest period to the time of Ptolemy Philadelphus; and also the Quantities of each Syllable; their combining advantages of a Lexicon of the Greek Poets, and a Greek Gradus. For the Use of Schools and Colleges.

By the Rev. J. BBAHALL, D.D.

Late Fellow of Trin. Coll. Cam. 8vo. 6s. boards.

"The indefatigable application required in the compilation of the Greek Gradus is manifest; and we heartily recommend the work as supplying a desideratum in our school books, and likely to be advantageously used to a very wide extent."—*Literary Chronicle*.

"Mr. BBAHALL has certainly conferred by this publication a lasting benefit on all classical students, and deserves the highest praise for taste, learning, and indefatigable industry."—*London Weekly Review*.

SATURDAY, AUGUST 15, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Cain the Wanderer; a Vision of Heaven; Darkness; and other Poems. By ———. 8vo. pp. 330. London, 1829. Whittaker, Treacher, and Co.

THE spirit in which this volume is written is essentially the spirit from which all the finer poetry must emanate in the present day;—the deep thoughtfulness of feeling—the philosophy to which the passions have been pioneers—that innate romance which, in default of outward resource, can, like the pelican of the desert, find a fountain in its own bosom:—these must now constitute the poet. We do not live in an age either of excitement or of adventure: we have had years of peace, till the voice of the trumpet is a forgotten sound—one that finds not its echo in ourselves; and it is a subject of thankfulness, that military glory is stripped of its scarlet and gold, banners and plumes, till victory is held but as a showy kind of throat-cutting. And, worse still for the minstrel's tale of wonder, nothing unaccountable ever happens now—a days—and an age of astonishment and wild enterprise is so rife with poetry. To support this assertion we need but appeal to the two great advents of poetry in England. The one followed the change of religion and the discovery of America—witness the rich growth of the drama; and the other followed close upon the French Revolution. The cause was alike in both—the common-places of life, those barriers of the soul, were for awhile pressed aside—wild actions gave birth to wilder theories—the sea was terrible because unknown—countries beautiful because undiscovered—El Dorados and Fortunate Isles, where summer knew only sunshine;—these haunted the young and ardent dreamer, till the whole atmosphere was filled with their presence, and every page of the gorgeous literature of the period bears witness to their influence. In like manner did the French Revolution break up the frozen surface of society: there were powers shewn in the human mind of which man was before unconscious—terrible deeds wrote their own annals in blood—wild visions of excellence were abroad;—then the storm subsided, and its rest was poetry. The effect was the same, though in the latter instance it was of a moral influence, affecting the mind even more than the imagination; and Byron's clear and bitter insight into the truth of things—and Wordsworth's nature-loving, sympathetic, but we must say more fanciful, philosophy—had alike their origin in that reflux of fearful excitement. The age following ours will, we venture to predict, be a most unpoetical one—simply because nothing happens that arouses us strongly enough to take us out of the succession of hopes, or rather, calculating wishes and petty interests, that make a quiet and prosaic life. The great beginning of poetry is to carry us beyond ourselves. The volume which led to these remarks belongs to that one haunted ring yet left—it has sought for *matériel* in that only

inexhaustible mine, the poet's own heart. The author of Cain has done what our actual time is so fitted for—called upon his feelings to minister to his thoughts; and in depicting the feverish workings of vain imaginings and vainer hopes, he has painted what will come home to so many a bosom. Cain is an extraordinary performance, whether in its deep thoughtfulness or its touches of exquisite beauty. We think its writer shews want of judgment, but more with reference to public taste than to his own productions. His choice of titles and subjects is injudicious, inasmuch as they are already familiar to the public: half the readers, and among them many who would otherwise do full justice to merit that well deserves it, will be deterred by the very name of Cain; and his faulty and rugged versification, in Lord Byron's worst style, will occasion an imputation of imitation, which his genius is too original to justify. But we will let him appeal to our readers, in the belief that their praise will be the echo of our own. The ensuing speech of Ada to Cain is both characteristic and beautiful:

"Even in thy dreams thus ever are thy thoughts!
Beyond our life, and hopes, and simple joys,
Thou hast ever been: that marvel, when thus hast
Forsook thy God? Oh! never wert thou as
One of ourselves; thy heart hath never opened
Its fulness, even to the charm of mutual love,
Sharing our joys and sorrows; or if thou didst
For a moment own them, how hast thou relapsed
To double gloom, as if in mockery of
Thy nature, which could so forget itself
As to be happy! Yet, oh yet, my Cain!
'Tis not too late; let the past be as nothing.
And, oh! believe and prove what thou hast lost.
Feelst thou no joy, no quiet happiness,
No soothing sense of satisfaction in
Loving and being loved? Is there no weight
Removed from the heart in knowing there is one
To share all, bear all with thee? to soothe grief,
Yes, to so soften away its human pain
By a superior love, the cup to temper
With words of consolation and sweet hope.
That even its very bitterness shall seem sweet,
Forgotten in the love that offers it!"

Description of Helel—

"She stands alone in her purity, like that star
Which she doth gaze on, as if her spirit drank
Feeling from its rich urn! A very light,
Veil-like, is floating round her, haloing
From the common aim: she looks as one to whom
All knees should bow, and yet as light and graceful
As the fleece-cloud in heaven. Her eyes are raised
To that deep sky, mysterious as herself,
Watching that shrine, as if she listened for
An answer, or hoped one from it to descend
Bright as herself, or had dreamed of such, which waking
She dared not hope.

"Her lips are parted, and move like rose leaves opening
To the invisible aim. Her hair how lightly
Doth its pale golden wreaths, in tangled
Luxuriance, cluster down that neck, and rest
On her white bosom, where the violet vein
Sheds a dim lustre, down even to her knee,
Veiling yet hiding not the rounded shape
Of those limbs swelling with voluptuous fulness,
And glowing through them as the softened moon
Through the depths of shadowing leaves, where
Beauty dwells,

Revealed at once as on her visible throne,
Which the eye dims with gazing on, and heart
Owns in its faint idolatry!

Speaking of love—

"I was even thus; my heart was its own fountain,
That flowed o'er all around it, till a new
Feeling was opened in the vision I had of thee.
How hath it changed me! Since that hour, content

And quiet are gone; my heart thrilled with a sense
Of pain, yet joy, till then unknown; my eyes
Seemed opened which were shut, and all things robed
In lovelier hues: it was the happiness
Of my own bosom spreading itself o'er all
The visible things on which it could repose.
But an after languor came—a shadow stole
Over me, sweet but sad, unfelt till then;
Vague wishes, which were aimless yet delightful;
Hopes dimly promising some coming joy,
Startling, as half believed! yet sighs and fears
When they were fled! a tumult of flushed feelings,
Ending in vacancy, not rest. By day
I sat on the stream's bank, and, as I plucked
The flowers, and watched them floating down the water,
As vague and baseless as my thoughts, like them
Without a resting-place.

"Oh, no! you cannot share with me
The feelings of a mother! She was not
Part of your being as mine; you never watched
From its first struggling into life the picture
Of her unfolding dower! so helplessly
Lying, so all-unconscious between life
And death, dependent on a mother's love!
You never felt her joy in seeing her own
Lineaments germinating forth, her voice and features,
Nay, actions, imitated, and her smile
Reflected in the light from its raised eyes!
And growing up, you cannot know the fond
And anxious watching of each new development;
The pride in seeing them realised, in feeling
Youth's hopes and fears and innocent joys again,
All—all revived in them! But these are gone;
And left to memory in mockery.
Now she who gave them is no more!"

From the minor poems we extract part of
"the Naiad."

"This is the Naiad's haunt: and, lo! beside
The root of that gray tree, o'er-canopying
With its woven branch the stream, and veiling it
In slumber and in coolness from the sun,
She stands half leaning, eyeing the dark water,
As moveless as the form the sculptor hath
Embossed into life; image of his
Idolatry he hath not seen—not so,
For whoso turns he from the living so coldly?
But that they break in harshly on the dream.
The vision that lived upon his trance eye,
Which he feeds on in solitude, there drooping
Over the unapproved work of his hands.
It is the form of innate beauty in him
That exists everywhere, common as life,
Felt though unseen: we know that it exists
From the consciousness and recognition we
Own when we see aught bear its visible impress,
Though revealed to us all dimly as the light
Of a veiled star. What marvel *he* is baffled—
For how can hand of clay embody aught
Of spiritual feeling chiseled from crude mould?
The limner may pour forth his soul in hues
Life-like, that are deep feelings, and thrill through us
The sense of rapture or of pain; the bard
May rouse the slumbering thought to create grand
forms

On the mind's eye, though fleeting, vague, and shadowy;

But how may cold, carved, colourless, sightless marble,
Give back the life, love, beauty, *soul* of woman?
She stood by the extreme brink of that blue stream:
The image of herself so standing was
Reflected to the lightest hair escaped
From the braid of her redundant tresses, parting
Over her glossy shoulders, tangling down
Her neck and bosom. She looked on the water,
And saw her visible self returned: the same
In hue and stature, and each rounded limb
Swelling with breathing life—and yet a shadow!
The sky looked in behind her, and they were
Alone together! What were then her thoughts?
For her eye is lighted up, and a faint smile
Is on her parting lips; and then a shade
Stole over them, but slight, so slight, as scarce
Perceptible. Perchance she saw and felt
How beautiful she was; that she stood there,
The form all would resemble, the embodied
Being all dream of, sighing to possess.
That consciousness gave light to her dark eye,
And the faint dimpling smile on her soft cheek;
And then, it may be, a shade of sadness, mindful
Of all she had heard of love, yet loving none;
For she had seen none like herself—a leaf

Fell lightly down by her and startled away
The half-formed rising sigh!

She looked around—
But who e'er yet profaned that sanctuary?
She was there as alone as is the star
In the solitudes of heaven! To her hair
She raised her slender fingers, and unloosing
The silk knot, down it fell, even to her knees.
In rich profusion, like the ripened tendrils
Of the purple-glowing vine. Then, bending graceful,
She drew the golden sandal from her foot,
And stepped upon the green moss among flowers,
As pale and assure as their veins!"

We now conclude; and must say, amid the many poetical volumes which fall from the press, "thick as the autumn leaves in Valambrosa," and about as dry and unprofitable, we owe something more than praise, even gratitude, to an author whose work merits such attention and commendation as Cain.

We have a few words to add on the bad taste, to say nothing worse of it, of the unmerited and ungenerous attack upon Southey—a man for whom our feeling of respect is equal to our admiration; to say nothing of a work which would alone ensure his immortality—we allude to his *Colloquies*. We also avow a cordial and true love of his *Curse of Kehama* and his *Thalaba*: this is no place to enter on his poetical merits; but folios though they be, we can hold him scarce a poet who could go through them, as from Dan to Beersheba, and find all barren.

There are many opinions of his contemporaries given by this writer, which it would have done him more honour to have kept to himself;—the caustic abuse of others does not exalt the writer.

Memorials of Charles John, King of Sweden and Norway: illustrative of his Character, of his Relations with the Emperor Napoleon, and of the present State of his Kingdoms. With a Discourse on the Political Character of Sweden. By W. G. Meredith, Esq. A.M. 8vo. pp. 425. London, 1829. H. Colburn.

HAVING visited Stockholm, and received much attention and hospitality there, Mr. Meredith has endeavoured to shew his sense of these obligations by publishing a work, which certainly places Sweden and its monarch in a point of view as favourable as possible. It is, however, chiefly documentary, and we might say contains the seeds of history rather than the tree with its branches and leaves. The gradual decline of Sweden for nearly a century, from 1721, when the Czar Peter obtained more by the peace of Nystad than he "hoped for," till the crisis of our own times, presents a useful lesson to nations. In 1810, Bernadotte was elected to the succession. Mr. Meredith glances over the events of the ensuing war, and then fills up his volume with speeches, addresses, proclamations, and official correspondence; the state of affairs at the close of which is thus summed up—

"The result which was thus brought about, namely, the final abandonment by Sweden of the last of her continental possessions, and the formation of one great peninsular kingdom, by the union of the two Scandinavian nations, had been operating in a variety of revolutions for upwards of a century. This change in the locality of her territories must of necessity be accompanied by a corresponding alteration in the system of her policy, and in the nature of her relations.

Thus free and united, unfettered by a geographical incorporation with the States of the Empire of Germany, absolved from all connexion with that Confederation, the variety of whose interests and the intermixture of whose territories caused perpetual differences, Sweden is not, as formerly, borne by the tide of conti-

mental systems winding round the subjects of political collision. Unembarrassed by the possession of distant points of attack, and free from the glance of ambition, she is secure and concentrated in herself. She may choose her part or stand aloof, she may interfere or persevere in preserving her neutrality with greater ease and dignity. She is not liable to be disturbed by paltry debates concerning the freedom of navigation of rivers, or the lines of military roads intersecting her territories; she does not see her towns garrisoned and her provinces occupied by the friendly forces of an overwhelming neighbour. The outline of her kingdom is no imaginary line drawn through a lake with all its entanglement of islands, or meandering among streams or over mountains. The icy and Northern oceans, the Baltic sea, the Sound, and the Cattegat, guard her boundaries, and alike preclude all idea of aggrandizement on her part, and destroy all thoughts of aggression on the part of others. On the side of Russia alone she has a land frontier; but marked as it is by the course of rivers, and minutely set out in the act of demarcation of 1819, nothing but the most obstinate violation of the law of nations could possibly tempt either party to meditate its transgression. The general security of Sweden is the guarantee for her internal repose. The peasant cultivates his fields without any apprehension that the marching or countermarching of hostile or friendly armies will plunder his stores or trample over his crops. Hence, and from the especial protection accorded by the late and the present monarch to the different branches of agricultural industry, so great a progress has been made, that from being unable to supply herself with corn, as was the case not many years since, Sweden now annually grows sufficient to leave a considerable surplus, after the quantity necessary for the year's consumption has been deducted. In the cities of Sweden, the merchant fears neither siege nor bombardment, nor that legitimate plunder so often levied under the name of contributions on the cities of the continent. And even most of her seaport towns, lying as they do on the banks of arms of the sea, but at a considerable distance from the main, and well protected by fortifications to guard the entrance, are less liable to assault than those harbours which are scarcely a bomb-shot distance from the ocean."

These brief extracts will shew the character of this volume, and we shall only add to them a little of what the author says of the king.

"The time has long arrived that Charles John of Sweden should be extricated from the pen of fugitive pamphleteers and political adventurers. Envy, indeed, will not yet be silent, but her whisper will not reach posterity. In England, we have been too apt to consider this king as one of the mushroom monarchs of Napoleon, fortunate in not being as evanescent as his fungous brethren. We forget that he was the free choice of a free people, and that perhaps no event was more galling in the life of Napoleon, than the election of his ancient brother in arms to the throne of the Vasas. Even those who are unprejudiced, and who pay homage to the talents of the king of Sweden, consider him only as a skillful general and a sly politician. What else he may be, and what are the sentiments of the writer of this notice with regard to him, it is unnecessary to state. We have no wish to interfere in the opinion which the reader may himself form from the following documents, which must command, if not his admiration, at least his attention. In them we may trace the king of

Sweden from the moment he landed on the quay of Helsingbourg, to his very last meeting with the representatives of his people. We shall find him, during the course of his extraordinary career, in all possible situations, and under the influence of all the feelings with which men can sympathise. As a warrior, as a statesman, as a patriot, as a father, as a promoter of science, and as a patron of the arts; in his tent, in his cabinet, invoking an implacable despot, planning the studies of his son—in the hall of agriculture, in the theatres of universities, in the academies of science, he alike fixes our interest. We are surprised to hear one whom we have considered only as a successful soldier, giving utterance to feelings of refined sensibility in language of majestic eloquence."

But while reviewing a work that exhibits so much of the rise and fall of nations, it may not be amiss to take the opportunity of embodying (from sources of foreign origin) a statement which we had prepared touching the aggrandizement of Russia; a contrast between the Muscovite and Ottoman in the olden times. At a period when the operations of Russia attract the whole attention of the political world, it may be instructing—it certainly is curious, to recall the strides towards mighty empire which that power has been making during the last three hundred years.

In the year 1476, Ivan the third, the last Grand Duke of Moscow, succeeded to patrimonial estates of—

	Geog. sq. miles.	Populat.
In 1506, he died, bequeathing....	18,308	6,000,000
1535, died the first Czar, Vasili IV.	24,238	10,000,000
1584, died Ivan IV.	144,040	12,000,000
1598, died Feodor I.	150,414	12,000,000
1645, died Michael Romanoff.	227,933	12,000,000
1676, died Alexis	367,176	15,000,000
1689, succeeded Peter I.	371,371	30,000,000
1725, died Peter the Great	520,379	30,000,000
1740, died the Empress Anne.	325,567	25,000,000
1762, succeeded Catherine II.	335,609	36,000,000
1796, died Catherine.	336,646	36,000,000
1825, died Alexander, bequeathing to his successor, Nicholas I. a territory of 5,679,900 superf. square miles, and a population of 36,000,000 of souls! constituting an addition to the latter (in a short career of conquest, begun and ended within little more than one quarter of a century), of twenty-two millions! We may throw in another two millions at least for the natural increase of the Russian population, conjointly with the forced increase of subjects plucked from the Persian crown, during the three years of modest pretensions posessed by the present autocrat.		

To this plain statement we may add Balbi's recent estimate of the actual state of the Muscovite empire:—

Superficies in square miles	5,912,000
Population	60,000,000
Revenue	14,000,000 <i>rs</i>
National Debt	52,000,000 <i>rs</i>
Army and Navy	1,039,000
Ships of war	120

Though it may not altogether comport with the subject mooted in the foregoing details, it is at least germane to the popular excitement of the present hour, that we should shew how very different is the relation in which Turkey now stands to Russia, to that in which she stood when the Muscovite first sought the honor of her acquaintance. *Tempora mutantur, et illa mutatur cum illis!*

"Anno 1490. The year in which Columbus discovered America was the year during which a species of distant acquaintance began between the Russian and Ottoman. At this time, Ivan the Third employed Girai, the khan of the Crimea, to make the first overtures to Sultan Bajazet, by whom they were met with this laconic remark,—'If the prince of Moscow be thy brother, of course he is mine also!' A short time after came an autograph from Ivan to the sultan, vindicating his friend, Girai, from certain calumnies."

"Anno 1495. In the person of Michael Plettshejef appeared the first Russian ambassador at the court of Constantinople, bearing with him letters of recommendation from the khan of the Crimea. His object was to obtain an assurance that the merchants of Russia should be allowed to follow their commercial avocations in the Ottoman states without let or hindrance. He was instructed not to bend his knees, but to remain standing when he came into the presence of the sultan and his son, Mohammed, and to address himself immediately to the sovereign himself. But he managed to exceed his instructions, and refused to partake of a banquet of ceremony, or to allow the cloak of honour to be thrown over his shoulders. Bajazet, therefore, dismissed him in wrath, and in reply to the letter of credence he had brought with him, complained indignantly of the envoy's rudeness."

"Anno 1499. Alexis Golokvastof was despatched on a second embassy, with a numerous suite of merchants, and letters to Bajazet and his son. He was commissioned to procure increased privileges for the Russian traders, and to declare to the Ottoman sultan, 'that the grand duke was ignorant of the offence laid at Plettshejef's door, but was sensible that many sovereigns sent ambassadors to him.' It was politic on the Muscovite's part to seek favour in the sight of one whose troops were at his door, when devastating the territories of his brother of Poland."

"Anno 1514.—The czar Vassili sent Alexejew, one of his officers, with assurances of amity to Selim the First; and commanded him to say, 'our fathers lived on terms of brotherly unity, what reason is there that we, their sons, should not do likewise?' He was also directed not to throw himself upon the floor, but to keep his hands crossed upon his breast, to deliver the presents entrusted to him, and to ask after the sultan's health; but not unless the latter should have previously made a similar inquiry as to that of the grand duke. This was the Selim, in whose time it grew into a common term of malediction. 'Heaven grant you may be sultan Selim's grand vizier!' Because, says Aali, his historian, Selim's viziers were oftentimes limited to a month's sway, and then delivered over to the executioner; for which reason it was customary for all the viziers appointed during his reign to carry their last wills in their bosoms; and they deemed themselves new-born creatures, whenever they brought away their heads upon their shoulders after they had had an audience of him!"

It may be interesting to our readers to know, that the census of 1828 states the population of St. Petersburg at 422,166; of which 297,445 were males, and 124,721 females.

Elements of Medical Statistics. By F. Bisset Hawkins, M.D., &c. &c. 8vo. pp. 234. London, 1829. Longman and Co.

THE word *statistics*, now so familiarly used by every one, was first employed about the middle of the last century, by a professor of Göttingen, to express a summary view of the physical, moral, and political condition of states. Many important facts relating to this branch of knowledge had been published long before this learned appellation was applied to them; and many valuable essays on the condition (as regards the health) of various countries, cities, towns, and hospitals, have been given to the world, without the authors of these insulated reports dreaming that they were laying up materials for the important science of medical statistics. A mere register of occurrences, however, which

does not tend to establish some general principle, is dull and valueless;—but the writer of this work, thinking that the moment was arrived for arranging these scattered fragments into the rudiments of a system, has compared the documents afforded by different countries and institutions, and drawn from them many curious and important inferences. He speaks modestly enough of his book; and, in a well-written preface, observes, that he shall be amply rewarded "if the present humble essay should form a temporary repository of the most important of the labours of medical practitioners and political philosophers; if it should become one of the early milestones on a road which is comparatively new, rugged as yet, and uninviting to the distant traveller, but which gradually discloses the most interesting prospects, and will at length, if I do not deceive myself by premature anticipation, largely recompense the patient adventurer."

Of the great extent of this subject, and the comprehensive range which Dr. Hawkins has taken in his mode of treating it, the reader may judge by glancing only at the table of contents, which embraces the following matters:—a comparison between the value of life in ancient and modern times—progressive changes and present state of mortality in Great Britain—superior salubrity of Great Britain—medical statistics of countries—of cities—of general hospitals—of lying-in hospitals and of the still-born—of foundling hospitals, and of the diseases of children—of asylums for the insane—mortality of prisons—of the prevalence of suicide in different countries—of the increase and decrease of disease—of climate—influence of various conditions, professions, and modes of life, on longevity—average quantity of disease attendant on particular pursuits—statistics of the sexes—fruitfulness of marriage in various countries, &c. &c.

These are the heads of the different chapters into which his work is divided; but it will be at once seen, from the multifarious subjects which are discussed, that it is only possible for us to give one or two specimens of the manner in which the author treats his science, which he defines, in a few words, to be the application of numbers to illustrate the natural history of man in health and disease. Like a worthy son of Æsculapius, he has a sincere love of his profession; and one of his first observations is, that medical statistics afford the most convincing proofs of the efficacy of medicine; for, says he, Hippocrates has left a frank and explicit statement of the history and fate of forty-two cases of acute disease; among which thirty-seven were cases of continued fever: they were left almost entirely to nature, and no plan of cure was attempted: of the thirty-seven, twenty-one died. Whereas, if we examine the returns of the Fever Hospital of London (in 1825), the total mortality of cases admitted into that institution was less than one in seven. It is even still less than this in the Dublin Fever Hospital, and in the Clinical Wards at Edinburgh.

In chapter 3, which professes to treat of the superior salubrity of Great Britain, proved by a general comparison with other countries, we meet with the following consolatory reflections.

"Since the late peace, the principal governments of Europe have paid much attention to statistics; and we possess very instructive returns from nearly all the countries, cities, and hospitals, on the continent. A comparison of these results enables us to submit a very interesting conclusion, and one which we are not aware to have been as yet generally received;

viz. that the mortality of Great Britain, its cities, and its hospitals, is greatly inferior to that of any other country in Europe; and that it is incontestable, that Great Britain is at present the most healthy country with which we are acquainted, and that it has been gradually tending to that point for the last fifty years. It is remarkable that this superior value of life in Great Britain is not confined to any particular districts or classes of individuals. To whatever point we turn our view, the advantage is still the same: the man of affluence, the pauper-patient of the hospital, the sailor and the soldier on active service, the prisoner of war, the inmate of a jail,—all enjoy better tenure of existence from this country than from any other of which we have been able to consult the records. It has been long the fashion, both abroad and at home, to exhaust every variety of reproach on the climate of our country, and particularly on the atmosphere of London; and yet we shall find, that the most favoured spots in Europe—the places which have long been selected as the resort of invalids, and the fountains of health—are far more fatal to life than even this great metropolis."

The country which approaches the nearest to England in salubrity, is the Pays de Vaud, where the mortality is one in forty-nine; whereas, the annual deaths in England and Wales are only one in sixty. This is gratifying information; nor is the superiority of England and its metropolis visible only in the longevity of its free and opulent inhabitants generally, but even maintains itself among the victims of improvidence and criminal excess, and the unfortunate inmates of prisons. To judge from the details of France, it would appear, that the highest mortality any where known is at the *Dépôt de Mendicité* of St. Denis, at Paris, where the annual deaths are one in three; while, on the other hand, here, in the heart of our metropolis, of 300 prisoners received in the Fleet Prison during the year ending the 9th March, 1828, only four died; which is a mortality of one in seventy-five. Another fact is mentioned by Dr. Hawkins, which is as creditable to the humanity of our government as it is favourable to the salubrity of our climate. At p. 160, we learn—"So great was the care taken of prisoners of war in this country, that in the year 1813 the mortality amongst them was only one in fifty-five—not one half of what occurs to the whole population of Rome—although these persons were labouring under most of the privations which embitter or enfeeble existence."

On the topic of suicide we have also a very pleasing conclusion to draw in respect to England; as, in spite of ancient prejudices and the influence of the notorious month of November, it really turns out, on accurate calculation, that the English are less disposed to suicide than any other people who have attained a similar grade of civilisation.

We have perhaps dwelt too much upon the points immediately relating to ourselves and our own country, to the neglect of those parts of our author's work which treat of the condition of foreign states; these are, however, full of interest.

Climatology—a word, by the by, which sounds strangely in our ears—would fill an entire volume with important statistical facts. Dr. Hawkins divides the earth into four principal climates: first, the warm and dry, as the deserts of Sahara and Arabia;—secondly, the warm and moist—in Bengal, Mesopotamia, and other countries, where an eternal verdure exists, and which are the birth-places of the giants of

the vegetable kingdom, where the reptiles are enormous, the human race is robust, and its generations rapid; but its character approaches the brute; the skin is black, and the temperament phlegmatic;—thirdly, the cold and dry climate nourishes a vigorous, but not luxuriant vegetation; the waters are generally pure, but hard; the animals and men enjoy strength and health; the sanguine temperament and white skin predominate in this climate, which includes the largest portion of Europe and Asia;—fourthly, the cold and moist climate, as in Siberia and the North of Canada. Here the vegetation is reduced to a few stunted shrubs and to creeping mosses; the animals are clothed in a thick fur, under which they pass half the year torpidly; man is large, but feeble and heavy; the copper-red skin, and the melancholic temperament, seem to prevail.

On the subject of population, and the comparative fruitfulness of marriage in various countries—a most interesting topic, which was first introduced to the consideration of political economists by the speculations of Malthus, and has been very lately again brought before the public by the clever book of Mr. Sadler on Ireland,*—the details given by Dr. Hawkins are well worth the most attentive consideration.

But we must conclude this slight sketch of the *Elements of Medical Statistics*, though we cannot do so without begging the reader will not allow the numerous tables which will catch his eye as he carelessly turns over the leaves of the volume to deter him by their uninviting aspect from perusing the text with care and attention. The variety and curious nature of the information he will meet with in the course of his reading will amply repay him for his resolution. The author is evidently a man of great research—has selected his facts and observations from every well-authenticated document to which he could have access, in whatever language published, whether ancient or modern, French, German, Italian, or in his own tongue. It is a book which we hail as a real acquisition to our store of useful knowledge; and, though it has been compiled with considerable labour, from the simple, easy, and unaffected style in which it is written, will be found very agreeable and amusing reading.

The Library of Entertaining Knowledge.
Vol. III. Part I.

THE annexed remarks, for which we could not make room last week, claim selection, as the conclusion of our review of this excellent volume.

“Men circumstanced like Walton, Defoe, and Lillo, are well fitted, it may be remarked, to give new vigour to the literature of a country, by infusing into it something of what we may call the spirit of the living world, when it is waxing feeble under the regimen of recluse students and dealers in mere erudition. Their works are almost sure to bear the stamp of originality in conception and manner, which is in literature the very principle of life and strength. The point from which they look to

their subject is different from that which the mere scholar would naturally select; their subject itself is probably not one which he would have chosen; and, at all events, the conceptions it suggests will amalgamate with different associations, and take altogether a different shape and character. Erudition, that should be but the furniture, is too often made the food, of the mind; which, under such unfit sustenance, is apt to languish and dry away. A man who mixes much with the world is little liable to have his powers of thinking thus destroyed by being crushed under the worn and cast-off thoughts of his predecessors; for his mind cannot fail to be kept awake by the stir of the living world about him, which will act upon it like a healthy breeze, blowing away all dust and rubbish, and keeping its faculties in their proper tone. But if, in addition to this salutary intercourse, a man of true genius shall have been further exposed to the necessity of acquiring his knowledge of literature principally by his own efforts, and of working out his own way to that mastery over his thoughts and expressions which constitutes the power of writing, it is probable that, whatever may be his deficiencies in other respects (which, if they were ever so many, the possession of true genius will go far to cover), his productions will have the advantage, in respect of originality, over those of an equally gifted but more regularly educated mind. In the very style of the writers we have mentioned, especially of the two first, there is a charm of nature, which we generally look for in vain among the compositions of more learned wits. In Defoe's political works, too, there is often all the vigour and dexterity of a most consummate rhetoric, rendered only more effective by many a racy idiom which would probably have been rejected by a mere rhetorician of the schools. Lillo's tragedies, again, full of power and pathos, are unlike any thing else in the dramatic literature, either of our own or any other country. It seems as if we could tell almost by the perusal of them that their author must have been in business—that he was a regularly bred tradesman, as well as a self-taught poet. The humblest and the highest walks of life are both favourite regions of poetry; Lillo is the only poet of middle life. His personages are merely the ordinary men and women we meet with every day,—neither heroes and emperors, nor beggars and banditti; and his scenes are mostly in streets, or on country roads, by daylight, and at evening in domestic parlours. Yet even to common life he has communicated not a little of the excitement of poetry. This is true originality; one of the feats of genius, to which nothing is impossible.”

Though not new, the subjoined story is not so generally known as to divest it of any of its interest.

“The celebrated Bernard Palissy, to whom France was indebted, in the sixteenth century, for the introduction of the manufacture of enamelled pottery, had his attention first attracted to the art, his improvements in which form to this time the glory of his name among his countrymen, by having one day seen by chance a beautiful enamelled cup, which had been brought from Italy. He was then struggling to support his family by his attempts in the art of painting, in which he was self-taught; and it immediately occurred to him that, if he could discover the secret of making these cups, his toils and difficulties would be at an end. From that moment his whole thoughts were directed to this object; and in one of his works

he has himself given us such an account of the unconquerable zeal with which he prosecuted his experiments, as it is impossible to read without the deepest interest. For some time he had little or nothing to expend upon the pursuit which he had so much at heart; but at last he happened to receive a considerable sum of money for a work which he had finished, and this enabled him to commence his researches. He spent the whole of his money, however, without meeting with any success; and he was now poorer than ever. Yet it was in vain that his wife and his friends besought him to relinquish what they deemed his chimerical and ruinous project. He borrowed more money, with which he repeated his experiments; and, when he had no more fuel wherewith to feed his furnaces, he cut down his chairs and tables for that purpose. Still his success was inconceivable. He was now actually obliged to give a person, who had assisted him, part of his clothes by way of remuneration, having nothing else left; and, with his wife and children starving before his eyes, and by their appearance silently reproaching him as the cause of their sufferings, he was at heart miserable enough. But he neither despaired, nor suffered his friends to know what he felt; preserving, in the midst of all his misery, a gay demeanour, and losing no opportunity of renewing his pursuit of the object which he all the while felt confident he should one day accomplish. And at last, after sixteen years of persevering exertion, his efforts were crowned with complete success, and his fortune was made. Palissy was, in all respects, one of the most extraordinary men of his time; in his moral character displaying a high-mindedness and commanding energy altogether in harmony with the reach and originality of conception by which his understanding was distinguished. Although a Protestant, he had escaped, through the royal favour, from the massacre of St. Bartholomew; but, having been soon after shut up in the Bastille, he was visited in his prison by the king, who told him, that if he did not comply with the established religion, he should be forced, however unwillingly, to leave him in the hands of his enemies. ‘Forced!’ replied Palissy. ‘This is not to speak like a king; but they who force you cannot force me—I can die!’ He never regained his liberty, but ended his life in the Bastille, in the nineteenth year of his age.”

With this we finish our extracts from a little work of which we cannot express too good an opinion: though few, they will speak to its character. Among the persons instanced, we observe Ibbotson, the English Berghem—Chantrey, and Canova; and we merely allude to them for the sake of mentioning, that several years ago we collected some materials for a biography of the first, which the pressure of other matters prevented us from arranging and publishing in our *Gazette*;—and adding from a foreign author a brief paragraph respecting the two latter, which, had it been known to the intelligent editor, might fairly have been incorporated in this Part of the Library of Entertaining Knowledge.

“Accident is a necessary ingredient in the determination of man's destiny. Chantrey's mother had designed him for the legal profession, and with that view sent him to a school at Sheffield. It chanced, however, that on his way to it his attention was attracted by the figures set up in the window of one Ramsey, a carver and gilder. This circumstance determined the character of the youth's future pursuits; and the mind which might have bewil-

* In reference to Mr. Sadler, Dr. Hawkins observes, that that gentleman appears to have been anticipated by Muret, so long ago as 1766, who entertained the same opinions; viz. that the fecundity of human beings is, *ceteris paribus*, in the inverse ratio of the condensation of their numbers. Muret, in the *Mém. Soc. Economique de Bernes*, expresses his astonishment at finding that the proportion of births in the Pays de Vaud was much less than in other countries, although the duration of life was greater; and came to the conclusion, that healthy countries, having less fecundity, will not overpeople themselves; and that the unhealthy countries, by their extraordinary fecundity, will be able to sustain their population. Mr. Sadler's ingenious speculations seem, therefore, not to be entirely original.

dered itself among the subtleties of Justinian and Coke, was directed by Ramsay in the track of its natural powers and impulse.—An accident was equally subservient to the determination of Canova's career. His native village of Possagno was a feudal appendage of the Falleri family. At a banquet given by the elder member of that family, when Canova had scarcely attained his twelfth year, he modelled the figure of a lion in butter with a spirit and fidelity which excited general admiration; and the humble rustic modeller was immediately adopted as a *protégé* of the Fallerii, and sent to acquire the mechanical principles of the plastic art under the tuition of a sculptor at Bassano. The earliest successful effort of his chisel was an Eurydice in white marble, which he produced in his seventeenth year. We have seen that his first attempt was a lion; the same animal, wrought for the great monument which records the consummation of Swiss independence, was the closing achievement of his chaste and splendid genius. *Tantopere caco casu efficitur.*"

Sir James Turner's Memoirs.

[Second Paper—conclusion.]

HAVING seen our author safely delivered from imprisonment at Hull in 1649, we shall briefly accompany him abroad, where many plans were agitated, by the numerous emigrants of that period, for the restoration of King Charles. Here we learn that want of money prevented him from joining in the expedition of Montrose, 1650, respecting which gallant leader, and other affairs of the time, however, he says: "I went by land to Holland, accompanied with Colonel Sibbald, who carried letters from Montrose both to Scotland and Ireland. From Rotterdam I wrote with him to my wife at Edinburgh, to furnish him with a considerable piece of money (for he was not well stored), which she did; and he had his head chopped off not long after at the Croose of Edinburgh; so I lost both my friend and my money. My wife, in a stormie and tempestuous winter, gave me a visite in Holland; and having furnished me with what I most stood in need of, returned with much trouble and danger to Scotland. I passed the rest of the winter in visitinge the best places in Holland; and in March of the year 1650, went to Breda to attend the treatie betuene the King and his Scottish subjects; the issue wherof was a gracious condescendence of his majestie to all or most of their demands; and with them he went to Scotland, accompanied with severall lords, who after his arrivall were removed from him, and himselfe so used as I wish posteritie may never know."

In 1651 he adds: "I went privatlie to Fife, where I had the comfort to meet with my deare wife, who, having put her best things in the Castle of Edinburgh, and left the rest to their hazard, came and livd with me that winter at Disart. About this time, the monstrous Remonstrance was hatchd; and if Lambert had not, by good fortune to us all, beaten Colonel Ker at Hammliton, I beleve the king had bene just as safe at St. Jonston as his father was at Westminster. The desperate condition of affaires movd some of the best-naturd of the Presbyterian cleargie to thinke of some meane, to bring as many hands to fight against the publike enemie as was possible; and therfor, notwithstanding all their acts of assemblies and commissions of the kirk to the contrary, they declared all capable of charge in state or malitia, who would satisfie the church, by a publike acknowledgment of their repentance for their accession to that sinfull and unlawfull engad-

ment. The king commanded all who had a mind to serve him, to follow the churches direction in this point. Heerupon Duke Hamilton, the Earles of Craufurd and Lauderdale, with many others, were admitted to court, and numbers of officers reassav and put in charge, and entrusted with new levies. My guilt in affronting the ministrie (as they call'd it), in the person of Mr. Dick at Glasgow, and my other command in the west, retarded my admission very long; but at length I am absolved, and made adjutant-general of the foot; and after the misfortunate rencounter at Innerkeithen, had once more Lieutenant-General Holburns regiment given me by his majesties command. Behold a fearfull sinne! The ministers of the Gospell reassav all our repentances as unfained, thogh they knew well enough they were but counterfeit; and we, on the other hand, made no scruple to declare that engadgment to be unlawfull and sinfull, deceitfullie speakeing against the dictates of our owne consciences and judgments. If this was not to mocke the all-knoweing and all-seeing God to his face, then I declare myselfe not to know what a fearfull sinne hypocrisie is. The defeate of that part of the armie at Innerkeithen, Cromwells march with most of his forces to St. Jonston, whereby he cut all succour of men and meate from the North, obliged the king, with the advice of the committee of estates, to lay present hold on occasion to leave the rebell behind him, and march with his whole armie from Stirline into England. The horse and dragoons might be about foure thousand; and the foot, as I reckoned them that day we marched from Stirline Park, were upwards of nine thousand. A traine of artillerie of some field peeces and leather canon we had, with suteable amunition, under the conduct of Sir James Wemis, generall of the artillerie. We got quicklie to English ground, but with a great deale of mischief to all these poore Scotch people by whose dwellings we marchd, robbing and plundering being used by the sojors, even to admiration and inhumanitie. Neere to Carlile, the king is proclaimed king of England and Ireland, with the great acclamations of the armie; and severe commands made against all other robberies, plunderings, and exactions; which being put in execution by hanging two or three, were well enough observed, and very good order and discipline keepd the whole march. I will not amuse myselfe to relate all the particulars, circumstances, or miscarriages of this unfortunate expedition, my intention being to speake of what befell myselfe till this present year of God. In that armie I was colonell of foot, and adjutant-general; and with no better fortune then I had when I exered these charges in the year 1648."

At the ensuing defeat of Worcester, Sir James was taken, but contrived to escape at Oxford, and came to London (whither his companions were marched prisoners) in disguise. His proceedings are very characteristic of these strange and eventful days.

"The search, which was not very strict, being over, and the prisoners with their guards prettie well advanced towards London, I creepd out of my retreat, and in a very pitiefull disguise, accompanied with half-a-dozen of watermen (who had all served the late king as sojors), tooke my journey straight to London. The first day I walkd a-foot to Morley, which was twentie miles from Oxford; but my feet were so spoiled with the clouted shooes which I wore, and myself so wearie, that my companions were forced to carry me almost the last

two miles. Lustie, strong, and loyall fellows they were, but extreame debauchd. They misd not one ale-house in the way; and my paying for all the ale and beere they dranke (for I thanke God they wold drinke no wine) did not at all trouble me; but it was a vexation to me to drinke cup for cup with them, els they could have had no good opinion of me, and to them I was necessitated to reveale myselfe, my honnest barger goeing before us all the way a horsebacke, and so serving us for a scout. At Morley I hird ane old carkasse of a horse from a knaveish old fellow, who made himselfe exceeding merrie with me, jeering me verie broadlie; and indeed I was in so wofull a plight that I was ridiculous enough, neither could any man have conceavd that ever I had bene ane officer in any armie of the world. On horseback I came from Bramford, threeteene miles from Morley, and seven from London, and rode thorough at leaste two hundreth red coates that had convoyd my countrymen to Titfield; but was well seconded in passing them by my trustie comrades the watermen. At Bramford I tooke oares, and in the night time landed at Westminster staires, which I had never seene; for I came in ane evil houre to London, where I had never bene before. I was lodgd that night with ane honest Welchman, to whom my barger reveal'd what I was, that he might make me knoune to some of the royall partie, for I had no acquaintances in that great citie. After I had reposed myselfe two days, wherof I stood in great need, some clothes, linnens, and a little money, were sent me by three honnest men, and brought to me by my hoste. The clothes I accepted, but refusd the money; and next night I was brought by water to the citie, to the three gentlemen who had sent me so sure tokens of their kindnes, and whom I had never seene all my life before. Three loyall persons they were, who, after they had made themselvs knoune to me, they desired a particular rehearseall of the king's misfortunate expedition, and his losse at Worcester; which they heard with as grievd hearts as I related it. They thought it fit to lodge me in a publike inne within the citie, and entrusted me to the care of the drawer, who was both ane honnest and ane understanding fellow. That house I changd, and so did I many others, till I lighted on the house of ane honest widow, who had no creature in the house with her bot her owne daughter; and there indeed I was as secure as if I had bene in my mother's house. Severall appointments were made betuene my three noble friends and me, and all punctualie keepd. Their kindnes I can never forget, unles I intend to accuse myselfe of the highest ingratitude. They entrusted me with a message to the king, wherin his majestie was neerlie concernd, which I faithfullie delivered to him at Paris."

Returning from Scotland in 1664, Sir James staid a month at Bruges, as he tells us, "Partlie to see my old acquaintances, whom I knew not when I could see againe; partlie to cure myself of a disease which is epidemicall almost in the place from whence I brought it, the Hielands; I meane the ich or scab, the hote bathes of that citie being excellent for it."

What will our northern friends say to this picture of their country? It is very different now, but then we do not wonder at the sequel of the sentence just quoted, where the patient relates, "I got his majesties passe to goe to Bremen, bot not to leave his service. Having kisd his and the princesse royalls hands, and taken my leave at court, I left Aken the very same day."

His majesty and the princess were quite right to have the cure of the baths of Bruges perfected before the ceremony of kissing of hands took place!

Till near the era of the restoration, Sir James served in the Danish army; and after that event, it was not till 1662 that he was employed in a military charge; which brings us to the third part of these Memoirs. And this portion will, in our judgment, be found the most interesting to Scots, and, probably, to English readers; for it contains a full narration of the short insurrection of the Covenanters in 1666, and of those previous oppressive proceedings of the writer in the west of Scotland, which seem, in spite of his glosses, in a great measure to have provoked that rising. These he attempts to extenuate and justify; but with indifferent success, since the result was, that a committee of inquiry into his conduct, even by the council whom he served, led to his being deprived of his commissions and disgraced. Having, as we have noticed, by fining, cessing, quartering soldiers, &c. &c., during several expeditions in support of episcopacy against presbyterianism, excited a spirit of resistance among the Covenanters, they rebelled; and one of their first acts was to make their persecutor prisoner. In this condition, and in hourly fear of death, he was marched about by them in all their movements, for the fortnight of their continuance; and of which his accounts are extremely curious. We regret that we can only select a few examples.

"Towards the evening, Mr. Robbison and Mr. Cruikshank gave me a visite; I calld for some ale, purposlie to heare one of them blesse it. It fell Mr. Robbison to seeke the blessing, who said one of the most bombastick graces that ever I heard in my life. He summond God Allmightie very imperioussly to be their secondarie (for that was his language); 'and if,' said he, 'thou wilt not be our secondarie, we will not fight for thee at all—for it is not our cause, bot thy cause; and if thou wilt not fight for our cause and thy oun cause, we are not obligd to fight for it. They say,' said he, 'that dukes, earls, and lords, are comeing with the kings generall against us; bot they shall be nothing bot a threshing to us.' This grace did more fullie satisfie me of the follie and injustice of their cause, then the ale did quench my thirst. That night they sent severall parties abroad, who brought many horses to them. Oune partie they sent to the toune of Aire, which brought out of the tolbooth all these armes, which E. Glencairne and I had taken from the countrey people the yeare before.

"I was taken into a contrey house under pretence to refresh; but it was, that I could not looke upon their armie (for so they were pleasd to call it), till they had marshald it rightlie. At length I was mounted and led along the reare of both horse and foot; and thereafter I was brought to the front of the battell, where I did not let the opportunitie slip to reckon them. I found their horse did consist of foure hundreth and fortie, and the foot of five hundreth and upwards, besides the partie of horse which was at Lanrick, and some other small parties which they had sent abroad to plunder horses;—a Sundayes exercise, proper onlie for phanaticks. The horse men were armed for most part with suord and pistoll, some onlie with suords. The foot, with musket, pike, sith, forke, and suord; and some with staves, great and long. There I saw tuo of their troopes skirmish against other

tuo (for in foure troopes their cavallerie was divided), which I confesse they did handsomlie, to my great admiration. I wonderd at the agilitie of both horse and rider, and to see them keepe troope so well, and how they had comd to that perfection in so short a time."

"That night a councill or committee was keepd, where it was concluded, that nixt morning, the Covenant should be renewd and suorne. And the question was, whether immediatlie after they should put me to death; they who were for it pretended ane article of the Covenant obligd them to bring all malignants to condigne punishment. Bot it was resolvd that I should not dy so soone, bot endeavors should be used to gaine me. All this was told me by one of my intelligencers before tuo of the clocke nixt morning. Yet I have heard since, that it was formallie put to the vote, whether I should die presentlie or be delayed, and that delay was carried in the councill by one vote onlie. Let now all people of impartiall judgments determine whether this armie of pretended saints spent this Lords day as Christians ought to do; and these who make Sabbath breakeing a crying sinne, how will they excuse this crue of rebellious hipocrites, who began that dayes worke in the morning with stealing a silver spoone and a night gounce at Douglas, and spent the rest of the day most of them in exercising in a militarie way, and the rest in plundering houses and horses, and did not bestow one hour or minute of it in the Lordes service, either in prayers, praises, or preaching? Bot they made a good amends at night, for omitting the duties of the day, by passing one act for renewing the Covenant, and ane other for murthering me whenever they could think it fitting. This I shall say, they were not to learne to plunder, and that I have not seen lesse of divine worship any where, than I saw in that army of theirs; for though at their rendezvous and halts they had opportunitie enough everie day for it, yet did I never heare any of their ministers (and as themselves told me, there was not so few as tuo and threttie of them, wherof onlie five or sixe conversed with me) either pray, preach, or sing psalmes; neither could I learne that it was ever practisid publikkie, except once by Mr. Robbison at Corsfairne, ane other time by Mr. Welch at Damellinton, and now the third time by Mr. Semple at Lanrick, where the lauffull pastor was forced to resigne his pulpit to him; what they did in severall quarters I know not, perhaps they had some familie exercise there. I am sure in my quarters my guards neither prayd nor praised, for any thing I ever heard; and being for most part in one room together, it is to be supposed I must have bene a witness to their devotions. Bot I confesse I was more overwearied with the tediousnes and impertinencies of their graces before and after meate, than I was either with the scarsnes or badnes of my meate and drinke. It was now Monday morning, the tuintie sixth of the month, when one of their ministers did reade the Covenant on the top of the staires of the tolbooth, which was suorne by all the assistants. Bot neither I nor any of my guards were invited to that morning exercise."

At last, when "the saints" were routed by the king's forces, Sir James says—

"When I saw the encounter would be inevitable, and that my guards were doubtful of the event, I thought it hie time to propone that to them which I had long premeditated, and which none of them could at that nick of time reveale without their oun danger. 'My

friends,' said I, bruskkie, 'the day will be either yours or ours. If yours, I am still your prisoner; and I beleeve I shall not be long troubled with you after your victorie. If the day proves ours, your lives and mine are in equal danger. If, then, the kings forces gaine the victorie, defend you me from the violence of your partie in the flight, and I shall assure you of your lives.' To this proposition the eight who were with me (for the other eight had left me to my fortune) readilie assented. 'Then,' said I, 'put your suords in your left hands, and hold up your right hands to heaven, and let both you and me sueare the performance of our mutuell promises.' This was presentlie done. 'And who will now say,' said I, 'that I am not a Covenanter?' Not long after this we might heare Mr. Welch and Mr. Semple cry out very loudlie and very often, 'The God of Jacob, the God of Jacob,' without adding any more. This was because they saw our commanded men give some ground: my very latlie suorne guards echoed the same words—'The God of Jacob, the God of Jacob.' I askd them what they meant. They answered, Could I not see the Lord of Hostes fighting for them? I told them then very passionatlie, that they understood not their oun condition; for they might see that party which they thought was beaten rally and stand. They could not bot see the whole bodie of our foot, and left wing of our horse, advance with much courage and in very good order, with trumpets sounding and drums beating. 'And in one word,' said I, 'if your partie doe not reele, runne, and fly, within one quarter of ane houre, then I shall be contented you pistoll me.' It fell out so, that though the rebels, for their number, fought desperatlie enough, yet it pleased the Lord that they were beaten, and their horse fled apace. Whill I thought to make use of this opportunitie, came Canon of Mondroget, bleeding very fast—for wounded he was. He had professd kindness to me formerlie for some curties I had done to some neere friends of his; bot he told me then, that I must goe with him. I answered, that I was so pitifullie ill mounted that I could not ride up with him; besidea, he knew I had no spurrs allowd me, wherby I might helpe my nagge to run. Bot he replyd, it was probable some of their officers might be made prisoners, and that I might helpe by exchange to relieve them; therfor forward I must goe, for he neither could or would leave me behind him, and tooke God to witness it was much against his will. I told him, that since sure it was he could not get me forward with him as I was mounted, and his partie being routed, and himselfe wounded, it wold be no advantage to him to kill a person who had never done him any injury, whatever other crimes were layd to his charge; and with that I lookd over my shoulder (for my guards still forcd me to ride after him), and saw our horse pursuinge eagerlie enough, and were not farre from us. Then I calld to Mondroget, and advisd him to look about and see who was pursuing him, telling him it was now more time to save his oun life, than to seek after ane other mans. This advice he followd by galloping away. Foure more of my guards had left me out of feare; the other foure were soone persuaded to turne with me. I then commanded a drummer of mine, who had waited constantlie upon me, to tell any officer he met with that I was there. He rencounterd with Alexander Cockburne, a servant of my Lord Duke Hammiltoun, who was well armd and mounted. He came to me with

much kindness, and gave me and my prisoners (for such were now my guards) the word and the signe, and conducted me to my lord duke. His grace was pleased to ressave me with much civillite and favour, and entertained me with expressions of so much kindness, as I doe really acknowledge not to have deserved. He gave order likewise that my prisoners should be kindly used, till next day they were delivered to the foot guards: and not long after, upon my humble supplication, had their lives and liberties granted them."

He was, however, as we have stated, called to account for his transactions in the west, and dismissed the king's service; the details of which (with an appendix of correspondence, &c., including letters from the Duke and Duchess of Hamilton, Lord Arran, Lord Ross, Gilbert Burnet, &c. &c.) conclude the volume. Into these we have not room to enter, and can only give our opinion, that the author's "misfortunes" were justly merited by his want of all principles but those of the Dalgetty school. He was, in a word, a soldier for any body's pay; and, so that he gained, cared for no sufferings on any side. His book is a singular record of this, and a striking picture of the bad age in which he flourished.

Some Account of Edward Ruppel, and his Travels in Northern Africa.

WE left the traveller [see our No. 645; and we regret having deferred the continuation of the paper so long,] on the eve of starting from Alexandria to make his way up the Nile. In a letter dated from Cairo in October 1822, he says, among other things, "I am determined to pass two whole years in the negro states of Kordofan, Deir, and Darfour. . . . M. Hey and myself will be obliged to mount guard alternately during the night, for the protection of our property and lives, especially in the desert. Conceive, therefore, what our situation would be, were one of us to fall sick in such a region. God's holy will be done; we want neither courage nor zeal. If I return, I shall enjoy the consciousness of having promoted the cause of science by success in a difficult undertaking; and this will entitle me to distinction among my fellow-countrymen."

In December he reached Nubia, where he encamped at Sakot, which, the very day after his departure, was attacked by the rebel Arabs, who put the garrison, including Ismael Pasha, the son of the viceroy of Egypt, to the sword. After this miraculous escape, the travellers were detained two months in Dongola by the troubled state of the country: a detention which was somewhat counterbalanced by the cordial reception they received from Abdim-bey, the sovereign of that country. On the 17th April, they set out for the country of Korti, where M. Hey made an excursion into its mountainous desert, killed and prepared several ostriches, and six gazelles, all of them nearly as large as the horse; among the latter was the *antelope leucorix*, an animal valuable from its rarity. In this expedition he obtained the first specimen of the *canis pictus*, (hyena picta of Temminck), as well as an immense species of land-tortoise, the *testudo Schapfi* of the Frankfort museum:—whilst Ruppel, on his part, was busied at Ambukol, in adding to his collections in natural history. Hence they returned to Dongola on the approach of the rainy season; and M. Hey being constrained to keep his bed in consequence of excessive fatigue, was lodged under Abdim-bey's roof, where Ruppel left him on his return to Cairo. "The bey," says he, (his own

camels being invalided), "had given me fourteen of those animals, and I set out towards the end of July. I was scarcely half-way from Wadi-Halfa, when I was alarmed by intelligence that the Bisharie Arabs had shewn themselves on the western bank of the Nile, within a day's march of us in a northerly direction, had plundered a vessel and several dwellings, and put some men to death. I instantly determined on continuing my route by forced marches through the desert, so as to keep at a good distance from that stream. We at first travelled three and twenty hours a day uninterrupted; and then, giving four short hours' rest to man and beast, continued our march at the rate of twenty. It was our good fortune to escape the danger; but you will readily imagine not only what I must have endured, particularly from our forced marches in the night, but how much our cargo must have been injured; none of it indeed so much as the skeletons, which were protected by mats only. Fossils were not the least attractive objects of my attention during the journey: among others, I found, under the nineteenth degree of northern latitude, a considerable number of hippopotamus' bones in a petrified state. When I meet with an occasion to despatch them, I shall accompany them by elucidatory remarks."

Such were the results of Ruppel's first journey into Nubia. Ten years back, an expedition from Cairo to Dongola would have been accounted a prodigy in the annals of voyages and discoveries; yet here we see our friend not only making his hazardous way to that clime, but returning, for the sole purpose of forwarding the curiosities he had amassed to his native country. He had no sooner effected this object, than he set about the prosecution of his ulterior projects, and returned to Dongola, whence he writes, in November 1823, on the eve of his departure for Schendi and Kordofan: "I am obliged to carry eatables with me for the whole journey; for every one of the ancient fields has been converted into deserts by the exterminating scourge of a war which has lasted three years. Besides Hey and myself, our caravan consists of a European chasseur, whom I engaged at Cairo, two slaves, four Arabian domestics and our guide; making a total of ten persons." But his intention to explore the slenderly-known oasis of Kordofan, and to penetrate eastwards as near as possible to Timbuctoo, was nipped in the bud by the revolt of the people of Deir, Darfour, and Sennaar, and the nomadic tribes of Méran and Kordofan, against their Egyptian task-masters. His next letter, dated from the camp near Kurgos, on the 29th December, gives a horrible picture of the summary vengeance inflicted by the viceroy's son-in-law, Mehmed-bey, and his 20,000 myrmidons. "This barbarous wretch has strained every nerve to execute his instructions in their bloodiest acceptance. More than fifty thousand individuals had been already massacred by his troops; and he had been employed twelve months in over-running the provinces, one after another, putting the males to death, and carrying the women and children into slavery. Those who make their escape, fly to the deserts and mountains for refuge; but even there he treads upon their heels, and no long time back a vast number of them were obliged to surrender at discretion; there was no food at hand for such a multitude, and two thousand of these unfortunate captives died of starvation within the next three days! The stupor of despair darkens over the whole of these countries; vengeance broods upon every brow, and mutual

extermination is the one only thought which occupies men's minds. . . . All communications by land are interrupted, and there is scarcely safety even for a body of fifty horsemen. . . . I consider it impossible to prosecute my route with my camels; nor can I travel a distance of two leagues from the camp without exposing myself to imminent danger." Under these sinister circumstances, he hired the bark of the reis-baschi, and despatched his companion, M. Hey, with the chasseur and two servants, on a voyage of discovery up the Bahar-Abbiad to the territory of the Schilluks and Funges; whilst he remained among the Turks, with his camels and various collections (amongst which were nearly 350 birds, inclusive of those *en dépôt* at Dongola), in the hope of following his comrade, whenever Mehmed-bey should be bribed into granting him a vessel. Surrounded by dangers, at which the stoutest heart would have been justified in recoiling, the love of country still burns bright within his breast, amidst every toil, and peril, and anxiety! "Do not be alarmed," says he, when concluding the letter before us, "for the safety of these objects (two large cases of specimens of natural history), for though it might be Hey's fate and mine to perish under this sky, we have taken such mature precautions, that I trust our collections would not fail of reaching their destination in safety."

His next letter, from the camp of Kurgos, is of the 14th of February, 1824, and gives an account of some highly interesting ruins in its vicinity. "Crossing from the western to the eastern bank of the Nile, and directing your course towards the desert, under the parallel of the village of Guskab, you travel fifty-seven miles across a long valley of fluvial deposit, covered with bushes and high plants; and in several places observe the remains of ancient canals, which are at this moment filled up, and run parallel with the river: hence it is obvious that these regions were highly cultivated in former times. At the extremity of the valley, where the desert commences, is a village lately tenanted by the Juhelin Arabs, but now abandoned. A ten minutes' excursion* into this waste of yellow sands brings you to a considerable aggregation of bricks and wrought stone. The site of time has levelled every thing to the ground, and what remains is buried beneath the shifting sand. I experienced great difficulty in finding some shafts of pillars, two feet and a half in diameter: their capitals were adorned with heads of Isis. These probably belonged to some large temple. At ten minutes' distance east of these ruins, a series of mansoles, pyramidal in form, rise out of the sandy waste: I counted thirteen of them, all of hewn stone, and nearly thirty feet in height: they are built stepwise, the edges of smooth stones (*pierres lisses*), and the tops absconded; but I could not discover any entrance into them. There was a mutilated lion's head, of granite, lying close to them. At thirty minutes' distance, still further eastwards, we found a much larger number of tombs,—as many as one-and-twenty, built without any regular order, and ranging from north to south along the side of a sand-hill; some are shaped like pyramids, with indented edges; others have acute angles, and plain edges; but all of them possess flat terminations. The most southerly of these monuments was of a distinct style of architecture; the base consisting of a quadrangle of masonry, each side of which is

* Our traveller speaks, we conceive, of geographical minutes or miles, whereof sixty constitute a degree.

twenty feet long, and six feet high; and over it, two rows of projecting stone sustain a prismatic column, fifteen feet in height. This mausoleum has, like its neighbours, an entrance, which serves for a porch, similar to that which characterises the tombs of Méroé. The entire circuit of the walls is embellished with figures of tasty workmanship; the bas-reliefs resemble those of Méroé, though more perfect, and are emblematical of the apotheosis of some deceased personage. There is one amongst these pyramids, which, as is the case at Méroé, stands distinguished from every other by the peculiarity of its entrance, whilst its roof is composed of stones, rounded off into a vault: it is the fifth in succession as you approach from the north, and is easily recognised by means of the bas-reliefs which cover its façade. A female, brandishing a lance as if preparing for an attack, is represented on either side of the entrance. The drapery and attitude are so entirely to the life, and the workmanship is so fine and highly finished, that I have seen nothing either in all Egypt, or in Nubia, to compare with it. Both are almost equal to the finest ages of Grecian sculpture; the temple of Tentyris itself in this respect must rank below them; and the figures possess none of that hardness which offends the eye at first sight in the groups of Briareus existing in that edifice. In spite of common opinion, I cannot help thinking that the bulk of these remains are of much later date than those of Méroé. This conjecture is partly derived from their excellent state of preservation, though their exposure to more frequent rains, and an intenser heat, arising from the more southerly latitude of their site, ought in the common course of things to have occasioned their speedier decay. May they not be referred to the same period as the inscriptions and obelisks of Axum? In those times the intercourse between Alexandria and these southern regions was brisk, and of frequent occurrence. There is a third group of tombs, five minutes to the south-east of the preceding: it contains nine pyramids, all of them having sharp angles, and their summits being composed of smooth stones. The entrances invariably face the east, and are adorned by sculptures. The two groups, of which I have just been speaking, have this peculiarity about them, that the bas-reliefs are confined to representations of female apotheoses; whereas the remainder portray heroes in the act of receiving offerings. The more southerly of the mausolea are the smallest; even the tallest among them do not exceed forty feet in height: but of the one-and-twenty pyramids which precede them, some are at least ninety feet high. The whole of these monuments are of hewn stone, laid without cement."

[To be concluded in our next.]

SIGHTS OF BOOKS.

Annals and Antiquities of Rajasthan, or the Central and Western Rajpoot States of India. By Lieut.-Colonel James Tod, late Political Agent to the Western Rajpoot States. 4to. London, 1829. Smith, Elder, and Co.; and Calkin and Budd.

WITH the various excellencies of this splendid work we must find another opportunity of making our readers acquainted more particularly than can be done under present circumstances; for we should think it equally unjust towards the public and the accomplished author, were a publication of such magnitude, merit, and importance, to be noticed in a hasty and superficial manner. We

can state, however, that the eight hundred large quarto pages of this very handsome volume, and the numerous beautiful plates which embellish it (executed by those eminent artists, Finden, the two Storers, Haghe, &c.), constitute an ample stock of curious, entertaining, and authentic information, respecting countries and races of people highly interesting, yet hitherto almost wholly unknown to Europeans.

Assisting Questions on English Grammar, with Answers; comprising Explanations of Etymology and the Principal Rules of Syntax. By Mary Ann Tuckey. London, 1829. Boosey and Sons.

WE notice this as one of the many useful little school-book novelties with which the midsummer season teems. Our table is laden with such, and it is a distinction to mention an individual example; but we do not mean to do so at the expense of the rest: we will take them in turn as fast as we can.

An Introduction to Systematical and Physiological Botany. By J. Castles, F.L.S. 12mo. pp. 285. London, 1829. Cox; Baldwin and Cradock; Underwood.

A WELL-ARRANGED as well as useful volume for those who wish to make themselves familiar with the pleasant pursuits of botany. The engraved illustrations are numerous, and sufficient for the purposes of reference: there is also a good index.

Transactions of the Medico-Botanical Society of London. Part I. Vol. I. London, 1829. Wilson.

WE have to notice this as the first publication of a Society of whose proceedings we have given many Reports. It is a selection, in 8vo., of the papers read at the meetings, and is adorned with well-executed engravings.

The Olio; or, Museum of Entertainment. Vol. III. From January to July. 8vo. pp. 460. London, 1829. Shackell.

WE noticed this publication on the appearance of its second volume, as one of those cheap weekly productions which characterised the wholesome improvement of the periodical press, in which entertaining and useful reading had nearly superseded the pernicious stuff that prevailed some years ago. These now spread general pleasure and instruction, instead of political danger, immorality, and irreligion; and it is the bounden duty of high and low to afford them every encouragement. The Olio, consisting of selections and some clever original papers, is indeed a very agreeable miscellany.

An Explanatory Key to a Map of England and Wales; including a Brief Description of the Counties, Places, and Rivers, laid down in it; and also Miscellaneous Information, chiefly Historical and Biographical. Designed for young persons. By Robert Dymond and William Dawson, Surveyors, Exeter. London, 1829. Longman and Co.

THE Map which this Key illustrates is formed on a new plan:—instead of the usual method of giving the names of places and rivers, numerals are substituted for the former, while the latter are designated by letters. The plan is intended to awaken the activity and precision which are essential to geographical acquisitions. Many young persons who are able by mere routine to point out places and trace rivers by seeing their names, have, never-

theless, a very imperfect knowledge of their real situations. The deficiency is proposed to be remedied by the use of this Map, which taxes the memory rather than the eye, and has moreover the advantage of being divided into sheets, for the purpose of distribution among different classes; and is formed on so large a scale, as to enable the pupil to use it without any fatigue to the eye. The Key, which describes the places and rivers, contains a variety of information condensed in a small compass. The Map may certainly be classed among the most useful and ingenious of the many modern improvements for facilitating elementary instruction.

ORIGINAL CORRESPONDENCE.

Paris, August 8.

ALL the old women in Paris have popped on their spectacles to read the third and fourth volumes of the "Mémoires et Anecdotes sur l'Intérieur du Palais de Napoleon et de Marie Louise." Nothing equally excites curiosity as seeing royalty *en déshabillé*; and, thanks to historians, we are now completely initiated into the secrets of palaces. Kings and queens can no longer hope to take even a pinch of snuff without its being recorded to posterity. Mademoiselle Heinfetter, whose fame in Germany as a cantatrice is equal to that of Mademoiselle Sontag, is engaged to perform at the Italian theatre: she is expected in a few days. As to our theatres, they are almost totally abandoned; in fact, the *goût* for spectacle is daily passing away, and illusion ceases to please: it would seem that the falseness we become, the more we prize truth and reality: this perhaps is owing to the law of contrasts. Amongst the new works worthy of note, is the "History of the Life and Writings of P. Corneille," by Monsieur Tascheran; as also the "Souvenirs du Golphe de Naples," by Mr. Turpin. Those who partake of Dr. Syntax's love of the picturesque, will read this latter work with infinite pleasure: it is written in a peculiarly elegant and simple style.

ARTS AND SCIENCES.

ROYAL OBSERVATORY, GREENWICH: CHRONOMETERS.

THE annual public trial of these beautiful pieces of mechanism closed on the 31st of July, when the prize was awarded to chronometer, Dent, No. 114; and as our scientific readers will be pleased to see how rapidly we are proceeding towards perfection, we give the rate as issued from the Royal Observatory.

Mean rate.		Extreme variation between any two days.	
1828, Aug.	+3" 43	1828, Aug.	0" 7
Sept.	+3" 85	Sept.	1" 7
Oct.	+3" 73	Oct.	0" 8
Nov.	+3" 67	Nov.	0" 9
Dec.	+3" 63	Dec.	1" 2
1829, Jan.	+3" 59	1829, Jan.	1" 4
Feb.	+3" 59	Feb.	1" 1
March	+3" 74	March	1" 6
April	+3" 60	April	1" 1
May	+3" 58	May	1" 2
June	+3" 77	June	0" 6
July	+3" 67	July	1" 6

Greater rate in July, 3" 67
Lesser rate in Aug., 3" 43

Actual variation, 0" 54

From the above it will be seen that its variation between any two months during the year is 0" 54, being a trifle more than half a second! The reward, though now comparatively small, answers the proposed end—the gradual improvement of the chronometer. The utility of the public annual trial may be estimated from the fact, that no fewer than 344 have been entered in competition for the prize since its

establishment in 1822, before which period the chronometer-maker knew but little of the performance of his own production. The first year's trial detected the imperfections which existed, and which have not since recurred. On the contrary, the maker has had the advantage of watching narrowly the progress of his machine, and by this means of gaining an experience which otherwise could not have been obtained. Although longitude has occupied the attention of the English and most other European governments, and induced them to offer and bestow the most liberal premiums, every effort was insufficient to produce a satisfactory performance; and to the adoption of this annual trial we are, no doubt, indebted for the improved results.

According to one of the rules, no maker is allowed more than one chronometer upon trial during the year; but it is generally known that more than that number have been entered by different individuals in fictitious names, or in the names of persons neither owning nor constructing them: it is therefore to be hoped that proper steps will be taken to prevent a recurrence of this abuse, as it destroys the fairness of competition, to the detriment of the greater number of the depositors.

COPTIC LANGUAGE.

WITHOUT pledging ourselves to the extent of the writer's dogmata, we insert the following as a suitable addendum to our last week's paper on hieroglyphics:—

"The literary world will be astonished at the variety of Champollion's labours, the indefatigable spirit which he applies to them, and the important results which they must inevitably produce. I shall content myself with naming, as one portion of them, that he has composed a complete Grammar of the Coptic Language, in which he proves that this is the language used in the inscriptions on the ancient Egyptian monuments. He has also compiled a Coptico-Egyptian Dictionary, contained in three quarto volumes, and comprising the three distinct dialects, viz. the Thebaic, Memphitic, and Heptanomic. To every word he has attached authorities, justifying the meaning which he assigns to it; the chief part of them being derived from the inscriptions he has personally investigated on the several sites themselves. By these works my persevering friend will be the means of adding to our literary lore the ancient wisdom of Heliopolis, Memphis, and Thebes, in so far as it can be gathered from the deciphering and explanation of a character which has hitherto baffled the comprehension of antiquarians. J. ACERBI."

LITERARY AND LEARNED.

Oxford, July 18th.—On Saturday, the 11th inst., being the last day of Act Term, the following degrees were conferred:—

Doctor in Civil Law.—W. Robinson, Esq., Balliol College.

Masters of Arts.—E. P. Blunt, Scholar, Corpus Christi College; J. E. Pitcher, Oriel College; C. D. Bevan, Balliol College.

Bachelors of Arts.—G. H. S. Johnson, Scholar, Queen's College; J. C. H. Tracy, Oriel College.

PROFESSOR HANSTEEN'S TOUR IN SIBERIA.

[From a Letter to Professor Schumacher, dated Irkutsk, April 11, 1829.]

It would be very difficult, I believe, to find a climate for astronomical observations like that of Eastern Siberia. From the moment that the River Angara (which issues from Lake Baikal, and in part surrounds Irkutsk) is frozen over, till April, the sky is constantly serene,—not a cloud is to be seen; the sun rises and sets in full splendour (the cold being

from 30° to 33° Reaumur), and has not that red appearance which it has with us, near the horizon during the winter. The rather elevated situation of the country (from the 9th of February till to-day, the barometer has oscillated between 737 and 710), and the great distance from the sea, makes the air dry and free from vapours. The sun has such power here in the spring, that while the thermometer in the shade is from 20° to 30° at noon, the water runs down from the roofs on the sunny side.

On the 12th of December we set out from Tobolsk, and on our way hither had, almost without interruption, a temperature of 20° to 34° Reaumur; notwithstanding, I observed every morning at sunrise, for an hour together, in the open air. With a cold of 30° the air is fortunately always calm; and in consequence of its dryness, we suffer less here with that temperature than in our own country with 15°. The nose and ears are the most exposed to the effects of the cold; and it not unfrequently happened, that my servant told me, while I was making my observations, that my nose was quite white, and must be immediately rubbed. I have covered with thin leather the screws of the instruments; for if one touches the metal with the naked hand, one feels a pain as on touching a burning coal, and a white blister is occasioned as after touching red-hot iron.

My Arnold's chronometer stopped three times during my observations, at 26° to 30° of cold; on the contrary, my two time-keepers, by Kessel, performed very well. At a temperature of 30° to 32° they do not indeed go so regularly as usual; but on the whole they are excellent. On the latter part of the journey I carried Arnold's chronometer, and Kessel's No. 1820, in my waistcoat-pocket; but Kessel's box chronometer, No. 1259, was obliged to endure the cold in a covering made of hair. It bears the jolting of a carriage very well. Arnold's chronometer has changed its rate of going from + 6" to + 29". The two chronometers by Kessel, on the contrary, though exposed to every disadvantage to which chronometers are liable, and the constant jolting in a Russian carriage, have changed their rate of going only 2" or 3" from Christiania to this place.

After a long search, I have at length found the site of the observatory at Tobolsk, which the Abbé Chappe used in 1760. Col. V. Cramer, of the artillery, now eighty years of age, shewed me both the house in which Schubert made his observations in 1805, and the bastion, in a now ruined entrenchment, where Chappe had his little observatory. He had the latter pulled down twenty years ago, in consequence of orders given him. The foundation, forming a square, is still to be seen; and, not quite in the centre, are the remains of a square pillar, on which Chappe probably placed his sector. I have determined, by trigonometrical measurement, the position of this spot with respect to two churches of the city and Schubert's observatory and mine. The latitude determined by Schubert agrees with mine, within a few seconds. Unfortunately, I was not able to make observations of the longitude.

Though our thermometers lay in wooden cases, covered with thick leather, and were packed in the pockets of our travelling-carriage, we several times found them frozen in the morning. The barometer would also have been frozen had I not held it between my legs, and brought it into a warm room at every stage. On the 30th of January, 1829, at 7½ in the morning, at the station of Tunksaja (lat. 56°, long. 114½°, from Ferro) the spirit thermometer was at -34°·4. In the quicksilver thermo-

meter the mercury was all in the bulb, and had a considerable hollow at top. It was quite solid. The tube of the thermometer goes to -35°. In the evening, at Bagranowskaja (lat. 55½°, long. 115½°, from Ferro) the two thermometers were hung in the open air at 8¼ o'clock. At 9, I found the mercury in Pistor's thermometer in the bulb, but still fluid, so that, on turning the thermometer, and moderately shaking it, it ran quite to the end of the tube; and the spirit thermometer was at -30°·2. A quarter of an hour later, the spirit thermometer was at -30°·4; and the mercury in the two thermometers of Pistor was already stiff, and could not be moved by turning and shaking the instrument. At our next night's lodging I poured about 3 lbs. of quicksilver into a basin, and exposed it to the air. The next morning, the 31st, before 7¼ o'clock, it was frozen into a compact hard mass, which I could not loosen with my knife from the bottom of the basin. I cut it like lead; and at first, as the knife came out of a warm room, the mercury was still rather fluid where it was cut. The spirit thermometer was at -31°·35. After standing for some time in a warm room, it separated from the basin, but was still so brittle that it could be broken.

The spirit thermometer agreed with the two quicksilver thermometers of Pistor down to -10°. Below -10° the spirit thermometer always indicates a higher temperature, the difference increasing in proportion as the temperature became lower.

Pistor. -10°	Difference. =0°·0
-15°·9	+0°·40
-28°·7	+0°·95
-25°·1	+1°·78
-30°·0	+2°·00

i. e. when the quicksilver thermometer was at -30°, the spirit thermometer was at -28°; but when the latter was below 30°, the quicksilver in the former fell quite into the bulb.

Dr. Erman has left this place for Jakoutzk and Ochotzk, whence he wishes to go to Kamschatka. Lieutenant Due is also gone to Jakoutzk, whence he will, if possible, proceed northwards, down the Lena to Schigansk. I only wait for the thawing of the Angara to go down that river to Jeniseisk, and thence on the Jeniseisk northwards to Turnkanak, under the polar circle. On my return to Krasnojarsk I hope to meet Lieutenant Due, and go with him, by way of Orenburg, to Astrachan, and thence on the Caspian sea to Bakou: from Bakou we return home by way of Tiflis, the Crimea, and Nikolajew.

The reception which we have every where met with is beyond all description. The governors and governors-general have rivalled each other in shewing us every possible civility and kindness. From Krasnojarsk the governor gave us a Cossack to accompany us to Irkutsk; and on a journey to Kiachta, on the Chinese frontier, we had two. Due and Erman have each a Cossack to attend them to Jakoutzk.

In the gymnasium at Irkutsk we found the instruments which Baron Wrangel and Anjou used in their northern tour; among which were two English sextants, and two declinators. The sextants were in excellent condition; the two other instruments out of order. His excellency the governor-general, Lawinski, has had the goodness to lend me one of Troughton's sextants, and one of the declinators for Lieut. Due to take to Jakoutzk. The latter I have myself put in order; the sextant gave, within a few seconds, the same

latitude as my own. Lieutenant Due has also Kessel's chronometer, No. 1280.

I have found the magnetic pole which I sought about in 119° from the meridian of Ferro, that is 8° or 9° more to the east than I expected, in Christiania. The magnetic intensity has greatly increased to the east, from Nishnei Nowogorod to this meridian.

ANTIQUARIAN SOCIETY OF PERTH.

Gowrie Conspiracy.

THE Report of the proceedings of the Literary and Antiquarian Society of Perth for 1827 and 1828, has been published lately, and represents the Society as prosecuting the objects of the association with considerable zeal and success, — to which the publication of a volume of Transactions, noticed in our columns last year, appears to have greatly contributed.

Of the Report now before us the most attractive part is a letter from Sir Walter Scott, in reference to an article by the secretary, in the volume of the Transactions, on the subject of the Gowrie Conspiracy. The interest which attaches to every thing from the pen of Sir Walter, and the prominent point of view in which the subject of his letter has of late been placed by the discovery of Logan of Restalrig's letters, and other circumstances, induce us to give that letter entire from the Report.

"Sir,—I was greatly obliged and interested by the reception of the proceedings of the Perth Antiquarian Society, more particularly as the researches of the Society seem to have taken a more wide and historical view of their subject than is usual with Institutions of the kind, too often dedicated to petty and puerile objects. I have long wished to see a complete plan of Gowrie House: indeed, I have a ground-sketch made by an artillery officer when it was used as a barracks for that corps; but imperfect, owing to the demolition of the memorable turret. The author of the sketch has shown a spirit of moderate and impartial inquiry, which does him great honour; and his summary has led him to the only rational explanation of that mysterious business, which must certainly have had its rise in some meditated *coup d'état* of Queen Elizabeth. She had found so much convenience in having Mary under lock and key, that she might have thought it not unadvisable to snap up poor James also. The Tay was at hand, and accessible from the garden without noise or observation. Once in a boat, James might have been carried to Fast Castle, an almost impregnable fortress, and from thence sent to England according to convenience. If the plot is supposed to have been laid by James to get pretence for slaughtering the brothers, it has neither any adequate motive, nor is it at all consistent with the character of a prince neither cruel nor courageous, to stick himself into such a fray, for the purpose of committing so great a crime. I differ from the learned editor on one point:—I do not see that the king or his attendants had the means of seizing the brothers Ruthven. When the younger was killed, Ramsay found him in *grips* with the king;—and it was surely time for him to see the sharpest and readiest remedy, not knowing how such an act of treason was supported. Again: Gowrie, with six servants, attacked the five attendants of the king, who certainly had no chance of being able to secure a superior number of assailants, or even to protect their own lives, except by repelling violence by violence, and taking the life of Gowrie, whose fall ended the fray. The whole was a sudden and violent affray, in which the manners of these times, and indeed of our own, authorised the use of weapons in self-defence, and rendered the slaughter of the assailants justifiable homicide. I cannot help noticing (though it is against my argument, as far as it goes) that James, in one particular instance, showed more coolness than could have been expected from the character of timidity. When Ramsay cast the king's hawk from his hand, and began to lay about him, James had the composure to put his foot on the hawk's leash, to prevent her making her escape. Unless we suppose this was done instinctively, we shall have a new view of James's character:—for the man could not surely be so very timid who could think about the escape of a kite, while they were struggling for his life or liberty close at his elbow. A word is used, the meaning of which is obvious, but the etymology is unknown to me. The king cried to Ramsay to strike laigh, for that Ruthven had on a *pyne* doublet. Secret armour of course is meant, but what is *pyne*? In the Catalogue of James III.'s Treasures, mention is made of a *pyne* box—a strong box, or metal chest, probably; but what is the derivation? I see Lord Hailes was puzzled by the expression of Henderson,—that he thought they were going to make breaks for Maconildy,—which he was disposed to think meant, that they were about to make breaches for the wild Highlander,—a metaphorical expression equivalent to taking Maconildy into custody. This seems a forced interpretation. I think I could shew the use of the expression 'making breaks' as a hunting

phrase equivalent for settling tolls for deer, which explains Henderson's phrase. Excuse these desultory observations. I have not had leisure to look at the historical introduction, which seems to be very curious. I wish every degree of success to an Institution whose labours are so respectable; and, with best thanks for the personal trouble you have taken, I am, with regard,

WALTER SCOTT."

"Edinburgh, 6, Shandwick Place, November 27th.
Addressed, "D. Morison, Esq., Secretary to the Antiquarian Society of Perth."

The perusal of this letter, and the terms of commendation in which Mr. Morison's Summary is noticed in St. Valentine's Eve, have led us, as they probably will such of our readers as have access to the volume of the Perth Transactions, to read with attention the article in question; and we rise from it without a doubt on our minds respecting the veracity of the witnesses adduced in this mysterious affair on the part of the king, and that the whole affray arose from an attempt on the part of Gowrie and his friends to secure the person of James.

We cannot leave the subject without expressing our surprise that Mr. Lawson, in his account of the Gowrie Conspiracy in the last published volume of Constable's Miscellany, should not have brought the proof thus afforded him of the veracity of the witnesses more prominently forward. He was in possession of it—for he refers to the article containing it in his description of Gowrie House; but he takes the truth of their testimony for granted, in which he appears to us to have erred, considering how limited the circulation of such a volume as the Perth Transactions necessarily is, and how widely and strongly the veracity of the witnesses was impugned. He, it is true, rests the proof of the view he takes, in common with Sir Walter Scott and Mr. Morison, as much upon the discovery of Logan's letters as upon the evidence of the witnesses at Perth. But the *existence* of these letters was, we believe, never doubted,—it was their *genuineness* which was called in question; and of that we think there might still remain a doubt, were the veracity of the witnesses still liable to suspicion. On the whole, considering the satisfactory ground upon which the evidence has been placed by the Secretary of the Perth Society, we think Mr. Lawson should take the opportunity which his second volume will afford him, of strengthening his view of the transaction by giving an outline, at least, of the proofs and reasoning by which Henderson's testimony, in an especial manner, is substantiated.

FINE ARTS.

PORTRAIT PAINTING.

THE attention of the artist and the amateur has recently been called to a painting of singular merit, at present in the possession of Mr. M. Colnaghi, of Cockspur-street; namely, the portrait of Mr. Farren (an eminent solicitor in Dublin), by Richard Rothwell, R.H.A. We have, among others, had the pleasure of seeing this picture; and we can truly say that, to the best of our judgment, it is one of the most natural and unsophisticated productions of the kind that we have ever met with. Nor are simplicity and truth its only qualities. The composition, the drawing, the colouring, the effect, the expression, and the execution, are all admirable. The resemblance to the original is also, we understand, very striking: to us (and we consider the observation as complimentary) it appears to be an excellent likeness of what our old favourite, Jack Banister, was in his best days. While we congratulate Mr. Rothwell (who, we are told, is quite a young man, 27,) on this fine evidence of his talents,

we are aware of the difficulties under which the very production of it places him. The injudicious and unreasonable are for ever exclaiming, "more! more!" Whatever powers an artist may manifest in one work (a work perhaps painted *con amore*, and under peculiarly favourable circumstances), he is always expected by such persons to surpass it in his next. The danger of this is, that, instead of being stimulated, he may be intimidated; and we have known instances in which young men of genius have been overwhelmed by the anxiety thus created. We trust that Mr. Rothwell will shun this rock. If he will pursue a steady course, following Sir Joshua's excellent advice, "always to do the best he can," but not allowing himself to be discouraged if his performances occasionally evince the inequality which is inseparable from human efforts, we have no doubt that we shall ultimately see him in the highest rank of his profession.

NEW PUBLICATIONS.

Passes of the Alps. By William Brockedon, Member of the Academy of Fine Arts at Florence. No. XI.

THE Passes of the Tende and the Argentières furnish, as the subjects of the eleventh Number of Mr. Brockedon's clever and highly picturesque work, "*Défilé de Saorgio*," "*Saorgio*," "*Tende*," "*La Ca en the Mont de Tende*," "*The Valley of the Stura*," "*Scene in the Valley of the Ubaye*," "*Mont Dauphin and the Upper Valley of the Durance*," and "*Scene near Zambucco*." The following anecdote, introduced into the description of the Pass of the Argentières, shews that, notwithstanding the comparative ease with which the Alps are at present traversed, enough remains of danger to give occasionally a romantic interest to the undertaking:—

"When the author passed through the Val Stura, in 1826, he went in a light carriage from Coni to Venadio, where he hired mules for Barcelonnette, intending to rest at Pont Bernardo, and pass the Barriades in the morning. A fair had been held on the preceding day at Démont: the *négocians* and peasants, returning to their houses, crowded the little inns in the villages of the valley. At Venadio, when the author and a friend who accompanied him were prepared to start, a woman undertook to be their guide, and bring back the mules. They were soon joined by a village doctor, returning to Bersesio, whom the guide recognised as a *medico*. The day had closed upon them when they reached Pied de Port, near Pont Bernardo, where they sought for accommodations. Not a place could be had for shelter; the house was crowded with peasantry. After getting some wine, and the woman, as guide, had furnished herself with a lantern, the party proceeded; darkness begun, and the rain fell fast. The author had lent his mule to the *medico*, who was in advance of the party, in a narrow road, when a gun was fired at the terrified doctor. He said, that in the dark, and so far ahead of the party as to appear alone, he had been mistaken by some robber for a *négociant* returning from the fair. The author and his friend were armed, and immediately advanced to the spot; but, luckily, without having their valour put to the test by brigands. Soon after passing Pont Bernardo, a violent storm came on; and it was so dark that the guide insisted upon their dismounting, and leading the mules over the crazy bridge, which lay across a fearful torrent, already increased by the rain, whilst she held the lantern close to the planks, that both the mules and the travellers might avoid

the dangerous holes on the bridge. The dark pass of the Barricades appeared like a cavern, except when seen by the lightning; then the foaming torrent was lit up beneath them, and their situation seemed to be perfectly horrible. The woman now took the lead; and crawling about with her lantern amidst the rocks, soon misled them from the path, and they found themselves wandering amidst rocks and stones. At this moment, the mule, upon which the author's friend had again mounted, endeavoured to spring across a deep pit; a rock prevented the bringing of its feet together, and it fell back with its rider, fortunately without injury to the latter, who extricated himself immediately; but, with the assistance of the lantern, they saw the poor mule doubled up in the pit. They could only assist it by cutting the straps and removing the baggage. The guide became bewildered; her terror of the storm and loss of her mule brought forth vows, curses, and prayers. St. Anna was her patron saint; and she poured out her solicitations that she would entreat the Virgin to extricate the mule, whose struggles soon ceased, and it was thought that the poor animal was dead. In this wretched situation the *medico* offered to take the lantern, and grope his way to the village of Praynard for assistance. This was their only resource; and he left them in darkness so great, that though the guide was near enough to touch, she could not be seen. For an hour they remained thus exposed to a dreadful storm of thunder, lightning, and rain; a torrent roaring close by them. During this time the mule, after remaining quiet for some time, recovered strength, and got out without assistance. The poor woman vowed in her gratitude five francs for a mass, and a picture of the *miracole* for the chapel of St. Anna. At length the horizon lit up, as if assistance were coming, and in a few minutes four gigantic figures—for their distance deceived—appeared, wrapped in storm-cloaks, with torches in their hands, descending amidst the rocks and stones; and the party was soon assisted by these hardy mountaineers to remove from an exposed and perilous situation."

Fisher's Illustrations of England. Nos. 8 and 9. VARIOUS public buildings in Liverpool are the subjects of the plates in these two parts of Mr. Fisher's publication. Several of them are exceedingly beautiful; and one of the most prominent of these is the "Interior of the Ball-room, Town Hall." We certainly agree with the declaration in the text of the work, that the series of views in these and preceding numbers "exhibits the most complete graphic delineation of Liverpool which has yet been presented to the public."

The Queen of Portugal. Engraved by Woolnath, after a Picture by R. Holmes. Ackermann.

A SMALL circular, but one of the most pleasing and satisfactory likenesses of this interesting young personage which has appeared in any form of art. It is engraved very beautifully, and displays the utmost skill of the burin; and though little larger than a crown piece, is a delightful representation of the wearer of a crown.

Portrait of Daniel O'Connell, Esq. Painted by J. Gubbins, engraved by J. P. Quilley. M'Lean.

THE conspicuous part which Mr. O'Connell has lately been playing, and the still more conspicuous part which he threatens to play, in the politics of this country, naturally excite some

curiosity in those who have not seen the orator to ascertain what kind of a looking man he is. We understand that this print is the only authentic portrait of Mr. O'Connell that has been published, and that it is an undoubted likeness. If so, we can undeceive any of our readers who may entertain a mistaken notion on the point, by assuring them that there is nothing alarming in Mr. O'Connell's countenance, which, on the contrary, has a great expression of archness and good humour.

La Jeune Parisienne, Dubufe pinxit, S. W. Reynolds sculpt. — *La Surprise*, Dubufe pinxit, S. W. Reynolds sculpt. — *Une Tragédienne*, Dubufe pinxit, Maile sculpt. — *Une Comédienne*, Dubufe pinxit, Maile sculpt. M'Lean.

FOUR large, interesting, and well-executed mezzotints. The "Tragédienne" is a fine and striking portrait of Miss Smithson.

ORIGINAL POETRY.

THE SIBYL.

MINE ear hath heard a sound—a stifled cry
Of distant sorrow; up from th' abyss of time
Springs the sad wail of helpless agony—
The laugh of scorn, the scoff, the ribald

rhyme,
The fearful consequence of lust and crime:
O sin hath crushed a heart that went astray
From the right path, and with her serpent slime
Of pleasure daubed it, hideously gay,
The surer thus to gorge and batten on her prey!

Stay, mortal, thy career! and ere the hour
Of retribution comes, that comes to all,
O let Repentance use her saving power
To free thy soul from miserable thrall—
Call with a warning voice, nor vainly call:
Then shall the bonds of vice apart be riven;
And angels, when they see thy shackles fall,
Almost—so great the joy will be in heaven—
Wish they had sinned like thee, to be like thee
forgiven.

Wouldst thou learn wisdom? seek it not
In the hermit's cell or the peasant's cot;
For the hermit's cell, though far it be
Away from the world's impurity,
Holds but little of earthly good
Beyond the charm of its solitude;
As the flower that springs in desert ground
Looks only bright for the waste around:
And the lowly cot of the peasant, though long
It hath Paradise seemed in the minstrel's song,
Hath its ample share of wants and woes
When clothed in reality's humble prose.

Turn away, then,
From the path that leads
To the mountain glen
Or the flowery meads;
Come when the moon her beauty discloses
Over thy garden-bower of roses;
Come not in fear or in company.
With a trembling heart and a tearful eye,
But, harmed not the more, nor guarded the less,
Come alone in thy gentleness,
And spread thy little white hand to me—
Thou shalt be taught by palmistry.

There is a line upon thine hand—
Deeply, deeply that line is traced;
Ne'er hath the eye of futurity scanned,
Ne'er hath the finger of Providence placed
On mortal mould
A type that told
Of half the sum of human bliss
As, in characters known
To me alone,
Is graven in letters of light on this.

Thou shalt be happy, for happiness flies
Ever round the fountain of light divine,
That is fed by the streams of virtue which rise
With sparkling radiance in hearts like thine;
And if ever sin
By chance should win
A wish or a thought for her guilty store,
Thy memory cast
To the times then past,
Remember the Sibyl, and sin no more.

F. T. C.

SKETCHES OF SOCIETY.

MONUMENT TO THE LATE KING.

THE little account of the royal employments in Windsor Park contained in our last *Literary Gazette*, will have prepared the public to hear that on the 12th, his own birth-day, our gracious monarch, whose good feeling teaches him to lend an additional interest to every act he performs, laid the foundation-stone of the monument to the memory of his royal father. Sir G. Wyatville, the architect, and Mr. Westmacott, the sculptor, attended, and assisted his majesty to go through the masonic ceremonies required by the occasion. The King looked extremely well, and was warmly cheered by the people assembled around.

THE NEW POST OFFICE.

WE this week availed ourselves of the privilege of inspecting the New Post-office previous to its being opened towards the end of the month (as stated in our last), and were extremely gratified by the sight. So complete and perfect a specimen of systematic arrangement does not, we will venture to say, exist in the whole world. Every thing seems to be foreseen and provided for in the most convenient and efficient manner, throughout the whole details of this vast and complicated, yet minute and simple, establishment. On examining it, we no longer wonder at the extraordinary precision with which that eminent public servant, Sir Francis Freeling, has discharged the duties of his arduous station; though a higher admiration is excited by the beautiful and accurate machinery by means of which he has done so much.

Of the place itself it is impossible to give an adequate description. The building, by Mr. Smirke, is, as it should be, solid, but grand and imposing as an architectural ornament of the metropolis. The first great hall, on entering, is a well-proportioned and magnificent apartment supported by superb columns, though on bases we could well have wished had been omitted. On one hand are the receptacles for inland and two-penny post letters and newspapers; on the other, for foreign letters: and it is a marked improvement, that the parties putting them in will henceforward be protected from the weather, and accommodated in every way with greater facilities for the despatch of their correspondence.* The interior rooms are not only commodious, but striking from their dimensions, and still more so from the unequalled ability with which the various works of the various departments are classed, and the distinct order which is to be traced in every table, desk, and pigeon-hole. It seems almost impossible that any mistake should happen throughout the whole of this complex office, in receiving, sorting, issuing, checking, and all its other multitudinous objects. Above

* The three new receiving-offices, in different parts of the town (one of them next to Northumberland House), will add so much to this benefit, that we may almost count on an hour being added to the day of business throughout the metropolis.

are apartments for officers and foreign clerks, and all executed in the plain but becoming style suited to such a place. Mr. Henry Free-ling will reside, as chief, on the spot, which owes much of its excellence to his active superintendence during the six years of its construction. The space around is being more enlarged, and except on the side towards Newgate-street, will be sufficiently open to display the building, and to permit the mails to circulate freely both on arriving and departing. On the west side, which is somewhat cramped, it is supposed that in a couple of years the falling-in of leases will enable the Post-office to finish its boundaries properly. A handsome railing, by Mr. Bramah, encircles the ground; and altogether we congratulate the country on the completion of one erection which does honour to the arts and character of England.

MUSIC.

NEW PUBLICATIONS.

Songs from Fairy Land. The Poetry by T. H. Bayly, Esq.; the Music by J. Barnett. Vol. I. Cramer and Co.

THIS volume, we doubt not, will be as popular as any of those very pleasing of its predecessors which Mr. Bayly has published. The airs are generally pleasing; though, of course, we have our favourites among them. Of these, for music and words together, our first is "Young Brincan, beware!" while "The Spectre-like Tree" is so poetical, that we are tempted to quote it.

"Under the spectre-like yew,
Spreading its boughs o'er the heath,
Sat the lone Banahoe; I knew
Her wall was the herald of death!
'Twas not a summons for me—
When she wept under the spectre-like tree.

Wildly my lover I sought,
Scared by that desolate wall;
Smiling he came—yet I thought
Ne'er had I seen him so pale.
Oh! how it shock'd me to see
Why she wept under the spectre-like tree!

Now he is laid on his bier,
Far from all sorrow and pain,
And it would please me to hear
The voice of the Banahoe again,
Come with a summons to me,
Come to weep under the spectre-like tree.

But, as we have said, this is altogether a charming little collection for the music or drawing-room.

I saw the Tears. The English Words by Don Telesforo de Trueba, and the Spanish by D. M. Seoane; Music by J. M. Gomis. Biorhall.

THERE is much of both talent and taste displayed in this song, with a piano-forte accompaniment.

Farewell, thou Stream. Composed by H. Schwieso. J. C. Schwieso.

A very characteristic melody, and finely adapted to the words of Burns. The accompaniment is admirably managed, either for piano or harp, and does great credit to a female composer.

The Disowned. Poetry by Mrs. B. C. Wilson; Music by John Barnett. Barnett and Co. A BALLAD of the olden times, spirited and original—one of Barnett's best compositions—the air well adapted to the sense, and the accompaniment easy and graceful.

The Maid of Castalis. Poetry by H. J. Bradfield, Esq.; the Music by A. Lee. Lee and Lee.

PRETTIER, if it may be, than many of the pretty songs which issue in such numbers from

the musical press, this is the first of eight promised ballads, and possessed of so much beauty, both in writing and composition, that we shall look with impatience for the remaining seven, to make up our book.

Bajelito. Composed by Sixto Perez. Chappell. A CELEBRATED Spanish air, and exceedingly fine music, with here and there some of the sweetest touches that can be heard.

Donald has gone to the Wars. The Words by the late H. Stoe Van Dyk; Music by Lewis Leo. Mayhew and Co.

THIS is a beautiful ballad: very original, and deserving of the highest praise. It ought to be on the music-stands of all our young friends.

The Sailor Boy's Return. Written by John Duff; Music by J. T. Craven. Cramer and Co.

A PRETTY and lively ballad, sung by Master Smith, and sure to become popular through its sweetness and simplicity.

Selections of Welsh Melodies, &c. By John Parry; the Poetry by Mrs. B. C. Wilson. Goulding and D'Almaine.

THIS is the third interesting volume which Mr. Parry has contributed to the melodies of his native land—at once a patriot's and a musician's duty. It consists of twelve characteristic and pleasing airs, to which the editor has done every possible justice—making as few alterations as the preservation of accent rendered imperative. We delight in the music of bygone times; and therefore this work is a source of great gratification to us. Mrs. Wilson has acquitted herself well in the poetical department.

DRAMA.

ENGLISH OPERA.

IT is seldom we regret being amongst the latest-published journals of the week: we have time to correct an opinion hastily formed, and avoid the many errors which must naturally creep into an account written at midnight, to be printed and published an hour or two afterwards. But upon this occasion we own it would have been gratifying to us to have been amongst the first to congratulate Mr. J. Vining upon the stride in public favour which he has so decidedly and deservedly made by his spirited performance of last Wednesday evening. We have long been convinced that this gentleman possessed talents of no ordinary description; and we are quite sure Mr. Bayly (the adapter of the piece) will not be so ungrateful as to quarrel with us for rendering this just tribute to one who contributed so greatly to the success of his drama before we notice the drama itself. We are happy to say we have nothing but praise to bestow in speaking of *The Witness*. The mere names of Kelly, Keeley (male and female), and O. Smith, "the terrible, the strong," whose very initial is an invocation, are sufficient guarantees for an evening's entertainment. We have already spoken of Mr. Vining; and the *Frank Elton* of Mr. Perkins was a highly creditable performance. Mr. Perkins is a valuable member of this company. Miss Pincoot, Mr. F. Mathews, and Mr. Baker, acquitted themselves with great propriety; and Mr. A. Lee, the composer of the music, has pleased us more upon this than upon any former occasion. Mrs. Keeley has two very pretty songs, which she did ample justice to; and a duet between that lady and Miss Kelly is a very graceful composition. The drama is well

adapted, from the novel of the Bally-Aylmers, by Mr. T. H. Bayly, the *chansonnier*, who, as well as we could catch the words of a pathetic air by Miss Kelly, and the second song of Mrs. Keeley, has maintained his old reputation as a bard, while he has laid the foundation of a new one as a dramatist.

VARIETIES.

An interesting discovery has lately been made in France in the art of domestic economy. In Picardy, and other provinces where turf is almost exclusively used as fuel, the inhabitants, by means of a cheap apparatus, are able to carbonise it so as to render it equal to the best charcoal. Something of this kind might be very useful in Ireland, where turf is the fuel of the peasantry.

It is stated in a French newspaper that an inhabitant of Lyons grafted upon the same stem, red and white grapes, and peaches and apricots, which all flowered at the same time, and gave ripe fruit within a few days of each other.

The Society of Agriculture, Sciences, and the Arts, of the department of Ain, in France, have offered a prize of 400 francs for the best method of making a pleasant and economical beverage, which shall not cost more than one sou per litre (quart). The last Number of the "Journal des Connaissances Usuelles," after noticing this offer, gives a great number of receipts for producing a beverage of this description. Amongst others is the following, which may be useful this year in England, on account of the abundance of the fruit required. "Take a sufficient quantity of apples and pears to fill a cask within three inches of the top; bruise them slightly, and place them in the cask by the bung-hole; then pour in sufficient water to fill it; leave this to ferment until the liquor acquires the taste of cider; then draw it off, and replace water as often as it will acquire a sufficient degree of strength." In the cider countries of France where this process is used, the cost of this production does not exceed one penny per gallon.

It is stated in a letter from Paris, that of the proprietors of seventeen political journals published in that city, at least one-third are noblemen or persons of great distinction in the scientific or literary world. The proprietors of one paper, who are three in number, are said to be a duke, a count, and a baron. To be a known writer in a respectable periodical, is said to be the best passport to good society in Paris.

It was stated some time since that a French surgeon had sent to the Academy of Sciences in Paris a powder, which he pretends to be a perfect solvent for the stone. It was announced at the time that its real or pretended efficacy would be ascertained by experiment. It does not appear that this has as yet been done; but we understand that the opinion of the persons appointed to report upon the discovery entertained no hope of its answering the purpose intended by the inventor. Some further improvements, however, of an important kind, are said to have been made in the instrument for crushing stone in the bladder.

Further accounts were received in Paris on Monday last from the members of the scientific expedition in Greece. They do not announce any new discoveries of importance; but one of the letters contains some interesting information respecting the financial situation of the country, and the condition of the people. The revenue of Greece for the year 1823

amounted to ten millions of francs, of which six millions were furnished by the Morea. The circulating medium of the country was almost every where French money; and notwithstanding the extreme poverty of the lower orders, persons who are known to travel with large sums about them take no precautions for the security of their property, thefts being of rare occurrence. Since the arrival of the expedition, no instance had been known of robbery upon travellers of this description.

Polamology.—A single sheet, divided into coloured columns, and containing brief descriptions of the principal rivers throughout the world, has just been placed before us. It affords much necessary information; and its tabular form has enabled the compiler to compress all that is required for general reference on the subject of rivers into this small compass. The arrangement is also very praiseworthy.

Holman the Blind Traveller.—The last accounts we have heard of this extraordinary individual is, his visit to the Brazil, where he was met by a friend of ours in December last. He had come from the coast of Africa, and was about to sail for Buenos Ayres, undetermined as to his future movements. He was in good health and spirits.

Indian Corn.—A Bourdeaux paper states, that an experimental chemist finding, on tasting the stem of Indian corn, in its green state, that it contained a great quantity of saccharine matter, prepared some sugar from it, which is affirmed to be of excellent quality. It would seem, however, that the cost was something more than that of sugar made from beet-root; and that this branch of industry ought not to be practised, except in seasons when there is little probability of the corn ripening. In some parts of Germany, when Indian corn has been extensively cultivated, the grain has been used entirely in the fattening of pigs, for which it is said to be very proper, attended with a saving of at least fifteen per cent, as compared with the use of grain of any other description.

The March of Intellect in Ireland.—We have received a prospectus of "the Oracle of Tralee," a periodical to be published in weekly Nos. The announcement states that it will contain, amongst other matter, "a weekly wreath of original poems on the most home subjects, with accounts of bull and cock fights," &c.; and concludes by expressing the hope, "that its purely original and very substantial merit will be its only and best recommendation!"

Literary Activity.—It is stated in a recent French paper, that during the last eight months not fewer than twenty political and literary journals have been started in the French provinces.

Hardy kinds of Olives.—Two new species of the olive have been discovered in the southern district of the Crimea: this discovery will render it practicable to rear this useful tree in much more northerly climes than has been hitherto possible. The shoots, which were planted in the botanical garden of Nikita, have lived through one of the hardest winters ever known, though the severity of the weather would have been fatal to the French or Italian olive.

Longevity.—A man named Nouvel died about a fortnight ago, at Saint Jean del Noux in France, at the age of 104 years. He preserved his mental and corporeal faculties to the last moment. The French papers also contain an account of a woman now living at Marseilles who is 115 years of age, having been born in the year 1714. She has been married twice;

the second time, at the age of 66 years, to a young man of 25. Between her first and second marriage she wore man's clothes, and served as a courier to a prince at Milan, no doubt being entertained respecting her sex. This extraordinary woman is said to be still in the enjoyment of all her faculties, with perfect health, and a fine flow of spirits. She partakes freely of the ordinary diet, and drinks a great deal of coffee, — upwards of thirty small cups daily.

Roman Antiquities.—A M. Michaud, of Sainte-Colombe-le-Vienne, in France, has recently, while digging foundations in some part of his land, discovered several interesting Roman relics. Among them were two bathing-rooms, beautifully fitted up with white marble, and pipes of baked earth to convey the heat. It is presumed that these remains belonged to a magnificent residence, which was pillaged and destroyed during an irruption of the barbarians of the north. Near the same spot were found several fragments of statues, of exquisite workmanship, and an entire statue of Hygieia, in the finest style of Greek sculpture, larger than life.

Population of Bavaria.—It appears, from a recent account, that the population of the kingdom of Bavaria has increased to 3,960,000, who reside in 229 towns, 399 *bourgs*, 2,000 villages, and 28,450 hamlets. It is composed of 2,720,000 Catholics, 1,103,000 Christians of the confession of Augsburg, 81,000 Protestants of other sects, and 56,000 Jews. Public instruction costs the government, annually, 755,000 florins—that is to say, one-sixth of the entire expense of the interior administration. There are 5,530 establishments for education—three of them universities, two law schools, seven agricultural schools, 118 colleges, gymnasiums, or boarding schools, and 5,400 preparatory schools. These establishments are directed by 7,114 professors, under the care of 300 inspectors. The Jews have one school for the instruction of their children, and a university at Furth. It is reckoned that the total number of scholars who receive their education at these establishments is 500,000—this is about an eighth of the population; but to this must be added the children who assist in the Sunday schools founded in this country, similar to those in England.—*French Paper.*

Lines on Death.

What holy awe! what mystic fear!
Whilst gazing thus upon the dead:
Say what is this which greets us here?
Say more—say, what is fled?

Mysterious change! whence hath it past?
Oh! how each faculty is mated!
Life's idol is down cast—
The temple of the soul is shut!

A Conceit.

Creation's a huge dial which o'erwaxes
Time's fleeting shadows; and each point's a grave:
Death must enfold it in a hideous veil,
To be withdrawn when Time and Death shall fall.

On Milton, blind.

When Milton felt those sacred raptures rise,
And sang, by Genius wafted to the skies,
He stored his mind with knowledge, heavenly, bright,
Then closed his eyes upon the world—to write.
Cecil Street, Strand. H.

LITERARY NOVELTIES.

Mr. Swan is preparing for publication a Demonstration of the Nerves of the Human Body, founded on the subjects of the two Collegial Anatomical Prizes adjudged to him by the Royal College of Surgeons. The First Part, exhibiting the Nerves of the Thoracic Viscera, in large plates, will be ready in January next.

Captain Brown announces Biographical Sketches and Authentic Anecdotes of Horses; illustrated by figures of the different breeds, and portraits of celebrated horses, engraved by Lissac.

LIST OF NEW BOOKS.

Napier's Peninsular War, Vol. II. 8vo. 20s. bds.—The Horse in all his Varieties, by J. Laurence, 12mo. 6s. bds.—Whittingham's Novelist, Vol. XXXV. 32mo. 2s. 6d.

bds.—Morton's Journey in Italy, 2 vols. 8vo. 14. 4s. bds.—Stevens' Comments, Vol. XV. 8vo. 10s. bds.—Ballance's Memoir, 12mo. 5s. bds.—Hoogeweg's Greek Particles, by Senger, 8vo. 7s. 6d. bds.—Bedford on the Catholic Question, 8vo. 10s. bds.—The Bee Preserver, 12mo. 3s. bds.—Burton's Bampton Lectures, 8vo. 15s. bds.—Carpenter's Scripture Difficulties, 8vo. 12s. bds.—Williams's Abstract, 10 G. IV. 8vo. 7s. bds.—Bloxam's Gothic Architecture, 12mo. 4s. bds.—Graves on Predestination, 8vo. 7s. bds.

METEOROLOGICAL JOURNAL, 1839.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. June 1839.

Thermometer—Highest.....	74° 50'
Lowest	34-50
Mean	54-91875
Barometer—Highest	30-14
Lowest	29-15
Mean	29-77044

Quantity of rain in inches and decimals, 3-66
Number of days of rain, 12.

Winds.—0 East—1 West—3 North—2 South—7 North-east—3 South-east—7 South-west—7 North-west.

General Observations.—In the early part of the month there was much dull, threatening weather; yet but little rain fell until the latter end, when there were frequent heavy showers: upwards of an inch fell on the 27th, and nearly as much on the following day: the whole quantity more than since 1824. The temperature much below June last year—the range of the thermometer forty degrees—and the minimum only two degrees and a half above the freezing point. The mean and extremes of the barometer rather above those of June last year, and the average of the month. On the 25th a slight thunder-storm, with some little lightning, between 7 and 3 s.w. An indistinct lunar halo, with misty area, observed on the night of the 9th. The evaporation, 0.45 of an inch.

July.

Thermometer—Highest.....	75°
Lowest	35
Mean	55.91538
Barometer—Highest	29-54
Lowest	29-08
Mean	29-54881

Quantity of rain in inches and decimals, 4-7625.
Number of days of rain, 21.

Winds.—3 East—3 West—3 North—3 South—0 North-east—3 South-east—13 South-west—4 North-west.

General Observations.—More rain fell in the month than in any July since 1825, the weather of which month in that year it very much resembled: the mean temperature was very nearly the same—the maximum of heat lower than usual, and the minimum about the average. The barometer higher than last year, although lower than ordinarily in July, and nearly approximating the mean of 1823. Thunder heard on the 2d, 8th, 10th, and 24th: slight storms were experienced on the two last of these days, and the lightning on the 24th (about 12 p.m.) was very general, but not extremely vivid; and for some little time the rain fell with extraordinary rapidity. On the 9th, what appeared a heavy storm passed over to the N.E., but no thunder was heard here. The evaporation 0-2 of an inch.

TO CORRESPONDENTS.

To the Editor, &c.

Sir,—Agreeing as I do in most instances with you on the merits of Mr. A. Cunningham's work on British Painters, I am yet inclined to think that in some parts of it his seal has been without knowledge, and his feelings have been expressed without discretion, when he terms the late Barrett an indifferent dauber, and speaks also of a distinguished artist, whose name he does not know how to spell, as "one Paul Sanby," and with whose character and works, it may hence be presumed, he has never been acquainted. Mr. C. has been equally at fault in asserting that Wilson sold his picture of Ceyx and Halcione for a pot of beer and part of a Stilton cheese,—the fact is, the painting was (in the spirit of contemporary spleen) painted by Barrett to a pot of beer and a Stilton cheese. But not to take up your pages with enumerating the claims which the above-mentioned artists, Barrett and Sanby, had to distinction, I shall recommend the following anecdote to the attention of Mr. A. Cunningham, as well as to all biographers, whether of artists or others:—It was in a large and mixed company, at a dinner and meeting of artists, that one of them called out in a loud voice to an elder of the profession, the late J. R. Smith—"Don't you think D— is a very bad painter?" to which the veteran artist answered—"No, sir; and if I did, I should not have said so here."
R. D.

An unavoidable occurrence will prevent us from answering Mr. J.—'s note for about ten days. Spectator's letter is not specific enough to be of use to science.

We are much obliged to "the Editor" of the *Greek Letters*, and shall be happy to hear farther from him.

There is much truth in the letter of "Amicus Literarum et Veritatis" (Paris, July 22d), respecting M. César Moreau and his big plan for educating the Duke de Bordeaux; but it is too personal, and has not sufficient general interest for our publication.

We are obliged to T. W.; but the thing is not worth notice.

ADVERTISEMENTS

Connected with Literature and the Arts.

NEW LITERARY PERIODICAL. On Wednesday, January 6th, 1880, will be published the first Number of a new Weekly Journal principally devoted to the commendation of Foreign Literature and Science, but so arranged as to afford to the Readers of other Countries a distinct idea of the similar produce of Great Britain in genius and mind. Connected with the most powerful Publishers of London, it is the object of this Work to supply a remarkable deficiency in the Literature of an inquiring age and people, by collecting into one circle (small, but ever recurring) the immense mass of intelligence with which the Continent abounds, and respecting which we, in our insular position, so full of activity and yet so much confined to ourselves, possess so very little information. To the few, indeed, who are aware of the treasures of instruction and amusement belonging to the rest of the World, which, at a late period, or never, reach England, it is a matter of astonishment that the general Public should have been so long blind to this want. Arrangements of the most systematic and extensive kind have been made to fill up this deficiency; and the Directors of "The Foreign Literary Gazette, and Weekly Epitome of Continental and Domestic Literature, Arts, &c." confidently depend on a high degree of support, commensurate with their capabilities and exertions.

Prospectuses will be immediately issued.

BRITISH INSTITUTION,
PAUL MALL.
The Gallery, with a Selection of the Works of the Italian, Spanish, Flemish, Dutch, and English Schools, is open daily, from Ten in the Morning till Six in the Evening.
Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

UNIVERSITY OF LONDON. The Notice of the various Courses of Lectures to be delivered during the next Session, and of the Days, Hours, and Fees, fixed for the Assembly, may be had at the Office of the University, and at Mr. Taylor's, 80, Upper Gower Street.
The Medical Classes will commence on the 1st of October, and the general Classes on the 2d of November.
By Order of the Council,
THOMAS COATES, Clerk.
August 1, 1880.

MUSIC.

THE HARMONICON; a Popular Journal
of Music.

Contents of this Month's Number: Part I. Music.—1. March, for Piano-Forte and Flute; Raphael Dressler.—2. Drinking Song of the Men of Beale; the Poetry by J. R. Planché, the Music by H. B. Bishop.—3. Review.—10. Foreign Musical Report.—11. The Drama—King's Theatre, English Opera-House, &c.
London: Published by Samuel Leigh, 18, Strand; and sold by all Booksellers, Music-sellers, and Teachers, in Town and Country.

BOOKS PUBLISHED THIS DAY.

Lately published by Mr. Murray, Albemarle Street.
COLLOQUIES on the PROGRESS and PROSPECTS OF ART.
By ROBERT SOUTHBY.
2 vols. 8vo. with Engravings, 20s.

"These volumes will supply considerable entertainment to every order of thinkers, who like to have their faculties called into exercise by power and accomplishments of no common description, however singular. To a fine display of opinions and commanding eloquence, supported by much felicity of expression, and adorned by most of the graces which attend on practised composition, is united a variety of illustration and allusion, which a reading experience of Dr. Southby's could alone supply. His books are worth reading, and should be read accordingly."—*Westminster Review*, No. XXI.

"This is a beautiful book, full of wisdom and devotion of poetry and feeling; conceived altogether in the spirit of other times, such as the wise men of our own day may scoff at, but such as Evelyn, or Isaac Walton, or Herbert, would have delighted to honour."—*Quarterly Review*.

2. All for Love, or the Pilgrim of Composition.
By ROBERT SOUTHBY. Foolscap 8vo. 7s. 6d.
"In the ease of its structure and verification, and the straightforward simplicity of its narrative, it claims with the most of Ballads. We thank Mr. Southby for giving to the friends of the public a trifle originally intended for his own; and glad we are that after so long a course of arduous and useful labour he still retains the life and vivacity of his youthful heart, and the merry ventrality of his boyish fancy."—*Blackwood's Magazine*.

Post 8vo. 8s. 6d.
FOREST SCENES AND INCIDENTS in the WILDS of NORTH AMERICA.
By GEORGE HEAD, Esq.
John Murray, Albemarle Street.

"The author's buoyancy of spirits, his perpetual activity, and never-failing resources, in his hut-residence in the forest, during the severity of a Canadian winter, form an interesting feature of the volume."—*New Monthly Magazine*.

"In the company of Mr. Head we have skated on Lake Simcoe, and glided down the rapids of the St. Lawrence, with the same sense of reality and busy rest with which we lately galloped over the Pampas with his shrewd and indefatigable brother Gallop Head."

"The work before us, a very sensible and entertaining, yet wholly unpretending production."—*United Service Journal*.

Second edition, with numerous Engravings and Woodcuts, post 8vo. 16s.

THE JOURNAL of a NATURALIST.

Plants, trees, and stones, we note,
Birds, insects, beasts, and rural things.
"We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely than they have been accustomed to do, into the objects of animated nature; and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's boudoir, in her rank and station in life what they may."—*Quarterly Review*, No. 78.
"We think there are few readers who will not be delighted (we are certain all will be instructed) by the 'Journal of a Naturalist'."—*Monthly Review*.
"This is a most delightful book, on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selbourne,'—the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—*Athenaeum*.
John Murray, Albemarle Street.

Important Works just published by Henry Colburn, 5, New Burlington Street; and to be had at all respectable Libraries.
BURKHARDT'S TRAVELS in ARABIA, comprehending an Account of those Territories which the Mohammedans regard as Sacred. In 3 vols. 8vo. with 24 Plates.

2. Buckingham's Travels in Assyria, Media, and Persia. In 1 vol.
This volume concludes the series of the author's journeys in the East, which present the reader not only with the present condition of the interesting countries described, but with the results of personal investigations as to their antiquities, which enable the author to throw light upon ancient history, and also upon the inspired writings.

3. Letters from the Ægean, by James Emerson, Esq. containing, among other interesting Narratives, the singular History of Crevelier, the Pirate, the Original of Lord Byron's Corsair. In 2 vols. post 8vo.

4. Memoirs of Lady Fanshawe, Wife of the Right Hon. Sir Richard Fanshawe, Bart. Ambassador under Charles II. to the Court of Madrid. Written by Herself. Now first published from the original MS. to which are added, Extracts from the Correspondence of Sir Richard Fanshawe. Handsomely printed in 1 vol. 8vo. with a Portrait, 16s.

5. The Loves of the Poets, by the Author of the "Diary of an Ennuyée." In 2 vols. post 8vo. 21s.

6. The Empress Josephine's Memoirs, the third and concluding Volume, comprising her private Correspondence with Napoleon. Post 8vo. 10s. 6d.; French, 6s.

7. Letters addressed to John Ellis, Esq. Secretary to the Commissioners of His Majesty's Revenue in Ireland, during the Years 1806, 1807, and 1808, comprising many particulars of the Revolution, and Anecdotes illustrative of the history of the time. Now first published from the original, with Notes and a Preface. By the Hon. George Agar Ellis. In 2 vols. 8vo.

8. Nollekens and his Times, 2d edition, in 2 vols. 8vo. with a fine Portrait, from a Drawing by Jackson, price 24s.

9. The Living and the Dead, Second Series, in post 8vo. 10s. 6d.

10. A Second Judgment of Babylon the Great; or, More Men and Things in the British Capital. In 2 vols. post 8vo. 21s.

11. Memoirs of Scipio de Ricci, Minister of the late Grand Duke Leopold of Tuscany. Containing an exposé of the Romish Church Establishment during the 18th Century, and of the Abuses of the Jesuits throughout the greater part of Europe. Edited by Thomas Roscoe, Esq. In 2 vols. 8vo. with Portrait, 21s.

The leading feature of this important work is its close application to the great question now at issue between our Protestant and Catholic fellow-subjects. It holds forth a most impressive and instructive lesson to both parties, and contains a fund of curious anecdote and information.

2d edition, greatly enlarged, price 6s. boards.
SIMPLICITY of HEALTH, exemplified
by HORTATOR. Mr. Abernethy's Character of this Work is inserted by his Permission.
London: Published by EDINGHAM WILSON, Royal Exchange.

New Work on Chemistry.
Just published, in 1 large vol. 8vo. price 16s. boards, with Engravings.
A CHEMICAL CATECHISM, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained. Illustrated by Notes, numerous Engravings, Select Chemical Experiments, and a Vocabulary of Terms.
By T. J. GRAHAM, M.D. &c.

"We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 21st Feb. 1880.

"Every thing is here written up to the latest date; and the work cannot fail, we think, of being found eminently useful. More important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parke's book."—*Monthly Magazine*, 1st March, 1880.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the learner. It is very superior to Parke's."—*Atlas*, 1st March, 1880.

"For the purposes of tuition, as well as of private study, this book, from its plan, will be found of uncommon service. London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

Albemarle Street, August 1880.
Volumes of the Family Library published up to this time, by Mr. Murray.

NOS. I. and II. containing the LIFE of NAPOLEON BUONAPARTE, with Fifteen Engravings on Steel and Wood, by Finden and Thompson; the Woodcuts from Designs of George Cruikshank. Very neatly bound in canvass, 2 vols. 5s. each. 2d edition, in the press.

No. III. The Life of Alexander the Great. By the Rev. James Williams, M.A. Rector of the Edinburgh Academy. In 1 vol. 5s. 2d edition.

No. IV. Lives of the most Eminent British Painters, Sculptors, and Architects. By Allan Cunningham. Vol. I. (to be completed in 3 vols.) illustrated by Ten Engravings on Steel and Wood. 5s.

No. V. The History of the Jews. Vol. I. (to be completed in 5 vols.) illustrated with original Maps and Woodcuts. 5s. (Just published.)

In 2 large vols. 8vo. with a Map and 70 Plates, price 21. 2s. bound and lettered.

S. T. PETERSBURGH, 2d edition, comprising an Account of its Manners, Customs, Institutions, Amusements, State of Society, Literature, &c. By S. GRANVILLE, M.D. F.R.S. F.L.S. M.R.S. &c.
"A book which contains a great deal of useful information."—*Times*.

"He enjoyed opportunities of seeing more than any writer upon that city with whom we are acquainted."—*Literary Gazette*.
"It contains infinitely more intelligence with respect to the Russian capital, than has yet been impartially conveyed to the English reader."—*John Bull*.

"His picture of St. Petersburg contains the most copious and detailed description of the gigantic edifices of this extraordinary city, which has hitherto been laid before the public."—*Quarterly Review*.

"We are not in possession of any work that exhibits such a desire to place clearly before the public all matters that can be considered interesting relative to the present state of Russia."—*Atlas*.

Printed for Henry Colburn, 5, New Burlington Street.

In 1 vol. with Portrait.
LIFE and CORRESPONDENCE of JOHN LOCKE, with Extracts from his Journals and other unpublished Manuscripts. Edited from the Originals.
By LORD KING.

"A delightful addition to the literature of our country. A work which must ever remain a standard book in English libraries."—*Literary Gazette*.

"The Life of the celebrated John Locke, just published by Lord King, is one of the most important additions ever made to our national literature. The Journal, the common-place book, and the immodest writings of the illustrious philosopher, which have descended to Lord King as a branch of the family, are invaluable; and the correspondence, which his lordship has inherited by way of elucidating the memoirs, includes letters of King Charles the 11th., Lord Shaftesbury, Sir Isaac Newton, Earl of Sunderland, Bishop of Oxford, Earl of Pembroke, Lord Mordaunt, Lord Ashley, Earl of Monmouth, Earl of Peterborough, Lord Somers, Mr. Cudworth, &c. &c. &c."—*John Bull*.

Printed for Henry Colburn, 5, New Burlington Street.

Price Six Shillings,
THE FOREIGN REVIEW,
No. VII.

London: Black, Young, and Young, 2, Tavistock Street, Covent Garden; and Bossange, Barthes, and Lowell, Great Marlborough Street.

"This Number contains a very agreeable variety of articles, some of which are executed with considerable spirit. The History of Lithography is an article which ought to be read by all those magicians who have made 'the stone' their work. The Life and Writings of Toveilanus is an able article. Novels, midwifed into the English world by our friend, Mr. Carlyle, we take it; for who but he would have attempted such a thing?"—*Edinburgh Evening Post*.

A Present for a Young Lady.
In 18mo. printed by Davidson, and ornamented with a fine Frontispiece, drawn by Harvey, price 5s. half-bound.
ELLEN CAMERON; a Tale for Youth.
By EMILY ELIZABETH BANKIN.
London: Printed for Baldwin and Cradock.

Where may also be had,
Mrs. Leicester's School; or, the History of several Young Ladies, as related by themselves. Fine Frontispiece, 9th edition, 18mo. 4s.

8vo. a 2d edition of
OBSERVATIONS on the ACTUAL STATE of the ENGLISH LAWS of REAL PROPERTY, with the Outlines of a systematic Reform, corrected and enlarged, especially upon the subject of Equitable Interference.
By JAMES HUMPHREYS, Esq. of Lincoln's Inn.
Printed for John Murray, Albemarle Street.

Carpenter's Lectures on Biblical Criticism.
Most handsomely printed in 8vo. price 12s. boards.
POPULAR LECTURES on BIBLICAL CRITICISM and INTERPRETATION; to which is added, a Vocabulary of the Symbolical Language of Scripture.
By W. WILLIAM CAMPBELL.
Author of "A Popular Introduction to the Study of the Holy Scriptures," &c.

"Let no man, upon a weak conceit of sobriety, or an ill-applauded moderation, think or maintain that a man can search too far, or too wide, into the Book of God's Word; rather let men endeavour an endless progress or proficiency therein."—*Bacon*.
London: Printed for Thomas Tegg, Cheapside; Hatchard and Son, Piccadilly; J. Nebit, Berners' Street; and of all other Booksellers.

Where also may be had, by the same Author,
An Examination of Scripture Difficulties, elucidating 700 Passages in the Old and New Testament. 12s.

Also,
Scripture Natural History, with numerous Cuts, 16s.

Third edition, corrected to the present period, inscribed, by permission, to His Most Gracious Majesty, bound in 1 very large paper 11. 12s.

BURKE'S DICTIONARY OF THE PREJUDICES AND BARONETAGE OF THE BRITISH EMPIRE.

"This popular work has justly deserved to be considered as a history of the British nobility, it is enriched by a variety of personal anecdotes, never before published, relative to many illustrious houses, in addition to numerous authentic details connected with their lineage, and communicated to the author by the noble inheritors of the titles. The volume, containing 800 pages of letter-press, is moreover illustrated with upwards of 1500 heraldic shields, is printed in double columns, with so remarkably clear and beautiful a type, as to comprise a quantity of matter equal to no less than 15 octavo volumes!"—*John Bull*.

"The work which Mr. Burke has just given to the public is equally well planned and well executed."—*Standard*.

Printed for Henry Colburn, 8, New Burlington Street.

TRAVELS TO CONSTANTINOPLE, in the Years 1827 and 1828.

By CAPT. CHARLES COLVILLE FRANKLAND, R.N.
"By Captain Frankland has in these volumes given us one of the most picturesque and attractive of modern tours. His route, which embraced the finest regions of the world, and led him into the midst of the most striking scenes, was made under all the advantages of a man of rank, in a distinguished profession, itself a passport to reception every where; and his pecuniary means, activity, and personal accomplishments, gave him the power of enjoying all his opportunities. Thus furnished, his curiosity sent him forth to range the world, from Vienna through Hungary and Renssela, to the Bosphorus, and from the Bosphorus to Syria, Greece, Italy, the Tyrol, until he reached Vienna again, living all the while among ambassadors, pashas, commanders of squadrons, hesperides, and that whole elite of opulent and influential society, which, in these regions, is almost essential to seeing any thing with interest or escaping without being shot, starved, or turning Turk."—*Globe*.

Printed for Henry Colburn, 8, New Burlington Street.

THE LOVES OF THE POETS.

By the Author of the "Diary of an Ennuyé."
"This delightful work contains notices of the most celebrated poets of all countries, in so far as they had any thing to do with affairs of the heart. The second volume is devoted to the loves of the classic poets, of the troubadours, of the Italian poets, Dante, Petrarch, Lorenzo de Medici, Ariosto, Tasso, and others; and of the English poets, Chaucer, Surrey, Shakespeare, Sydney, Milton, and other celebrated persons belonging to the court and age of Elizabeth. The second volume is devoted to the loves of the modern poets, of Doctor Donne, Lord Lyttelton, Keats, Keats, and his wives; of Swift, Pope, Lady Mary Wortley Montagu, Martha Blount, and various others."—*Edinburgh Literary Journal*.

Printed for Henry Colburn, 8, New Burlington Street.

TRAVELS IN TURKEY, EGYPT, NUBIA, AND PALESTINE, in 1824, 1825, 1826, and 1827.

By R. R. MADDEN, Esq. M.R.C.S.
"Mr. Madden's volumes are replete with entertainment. The details respecting Constantinople, a place to which the eyes of the whole of the world are just now directed with extraordinary interest, are full, lively, and descriptive."—*Standard*.

"One of the most amusing and instructive books of travels that we have ever perused."—*Medical-Chirurgical Review*.

"We strongly recommend Mr. Madden's Travels to our readers."—*Age*.

Printed for Henry Colburn, 8, New Burlington Street.

MEMOIRS OF JOHN FREDERIC OBERLIN, Pastor of Waldbach, in the Ban de la Reusse. Compiled from authentic sources, chiefly in French and German. With Portraits, Views of Waldbach, &c.

"We are much indebted to the writer for having performed this service with so much diligence and success in collecting valuable materials, and so much ability and good taste in her manner of presenting them to her readers, as to render the volume highly attractive."—*Christian Observer*, August 1826.

"We strongly recommend Mr. Madden's Travels to our readers."—*Age*.

Printed for Henry Colburn, 8, New Burlington Street.

THE APOCRYPHA OF THE BOOK OF DANIEL, containing the Story of Susannah, the Prayer of Azariah, with the Hymn of the Three Children, and the History of Bel and the Dragon. Translated from the Vulgate Latin, with Notes, and a short Treatise of the Matter contained in these Pieces.

The Book of Tobit, royal 8vo. 2s. 6d.
Sold by J. and A. Arch; Longman, Rees, Orme, Brown, and Green; Hatchard and Son; and Harvey and Darton.

SALMONIA; or, Days of Fly-fishing. In a Series of Conversations.

By an ANGLER.
John Murray, Albemarle Street.
"One of the most delightful hours of leisure ever seen; not a few of the most beautiful phenomena of nature are here incidentally explained, yet the pages have none of the variety of philosophical unbelief, or finite reasoning."—*Biography of Sir H. Davy, Gendeman's Magazine*, August.

ASSISTING QUESTIONS ON ENGLISH GRAMMAR, with ANSWERS, comprising an Ex- planation of Etymology and the principal Rules of Syntax.

By MARY ANN TUCKER.
Boosey and Sons, Broad Street; and Sherwood, Gilbert, and Piper, Paternoster Row.

Conjugationum Itemque Propria Quæ Maribus, quæ Genis, et As in Presenti, Englished and Explained, for the Use of Young Grammarians. By Charles Hoola, M.A. Revised throughout, with very considerable Improvements, by Thos. Sandon, Second Master of the Grammar School at Lincoln. In 12mo. 1s. 6d. bd.

Exercises to the Accidence and Grammar;
or, an Exemplification of the several Moods and Tenses, and of the principal Rules of Construction. By W. Turner, M.A. late Master of the Free School at Colchester. New edition, 8s. bd.

Printed for Longman, Rees, Orme, Brown, and Green.

In 3 vols. post 8vo. 1l. 11s. 6d.
RICHIELEU; a Tale of the Court of
France.

"This new and striking story of the French court, which is exciting so much interest, commences with the last year of the reign, as it may be termed, of the Cardinal de Richelieu, who governed not only Louis XIII. but all France, with a despotism and resistless force. Among the numerous characters introduced are the King; his Consort, Anne of Austria; her Majesty's Dame d'Honneur, Clara de Hauteville, a former flame of the King's; the Duc d'Orleans; the Cardinal's great friend and confidant, Chevalier; their corrupt tool, Lafemé, the Marquis de Fontenailles; Cinq-Mars; De Thou, &c. The interesting hero is the Count de Bléneau, chamberlain to the Queen—the heroine, Made-moiselle de Beaumont."—*Morning Journal*.

Printed for Henry Colburn, 8, New Burlington Street.

 price 2s. 2s.

38. **Records of Mining,** edited by John Tay-
 lor, F.R.S. F.G.S. Part I. with Plates, 4to. 30s.

Cuvier's Natural History.
 Embellished with Sixteen superior Engravings, in 4to. with
 Proof Impressions of the Plates on India paper, price 24s.; in
 royal 8vo. with the Plates accurately coloured, price 24s.; in
 royal 8vo. with the Plates plain, price 18s.; and in 8vo. price
 12s. Part XX. the Seventh of the Class 8vo., of
THE ANIMAL KINGDOM; described
 and arranged in conformity with its Organization.
 By the BA RÖN CUVIER.

Member of the Institute of France, &c. &c. &c.
 With additional Descriptions of all the Species hitherto named,
 and of many not before noticed; with other Original Matter.
 By EDWARD GRIFFITH, F.L.S. A.S. and others.

The Class Mammalia, complete in Twelve Parts, with append-
 ices of Two Birds, Reptiles, forming a 6 vols. price in extra cloth
 boards, demy 8vo. 7l. 4s.; royal 8vo. 10l. 10s.; ditto coloured,
 14l. 8s.; demy 4to. India paper, 14l. 8s.

The Thirteenth Part contains an account of the Fossil Mam-
 mals, which, with a subsequent Part, to be devoted to other
 Organic Remains, is intended to form a distinct Volume on the
 Fossil Genera and Species.

The Class of Birds will occupy Nine Parts; the Fishes, Insects,
 Reptiles, &c. will form about Twenty Parts; and the whole, it is
 computed, will comprise about Forty Parts. It will be so ar-
 ranged, for the convenience of those who may confine their Zoolo-
 gical studies to either of the Classes, that each Class will make
 a distinct Work, as well as one of the Series of the "Animal
 Kingdom." The conclusion will contain a Tabular View of the
 System, a copious Index, and a general Terminology of the Sci-
 ence. The engraved Illustrations of this Work are in a superior
 style of different Artists, forming a distinguished embossed en-
 tire, and among the rest, many are by Mr. Landseer. Most of them
 are from original Drawings made from Nature, and several re-
 present Species altogether new, or never before figured. The
 paper and type of this Work are in a corresponding style of excel-
 lence.

Also,
No. IV. of a Republication of this Work, to be
 continued Monthly, price 4s. in demy 8vo. and 4s. in royal 8vo.
 embellished with Six Engravings. The Class Mammalia will
 form the first Thirty-six Numbers; the Class of Birds Twenty-
 seven Numbers; the Fishes, Insects, Reptiles, &c. about Sixty
 Numbers.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

SATURDAY, AUGUST 22, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Three Years in Canada: an Account of the actual State of the Country in 1826-7-8.
By John Mac-taggart, Civil Engineer, in the service of the British Government. 2 vols. 12mo. London, 1829. Colburn.

A GREAT mass of local information, simply and clearly arranged, and derived from that best of all possible sources—the writer's own observation, for which he had every possible advantage; curious statistical details, &c. make these volumes a valuable addition to the long list of travels in which the present age is so rich. Our limits are ill calculated to allow that prolonged discussion which arises in the question of emigration; but it at least stands to reason, that every work fitted to throw real light on the actual state of a given country must be beneficial in its effects: and Mr. Mac-taggart's is one we cordially recommend to our readers. For our own pages we shall endeavour to select what seems of the more universal interest.

Rummaging: "We started again, cut holes through the thickets of these dismal swamps, directed a person to go about half a mile before and wind a horn, keeping to one place, until those behind came up; so that by the compass and the sound, there being no sun, we might better grope out our course. For in the woods you have not only to keep to a course, but you have also to discover what that course is; not as on sea, where the course is known before the ship starts, that one port bears from another; but in the wilderness the relative position of places is not known,—a cause which improves the instinct of the Indian, making it so superior to that of a European. We had this matter to study deeply; and we had likewise to seek for that track where we could best preserve our level, in the shortest possible distance. This compelled us frequently to diverge from the direct course; a ridge of rocks or a deep swamp, the one much above, the other beneath, the required level, had necessarily to be shunned as much as possible. I mention these things out of no vain boast, but as curiosities in science; and must own that the subject perplexed me not a little. Placed in thick and dark snow-covered woods, where, unless the axe-men cut holes, a prospect of five yards could not be obtained; doubtful what kind of land lay on either side, or directly before; calculating at the same time the nature of canal-making in such places—the depths to dig, or the banks to raise, so that the level might be kept from one sheet of water to another, the former eighty feet above the latter; while the weather was extremely cold, and the screws of the theodolite would scarcely move: these things all considered, were teasing enough to overcome, and required a little patience. When night drew on, two of the axe-men were sent off to rig the wigwam *shanty* by the side of a swamp. This was done for two reasons, or say three: first, because water could be had in the swamps to drink and cook with, if the ice

were broken to get at it; secondly, the boughs of the hemlock grow more bushy in such places, and are so far more easily obtained to cover the shanty; and thirdly, there are generally dry cedar-trees found there, which make excellent firewood, and the bark of dry cedar is the best thing in the world for lighting a fire with. When the party got to the place, there was a very comfortable house set out, a blazing fire with a maple back log, ranging along for a length of twenty or thirty feet. There, on the bushy hemlock, would we lie down; roast pork before the fire on wooden prongs, each man roasting for himself; while plenty of tea was thrown into a large kettle of boiling water, the tin mug was turned out, the only teacup, which, being filled, went round until all had drunk; then it was filled again, and so on; while each with his bush-knife cut toasted pork on a shive of bread, ever using the thumb-piece to protect the thumb from being burned: a lot or two round of weak grog finished the feast; when some would fall asleep,—others to sleep and snore; and after having lain an hour or so on one side, some one would cry *spoon!*—the order to turn to the other—which was often an agreeable order, if a spike of tree-root or such substance stuck up beneath the ribs. Reclining thus, like a parcel of spoons, our feet to the fire, we have found the hair of our heads often frozen to the place where we lay."

"Canadian ice is not so compact as that to be found in Britain: the thinner the ice, the more solid it is: when thick, it is more full of little air-cells, and of a grayish colour. It is not of so hard a nature, either, as that at home; a person can cut a hole through it with a hatchet as quickly as they can at home, although it may be four times as thick. In the winter of 1826 the ice of Lake Ontario, when at the thickest, was within half an inch of two feet; the Lake of Chaudiere was three feet and a half: they are not so thick, by about half a foot, towards the middle, and begin to take (that is, freeze) round the sides first, before the middle; sometimes towards the centre they will not freeze at all unless the frost be very severe. The road for sleighs is, therefore, round the sides. The Canadian adopts this for two substantial reasons: first, that the ice is more safe there; and, secondly, that should it break in, he has a better chance to get out. Often horses and sleighs will break smack through, sink beneath the ice, and be seen no more: the drivers generally contrive to escape, although sometimes they get entangled or confused, and sink with the rest. An honest settler and his wife were cantering along the Ottawa to hold their merry new-year in Montreal: what a gay set-out, and what a span of beautiful American bay horses! they went like the wind; while the cutter (an elegant species of sleigh) tilted over the cracks and cahots in glorious style. My much-respected friend John Sherrieff, esq. was a passenger aboard,—who would not have had his interesting company if it were to be obtained?—a profound connoisseur in the news and manners of Canada,

deeply read in the periodical literature of the old country, a great traveller all over the world, ever retaining a good and cheerful disposition. Often would he warn the farmer to take care of the ice, as about the eddies of Long Island it was never to be fully depended upon; but the other still replied there could be no fear, seeing by the track that two laden traineaux had lately passed before them. Thus gliding along with a swift and smooth velocity, down they went with a plunging crash. My humorous friend, whose presence of mind never forsook him, vaulted on to the solid ice, and very politely handed out the lady, while her husband, poor fellow, kept touching up the cattle lightly with the whip, unconscious of his dangerous situation, and, had my friend not caught him by the coat-tail, he would have sunk, like his horses, beneath the cold casement of the river, to be seen no more. If the horses are allowed to plunge much, there is no chance of saving them: they have therefore to hang them, to keep them quiet, until they are pulled out, when the noose on the neck is slackened, and life permitted to return. While on this subject, I may mention a question which was once laid before me for decision. A gentleman sent his servant with a sleigh and two valuable horses to a neighbouring village for some purpose or other; when this servant and another servant of the same gentleman, who was likewise there on some business of his master's, happened to meet: the one who had charge of the sleigh getting intoxicated with rum, the other insisted on driving the vehicle home for him: while doing so, the ice towards the middle of a river gave way, and the horses, sleigh, and cargo, were lost. 'Was it proper, or not, to dismiss those servants from their master's employ?' The voice of the multitude was in favour of the servants, but I doubt if that was right: humanity, however, ought to be coupled with rigid justice. In England such servants would have been turned off; but there they can soon find other masters, and masters other servants:—not so in Canada.

"The mosquitoes are very numerous during the hot months of summer in the uncleared country, and in that too partly shorn of the woods. They are extremely troublesome, and nothing hitherto discovered will prevent their biting the exposed parts of the body. The Indians and French Canadians, who may be called the natives of the country, suffer almost as much from them as new-comers, but their flesh does not swell so. People from Britain are frequently to be met with nearly blind from the poisonous effects of these insects. It is vain to rub the skin with grease or camphor; they mind it nothing. Some will fling veils over their faces; and these would keep them off, were not veils troublesome things too in hot weather to wear; they confine the breathing, and add an additional warmth to the cheeks that have no need of it. Nothing will keep them at bay but the strong, *smudging* smoke of fire; nor will this do unless we completely envelope ourselves in the midst of it,

which is not very comfortable. In Europe, the cattle run to the hill-tops to get rid of the flies, but in Canada they move towards the smoke. How contented will the old horses and cows hang over the smouldering embers, neighing and lowing for perfect joy! When the weather is damp and moist, they get numerous; the swamps and little inland rivers are perfectly covered with them. In these places they are considered to breed. In dog-days they are not so troublesome: towards the latter end of August they are at the worst, and larger grown than in the spring. They are extremely greedy; if with a pair of sharp scissors we clip away the half of the body of one that is sucking, it will not desist and attempt to fly away, but continue to suck for hours, the blood flowing from where it was severed in two. It is said that they have succeeded in killing animals; nor does this seem at all wonderful, when their virulent nature is known. Night and day they are equally annoying: it is in vain to go to bed at any prescribed hour, for no sleep can possibly be obtained unless we are completely fatigued out; and when we wake, the face is covered with blood; and if the hands or legs be exposed, they are rendered frightful to look at, and the feet will not go into the shoes or boots they have been accustomed to. Settlers in the heart of the woods suffer dreadfully from them: they keep a *smudge* always at the threshold of the door of the dwelling. The *black flies* are almost as bad as the mosquitoes; they are not such a large insect, nor so poisonous. When examined with the microscope, the mouth is not unlike that of a bull-dog; whereas, the other sucks with a proboscis."

There are some curious accounts of a species of madness, which seems peculiar to sailors.

"This madness is, in two respects, similar to hydrophobia—it is extremely violent and outrageous in its nature, of short duration from the appearance of the symptoms until death closes the melancholy scene,—and as yet has been perfectly incurable. It has been my lot to see three cases, but I have heard of many more: they were all *captains* of merchantmen, driven in by stress of weather to a small harbour on the coast of Britain. The first I saw had been extremely irritable for a day or two previous: the crew durst not speak nor look the way he was on. The symptoms getting worse, he grasped a large sail-knife by the lanyards, and pursued one of the apprentices over the rigging of the ship. The young sailor was wide awake to the intentions of his master, and ran up and down the shrouds with great agility; but the captain was equally nimble; and while the poor lad was turning the cross-trees, the madman, on the opposite ladder, let dash at him with the knife, and cut one of his cheeks from brow to chin—a frightful gash. The sailors now interfered, and after much danger and difficulty succeeded in securing the captain with ropes: then he roared, kicked, and cursed, in a horrid manner, until the evening of the second day, when he died under a paroxysm of rage.—The second, while running into harbour, seemed struck with the appearance of a gentleman's house that had been built on a commanding station by the sea-side. 'D—d fine house!' he kept muttering to himself, until the ship was brought to anchor; when he ordered his apprentices, six in number, to proceed with him instantly ashore in the jolly-boat, and each to bring a rope with him five fathoms long. They obeyed, of course, as it is quite against all maritime law for apprentices to disobey the orders of their captain. On arriving ashore he bade them

follow him as fast as they could round the coast to the large house: they did so. On arriving there, which was about a mile and a half from the bay, he found, to his surprise, the door locked, and no persons moving about, the family being absent. The gardener's wife was left in charge, and she was at her own cottage in the garden at the time. Finding this, with his bare fists he whacked in the panes of glass and window-frames, cutting his hands in a shocking manner. Having effected an opening, he jumped into the drawing-room, and bowled out of the window whatever of mahogany furniture came first to hand—chairs, tables, sideboards, &c., d—ning the apprentices to make up their burdens. The poor fellows, having each bound in his rope a lot of furniture, proceeded on the homeward march, followed by the stormy captain, groaning under a huge table, balancing it on his back with one hand, and carrying a large mirror in the other. Thus passing many people on the road, the neighbourhood became alarmed—the country people gathered round with sticks and intercepted him when returning again to the house, and with much difficulty got him secured and lodged in the county gaol; but getting more and more outrageous, the humane conceived that being in a prison was the cause, and they had him removed from thence into a private house; but it made no difference, he expired in the same way as the other, perfectly smothered with rage.—The third seemed to decline robbery or murder: he wandered melancholy about the shore; and when any notice was taken of him, he gave utterance to wild imprecations. Sometimes he would take a stick and thrash the ground until he was quite exhausted, or hurl rocks off a precipice into the surge. This being in a remote part of the country, which was thinly inhabited, nobody molested him; or rather, none of the harmless sheep-farmers durst go near where he was. They kept hovering round at a distance, however, and as the distemper increased they got more and more alarmed. At last he became more exhausted, and could not stand on his feet. Thus did he wear away, much in the same way as the others did, although he was not handcuffed or molested by any one."

We shall conclude with the following sketch of the general state of the weather.

"The extremes of heat and cold are felt to be more severe in the cleared districts than in the uncleared: mercury frequently freezes at Quebec and Montreal; and the summers are so hot for some days, that it is a wonder how animals contrive to live. Rain is not very abundant: it prevails most in the spring and fall. Mists in the inland country are not so frequent as in Britain, but on the sea-coast much more so. Thunder and lightning are very common: the flashes more vivid and bright, and the peals much louder. Hail is not very common; and the *piles* of snow are very regular figures,—hexagonal and sometimes octagonal stars: the snow never falls in such minute particles as sand, or yet in flakes as large as common butterflies. The snow generally begins to fall about the middle of November: in the woods it is seldom attended with wind, but in the cleared places it blows into huge wreaths: the road-ways are filled full between the fences. In the beginning of the above-named month there are generally a few very fine warm days called the *Indian summer*. The coldest month in the year is January: if water be then put in bed-rooms, wherewith to wash, the jugs and ewers will be broken ere morning. The first indication of

cold weather having set in, is destruction occurring amongst porcelain and glass vessels containing fluids. If wine or porter be once frozen, it is very insipid when thawed. To malt grain of any kind is very difficult, the temperature of the seasons varying so much: nevertheless, there are numbers of breweries and distilleries; but the ale and spirits they produce are not very good. Tolerably fine cider is made, and there are cider-presses all over the country: the climate is extremely favourable for the growth of apples and melons. The branches of the apple-trees in the orchards towards the end of summer must be well propped, else they will break down with their loads. The best crops of wheat are produced by sowing it in the fall: it is not sown so thickly as with us; one bushel will sow as much as three. Spring wheat is also sown; from thirty to forty bushels an acre is considered a good crop of either, weighing from forty to fifty pounds per Winchester bushel. Crops are not built in stacks, but put in large barns, or under sheds, having movable roofs, that can be raised or let down at pleasure. The grub is not much talked of by the farmer; but I have seen them look serious, and express themselves dolorously, about blight, rust, and mildew. The squirrels, and a bird like the blackbird, are often troublesome amongst the crops. Flax and hemp are not much cultivated, but the soil in many places is accounted favourable. Tobacco is begun to be raised, and promises to do well. They do not sow rye-grass, but a kind of grass-seed called Timothy, which makes good hay: those having beaver meadows in their estates obtain a good deal of hay from them. Mowing and reaping are difficult in the new settlements, the land being so rough, and roots and stones sticking up. They reap with the toothed sickle, and mow with a short sith. The stones to sharpen the sith are of a white free-stone nature, and are brought from the States: it is not a composition stone, but cut from a natural block. There is a species of gypsum found in Canada good for sharpening axes, and as highly esteemed as the callumey stone is amongst the Indians,—a gray kind of fire-stone they make their pipes of: there is a river called the Grand Callumey, whose banks contain this stone. In sharpening sithes no sand is used; but I think it might be to much advantage. Oats are cultivated, and succeed tolerably. A gallon of oats is thought to be a good feed for a horse. The Canadian horse is one of the hardiest and best of his race, able to endure the greatest fatigue; and when he is whipped by his master, he is said to be getting his allowance of oats: he would outdo those of any other country I am acquainted with. The milk of the cows tastes of garlic if they feed in the woods, and is not considered very wholesome. The trees are in full leaf by the middle of June, and as bare as they will be by the end of November: there are a number of evergreens, and few birds of song in the woods. Along the margin of the lakes the snow does not lie above three months in the year. The snow is of considerable use to the farmer; it forms a covering for his crops, and a road to market. A farm in a tract of country that has five months sleighing snow in the year is considered to be in a more favourable climate than that which has but three: it is generally more healthy, and has less mud and rain. The weather is very changeable; and when it does change, it is always on a sudden: there are few who can prophesy from appearances with any degree of success, more than five hours before the altera-

tion takes place: the heavens will sometimes get overcast, and the rain begin to pour in a twinkling. The sky is seldom very beautiful so look upon; never have I seen what may be called a respectable towering woolly cloud. Winds are seldom severe; sometimes, however, they lay waste extensive belts of the forest for thirty miles at a stretch, and from a quarter to a mile broad: these are called windfalls. Trees growing on the banks of the rivers lean in towards the water: the reason of this is obvious, as their roots are all on one side. It is said that water attracts them: this I do not think is the case. Water may attract the willow to a certain extent, which may account for the Dutchman's art in discovering spring-wells with a forked stick. Wide roads through pieces of forest-ground are dangerous to travellers during a squall of wind: I have seen them crashing down behind and before in a frightful manner; and at Stoney Creek saw a poor woman and her son who were killed by a tree being blown down on a little cart they were riding in,—the horse was not hurt."

Again we most highly commend these volumes;—not perhaps for their great literary merit, but as containing much sound sense and great and general information.

Fauna Boreali-Americana; or, the Zoology of the Northern Parts of British America.
By John Richardson, M.D., F.R.S., F.L.S., &c. 4to. pp. 300. London, 1829. Murray.

THE zoology of the northern parts of British America, as elucidated by Captain Franklin's interesting expedition, has here received all the light that could be bestowed upon it by the diligence of his fellow-traveller Dr. Richardson, and by the scientific assistance of those distinguished naturalists Messrs. Swainson and Kirby. The volume, illustrated also by numerous plates, therefore assumes a high degree of importance as an addition to the pleasant science of which it treats; and we have much satisfaction in recommending it to all the lovers of natural history. But having said only thus much in a general point of view, we must be content to leave its graver features and principal merits to the philosophical reader, while we simply extract a few of its more popular passages for the gratification of all ranks.

"The young grisly bears and gravid females hibernate, but the older males often come abroad in the winter in quest of food. Mackenzie mentions the den or winter retreat of a grisly bear, which was ten feet wide, five feet high, and six feet long. These dens are named *wakes* by the Indians. As this bear comes abroad before the snow disappears, its foot-marks are frequently seen in the spring; and when there is a crust on the snow, the weight of the animal often causes it to crack and sink for a yard or more round the spot trod upon. These impressions, somewhat obscured by a partial thaw, have been considered by the inexperienced as the vestiges of an enormously large quadruped; and the natives, although perfectly aware of the cause of the marks, are prone by their observations to heighten the wonder they perceive to be excited by them. Many reports of the existence of live mammoths in the Rocky Mountain range have, I doubt not, originated in this manner. Necklaces of the claws of a grisly bear are highly prized by the Indian warriors as proofs of their prowess."

So much for our grisly bruin; now, touching his larger brother.

"The flesh of the polar bear is, as stated

by Captain Phipps (Lord Mulgrave), exceedingly coarse. The Russian sailors who wintered in Spitzbergen found it, on the other hand, much more agreeable to the taste than the flesh of the rein-deer. I quote this fact here, not to shew that there was any thing peculiarly gross in the taste of the Russians, but to have an opportunity of remarking, that when people have fed for a long time solely upon lean animal food, the desire for fat meat becomes so insatiable, that they can consume a large quantity of unmixed, and even oily, fat without nausea. Our seamen relish the paws of the bear, and the Esquimaux prefer its flesh at all times to that of the seal. Instances are recorded of the liver of the polar bear having poisoned people."

Of another animal we are told—

"An albino variety of the beaver is of very rare occurrence. Hearne saw but one in the course of twenty years, and it had many reddish and brown hairs along the ridge of the back: its sides and belly were of a glossy silvery white. When the Indians find an individual of this kind, they convert the skin into a medicine-bag, and are very unwilling to dispose of it."

Our next extract is a picture of manners.

"Herds of wild horses, the offspring of those which have escaped from the Spanish possessions in Mexico, are not uncommon on the extensive prairies that lie to the west of the Mississippi. They were once numerous on the Kootannie Lands, near the northern sources of the Columbia, on the eastern side of the Rocky Mountain ridge; but of late years they have been almost eradicated in that quarter. They are not known to exist in a wild state to the northward of the fifty-second or fifty-third parallel of latitude. The young stallions live in separate herds, being driven away by the old ones, and are easily ensnared by using domestic mares as a decoy. The Kootannies are acquainted with the Spanish-American mode of taking them with the lasso. Major Long mentions that 'horses are an object of a particular hunt to the Osages. For the purposes of obtaining these animals, which in their wild state preserve all their fleetness, they go in a large party to the country of the Red Canadian River, where they are to be found in considerable numbers. When they discover a gang of the horses, they distribute themselves into three parties, two of which take their stations at different and proper distances on their route, which by previous experience they know the horses will most probably take when endeavouring to escape. This arrangement being completed, the first party commences the pursuit in the direction of their colleagues, at whose position they at length arrive. The second party then continues the chase with fresh horses, and pursues the fugitives to the third party, which generally succeeds in so far running them down as to noose and capture a considerable number of them.' The domestic horse is an object of great value to the nomadic tribes of Indians that frequent the extensive plains of the Saskatchewan and Missouri; for they are not only useful in transporting their tents and families from place to place, but one of the highest objects of the ambition of a young Indian is to possess a good horse for the chase of the buffalo, an exercise of which they are passionately fond. To steal the horses of an adverse tribe is considered to be nearly as heroic an exploit as killing an enemy on the field of battle; and the distance to which they occasionally travel, and the privations they undergo, on their

horse-stealing excursions, are almost incredible. An Indian who owns a horse scarcely ever ventures to sleep after nightfall, but sits at his tent-door with the halter in one hand and his gun in the other, the horse's fore-legs being at the same time tied together with thongs of leather. Notwithstanding all this care, however, it often happens that the hunter, suffering himself to be overpowered by sleep for only a few minutes, awakes from the noise made by the thief galloping off with the animal. The Spokans, who inhabit the country lying between the forks of the Columbia, as well as some other tribes of Indians, are fond of horse-flesh as an article of food; and the residents at some of the Hudson's Bay Company's posts on that river are under the necessity of making it their principal article of diet."

Having lost our bonassus from the Regent's Park, we conclude with Dr. Richardson's notice of his wild companions in their native haunts.

"One of the earliest accounts we have of the animal is by Hernandez; and Recchus' edition of his observations, or rather commentary upon them, is illustrated by an engraving which seems to have been made from a rude sketch of the bison, altered by the European artist to a closer resemblance with the European ox. Hennepin, in the narrative of his discovery of Louisiana, and his travels through that country between the years 1669 and 1682, gives a very good description of the bison, together with a figure, which is apparently a copy of that of Recchus. It does not appear to have excited much attention in Europe until lately, when several specimens having been imported into England, were exhibited under the attractive title of *bonassus*, which, though described by the ancients, was asserted to have been lost to the moderns until recognised in the American animal. The American bison has, in fact, much resemblance to the *auroids* of the Germans (*Bos urus*, Boddart), identified by Cuvier with the *bonassus* of Aristotle, the *bison* of Pausanias and Pliny, and the *urus* of Cæsar, and which, down to the reign of Charlemagne, was not rare in Germany, but is now nearly confined to the hilly country lying between the Caspian and Black Sea. The bison wanders constantly from place to place, either from being disturbed by hunters, or in quest of food. They are much attracted by the soft, tender grass which springs up after a fire has spread over the prairie. In winter they scrape away the snow with their feet to reach the grass. The bulls and cows live in separate herds for the greatest part of the year; but at all seasons one or two old bulls generally accompany a large herd of cows. In the rutting season the males fight against each other with great fury; and at that period it is very dangerous to approach them. The bison is, however, in general a shy animal, and takes to flight instantly on winding an enemy, which the acuteness of its sense of smell enables it to do from a great distance. They are less wary when they are assembled together in numbers, and will then often blindly follow their leaders, regardless of, or trampling down, the hunters posted in their way. It is dangerous for the hunter to shew himself after having wounded one—for it will pursue him; and although its gait may appear heavy and awkward, it will have no great difficulty in overtaking the fleetest runner. While I resided at Carlton House an accident of this kind occurred. Mr. Finnan M'Donald, one of the

Hudson's Bay Company's clerks, was descending the Saskatchewan in a boat, and one evening having pitched his tent for the night, he went out in the dusk to look for game. It had become nearly dark when he fired at a bison-bull, which was galloping over a small eminence; and as he was hastening forward to see if his shot had taken effect, the wounded beast made a rush at him. He had the presence of mind to seize the animal by the long hair on its forehead as it struck him on the side with its horn; and being a remarkably tall and powerful man, a struggle ensued, which continued until his wrist was severely sprained and his arm was rendered powerless: he then fell, and after receiving two or three blows became senseless. Shortly afterwards he was found by his companions lying bathed in blood, being gored in several places; and the bison was couched beside him, apparently waiting to renew the attack, had he shewn any signs of life. Mr. McDonald recovered from the immediate effects of the injuries he received, but died a few months afterwards. Many other instances might be mentioned of the tenaciousness with which this animal pursues its revenge; and I have been told of a hunter having been detained for many hours in a tree by an old bull which had taken its post below to watch him. When it contends with a dog it strikes violently with its forefeet, and in that way proves more than a match for an English bull-dog. The favourite Indian method of killing the bison is by riding up to the fattest of the herd on horseback, and shooting it with an arrow. When a large party of hunters are engaged in this way on an extensive plain, the spectacle is very imposing, and the young men have many opportunities of displaying their skill and agility. The horses appear to enjoy the sport as much as their riders, and are very active in eluding the shock of the animal, should it turn on its pursuer. The most generally practised plan, however, of shooting the bison is by crawling towards them from to leeward; and in favourable places great numbers are taken in pounds. When the bison runs, it leans very much to, first, one side for a short space of time, and then to the other, and so on alternately. The flesh of a bison in good condition is very juicy and well-flavoured, much resembling that of well-fed beef. The tongue is reckoned a delicacy, and may be cured so as to surpass in flavour the tongue of an English cow. The hump of flesh covering the long spinous processes of the first dorsal vertebra is much esteemed. It is named *boe* by the Canadian voyagers, and *wig* by the Orkney men in the service of the Hudson's Bay Company. The wig has a fine grain; and when salted and cut transversely, it is almost as rich and tender as the tongue. The fine wool which clothes the bison renders its skin when properly dressed an excellent blanket; and they are valued so highly, that a good one sells for three or four pounds in Canada, where they are used as wrappers by those who travel over the snow in carioles. The wool has been manufactured in England into a remarkably fine and beautiful cloth; and in the colony of Osnaboyna, on the Red River, a warm and durable coarse cloth is formed of it. Much of the pemmican used by the voyagers attached to the fur companies is made of bison meat procured at their posts on the Red River and Saskatchewan. One bison cow in good condition furnishes dried meat and fat enough to make a bag of pemmican weighing ninety pounds. The bison which frequent the woody parts of

the country form smaller herds than those which roam over the plains, but are said to be individually of a greater size."

With these very slight examples we must refer our readers to this volume for farther curious information. The engravings are beautifully executed.

Personal and Literary Memorials. By the Author of "Four Years in France," "Italy as it is," &c. 8vo. pp. 496. London, 1820. H. Colburn.

A VOLUME of this kind puts us in mind of country cousins' visits to London,—all sorts of things are to be seen; a great deal of industry is blended with *tant soit peu* of discrimination; they go shopping and staring, till, time and money alike expended, they return, the log-book of memory crowded with good, bad, and indifferent. Most writers of reminiscences do by their anecdotes as the before-mentioned do by their sights;—in the desire of missing nothing that can be seen, much that is useless and uninteresting is also put upon the list. We can think of no more accurate criticism for the volume before us; it is a complete *mélange*—many very amusing anecdotes, and a good deal of religious discussion, which we leave to those more authorised disputants, the divines; and shall content ourselves by endeavouring to make a selection of the most entertaining passages.

"Mrs. Brooke, authoress of 'Julia Mandeville,' 'Emily Montague,' the musical piece of 'Rosina,' and other works popular in their day, and of no small merit—this lady was sister to the wife of my great uncle Joseph Digby, rector of Tinwell, near Stamford. Mrs. Digby was a woman of talent, and had the faculty, very uncommon, not in women only, but in men of the highest attainments—the faculty of being able to read. She could take up a book, and in her natural voice, without any other change of tone or cadence than what the subject matter required, enunciate what in the book was written down as if the words were her own. Children learn to read. Men should talk out of a book. Mrs. Digby told me that when she lived in London with her sister Mrs. Brooke, they were, every now and then, honoured by the visits of Dr. Samuel Johnson. He called on them one day, soon after the publication of his immortal Dictionary. The two ladies paid him due compliments on the occasion. Amongst other topics of praise, they very much commended the omission of all *naughty* words. 'What! my dears! then you have been looking for them?' said the moralist. The ladies, confused at being thus caught, dropped the subject of the dictionary."

"Dr. Barton, warden of Merton College, Oxford, received a morning visit in his closet, or cabinet as the French would call it. The visitor, Dr. Sibthorp, said to him, 'Mr. Warden, why do you sit in such a little place as this? You have not room to swing a cat.' 'I do not want to swing a cat, Dr. Sibthorp.' Wisdom can teach few lessons of greater utility than not to desire what we do not possess. We are told of an ancient philosopher, who, on beholding the splendours of a great palace, cried out, 'How many things there are here that I do not want!' Was he a greater philosopher than Dr. Barton, who was contented with a space too narrow for an amusement in which he did not wish to exercise himself? Dr. Barton was a punster. He said, 'the fellows of my college wished to have an organ in the chapel, but I put a stop to it;' whether for the sake of the pun, or because he disliked music, is uncertain. He invited, for the love of punning,

Mr. Crowe and Mr. Rook to dine with him; and having given Mr. Birdmore, another guest, a hint to be rather after the time, on his appearing, said, 'Mr. Rook! Mr. Crowe! I beg leave to introduce one *Bird more*.' He married his niece to a gentleman of the hopeful name of *Buckle*. The enterprise succeeded beyond his expectation. Mrs. Buckle was delivered of twins. 'A pair of Buckles!' 'Boys or girls?' said a congratulating friend; the answer may be supposed. To him, though it has been attributed to others, belongs the glory or the shame of having said to one, who having re-established his health by a diet of milk and eggs, took a wife:—'So, you have been *egged* on to matrimony: I hope the *yoke* will sit easy on you.'

"A young, zealous, and conscientious student in Anglican theology once asked an experienced dignitary, 'Pray, sir, what do the Armenians hold?' 'Hold?' said his Mentor, 'hold? Why, they hold all the best pieces of preferment in the church of England.'

"The Abbé Denaïs, an emigrant priest from Anjou, talked English better than any foreigner I ever knew. He pronounced *th* perfectly well: he observed to me, moreover, 'You have two *th*s: you have *th* in *this*, *that*; and you have *th* in *thick*, *thin*. I shall tell you how I surmounted the difficulty of pronouncing them, and distinguishing between them.' Taking a letter out of his pocket, he tore off a very little bit of paper, and laying it on the back of his hand, and placing it horizontally in a line with his lips, said distinctly, *this*, *that*. He bade me remark that the bit of paper did not stir. Then, in like manner, emitting the words, *thick*, *thin*, exclaimed, — *Regardez comme le morceau de papier s'envole*; and was quite delighted with the success of his experiment."

"When the terms of the treaty which followed the restoration of the king were known, the French amused themselves by composing what they called the alphabet of the restoration, *la nation Française a, b, c*. The French pronunciation of these letters suggests to every one the word *abaissée*. *Quarante-trois Départements a, d, (cédés)*. *Le ministère a, b, t*. As the aspirate in the word *hébé* is not sounded, you have only to pronounce the three letters to arrive at the sense. *La gloire des armées Françaises f, a, c, (effacée)*."

"Dr. George Horne was a man of unaffected piety, cheerful temper, great learning, and, notwithstanding his propensity to jesting, dignified manners. He was much beloved in Magdalen College, of which he was president; the chief complaint against him being, that he did not reside the whole of the time in every year that the statutes required. He resigned his headship on being promoted from the deanery of Canterbury to the see of Norwich; the alleged reason was, the incompatibility of the duties; though other heads of houses, when made bishops, have retained their academical situations. He never manifested the least ill-humour himself, and repressed it, but with gentleness, in others. Having engaged in a party at whist, merely because he was wanted to make up the number, and playing indifferently ill, as he forewarned his partner would be the case, he replied to the angry question, 'What reason could you possibly have, Mr. President, for playing that card?' 'None upon earth, I assure you.' On the morning when news was received in college of the death of one of the fellows, a good companion, a *bon vivant*, Horne met with another fellow, an especial friend of the defunct, and began to console with him: 'We have lost poor L——,' 'Ah! Mr. President, I may well say I could have

better spared a better man.' 'Meaning me, I suppose?' said Horne, with an air that, by its pleasantry, put to flight the other's grief. I was talking with Henry James Pye, late poet-laureate, when he happened to mention the name of Mr. P. a gentleman of Berkshire, and M. P. I think, for Reading; 'That is the man,' said I, 'who damned the king's wig in the very presence of his majesty; with great credit, however, to his own loyalty, and very much to the amusement of the king.' 'I do not well see how that could be.' 'You shall hear a story which our president (Pye had been a gentleman commoner of Magdalen College) told at his own table. The king was out a hunting: P— was in, and of, the field: the king's horse fell; the king was thrown from the saddle, and his hat and wig were thrown to a little distance from him: he got on his feet again immediately, and began to look about for the hat and wig, which he did not readily see, being, as we all know, short-sighted. P—, very much alarmed by the accident, rides up in great haste and arrives at the moment when the king is peering about and saying to the attendants, 'Where's my wig? where's my wig?' P— cries out, 'D—n your wig! is your majesty safe?'

"While the late Edmund Burke was making preparation for the indictment, before the House of Lords, of Warren Hastings, governor-general of India, he was told that a person who had long resided in the East Indies, but who was then an inmate of Bedlam, could supply him with much useful information. Burke went accordingly to Bedlam, was taken to the cell of the maniac, and received from him, in a long, rational, and well-conducted conversation, the results of much and various knowledge and experience in Indian affairs, and much instruction for the process then intended. On leaving the cell, Burke told the keeper who attended him, that the poor man whom he had just visited, was most iniquitously practised upon; for that he was as much in his senses as man could be. The keeper assured him that there was sufficient warranty and very good cause for his confinement. Burke, with what a man in office once called 'Irish impetuosity,' known to be one of Burke's characteristics, insisted that it was an infamous affair, threatened to make the matter public, or even bring it before parliament. The keeper then said, 'Sir, I should be sorry for you to leave this house under a false impression: before you do so, be pleased to step back to the poor gentleman's cell, and ask him what he had for breakfast.' Burke could not refuse compliance with a request so reasonable and easily performed. 'Pray, sir,' says he to his Indian counsellor, 'be so obliging as to tell me what you had for breakfast.' The other, immediately putting on the wild stare of the maniac, cried out, 'Hob-nails, sir! It is shameful to think how they treat us! They give us nothing but hob-nails!' and went on with a 'decant wild' on the horrors of the cookery of Bethlehem Hospital. Burke staid no longer than that his departure might not seem abrupt; and, on the advantage of the first pause in the talk, was glad to make his escape.—I was present when Paley was much interested and amused by an account given by one of the company, of a widow lady, who was of entirely sound mind, except that she believed herself to be made of glass. Given the vitrification, her conduct and discourse were consequent and rational, according to the particulars which Paley drew forth by numerous questions. Canes and parasols were deposited at the door of her drawing-room as at the

Louvre or Florentine Gallery, and for the same reason. 'You may be hurt by a blow,' said she, to one of flesh and blood; 'but I should be broken to pieces: and how could I be mended?'

"Some one came up to Paley and made an excuse for a friend, who was obliged to defer an intended visit to the subdeanery, because a man who had promised to pay him some money in April, could not pay it till May. 'A common case,' said Paley. We all laughed. Paley, by way of rewarding us for our complaisance in being pleased with what was recommended chiefly by the quaintness of his manner, went on:—'A man should never *pay money* till he can't help it; *something maay happen*.'

"At another time he said—'I always desire my wife and daughters to pay ready money. It is of no use to desire them to buy only what they want; they will always imagine they want what they wish to buy: but that paying ready money is such a check upon their imagination.' Paley's education had been sufficiently hardy. 'My father rode to Peterborough, and I rode after him, on a horse that I could not manage. I tumbled off. My father, without looking back, cried out, 'Get up again, Will.' 'When I set up a carriage, it was thought right that my armorial bearings should appear on the panels. Now, we had none of us ever heard of the Paley arms; none of us had ever dreamed that such things existed, or had ever been. All the old folks of the family were consulted; they knew nothing about it. Great search was made, however, and at last we found a silver tankard, on which was engraved a coat of arms. It was carried by common consent that these *must* be the Paley arms; they were painted on the carriage, and looked very handsome. The carriage went on very well with them; and it was not till six months afterwards that we found out that the tankard had been *bought at a sale*!'

"He told me: 'when I wanted to write any thing particularly well,—to do better than ordinary,—I used to order a post-chaise and go to Longtown; it is the first stage from Carlisle towards the north; there is a comfortable quiet inn there. I asked for a room to myself: there then I was, safe from the bustle and trouble of a family; and there I remained as long as I liked, or till I had finished what I was about.' I said, 'That is a very curious anecdote;' and I said it in a tone which, from a certain change in his countenance, I believe to have set him on musing how this anecdote would appear in the history of his life. Paley took his rides on horseback occasionally, but always alone, without the attendance even of a servant. 'I am so bad a horseman, that if any man on horseback was to come near me when I am riding, I should certainly have a fall; company would take off my attention, and I have need of all I can command to manage my horse and keep my seat: I have got a horse, the quietest creature that ever lived, one that at Carlisle used to be covered with children from the ears to the tail.' Understanding all this, and seeing him gambadoing on the race-course, I turned my horse's head another way. 'I saw what you meant this morning; it was very considerate of you: I am much obliged to you.' Paley was too careful of petty expenses, as is frequently the case with those who have had but narrow incomes in early life. He kept a sufficiently handsome establishment as subdean, but he was stingy. A plentiful fall of snow took place during an evening party at the precentor's; two of Mr. Subdean's daugh-

ters were there; he shewed great anxiety on account of the necessity that seemed to have arisen of sending them home in a sedan-chair: taking the advice of several of the company, whether such necessity really and inevitably existed, he said to me, 'It is only next door.' 'The houses touch,' said I, 'but it is a long round to your door; the length of both houses and then through the garden in front of your house.' He consulted the precentor, who, to put the matter in a right point of view, cried out, 'Let the girls have a chair; it is only three-pence a piece.'

"He preached a sermon at Lincoln for the benefit of a charity school. In the course of this sermon he related, in familiar but sufficiently dignified language, a story of a man who, giving evidence on a trial respecting some prescriptive right claimed by the trustees of the charity, was browbeaten by the questioning counsel: 'I suppose the fact to which you swear happened when you were a charity boy, and used to go to school there?' The witness calmly replied: 'I was a charity boy; and all the good that has befallen me in life has arisen from the education I received at that school.' Paley drew hence an argument in favour of the institution for which he pleaded. The whole discourse pleased his auditors; and a deputation waited on him to request he would print it. He said, 'Gentlemen, I thank you for the compliment; but I must give the same answer that I have given on other like occasions; and that answer is—The tap is out.' 'The Archbishop of York,' said he, speaking of a late primate, 'preached one day at Carlisle: I was present, and felt muzzy and half asleep; when on a sudden I was roused, and began to prick up my ears; and what should I hear but a whole page of one of my own books quoted word for word; and this without the least acknowledgment, though it was a *white bear*; a passage that is often quoted and well known.' 'Now,' said Dr. Milner, Dean of Carlisle, who related the anecdote, 'guess what inference Paley drew from this plagiarism. No; if that court were full of people, not one of them would be able to guess: it was this—'I suppose the archbishop's wife makes his grace's sermons for him.' The Rev. Mr. Peters, prebendary of Lincoln, and a painter, gave to the cathedral an altar-piece, his own work; the subject, the Annunciation. It so happens that the Blessed Virgin is, in this piece, represented as very far advanced in pregnancy. Paley, with an arch look, first at the prominent part of the Virgin's person, and then at the angel, said, as if speaking to the latter, 'You're come too late.'

"Dr. James, the master of Rugby school, was represented, by those who knew him, as a weak, amiable man, and a very good Greek and Latin scholar. He went to Parr one day in great distress of mind, and opened his business with, 'Dr. Parr, I want to consult you: I am very much afraid there will be a rebellion among the boys; what am I to do?' Parr replied: 'Buy a large cocked-hat, James.' Dr. James rejoined, 'Pray, be serious: consider what serious consequences these symptoms of insubordination may lead to.' Parr insisted, 'Buy a large cocked-hat, James; an immensely large cocked-hat!'

'Hi motus animum atque hæc certamina tanta
Pulveris exigui jactu compressa quiescent.'

"There was once a crier of fish at Lincoln, who would not compromise his veracity: he was wont to say, 'Fish, fish! they were alive:' and this reticence obtained for him at least as much credit as would have done the

epithet 'fresh,' a hundred times repeated. He cried the lists of the horses at the races of Lincoln; and after announcing the contents of the lists, 'the horses' names, their owners' names, and the colours of the riders,' he endeavoured to excite the sympathy of us, his townsmen, by adding — 'Poor Lincoln races! they are worse and worse!' Public criers do not usually proclaim unwelcome truths: truth is as often found at the bottom of a well as on a race-course. True it was, nevertheless, that coaches and six, which the crier and others had formerly regarded with admiration, were no longer the mode; and that Yorkshire Doncaster afforded better sport to the amateurs, and a better harvest to the black-legs, than did our ancient colony. These races were in my boyhood a holiday to me: the scene was animating. Among other attractions was a German Jew, whose cry was 'Up mit it again — always a voman.' He carried before him a basket of cakes, to be sold at a half-penny a-piece; but, accommodating himself to the genius of the place and the spirit of the time, he offered to the public the chance of winning two cakes or of losing a halfpenny, pledging himself to risk his own fortune in the toss-up, on the event of the obverse of the coin being uppermost; this obverse bearing the figure of Britannia, not yet deprived of her cap of liberty. As this man was a Jew, and I belonged to the religion by law established, I thought it right to insult him; and so asked him when the Messiah was to come. He evidently resented my impertinence; but suppressing his anger, quietly replied, 'He was never tell me;' then turning to the business of the day, uttered forth his cry — 'Up mit it again — always a voman.'

"The celebrated David Hartley entertained, I believe, at his apartments in Merton College, of which he was fellow, a party of his friends: they dined well, *comme de raison*; and there was every likelihood that the evening would conclude with the utmost festivity, when a letter was brought to the naturalist: after due apology, he opened and read it; then starting up, he rushed out of the room. He soon returned, with horror on his face and a basketful of feathers in his hand: 'Gentlemen, what do you think we have been eating?' Some of the guests began to fear they had been poisoned: even the boldest felt qualms. 'Oh! that the letter had but arrived before the bird!' Then holding up some of the feathers, and letting them fall into the basket to display them to the company, he relieved their apprehensions, while he revealed the cause of his own grief, — 'we have eaten a nondescript.' Though no blame could attach to him, there was something in all appearance so disreputable in the untoward accident by which, under his auspices, a scientific object had been treated in so vulgar a manner, that Hartley did not quickly recover from the mortification."

We shall conclude with a riddle of Lady Craven's:

"The late Margravine of Anspach wrote an impromptu charade, and presented it to her husband, Lord C., as the person most interested in the subject of it, and most capable of judging of its truth: —

Mon premier est un tyran —
Mon second est un monstre —
Et mon tout est — le diable —

mari-
age;
mariage."

Altogether, we recommend this as a very readable book — a vein of pleasantries runs through the whole; and as for the polemical opinions, we leave them to such as may be inclined for the discussion.

Foscarini; or, the Patrician of Venice. 2 vols. 12mo. London, 1829. Hunter.

WE shall best characterise this tale by calling it one of the most picturesque possible; the imagination is kept continually excited by images of beauty — by that species of inspiring mystery, as in the veiled face of a nun — and by a poet's taste in the use of all those romantic associations, of which, like the magic and silver chain in the fairy's garden, touch a single link, and a hundred others vibrate in music. The story is exceedingly interesting, and well told; but we are too kind to our readers to spoil it by telling it to them. We shall extract a single scene; only premising, that the hero, and his mistress disguised as a young officer, have been taken prisoners by robbers.

"The boat turned into a winding passage amid the rocks, which advanced into the sea. Notwithstanding the profound darkness, the rowers continued their exertions; and some branches of resinous pine, lighted by one of the *Uscoques*, discovered the interior of a vast cavern, in which the waves, losing their impetuosity, formed a still and gloomy lake. *Foscarini* felt as if the world had closed on him: he looked upon *Margaretta*, upon features in which dignity and beauty were united, and whose expression was that of firm resolution. Every thing indicated in the *Uscoques* a barbarity more ferocious than that which has its origin in the want of civilisation. Among savages in a state of nature, we may discover the seeds of virtue; but in these countenances, where evil habits had extinguished every sentiment of humanity; in these eyes, at one moment apparently inanimate, and the next sparkling with fury, — might be read, in living characters, the inscription which the poet observed upon the gates of hell. Their arms consisted of a poniard, pistols, and a Turkish sabre; and each of these outlaws having retained such part of his dress as custom had rendered most agreeable to him, it was easy to trace the country from which he had been expelled."

They debate on the destruction of their prisoners: —

"In the East," said the Jew, in his monotonous and drawing tone, "a faithless woman is sewn up in a sack, and the sea covers all; let us shut up our prisoners under the deck of their bark: I remarked this evening the signs of a storm, and I am much mistaken if the north wind do not make them dance from heaven to hell. Drowned, beaten to pieces on the rocks, where can they be found, or how could they be recognised?" This expedient, being to them a new mode of inflicting a painful death, was received with noisy approbation. "Let them perish, and may they carry with them the good fortune of Venice!"

"The brigands displaced a rock, which closed the entrance of the cavern; as they went out, *Gregorina* redoubled her invectives: — 'May she not be dangerous?' demanded one of the *Uscoques*. 'No, no,' answered *Maslarida*; 'her attachment to me will be our security.' Antonio, whom they had not separated from *Margaretta*, entreated her to discover herself: 'To save my life is out of the question; but do not think I will suffer you thus to perish!' 'Say but one word, and I will throw myself from the rock.' Her foot was already on the edge, and Antonio, thinking she was going to execute her threat, sprung forward to hold her back. 'Do you think you can do as much, when she strikes on the points of the rocks?' said *Zafarana*. 'Listen! do you hear the roaring of the wind? did I not tell you so?'

demanding Isaac. They answered him with cries of savage and ferocious joy. 'This does not resemble the regattas on the grand canal, my young hero,' said *Zafarana*, with his tiger-look. 'Nor does it resemble the triumphs you have promised yourself, great exterminator of the *Uscoques*;' resumed *Maslarida* laughing. These insulting remarks produced others, to which Antonio made no reply; preserving a calm and firm demeanour, very foreign to his real feelings. He looked on with a sort of hesitation in his manner, whilst they prepared his singular mode of punishment, and with difficulty repressed his desire of selling his life dearly; but he thought he owed this sacrifice to *Margaretta*. What would become of her when he was no more? Of what use would then be her explanations, too long delayed, with these robbers, drunk with wine and carnage, and irritated by his unexpected resistance? Would she not remain exposed to every outrage? Nevertheless, in looking at that beautiful creature, so young, so tenderly bred, accustomed to all the luxuries of life, and destined to so miserable an end, a deep groan issued involuntarily from his breast; and the *Uscoques* rejoiced to see him at last show some sign of grief. Turning towards him, with a look which expressed the enthusiasm of her passion, *Margaretta* entered the bark with a firm step; and they heard nailed over them the hatches of their movable prison, to be broken only by the pointed rocks on which, in all probability, it would dash them. The *Uscoques*, delighted at the invention, crowded into the boat, and began to row vigorously. 'I have been unable to defend you, and yet I live!' exclaimed Antonio, striking his head against the planks. 'Why such despair?' said *Margaretta*, 'death to me is freedom; does it not unite us? Am I not yours? I die happier than I have lived!' Antonio's answer was lost in the noise of the winds and waves; their lips met, and it was in this moment of anguish that they exchanged the first kiss of love. Meanwhile the *Uscoques* had left the tunnel, and abandoned the bark to the fury of the storm. They felt their movable cell raised to prodigious heights, and then sinking to a frightful depth: they could neither speak to nor see each other, but their mutual feelings were expressed by sighs, and the trembling pressure of their hands. This extreme state of agitation finally produced an enthusiasm which raised them above the horror natural to human beings at the near and inevitable approach of death. As chance would have it, the wind, which as it then blew would have driven them out to sea, changed suddenly, and forced them towards the coast. The bark, driven about in all directions, at last struck against one of the innumerable rocks which bordered the shore, and split open with a horrible crash. Holding *Margaretta* in one arm, Antonio struggled courageously with the other against the wave, which at once carried them to a distance from the vessel. He preserved himself on the surface for a time by swimming; but it required the most strenuous efforts to resist the violence of the tempest. Pressed down by the weight of his clothes, and by that of his precious burden, his strength began to fail, when suddenly an enormous wave broke over them, drew them rapidly along, and finally threw them on the shore. Instead of the rocks, which were to have destroyed them, Antonio felt the sand; and, clinging to it a moment, that the water might retire, he rose on his feet, staggered a few paces, and called on *Margaretta*. She was cold and motionless: had he saved only himself! Despair deprived him of

his remaining strength, his ideas became confused, and he fell senseless on the strand."

There is a very original sketch of character in a young Moorish page; and we do think the lovers of romance will find much gratification in these pages.

Natural History of Enthusiasm. 8vo. pp. 311. London, 1829. Holdsworth and Ball.

THE age for essay-writing has long passed by, and with it much of that calm, sedate habit of thinking for which the authors of the last century were famous. So far as we have only lost by this circumstance the jejune affectations of pretended moralists, we have nothing to regret; but the old style of essays was very distinct from its imitation in later days. It often ran, it is true, with a grave, moralising tone; but there was a raciness of thought and expression, even when the commonest subjects were treated of, which compensated for the occasional introduction of a wise saw. The long series of essays which we possess is by no means the least valuable feature of our national literature; and we sometimes think it would be well if the rich reflective pages of the British Essayists were more frequently imitated in style and spirit than they have now for many years been. It is not without pleasure, therefore, that we witness some signs of a revival of this species of writing in the present day. We have now on our table four or five volumes which deserve to be regarded as worthily imitating their classical predecessors; and, though not broken up, as they might indeed have better been, into several distinct essays,—as composed in the weighty and convincing style which forms the great charm of a genuine essay. *The Natural History of Enthusiasm* is, in fact, an essay on the nature and effects of its operation on the human character,—a subject than which no better could be found for such a mode of treatment in the whole range of psychological science. Partaking, as every strong passion does, of the nature of this mighty agent, it is a work of profound philosophical thought to distinguish between what is natural as passion, and enthusiasm as feeling,—between the power working by its own energy, and the sudden strength which is felt but not possessed, impelling but not helping forwards. Enthusiasm, to take it in the bad sense of the word, is produced by a false estimate of things on the one side, and a false idea of ourselves on the other—the offspring, in by far the most instances, of ignorance and vanity. But it is not in this contracted sense that the word enthusiasm is always understood; nor does the principle in reality always proceed from the same causes, or produce the same effects. It may find a resting-place in strong minds, under particular circumstances, as well as in weak; and in this case, though the conduct to which it impels be no more the result of right or cool reason than in the other, it will be widely different in its character—as different, in short, as the passionate love or anger of a wise man and a fool. We have read the work before us with considerable pleasure. It is full of admirable observation, and expresses that high tone of moral feeling which gives a kind of legitimate authority to the writer's speculations. The following extracts will justify our praise.

In speaking of religious enthusiasm, he says—

"The religion of the heart may be supplanted by a religion of the imagination, just in the same way that the social affections are often dislodged or corrupted by factitious sensibilities. Every one knows that an artificial excitement of all the kind and tender emotions

of our nature may take place through the medium of the imagination. Hence the power of poetry and the drama. But every one must also know that these feelings, however vivid and seemingly pure and salutary they may be, and however nearly they may resemble the genuine workings of the soul, are so far from producing the same softening effect upon the character, that they tend rather to indurate the heart. Whenever excitements of any kind are regarded distinctly as a source of luxurious pleasure, then, instead of expanding the bosom with beneficent energy, instead of dispelling the sinister purposes of selfishness, instead of shedding the softness and warmth of generous love through the moral system, they become a freezing centre of solitary and unsocial indulgence, and at length displace every emotion that deserves to be called virtuous. No cloak of selfishness is in fact more impenetrable than that which usually envelops a pampered imagination. The reality of woe is the very circumstance that paralyses sympathy; and the eyes that can pour forth their floods of commiseration for the sorrows of the romance or the drama, grudge a tear to the substantial wretchedness of the unhappy. Much more often than not, this kind of luxurious sensitiveness to fiction is conjoined with a callousness that enables the subject of it to pass through the affecting occasions of domestic life in immovable apathy: the heart has become, like that of leviathan, 'firm as a stone, yea hard as a piece of the nether millstone.'"

We have very seldom read any more excellent reflections than the following, which occur in the chapter on the doctrine of Providence.

"Those unforeseen accidents which so often control the lot of men, constitute a *superstratum* in the system of human affairs, wherein, peculiarly, the Divine Providence holds empire for the accomplishment of its special purposes. It is from this hidden and inexhaustible mine of chances—chances, as we must call them, that the Governor of the world draws, with unfathomable skill, the materials of his dispensations towards each individual of mankind. The world of nature affords no instances of complicated and exact contrivance, comparable to that which so arranges the vast chaos of contingencies as to produce, with unerring precision, a special order of events to every individual of the human family. Amid the whirl of myriads of fortuities, the means are selected and combined for constructing as many independent machineries of moral discipline as there are moral agents in the world; and each apparatus is at once complete in itself, and complete as a part of a universal movement. If the special intentions of Providence towards individuals were effected by the aid of supernatural interpositions, the power and presence of the Supreme Disposer might indeed be more strikingly displayed; but his skill much less. And herein especially is manifested the perfection of the Divine wisdom, that the most surprising conjunctions of events are brought about by the simplest means, and in a manner that is perfectly in harmony with the ordinary course of human affairs. This is in fact the great miracle of Providence—that no miracles are needed to accomplish its purposes. Countless series of events are travelling on from remote quarters towards the same point, and each series moves in the beaten track of ordinary occurrences; but their intersection, at the very moment in which they meet, shall serve, perhaps, to give a new direction to the affairs of an empire. The materials of the machinery of providence

are all of ordinary quality; but their combination displays nothing less than infinite skill."

We believe that from this small volume might be collected sufficient materials to strike any ordinary mind with subjects of reflection for a year. We select the remarks which occur on the most important topics, because they are those of a man of sense and feeling, but not an enthusiast. In observing upon the probable spread of Christianity, he says:—

"The relative political and commercial condition of nations at the present moment affords several special grounds of reasoning, on which the extension of Christianity may be anticipated as a probable event. Among topics of this class may be named that of the diffusion of the English language—the language which, beyond comparison with any other, is spreading and running through all the earth, and which, by the commerce and enterprise of two independent and powerful states, is colonising the shores of every sea. This language, now pouring itself over all the waste places of the earth, is the principal medium of Christian truth and feeling, and is rich in every means of Christian instruction, and is fraught with religious sentiment, in all kinds, adapted to the taste of the philosopher, the cottager, and the infant. Almost apart, therefore, from missionary labour, the spread of this language ensures the spread of the religion of the Bible. The doctrine is entwined with the language, and can hardly be disjoined. If the two expansive principles of colonisation and commercial enterprise, once diffused the language and religion of Greece completely around every sea known to ancient navigation, it is now much more probable that the same principles of diffusion will carry English institutions, and English opinions, into every climate."

We close this book under the impression that the author is a man of great judgment, and possessed of a true and genuine philosophical spirit. His work deserves to be read universally, and especially at the present time, when there is great need, but great lack, of such productions.

Some Account of Edward Ruppel, and his Travels in Northern Africa.

[Concluding notice.]

THE distracted state of the country having prevented Ruppel's intended visit to Kordofan, he resolved to ascend the Bahar-Abbiad, or white river, which forms the western branch of the Nile, and has been conceived by Ritter, in his admirable description of Africa, to be a continuous stream of the Niger. It was not destined to be Ruppel's fate to solve a problem, in which Bruce, Rennell, and Humboldt, are opposed to Ritter. M. Hey was sent in advance up the Bahar-Abbiad; such, however, was the confusion created by the revolt of the province of Sennaar, that Ruppel was unable to follow him, but remained in the island of Kurgos for a space of three months, in a state of dreadful suspense, both for the fate of his enterprising companion, as well as the safety of his property, collections, and camels. Six months had elapsed without any tidings being received from either of them, when the arrival of a third collection of specimens brought their friends in Europe a letter from Ruppel, who had reached Cairo in July 1824, after having been rejoined by Hey, who had spent three months and a half upon his perilous voyage. This traveller is the first European who has navigated the Bahar-Abbiad, and afforded us any authentic account of that great river. "His conduct during this expedition was that

of a man who despised all personal considerations. With his little crew of five men, he made such good use of his skill and courage, that he persevered in his ascent of the stream for a space of two whole months, during which he was engaged in perpetual hostilities with the Shillons, Funges, and Nubas Shengas: on this excursion he penetrated as far as the mountainous district of Fazuglo; so that he must have reached the twelfth degree of northern latitude. As a proof of this, he brought back several mammiferous animals and birds which are natives of that clime. He observes, that he should have reaped a far richer harvest, if he had met with a single tribe whose conduct towards him had been otherwise than decidedly inimical: and he states, that the Bahar-Abbiad continued to be very broad, even at the furthest point of his attempt; that he saw numerous herds of hippopotami, without being able to kill one individual among them, and found crocodiles which were five and forty feet in length. The result of this voyage sets both Bruce's assertion and Rennell's and Humboldt's opinions at rest; for a single glance at Bruce's chart of the Nile renders one inference peculiarly striking; namely, that a stream which flows at a short distance along the side of mountains whence it takes its source, could not possibly possess so broad a bed, much less during the excessive heats under which Hey was navigating it. On the other hand, it does not follow, that we are at once to admit the identity of the Nile and Niger, or reject the recent assignment of a western mouth to the latter of these rivers, as insisted upon by English writers." Hey, on his return, ascended the Asrak, or eastern branch of the Nile, and reached Sennaar, from which unwholesome spot he was glad to make his escape and rejoin his colleague, with whom he regained Dongola, and returned to Cairo. In a letter of the 3d of May 1824, dated from Ambukol, Ruppel expresses his intention to visit Kordofan, as offering attractions of no common character. "Kordofan," says he, "possesses a singular range of semi-extinct volcanoes, particularly at the Gebel-Koldagi, where there is a lofty peak, which smokes and constantly throws up hot ashes. Against another mountain, to the south-east of Obeid (*Jbei*) are found several chambers hewn in the rock; their sides are covered with figures of animals; a stone bench runs completely round them; and several pillars of the same material support the ceilings. The map I enclose of Kordofan and the banks of the Nile is wholly derived from information collected by Mohammed-bey, the son-in-law of Méhémet-Ali, the pasha, and communicated to me by him. It indicates no other places besides those which this remarkable personage has visited during the campaigns of the last four years. Mohammed-bey is one of the few Turks who know how to appreciate and respect the claims of science; he is also enthusiastically devoted to geography, and sensible of the value of new discoveries. His constant companions are a large atlas published at Constantinople, and several Turkish works relating to geography, astronomy, and natural history. He is not destitute of a partial acquaintance with these sciences, and is fond of displaying it when in company with persons whose taste is akin to his own. I was not a little surprised to hear him explain the phenomena of refraction and attraction with much clearness and precision. When he asked me what was the real cause of declination and the deviation of the magnetic needle, I must own, that no school-boy was ever more embarrassed than I was on being

called upon for an explanation. In other respects, this extraordinary being is of a more cruel and sanguinary disposition than any writer has assigned to the most atrocious despots of antiquity. . . . You will be astonished at finding no indication on my map of the river *Morgan*, though it appears in the charts given by Bruce and Burckhardt. I was equally surprised at this circumstance myself, as Bruce had navigated the Atbara, from Goz-Regiab to Ras-el-Wadir. The following is the result of my inquiries on this subject. There is no river in the country known by the name of *Morgan*; this is an Arabian word, signifying the confluence of two rivers, and is derived from *gure*, a corner or acute angle. Hence the district of Kurdan, where the Bahar-Abbiad and the Bahar-Asrak meet, is here styled *Morgan*." Ruppel next dwells on the fertility and magnificent ruins of Mandéra, an immense plain, situated between the Atbara, Rahad, Bahar-Asrak, and Nile, and forming an island, as Bruce had conjectured: he ascribes the wealth and prosperity of its ancient inhabitants, as attested by the splendid ruins of their dwellings, to their commercial spirit, "which diffused itself in every direction around this common centre. The ruins to the south-east of Sofá were on the high road from Axum to Adulis." After alluding to his visit to the ruins of Gurbah, he communicates the heads of intelligence he had gleaned from trustworthy persons, in anticipation of his meditated journey into Kordofan. This passage is too interesting to be given in any words but his own. "The negroes, who inhabit the mountainous part of Kordofan call themselves Nubas, and are divided into distinct tribes, each of which occupies the summit of a high mountain. The majority of these tribes speak a dialect which is peculiar to them, and the roots of which are recognisable in the four languages of Koldagi, Shabun, Dia, and Tekala. In all these several tongues, the place where they have settled is termed *Danka* or *Donga*. The great bulk of the Nubas are heathens, adoring, as it is said, the moon, or at least addressing their prayers to that luminary. The only exceptions are a few tribes, living on the banks of the Bahar-Abbiad, and professing Mahomedanism. Agriculture is the occupation of all the Nubas of Kordofan; durra is the principal article of cultivation in the plains; and the greater proportion of them are weavers of cotton cloths. Many of the tribes are familiar with the casting of metals and working of iron. They are a race, generally speaking, of a mild, humane, and industrious character; and the inhabitants of Kolfan are the only people accused of thieving. To the south-east of Kordofan there is found, as it is reported, a tribe of anthropophagi. The dialect of Koldagi resembles the language spoken by the Berberes, which is the common language of this district, from Assouan to Dongola. The circumcision of girls is as prevalent among them as that of boys among the Berberes. All the inhabitants of Kordofan, who have not intermixed with the Arabs, of whom some have settled amongst them, have woolly hair; and though the flattened nose and thick lip bespeak their negro descent, they do not possess the round projecting cheek, which distinguishes the negro of western Africa from every other race. I have obtained the skull of a Nuba of Dguke or Dgdugub (perhaps the Shungalla of Bruce?) on the eastern bank of the Bahar-Abbiad. Hey, who has explored sixty leagues of that stream, describes it as a mass of marshy waters, which has no current in the winter season. These

waters, though neither turbid nor muddy, are whitish in colour, and do not mix with the stream of the Bahar-Asrak at the confluence of these two branches of the Nile; indeed, their distinct hues may be traced for a considerable distance beyond it."

Here we close our account of the interesting and important travels of this enterprising and devoted geographical explorer.

Ueber den Werth, &c. On the Value of the Weights and Measures of the Ancient Romans; as deduced from the original Records preserved in the Royal Bourbon Museum at Naples. A Prelection held in the Royal Acad. of N. By Lucas de Samuele Cagnazzi. Translated by J. J. Avon Schönberg, M.D. 8vo. pp. 152. Copenhagen, 1828.

NEITHER Neander, Agricola, Pactus, Bernard, Arbuthnot, nor Eisenschmid, have treated this subject as successfully as Romé de l'Isle, in his *Métrologie*, or tables for ascertaining the weights and measures of the ancients. The accuracy of his details, particularly as regards the Roman foot, is essentially corroborated by the present work; which is the result of inquiries undertaken by Cagnazzi, who was directed by the King of Naples to examine such antique remains as have been recovered during the progressive excavations of Herculaneum and Pompeii, and might serve to throw light upon ancient metrology.

Our author had six distinct scales under his examination, and measured them with an instrument he had constructed for that especial purpose; but his labours were thwarted by the same difficulties which had been encountered by his predecessors. In fact, the scales considered as representing the *Roman foot*, are not only of dissimilar lengths, but their subdivisions are inaccurate. M. Cagnazzi accounts for these discrepancies by reminding the reader that the incorrectness of the measures both of the "Eternal City," as well as her minor dependencies, was a frequent subject of complaint. From amongst the six scales he had before him, he felt no hesitation in preferring one which was beautifully inlaid in bone, to the other five, which were of metal: the length of the former he states at 131,348 Parisian lines, or 11,6656 English inches.

In regard to liquid measures, he did not consider those which are preserved in the Bourbon Museum as at all calculated to afford a satisfactory record of their original capacity; and he was, therefore, induced to recur to some other basis for his comparative estimate. An ancient weight, on which it is recorded that it was made in the reign of Vespasian, and weighed exactly ten pounds, is preserved at Rome, and had been made use of by preceding inquirers, particularly De l'Isle, as the groundwork of their labours. The Bourbon Museum indeed possesses various series of weights, the value of which is ascertained by the inscriptions upon them; but they differ considerably from one another. However, he selected three of those, which were in an excellent state of preservation, and, being marked with an X, were evidently masses of ten pounds each: he found them to yield the respective weights of 3258, 3285, and 3232 grammes; whilst another weight of two pounds, which was in a scarcely less perfect state, gave 652 grammes. From these data, our author assumes 3258 grammes, or 7.188 English pounds, to have been the

* Shuckburgh estimates this Roman foot as varying from 11.6064 to 11.6382 English inches.

exact contents of ten pounds;* and he then proceeds to state his reasons at length for the assumption of this calculation. He observes, that the four weights he employed were of serpentine stone, and in as perfect a state as when they came out of the makers' hands: on this account he deemed them peculiarly adapted to afford as accurate a result as could be expected under the circumstances. He next enters upon the following calculation:—Ancient writers mention ten pounds as being the weight of the *congius* of water; a measure equivalent to one eighth part of the ancient cubic foot: he therefore takes the weight, which forms the basis of the French gramme, viz. distilled water of 0 deg. of heat against rain-water of 10 degrees, and compares it with the number of grammes we have just mentioned. By these means he finds 131,325 Paris lines, or 11,6636 English inches, to be the value of an ancient foot measure; a value which closely approximates to the contents he had already estimated. With a view of ascertaining the extent of the errors with which his calculations might possibly be chargeable, he entered into a similar calculation in reference to the lightest and heaviest of the weights employed, and found the former to contain 130,976 grammes, and the latter 131,694.

It would be tedious to point out the variations which exist between the estimates of the Roman weights and measures which have been made by most preceding calculators, and the results which Cagnassi has obtained. In the eyes of scientific readers, the prolixity of his details will tend to give his treatment of the subject an increased value. At all events, he has evidently girded himself to his task with a mind anxious to derive conviction from positive experiment and laborious investigation.

With very few, and those but immaterial exceptions, the translator of this treatise appears to have done justice to its merits. The engraving he has annexed to it, represents the instrument employed in measuring the several scales, and gives the inscription found on one of the weights.

SIGHTS OF BOOKS.

The Englishman's Guide to Calais, &c. &c., by two Routes to Paris, &c. By James Albany, Esq. 12mo. pp. 212. London, 1829. Hurst, Chance, and Co.

A NOT very necessary, and, if necessary, a very indifferently executed work. A *Guide* begins by telling the reader that the writer was at six o'clock on the beach of a picturesque watering-place—that the morning was lovely, &c. &c.; and this idle vein runs through the book. We should like to know what such information has to do with the *guidance* of other travellers?

Stories of Popular Voyages and Travels.

THE plan of this little work is excellent. A knowledge of foreign countries—their customs, productions, &c.—is as interesting as useful to youthful readers: a spirit of inquiry is excited, a mass of information is almost unconsciously collected, which cannot but have a good effect in after years. The great drawback to this branch of literature is, that even in some of its best works there is much both useless and improper for the young mind; and, moreover, they are often too expensive for the juvenile library. The plan of the pages now before us is to condense and select the materials of some

of our most celebrated travellers; and an accurate idea of South America may be gathered from extracts which have laid Messrs. Warburton, Hall, and Head, under contribution; and this, we think, might be very advantageously extended into other countries—Africa, for example. We should not forget to mention that there are some pretty little illustrations; though that of Warburton's riding on the crocodile borders rather too much on caricature.

ORIGINAL CORRESPONDENCE.

Paris, August 10.

NEVER did warrior furnish such innumerable resources to dramatic invention as William Tell:—indeed, his exploits seem to possess the same charm as the widow's cruse of oil—for they are inexhaustible. I went to see the new opera, of which the northern hero is the subject; and perhaps the Helvetic chief will hereafter owe the immortality of his fame more to the divine accords of Rossini, than to his own achievements. The overtures of the first and second act are *des chefs-d'œuvre* in expression and elegance of style; the trio of the "chœur du serment" is also of the purest melody:—but what awoke every chord of the soul, and almost overpowered the senses, was the duet in the second act, sung by Nourrit and Debadie. The applauses of the audience were provokingly enthusiastic; for loud bravos and encores interrupted the vibrations of harmony, and broke the spell of enchantment. The scenery was very indifferent, except the landscape on the rising of the curtain; and as for the ballet, it was a sad distortion of legs and arms: a trio, however, danced by Paul, Taglioni, and Madame Montessin, to a Tyrolean air, indemnified the spectators for the unpoetic motions of the other performers, who looked as though their limbs had been just dislocated by the rack. Rossini was repeatedly called for at the conclusion of the piece; but he had left the house,—to the great disappointment of the assembly. In the box with me there were two ladies of consequence, who had brought crowns with them to throw on the stage as a homage to Rossini; but as he did not appear, they were obliged to renounce the pleasure of testifying their feelings of admiration to the "king of melody."

On the 2d of August the jubilé was opened by a solemn mass, and Monseigneur the Archbishop bore the old bones and relics of saints in procession. I suppose by way of giving them an airing. As I looked at the gravity of his face, and the awe-struck countenances of those who aided in the ceremony, I could not help thinking of Montesquieu's observation,—“That those who are only half mad are shut up; whilst others who are entirely so, range the world at large.”

As the palace of the Louvre is judged insufficient for the exhibition of the produce of industry, it has been proposed to terminate the half-built palace of the Quai d'Orsay, and to consecrate it to that purpose. According to the calculation of architects, it will require only three millions to complete the building.

“*Le Captif Littéraire*,” the same work which formerly was published under the title of “*Dangers des Souvenirs*,” has just appeared. Poems also, by the King of Bavaria, are *sous presse*; and so anxious are the public to be initiated into the secrets of kingly hearts, that fifty volumes are already bespoken. “*Souvenirs d'un Pendu*,” by a man of quality, is another work which has much whetted curiosity: reviewers speak highly of it.

ARTS AND SCIENCES.

A NEW EARTH.

M. BERZELIUS has just discovered a new earth, which possesses all the properties of that which formerly bore the name of thorina, but which, as is known, was only a phosphate of yttria. On account of this great resemblance, M. Berzelius has given the name of *thorina* to the new substance. This earth is white, and irreducible by charcoal or potassium. After having been strongly calcined, it is no longer open to the attack of the acids, with the exception of the concentrated sulphuric acid. Even after having been operated upon by the caustic alkalies, the sulphate of thorina is very soluble in cold water, but almost insoluble in boiling water; so that it cannot be separated from several other salts by washing the mixture in boiling water. Thorina dissolves easily in the carbonate of ammonia; the elevation of temperature causes the precipitation of a portion of the earth; but as it cools, the precipitate disappears. All the salts of thorina have a very pure astringent savour, almost like that of tannin. Chlorure of thorina, treated with potassium, is decomposed with a triple deflagration. The result is a gray metallic powder, which does not decompose water, but which, above a red temperature, burns with a splendour almost equal to that of phosphorus in oxygen. Thorina is but feebly operated upon by sulphuric or by nitric acid; hydrochloric acid, on the contrary, dissolves it with a lively effervescence. Thorina exists in a new mineral which has been found in a small quantity at Brevig, in Norway.—*Le Globe*.

CHRONOMETERS.

AT the annual public trial of chronometers at the Royal Observatory, Greenwich, an account of which was inserted in our last, the second prize (of 170*l.*) was awarded to chronometer John Carter, No. 131; the actual variation of which, between any two months of the year, was 0''/79; being only a quarter of a second greater than that of the chronometer which obtained the first prize.

NATURAL HISTORY: THE LION.

Two lions, which have been for some time in the menagerie at the Jardin du Roi, have afforded an opportunity of verifying a curious fact mentioned in several old works, but which modern authors have in general overlooked; namely, that there is at the extremity of the lion's tail a small claw concealed in the midst of the tuft of hair. It is a horny substance, about two lines in length, and is in the form of a small cone bent a little upon itself: it adheres by its base to the skin alone, and not to the last vertebra, which is separated from it by a distance of about two lines. This small claw is found in both sexes. The commentators on Homer endeavoured to explain by the presence of this claw the singular circumstance mentioned in the *Iliad*, viz. that the lion alone, of all animals, moves his tail violently when he is irritated, and strikes his sides with it: they believed that the lion endeavoured to excite himself by pricking his flanks with the claw in his tail. Blumenbach ascertained the existence of this claw several years ago: but the work in which he published his observations is unknown to naturalists; and they would probably for a long time have remained unacquainted with the fact we have just mentioned, had not M. Deshayes pointed it out, and induced those who particularly devote themselves to such subjects to make some inquiries into it.

* Arbuthnot calculates the Roman pound at 2946-4 English grains, making 10 pounds Roman equivalent to 7-464 pounds English.

This claw is very easily detached from the skin, so that in general there is no trace of it in stuffed specimens.

DR. SEYFFARTH.

THE liberal patronage of our Sovereign has enabled this distinguished scholar to visit, in a scientific point of view, the most interesting parts of Germany, Italy, France, England, and Holland; and he is not long since returned amongst us. He has recommenced his prælections by giving a course on Egyptian archaeology and the present state of Egyptian literature. He was nearly three years away from us, and employed that interval in exploring, with reference to those particular subjects, the various museums and libraries, both public and private, of Vienna, Munich, Milan, Turin, Rome, Naples, Lyons, Paris, London, Oxford, Cambridge, Amsterdam, Leyden, &c. The result of his inquiries has been to bring to light an immense number of remarkable Egyptian MSS. and unknown Coptic writings, many of which are above two thousand, and some even above three thousand three hundred, years old. The collection he has brought back contains more than ten thousand articles, comprised in twenty-one folio volumes; and it is more particularly valuable, as consisting, for the greater part, of perfect copies and impressions from the originals (for which purpose he has employed peculiar substances and compositions), as well as casts in plaster of Paris. As the deciphering of these records may be deemed one of the most important discoveries of the nineteenth century, and the records themselves belong chiefly to the historical class, the reports upon them, which our friend proposes gradually to bring forward, will contribute most essentially to spread a more general and accurate acquaintance with Egyptian literature, and to throw a clearer light upon the field of history and other sciences.—*Extract of a Letter from Leipzig.*

LITERARY AND LEARNED.

EGYPTIAN HISTORY.

HAVING alluded in our last Number but one to a very curious and interesting Essay on Egyptian History, &c. as connected with the Holy Scriptures, very recently published at Paris by Père Greppo, vicaire-général of the diocese of Ballay (of which a very few copies have been received in England, though more are expected), our readers will probably not be displeased to see a short paper on the same subject (written in June 1828, and agreeing in a remarkable manner with most of the above-mentioned learned father's opinions), which has just reached us from one of our correspondents, who has been authorised by the writer of it to make use of it in any way that he chose.

[Extract of a Letter to the Marquess Spineto, dated June 10, 1828.]

On the Connexion between the Egyptians and Israelites, and the sojourn of the latter during the eighteenth dynasty, and the Pharaohs at that time mentioned in the Holy Scripture.

It seems now settled, by the best chronologists, that the exodus of Israel took place in the year 1490-1 A.C.: it occurred, therefore, in the reign of Amenoph-Rameses (father of Sesostri, and son of Meiamoun), who began his reign anno 1493 A.C. (vide 1st Lettre au Duc de Blacas, Not. Chronologique, p. 117, and the other authorities). It follows, that Rameses Meiamoun was the Pharaoh from whose face Moses fled when he had slain the Egyptian; for Meiamoun reigned sixty-six

years, commencing in 1559 A.C.; Moses was eighty years of age when summoned by the angel in Horeb, after the death of that prince, and probably in the first year of Amenoph-Rameses, before whom he was ordered to appear; Moses had been exiled forty years in Midian, being forty years of age when he fled (vide Bible); therefore he must have fled in the twenty-sixth year of the reign of Meiamoun, and must have been born in the reign of Mandouei (the Achencheres II. of Manetho), who ascended the throne in 1585, i. e. about the eighteenth year of that prince. It seems probable that Osirei (Ph'osirei, the Busiris of the Greeks?), Mandouei, and Meiamoun, were the Pharaohs that persecuted Israel; and that Israel had been protected by their predecessors, Amenophis II., Thothmosis IV., Amenophis III. (Memnon), and Horus,—who seem to have been good and beneficent princes, and as such highly honoured by the Egyptians. It was in the reign of Amenophis II. (son of Moeris) that Joseph came into Egypt (and afterwards Jacob, i. e. from 1715 A.C. to 1706, vide the Chronology). The other princes, Osirei and his successors, appear to have been sanguinary tyrants and conquerors (vide their tombs, bas-reliefs, &c.); and being of a race collateral to the former kings (vid. Not. Chronologique, p. 107) might have been called the "kings who knew not Joseph." Their oppressions of Israel were punished in the time of their descendant Amenoph-Rameses; and whether or not this prince perished personally in the Red Sea (which may be doubted, as it is no where expressly so said in Scripture, except in one passage of one of the Alleluia Psalms, which were probably composed after the Babylonish captivity), it is clear that great and serious calamities befell Egypt in his time, as declared by the historian Manetho, therein corroborating the Mosaic account. It is likely that on this account, with his unfortunate and unhappy reign the priests chose to conclude the eighteenth dynasty, and commence a new one, the nineteenth, with the accession of his son, Rameses-Sethos, the Sesostri of the Greeks—as being a reign of peculiar prosperity and glory. The long wandering of Israel in the desert of Sinai, forty years, more than twenty of which correspond with the early years of the reign of Sesostri, during which many of his great conquests on the side of Syria and Palestine must have been achieved, sufficiently accounts for Moses and the Israelites not mentioning him, and not having met with him; as they would have been in the peninsula of Sinai, and afterwards proceeding by Mount Hor, and to the eastward of the Dead Sea,—while Sesostri probably penetrated into Palestine, &c. from Pelusium "along the sea-coast." He is said to have returned into Egypt the same way (vide Diodorus and Manetho). May it not be supposed, that the Divine influence (operating by second causes whenever a miracle was not absolutely necessary) directed Moses to proceed by Sinai, Mount Hor, and eastward of the Dead Sea, in order that Israel might be out of the way of Sesostri, and that they might ultimately have the advantage of attacking the Canaanitish nations after their power should have been broken by the previous invasion of Sesostri; and it is expressly said, that Moses was not allowed to lead Israel by the way of the Philistines (i. e. along the coast), "lest they should see war." The extreme youth of Sethos-Rameses (Sesostri) at the time of the exodus, as described by Manetho (and vid. Diodor. Sic.), is well accounted for by the death of the eldest son of the king at the time of the

destruction of the first-born of Egypt. Of this there can be no doubt, as it is expressly stated by Moses.

FINE ARTS.

SIR JOSHUA REYNOLDS.

WE had the pleasure, last week, of seeing a large and remarkably fine picture by Sir Joshua Reynolds, which has been, as it were, "raised from the dead." It is the property of the Earl of Westmoreland; but has for many years been lying neglected among lumber of various kinds; and, when discovered, was in so deplorable a state of decay (the surface being in many parts cracked, and the whole obscured by dirt), that the noble earl doubted the expediency of any attempt to restore it. Fortunately, however, he consulted Sir Thomas Lawrence on the subject. Sir Thomas recommended that it should be put into the hands of Mr. Dunthorne, of Grafton Street, Fitzroy Square; who, himself a clever artist, and familiar with the nature of oils, varnishes, and pigments, has devoted much of his time to the recovery of old pictures. The result has been highly gratifying to all parties. The picture is a composition of three whole-length figures. One is a portrait of the Hon. Henry Fane (uncle, we believe, to the present Earl of Westmoreland); the others are portraits of his guardians, Mr. Blair and Mr. Inigo Jones, a descendant of the celebrated architect. Mr. Fane and Mr. Jones are seated in a garden alcove, with a table before them, on which there seems to be some excellent claret; Mr. Blair is in a standing attitude, and is looking out of the picture. The whole is in Sir Joshua's best style. It appears to have been painted about the year 1770. The veteran Northcote, who has seen the picture since its resuscitation, is quite delighted with it; and the more so, as he recollects having varnished it for his friend and instructor, Sir Joshua, above fifty years ago.—Our knowledge of the injuries frequently inflicted on works of art by pretenders, who undertake to restore them "if in the very worst state," has prejudiced us against what is generally called "picture-cleaning;" but we should be guilty of great injustice to Mr. Dunthorne if we did not express our admiration of the skill which has enabled him thus to renovate one of the most pleasing and masterly productions of the father of the English school.

NEW PUBLICATIONS.

Whole-length Portrait of His Majesty, in the Robes of the Garter. Engraved in mezzotinto, on steel, by — Hodgetts, from the original picture by Sir Thomas Lawrence, P.R.A. Colnaghi.

KINGS, popes, statesmen, and heroes, come presented to us, through the medium of art, in such quick succession, that it may be said of them, as of the wooers of Portia, "whiles we shut the gate upon one, another knocks at the door." The present performance, however, claims our especial attention, both as respects our gracious Sovereign, and as regards the artists to whose joint efforts the public is indebted for so fine a work. We have recently noticed a portrait of our gracious Monarch in the familiar habit in which he is generally seen in domestic life; in the present print we behold him in all the splendour of royal decoration,—such as he ought to appear in the eyes of foreign potentates and nations; as dignified and illustrious in deportment and costume as he is in station and character. To the merits of the original picture the painter of

the *Literary Gazette* have already borne testimony; but if the talents of Sir Thomas Lawrence were conspicuous in its production, the talents of Mr. Hodgetts are no less so in the masterly engraving from it which is now before us. We are well aware of the difficulties with which he must have had to contend in the execution of his arduous task;—difficulties arising both from the nature of the work itself, and from the competition into which he had to enter with able contemporaries in a branch of art which has at no period been more fruitful of excellence; and we, therefore, feel the greater pleasure in saying that, whether viewed with reference to its minute and varied details, or to its more rare and valuable quality of general character and effect, this noble plate does Mr. Hodgetts the highest credit.

Decorations of the Grand Staircase of the New Royal Palace. From the Designs of Thomas Stothard, Esq., R.A.

It is with great pleasure that we find the talents of Mr. Stothard at length making their way into the residence of our gracious Sovereign, whose taste in the Fine Arts sheds a lustre on all which he approves. The subjects of these decorations are the Seasons, represented on four friezes. Each frieze is twenty feet in length, and the figures are about half the size of life. They have been modelled by Mr. A. J. Stothard, the son of Mr. Stothard, from his father's designs. Mr. Stothard's skill and elegance in composition, especially in that class of compositions which assumes a lengthened or processional shape, are well known; and he has again displayed those qualities in a very striking manner in the present work, which abounds with beauty of form in all the playful and poetical variety of nymphs, genii, and other allegorical figures. Mr. A. J. Stothard also has executed his difficult task with great judgment and ability. When these friezes are placed in the situation destined to receive them, we are persuaded that they will have a remarkably fine effect.

Abbotsford. F. Waller, Fleet-street.

Who can read the word "Abbotsford," much less contemplate a pictorial representation of the place itself, without instantly thinking of its illustrious occupant, and of those numerous and delightful creations of his powerful and richly-stored mind, which have contributed so much to the enjoyment of the present age, and which will contribute so much to the enjoyment of posterity? This is a very pleasing print. It has been lithographed, in his best style, by Mr. Gauci, from an original painting by Mrs. Terry, the widow of Mr. Terry; whose loss in a range of characters, certainly more varied than that of any of his contemporaries, the theatrical world has so much cause to regret. Mrs. Terry is the daughter of Mr. Naameth, the celebrated artist of Edinburgh; and she appears to inherit her father's talents and taste. The print is, we understand, published for her benefit. If every admirer of Sir Walter Scott would but follow our advice, and purchase a copy of it, the sale would be of unprecedented extent.

Hanoverian and Saxon Scenery, from Drawings by Captain Betty. Part XII. Jennings.

THIS Part completes the work. Besides the usual number of plates, executed with at least the usual skill and taste, it contains an engraved title, with a beautiful vignette of the "En-

trance to the King's Palace, Herrnhusen." Of the plates, "The Porta Westfalica, looking down the Weser towards Minden," and comprehending the celebrated field of battle of 1759; and the richly picturesque "Blaukenburg, Hartz," in which Louis XVIII. resided for a considerable time during his exile,—are our favourites.

Fisher's Illustrations of Ireland. No. 5.

THAT fine building "The Bank of Ireland," "The Ruins of Lord Portlester's Chapel, St. Auden's Church," and two views of "Kilkenny Castle," form the embellishments of the fifth No. of this pretty little publication.

A Series of Sketches of the existing Localities alluded to in the Waverley Novels. Etched from original drawings by James Skene, Esq. Nos. 1 and 2. Cadell and Co. Edinburgh; Simpkin and Marshall; and Moon, Boys, and Graves, London.

SLIGHT; but picturesque, and interesting.

Richard Jones, Esq. of the Theatre Royal, Drury Lane, as Alfred Highflyer, in "A Roland for an Oliver." Painted by H. Johnson; on stone by M. G.—Kenneth, Bow-street.

A GOOD resemblance of this lively actor, and respectable and gentlemanlike man.

Caricatures. M'Lean.

WE have lately been much amused by looking over a number of caricatures, some single, and political, such as "Hint-dropping," "Repose," "A Political Riddle," "A Broad Hint," &c.; others in sets, and of general application, such as "Paul Pry's Trip to Margate," "The March of Intellect," "A Search after the Comfortable," &c. With regard to the first class, it is really surprising to observe with what few lines the countenances of some of our leading public men, especially the Duke of Wellington, may be imitated. The profile of his Grace in "Repose" and "A Broad Hint," is perfect; and although in "A Political Riddle" only a small portion of his face is visible, no one can doubt to whom it belongs. The second class of the publications in question is exceedingly diverting. We were particularly delighted with "A Search after the Comfortable." It consists of "the adventures of a little gentleman of small fortune," represented in about fifty whimsical designs. The name of the hero is Peter Pickle, Esq., formerly a lawyer's clerk, but who has suddenly become possessed of four hundred a-year. He goes through the usual routine of dissipation; retires, for the sake of retrenchment, to a rural abode, where he is assailed by the blue devils; applies, in vain, for relief to the study of the arts and sciences; determines on getting rid of ennui by travelling, and, being disappointed in his hopes of finding "the comfortable" in these various devices, ultimately seeks for it in marriage, and is awakened from the dream of supposing that he has united himself to a rich bride, of whose affections he was the first object, by his wife's introducing to him, on the day after the wedding, five urchins of various longitudes, and accompanying the introduction with a "I have no fortune, love, but a fine family by my last dear man: I was a milliner; but, as I found it very laborious, I thought it best to get married again!"—It is but justice to Mr. M'Lean to add, that we have never seen any caricatures published by him which might not be introduced into a drawing-room, and submitted to

the inspection of ladies. And, apropos, Mr. Paul Pry, whose caricatures have obtained so much just popularity, has been obliged to protect himself from plagiarists by dropping his *inco*, and caricaturing himself under his real name of Heath.

Waterloo.—Mr. Burnet has completed the etching of his intended plate from Mr. Wilkie's picture of "Chelsea Pensioners receiving the news of the Battle of Waterloo." It looks remarkably well; and Mr. Burnet is proceeding with his arduous undertaking as rapidly as circumstances will allow.—Mr. S. P. Denning, whose beautiful miniatures we have had such frequent occasion to praise in our notices of the Exhibitions at Somerset House, has made a drawing from Mr. Wilkie's picture, which, in expression, colouring, effect, and execution, is one of the most fascinating specimens of the power of water-colours that we have ever beheld.

ORIGINAL POETRY.

THE TOMB OF CYRUS.

A VOICE from stately Babylon, a mourner's rising cry—
And Lydia's marble palaces give back their deep reply;
And, like the sound of distant winds o'er ocean's billows sent,
Ecbatana! thy storied wall sends forth the wild lament.
For he, the dreaded arbiter—a dawning empire's trust—
The eagle child of victory—the great, the wise, the just—
Assyria's famed and conquering sword, and Media's regal strength—
Hath bow'd his head to earth beneath a mightier hand at length.
And darkly, through a sorrowing land, Euphrates winds along,
And Cydnus, with its silver wave, has heard the funeral song;
And through the wide and sultry East, and through the frozen North,
The tabret and the harp are hush'd—the wail of grief goes forth.
There is a solitary tomb, with rankling weeds o'ergrown,
A single palm bends mournfully beside the mould'ring stone,
Amidst whose leaves the passing breeze, with fitful gust and slow,
Seems sighing with a feeble dirge for him who sleeps below.
Beside, its sparkling drops of foam a desert fountain showers,
And, floating calm, the lotus wreathes its red and scented flowers;
And lurks the mountain fox, unseen, beside the vulture's nest,
And steals the wild hyæna past, in lone and silent quest.
Is this Ambition's resting-place—the couch of fallen might?
And ends the path of glory thus, and fame's enshrining light?
Chief of a progeny of kings, renown'd and fear'd afar,
How is thy boasted name forgot, and dimm'd thine honour's star!
Approach:—what saith that graven verse?
Alas, for human pride!—
"Dominion's envied gifts were mine—nor earth her praise denied:

Thou, traveller, if a suppliant's voice find echo
in thy breast,

O envy not the little dust which hides my
mortal rest!"* J. F. H.

Chelsea.

MUSIC.

An Inquiry respecting the best Means to be employed with Beginners on the Piano-Forte, &c., so as to induce a Habit of Keeping Time.

THIS inquiry will, no doubt, be met with the prompt, and, as it will be deemed, unanswerable reply of, "Let them count their time," from a host of teachers, with whom a majority of parents may probably join chorus. This, they may say, has been the method adopted with respect to ourselves; and what greater proof of its efficacy can be required or expected? Nevertheless, I hope it will not be thought intrusive if I venture to ask, Whether it be not possible to *count*, as well as to *play*, out of time? Whether, in general, those who without counting would play out of time, do not accommodate their counting to their playing, and not their playing to their counting? Whether ninety-nine out of a hundred do not invariably stop counting, and especially in the absence of the master, just at the critical places where alone it is required? Whether the din produced by this incessant singing, squeaking, humming, blubbing, buzzing, muttering, or grunting accompaniment, may not clog the imagination and vitiate the taste, by diverting the attention from its proper objects—effect and expression? Whether it be judicious for those who play out of time continually, in consequence of having no ear; or, for those who only err occasionally for want of a greater command of their instrument, to encounter two difficulties at the same time, because they are scarcely able, or perhaps quite unable, to contend with one alone? It is commonly supposed that the ear may be much improved by cultivation; but I am fully persuaded that this is, as Brown terms it, a "vulgar error," although outward appearances may seem to warrant the contrary.

I know a child who, though only eighteen months old, will sing melodious phrases, perfectly in tune and in time, and these in the minor as well as in the major mode; yet it would be absurd to suppose that such a child could comprehend a sonata by Beethoven. Now, should this child grow up and be able hereafter to appreciate and enjoy the music of this wonderful composer (for few there are who can!), it will not be because his ear or his sense of discriminating the relation between one sound and another has become more acute, but because the stock of his ideas is increased. And thus it is in all cases. But in matters relative to what is termed an "ear for music," inattentive persons are apt to attribute that which is the result of a more cultivated taste in the department of science to the superior delicacy and refinement of the organ itself. But, for my part, I would as readily believe that the study and practice of painting has a tendency to render the perception of the effect of the prismatic colours more clear and vivid to the eye, as that the study and practice of music should cause the relation between one sound and another to become more distinctly perceptible, and thereby improve the ear. One of the strongest arguments, in my opinion, in favour of this position, arises from the consideration that our senses are not like the faculties either of the mind or body. For

though, in their incipient state, these are in all cases by nature exceedingly feeble, and only become strong and active, in process of time, by use and exertion;—yet, this is so far from being the case with respect to the senses, that, in point of fact, they are obviously in the highest state of perfection, not only in early life, but during infancy; and as it is universally admitted that they are the only inlets to, or primary source of, all knowledge, the cause for the distinction is as obvious as it is admirable. Though these remarks may at first appear digressive, they will, upon reflection, be found to bear very closely upon the subject under consideration: for, if I am right, it follows, that we have no power whatever to overcome defects which are really constitutional; and where such defects do not exist, it must be evident, that the stiff, mechanical method of counting ought only to be resorted to as occasion may require—in order, sometimes, to be convinced, once for all, that the value of the notes has not been mistaken for others; as, for example, that we have not mistaken crotchets for quavers, or quavers for crotchets, &c.—sometimes in order so to analyse the time in complicated passages as to be sure ever after that we have not formed a hasty and erroneous conception of them—and sometimes to make comparisons between distant parts of a long movement, by skipping abruptly from one part to another; for let it be observed, that the influence which impels us *insensibly* to accelerate or retard the time in playing, will also affect the counting; for which reason no dependence can be placed upon its agency in order to ensure a perfect equality throughout a whole movement; neither can it be conveniently applied to the regulation of the more minute subdivisions. If then, after all our counting, the ear must be left sole arbiter with respect both to the grand outline and its minute details, why should so great a ceremony be made about the crotchets and quavers? But I refrain from further remark, and take this opportunity to recommend the use of Mæbels' Metronome; or, in the event of the pupil not possessing this inestimable instrument, that the teacher, in the first instance, should count to the playing of the pupil, and that afterwards the scholar should count to the performance of the master; either of which practices is, in my opinion, preferable to the common system pursued, of permitting pupils to "count their own time."

79, Wimpole Street.

D. C. HEWITT.†

DRAMA.

ENGLISH OPERA HOUSE.

A THREE-ACT drama by Mr. Peake, called the *Spring Lock*, and founded on two early Italian novels, was produced on Tuesday last. It is as broad as it is long,—some of the scenes bordering upon extravaganzas,—and, when considerably curtailed, will, no doubt, prove an attractive after-piece; though we question its ever rivalling the *Bottle-Imp* in popularity. The whole burden of the drama rests upon Keeley's shoulders—the comic Atlas of this house—who, in the scene of his "mystification," convulsed the house with laughter. The music is by Mr. Rodwell: nearly every song

* The performance of duets, with a steady "timist,"—but not, as is too often the case, putting two novices to practice together—considerably tends to teach the pupil the value of time.

† This professor is the ingenious author of a work, recently published, on the Mathematics of Music: a review of which appeared in a former Number, and which induced us to request and insert his opinions upon the subject so ably discussed in this letter.—Ed. L. G.

was encored. The applause at the fall of the curtain was loud and unanimous.

SIGHTS OF LONDON.

PANORAMA OF CONSTANTINOPLE.

WE had a peep yesterday at the Panorama of Constantinople, which is to open to the public on Monday next. It is exceedingly beautiful, and does Mr. Barford the highest credit. Under any circumstances it would be an attractive exhibition; but, in the present critical situation of the Turkish Empire, when no one can tell how soon this magnificent city, with its splendid palaces, superb kiosks, swelling domes, extensive terraces, lofty mosques, pointed minarets, glittering crescents, and populous aeragios, may be exposed to the ravages of an almost barbarous army, the interest which so fine a representation of it excites must be increased tenfold.

VARIETIES.

Population of Paris.—The inconveniences attendant on the density of the population in the heart of Paris begin to be very sensibly felt; and it has been proposed to imitate the plan which has of late years been so beneficially acted upon in London; namely, that of opening new streets and squares in the centre of the metropolis, in order to compel a portion of its inhabitants to withdraw towards the circumference.

Statistics.—M. Moreau de Jonnés lately read a paper to the Académie des Sciences, in which, taking a view of all the nations of Europe, he shewed that agricultural and commercial pre-eminence, as well as the general prosperity of the people, were always in direct proportion to the extent of pasturage in a country; whether the meadows were natural, though improved, or artificial. At the head of the nations so regarded he placed England; and to Spain, in which artificial meadows are unknown, he assigned the lowest rank. He considered France to be a century behind England in this respect; and that not only were the English flocks much more numerous than those of France, but that the animals were finer, and their flesh of a better quality; so that, upon the average, every inhabitant of England was enabled to eat double the quantity of animal food (and that of a superior kind), that, upon the average, every inhabitant of France had the means of procuring.

Mr. Buckingham.—The Glasgow Courier states, that on Saturday, the 8th inst., at the close of Mr. Buckingham's lecture (a lecture which lasted nearly four hours, but which was listened to with intense and uninterrupted interest and attention), a vote of thanks to him for the able and eloquent manner in which he had treated the subject of India and its administration was proposed, and carried by acclamation.

Germination of Plants.—About six months ago, M. Pinot communicated to the Académie des Sciences the result of some experiments made upon the radicals of seeds, in order to shew that in germinating they were capable of penetrating mercury. As, however, the weight of the seed, and the adhesion of the cotyledonary body to the humid surface of the mercury were supposed to afford an explanation of the fact, M. Pinot has lately made further experiments with a seed of *latyrus odoratus* (the cotyledons of which do not unfold themselves in the act of germination), which he balanced with great nicety over, but at the distance of nearly one-fifth of an inch from, a

* Vide Plutarch's Life of Alexander.

surface of mercury, previously moistened. The germination took place as usual; and when the radical reached the mercury it pierced and buried itself in it, as had been the case when the seed was put on the metal.

Migratory Crabs.—We are assured by a correspondent from Ryegate that there was no imposition in the story of a shower of crabs having fallen near that place. He tells us that the crabs were found in an enclosed yard attached to the United Poor-house on Easlewood common, which yard had been completely flooded by the torrent of rain that had just fallen. The occurrence excited much attention in the neighbourhood; and after the strictest inquiry into the circumstances, it was generally believed that the crabs descended with the rain, although in the first instance not the slightest credit was given to the fact. Several of the crabs, when found, were as lively and active as if just taken from the sea. The largest of them weighed somewhat less than two ounces.

The Holy Alliance.—General La Harpe, the tutor of the late Emperor Alexander, has addressed a long letter to the editor of the French *Globe*, in reference to the extracts which appeared in that paper from the work of a M. Empetas, of Geneva, the disciple of Madame de Krudener, and which represented the Holy Alliance as resulting from the religious enthusiasm of the emperor. The general denies that such was the origin of the Holy Alliance; and enters into a long detail of facts and dates, to shew that the emperor desired to introduce reforms required by the spirit of the age, and to form new institutions for the benefit of his subjects and of Europe in general; and he argues that these intentions were manifested by the emperor at the very commencement of his reign.

Paris Academy of Sciences.—At the last sitting of the Paris Academy of Sciences, M. Cassini made a report upon the collection of artificial plants presented to the Academy by Baron Humbert de Molard. The report stated, that the most complete success had attended the attempt to imitate the living plants, as to the leaves, stems, and fruits, but not so much so as to the flowers. The manufacturer of these plants was a M. d'Argenteille, who made them in the isle of France. At the same sitting, M. Pamard, a physician at Avignon, presented to the Academy an instrument of his invention, called *sonde courbe*, for the introduction into the bladder of the instruments for crushing the stone. According to the statement of the inventor, this instrument does away with all the inconvenience hitherto felt in operations of this description. A letter was read from M. Vanner, a physician at Thomery, on hydrophobia, and the means of treating it. The author considers this disease as entirely nervous, having its seat in the nerves of the eighth pair; and from the great success which has attended the use of sulphate of quinine in nervous disorders similarly seated, the doctor strongly recommends that it should be employed in cases of hydrophobia, in large doses, either by the skin, or by injection into the veins.

Mozart as Valet de Chambre.—In a recently published biography of Mozart, by Counsellor Nissen, the late husband of Mozart's widow, out of 900 pages of large octavo, along with anecdotes told over and over again, we meet with a few hitherto unknown. To these belongs the following, as given in Nissen's own words:—"Never was Mozart's situation more deplorable than at the court of the Archbishop of Salzburg. A low salary,

a haughty, repulsive treatment, humbled him extremely. The archbishop treated him as the meanest creature. No ignominious expression was spared to mortify that great musician, who already, even when a child, had been honoured by kings and princes. In the scale of domestic rank he had that of a *valet de chambre*. At the common table Mozart had his seat beneath the upper valets (*leibkammerdiener*), but above the cooks. Even the confectioner of the archbishop had precedence of him. At length Mozart very naturally demanded his dismissal; and this he received with these humane words—"Pack yourself off, if you will not serve me properly."

Magnificent Donation.—John Soane, Esq., R.A., has transmitted, through the hands of Lord Farnborough, one thousand pounds towards erecting a monument to commemorate the memory of H. R. H. the late Duke of York.

National Prejudices.—There are no people under heaven's canopy more jealous of their popular usages than the Swiss: they kick against the most trifling innovation, and are sceptical beyond measure as to its promised advantages. On one occasion a reform of the calendar was projected, and the canton of Glarus took up arms against the innovation, from a motive the absurdity of which never entered the simple brains of its opponents. On the borders of this canton stands a lofty rock, in which is a hollow passage called the "Mauritius Loch;" the sunbeams break through this aperture two days in the year (on the 3d of March and 3d of September), and illumine the steeple of the parish church at Elms. Now the country-people conceived, that were a new calendar introduced, Phœbus would be shorn of his privilege; and for this very pertinent reason they determined to resist his antagonist!

French Poetry.—The new chief Secretary of the Ministry of the Interior in France is Baron Trouvé, who was formerly a bookseller. He is a poet; and some of his verses, made on different occasions, are now circulated in Paris. The following are specimens—

"On the Convention.

Bientôt une auguste assemblée,
Dépositaire de nos droits,
Viendra, par la France appelée,
Nous délivrer du mal des rois.

On the 10th of August at the Tuilleries.

Tout a fui! l'horrible repaire
Où des long-temps siégeait la guerre,
En solitude s'est changé:
Le fer a semé le carnage,
L'airain promène le ravage,
Le sang du peuple est trop vengé.

On the Alliance.

Ah! faisons mourir la pousière
A cette horde meurtrière,
A cette mare des tyrans
Qui, du Danube et de la Spée,
Vient dévorer notre contrée
Au nom de deux ou trois brigands."

LITERARY NOVELTIES.

The Keepsake is in a state of great forwardness: among the contributors' names are the following: Sir Walter Scott—Lord Byron—Lord Holland—Lord Normanby—Lord Morpeth—Lord Porchester—Lord Nugent—Hon. George Agar Ellis—Hon. Charles Phipps—Hon. Henry Liddell—R. Bernal, M.P.—Theodore Hook—S. T. Coleridge—Archdeacon Spencer—J. R. Gowen—William Roscoe—W. Jerdan—Lady Caroline Lamb—Miss Landon—Thomas Haynes Bayly—Charles Brinsley Sheridan—the Authors of "Anastasia," "Granby," "O'Hara Tales," "Frankenstein," "Hungarian Tales," and "Hajji Baba." Of these we hear that Sir Walter Scott's contribution is a dramatic romance, alias a tragedy, in five acts, written in imitation of the German, and founded on the Free Knights; and Lord Byron's are ten letters of the most interesting nature, beginning with his settlement at Pisa in 1831, and ending at Missolonghi in April 1834, a few days before his death.

Earliest Poem of Lord Byron's.—An article of great curiosity and interest, being the first known attempt at poetry by Lord Byron, will, we understand, be sub-

mitted to the public in the volume of that favourite Annual, the Forget-Me-Not, now in preparation. It is copied from the autograph of the noble poet, and certified by the lady to whom it was addressed—the "Mary" who was the object of his earliest, and perhaps his only, real attachment, and whom he has celebrated in several of his poems—as having been written when he left Annanley, the residence of her family.

Archæology.—*Bullettino degli Annali dell' Instituto di Correspondenza Archæologica*, per l'anno 1829.—The plan of a journal which Professor Gerhard had formed, in conjunction with several Roman and German literati, met with many difficulties in the execution; and in consideration of what connoisseurs and friends of ancient art had to expect from a journal published at Rome with the assistance of antiquaries of all nations, it seemed advisable to make regular accounts of new discoveries and excavations a principal object. A number of the most distinguished amateurs and admirers of antiquities having united under the protection of his Royal Highness the Crown Prince of Prussia, and the direction of the Duke Blacas d'Aulp, to found an institution for archaeological correspondence, Messrs. Bunsen, Fes, Gerhard, Kestner, Millingen, Nibby, Panofky, Thorwaldsen, and Weicker, were chosen regular members of the board of directors; and Messrs. Boeckh, Hirt, Rumohr, A. V. von Schlegel, Stuckelberg, Ardit, Avellino, Carelli, Inghirami, Mustoxidi, Sangiorgio Spinelli, Serra di Falco, Visconti, and Zannoni, were appointed honorary members. The first Bulletin, for the months of January to May this year, contains many interesting reports: on excavations in Etruria and in the vicinity of Rome, by Gerhard—ditto in Naples, by Panofky—on Pompeii, by several—on the excavations of the Roman Forum, by Bunsen—on those of the forum of Trajan, by Fes, &c. The Society has obtained from the Cardinal Camerlengo Galeffi, the favour that all reports relative to excavations, addressed to the Committee of Antiquity in Rome, shall be communicated to it for the use of the Bulletin; in the same manner, the Neapolitan Academy of the Ercolanesi has been authorised by its government to communicate the antiquarian reports which it receives to the Prince of Sangiorgio Spinelli, who will put them into a proper form for the Annals. In this manner we may expect in future complete and authentic accounts of archaeological novelties in Italy, which have hitherto been procured only by chance, or with great pains, and yet seldom complete. Besides the Annals, the Society publishes copper-plates, in which imitated works of ancient art are represented in outline, from the contributions of the members. The Number which has already appeared contains—Representations of the wall and gates, and a plan of the town of Norba, drawn and engraved by Mr. Knapp—Gate of Segni, published by Dodwell—Ceres and Tripolemus, paintings on vases, by Gerhard—four pictures of vases, collected by Panofky—a ditto by Millingen. The explanations of these plates will appear in the first No. of the Annals, which are sold separately from the Bulletin, and, besides these explanations, will contain, partly, accurate accounts of excavations and the additions to the museums—and partly, a view of the latest publications in the department of archaeological literature. These three works, connected together, will be delivered only to those who have had themselves entered as members of the Society, by an annual contribution of two louis d'or.

LIST OF NEW BOOKS.

Thomson's Atlas to Bateman, royal 8vo. 3l. 3s. bds.—Best's Cuma, a Poem, 8vo. 14s. bds.—Some Account of the Life of Reginald Heber, 18mo. 6s. bds.—Page on the Poor-Laws, second edition, 8vo. 5s. bds.—Gideon, and other Poems, by the author of "My Early Years," &c., 12mo. 3s. 6d. bds.—Vidocq's Memoirs, Vol. IV. 18mo. 3s. 6d.; royal 18mo. 6s. bds.—Heber's Sermons Preached in England, 2d edition, 8vo. 9s. 6d. bds.—Didbin's Bibliographical Tour, second edition, 3 vols. crown 8vo. 2l. 15s. bds.

METEOROLOGICAL JOURNAL, 1829.

August.	Thermometer.	Barometer.
Thursday... 6	From 45. to 69.	30.00 to 29.88
Friday... 7	— 56. — 72.	30.05 — 30.12
Saturday... 8	— 50. — 76.	30.19 — 30.17

CHARLES H. ADAMS.

LITERARY GAZETTE. Volumes I. to XI. (inclusive) of the Literary Gazette to be Disposed of the whole, or in separate Volumes.
Address, H. P., Mr. Stucké, Holles Street, Cavendish Square.

In 1 vol. 12mo. price 8s. boards.
THE HORSE, in all his VARIETIES and USES: his Breeding, Rearing, and Management, whether in Labour or Rest; with Rules occasionally interspersed for his preservation from Disease.
By JOHN LAWRENCE.
Author of a "Philosophical and Practical Treatise on Horses," the "History of the Horse," &c.
M. Arnold, Tavistock Street, Covent Garden; sold by Longman and Co.; Whittaker and Co.; Hurst and Co. London; and Oliver and Boyd, Edinburgh.

SIR W. E. PARRY'S VOYAGES, in 4to.
For Sale.
Captain Parry's Four Voyages to the North Pole, with the Two Supplements on Natural History, and the North Georgia Gazette, in 6 vols. 4to. half-bound, Turkey morocco extra, for 15l. 15s.
Sets of these interesting Voyages are rarely to be met with: this is a new and splendid copy.
To be seen at 6, Old Bond Street.

OXFORD ENGLISH CLASSICS. The Works of Dr. Johnson, 11 vols.; Boswell's Life of Johnson, 4 vols.; Hume and Smollett's History of England, 13 vols. in all 44 vols. beautifully and uniformly printed. Complete Sets, 17l. 12s.; or any Author may be purchased separately, price 8s. each vol. in cloth boards.
They correspond with the new edition of Clarendon's Rebellion, 4d. Copies only printed on large paper, price 4d. 4s.; or 1l. 1s. per vol.
The Public are requested to be particular in giving their orders for the above editions, as others of an inferior description have been frequently substituted.
Hume and Smollett may be had, with 35 fine engraved Portraits, price 9s. 6d. each vol.
Published by William Pickering, Chancery Lane; and D. A. Talbot, Oxford.

In 8 Vols. 8vo. 2l. 5s. boards.
GREEK TESTAMENT, with English Notes, 2d edition. Containing copious Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics, and with References to Virgil for Idioms, and Bos for Ellipses. To which is prefixed, a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Granville Sharpe, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English indexes are added. Two Plates are added, one illustrative of the "Travels of the Apostles," and the other, a "Map of Judea, and a Plan of the City and Temple of Jerusalem."
By the Rev. E. VALPY, B.D.
This Work is intended for the Use of Students in Divinity, as well as for the Library.
"After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition of the 'Greek Testament.'—*Horne's Introduction to the Bible.*"
Greek Septuagint, with the Apocrypha, from the Oxford edition of Bos and Holmes. 5l. boards.
This edition is handsomely printed in 1 vol. 8vo. hot-pressed. For use in Churches and Chapels, as well as the Library.
"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is so reasonable as to place it within the reach of almost every one."—*Horne's Introduction to the Bible.*
"The Septuagint and Testament may be had uniformly bound in Four handsome Volumes."
Sold by Longman, Baldwin, Whittaker, Harding, Rivington, J. Richardson, and all other Booksellers.

In 8vo. 7s. 6d. boards.
HOOGEVEEN on the GREEK PARTICLES. Translated into English, and abridged for the Use of Schools.
By the Rev. J. SEAGER.
Author of "Critical Observations on Classical Authors," and several Greek Criticisms in the "Classical Journal."
Viger on the Idioms of the Greek, by the same Author, on the same Plan. Price 9s. 6d.
"When you have a spare half-hour read Viguer. Consult him again and again, and read him a third time while you are in statu pupillari. Have the book almost by heart."—*Dr. Parr's Letter to Dr. C. P. Bury.*
"This volume is compiled with much industry and judgment, and altogether, a more valuable service could not well have been rendered to the literary student of the classics. We have great satisfaction in announcing that the same able editor is about to favour us with the critical works of Bos and Hermann, executed on a similar plan."—*Oxford Literary Gazette*, No. 3.
Bos and Hermann are under abridgment on the same plan, and will form about 300 pages each. The Four Works may be purchased separately or together, in 1 vol. 8vo. Bos is expected to be published in December.
Printed by A. J. Valpy, and sold by Longman and Co.; Baldwin and Co.; Simpkin and Marshall; and all other Booksellers.

Second edition, 8s. 6d.
NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of EGYPT, in the Years 1807 and 1808.
By Mrs. CHARLES LUSHINGTON.
John Murray, Albemarle Street.
8vo. with Plans, 20s.
THE HISTORY of the PENINSULAR WAR. Vol. I.
By WILLIAM F. P. NAPIER, C.B. Lieut.-Colonel, Half-pay, 43d Regiment.
Printed for John Murray, Albemarle Street.

Albemarle Street, July 1.
Mr. Murray has published during the Season the following Works:—
A CHRONICLE of the CONQUEST of GRANADA.
By the Author of the "Sketch Book."
In 2 vols. 8vo. 94s.

2. **Colloques on the Progress and Prospects of Society.** By Robert Southey. In 5 vols. 8vo. with Engravings, 20s.
3. **All for Love, and the Pilgrim of Compostella.** By Robert Southey. Foolscape 8vo. 7s. 6d.
4. **The Life and Services of Captain Philip Beaver,** late of H. M. Ship *Nassau*. By Captain Smyth, R.N. 8vo. 8s. 6d.
5. **The Life of Buonaparte, forming Numbers I. and II. of the Family Library.** 2 vols. small 8vo. 15 Plates, price 10s.
6. **The Life of Alexander the Great,** by the Rev. John Williams, Rector of the Edinburgh Academy. "Forming No. III. of the Family Library." Small 8vo. 5s.
7. **Lives of the most eminent British Painters, Sculptors, and Architects.** By Allan Cunningham. Vol. I. (to be completed in 3 vols.) Small 8vo. 11 Plates, 5s. Forming No. IV. of the Family Library.
8. **Lectures on Sculpture.** By John Flaxman, M.A. 54 Engravings from Drawings of the Professor. Royal 8vo. 2l. 2s.
9. **The Life of Belisarius.** By Lord Mahon. 8vo. 12s.
10. **An Account of some of the most important Diseases peculiar to Women.** By Robert Gooch, M.D. In 8vo. 12s.
11. **Forest Scenes and Incidents in the Wilds of North America.** By George Head, Esq. Post 8vo. 8s. 6d.
12. **Journal of a Passage from the Pacific to the Atlantic, crossing the Andes, and descending the River Amazon.** By Henry Lister May, Lieut. R.N. 8vo. 12s.
13. **Salmonia; or, Days of Fly-fishing.** By an Angler. 2d edition, illustrated with Engravings. Foolscape 8vo. 12s.
14. **Outlines of Geology.** By Professor Brande. 2d edition, with numerous Woodcuts, post 8vo. price 7s. 6d.
15. **A Companion to Pope's Homer,** and Dryden's *Æneid* of Virgil. 8vo. 12s.
16. **Narrative of a Journey from Calcutta to England, by the Way of Egypt, in the Year 1807-8.** By Mrs. Charles Lushington. 2d edition, post 8vo. 8s. 6d.
17. **A Dissertation on the Course and probable Termination of the Niger,** by Lieutenant-General Sir Rufane Donkin, G.C.H. K.C.B. and F.R.S. 8vo. 9s. 6d.
18. **Mary, Queen of Scots; a Poem.** By John Hennege Jesse. Post 8vo. 7s. 6d.
19. **Days Departed; or, Banwell Hill.** A Lay of the Severn Sea. By the Rev. William Lisle Bowles. 2d edition, post 8vo.
20. **The Journal of a Naturalist,** 2d edition, post 8vo. with Plates, 15s.
21. **Oxford and Locke,** by Lord Grenville. 8vo. 4s.
22. **The Botanical Miscellany,** by Professor Hooker. No. 1, royal 8vo. 24 Plates, 10s. 6d.
23. **Account of Guatemala,** by G. A. Thompson, Esq. Foolscape 8vo. 10s. 6d.
24. **L'Oratore Italiano,** by the Marquess Spineto. 3d edition, 12mo. 7s. 6d.
25. **Second Expedition into the Interior of Africa,** by the late Captain Clapperton; with the Journal of Landor, his faithful Servant. 4to. 2l. 2s.
26. **Illustrations of the Geology of Yorkshire.** 4to. with a Geological Map, Sections, and Plates of Fossil Plants and Animals. By John Phillips, F.G.S. 1l. 11s. 6d.
27. **The Zoology of North America, Part I.** containing the Quadrupeds. By John Richardson, M.D. Surgeon of the late Expedition under Captain Franklin. Illustrated by 28 spirited Etchings, by Thomas Landseer, 4to. 1l. 11s. 6d.
28. **Memoirs of the Affairs of Europe,** by Lord John Russell. Vol. II. 4to. 2l. 10s.
29. **On the Effect ascribed to the Resumption of Cash Payments on Currency.** By Thomas Tooke, Esq. 8vo. price 4s.
30. **Protestant Securities suggested,** by the Right Hon. R. Wilmot Horton, M.P. 8vo. 6s.
31. **Speech of M. T. Sadler, M.P. on the Catholic Question.** 2s.
32. **Ireland; its Evils, and their Remedies,** by M. T. Sadler, M.P. 2d edition, 8vo. 12s.
33. **Sermons preached in England,** by Reginald Heber, Lord Bishop of Calcutta. 8vo. 9s. 6d.
34. **Sermons preached in India,** by Reginald Heber, Lord Bishop of Calcutta. 8vo. 9s. 6d.
35. **Poems and Translations,** by Reginald Heber, 2d edition, 6s.
36. **Transactions of the Royal Society of Literature of the United Kingdom.** Vol. I. Part II. In 4to. price 2l. 2s.
37. **Asiatic Researches,** Vol. XVI. In 4to. price 1l. 2s.
38. **Records of Mining,** edited by John Taylor, F.R.S. F.G.S. Part I. with Plates, 4to. 20s.

A TREATISE on those DISEASES which are either directly or indirectly connected with INDIGESTION, comprising a General View of Symptomatic Affections, especially those of the Heart and the Lungs; and also a Commentary on the Principal Ailments of Children.
By DAVID UWIN, M.D.
Second edition, with explanatory Notes and Remarks on Dietetics.
Printed for T. and G. Underwood, 28, Fleet Street.

THE HISTORY of the REFORMATION of the CHURCH of ENGLAND.
By GILBERT BURNET, D.D. late Lord Bishop of Sarum.
A new edition, in 7 vols. 8vo. with an Index, price 2l. 6s. 6d. in Sheets.
Oxford: Printed at the University Press, for J. Parker, Oxford; and Payne and Poes, Pall Mall, London.

Dedicated, by permission, to Sir J. M. Gregor, M.D. &c. &c. price 7s. 6d.

MEDICINE NO MYSTERY; being a Brief Outline of the Principles of Medical Science; designed as an Introduction to their general Study as a branch of a liberal Education.
By JOHN MORRISON, M.D. and A.B.
Trinity College, Dublin.

* * * The design of this work is to vindicate the true dignity of Medicine, and to remove the opinion very generally entertained, that it is an art connected with mystery and conjuration, by showing, in an attractive and popular form, the scientific principles on which its practice is founded.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Keith's Mathematical and Geographical Works, &c. &c.
THE ELEMENTS of PLANE GEOMETRY; containing the First Six Books of Euclid, from the Text of Dr. Simson; with Notes, Critical and Explanatory. To which are added, Book VII. including several important Propositions which are not in Euclid; and Book VIII. consisting of Practical Geometry; also Book IX. of Planes and their Intersections; and Book X. of the Geometry of Solids. 3d edition, in 8vo. 10s. 6d. boards.

An Introduction to the Theory and Practice of Plane and Spherical Trigonometry, and the Stereographic Projection of the Sphere; including the Theory of Navigation; comprehending a Variety of Rules, Formulae, &c. with their practical Applications to the Mensuration of Heights and Distances, &c. &c. In 8vo. 14s. boards. 8th edition, corrected and improved.

A System of Geography, for the Use of Schools, on an entirely new Plan, in which the recent Alterations in the Division of the Continent are carefully attended to. 12mo. 6s. bound.

A New Treatise on the Use of the Globes; or, a Philosophical View of the Earth and Heavens; comprehending an Account of the Figure, Magnitude, and Motion of the Earth; with the natural Changes of its Surface, caused by Floods, Earthquakes, &c. Designed for the Instruction of Youth. 1 vol. 12mo. with Plates, a new edition, price 6s. boards.
Printing for Longman, Rees, Orme, Brown, and Green.

Illustrated by several Engravings, price 4s.
THE PRINCIPLES of GOTHIC ARCHITECTURE, elucidated by Question and Answer.
By MATTHEW BLOXAM.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

BOOKS IN THE PRESS.
Waverley Novels—New Edition.
On Tuesday, 1st September, will be published, beautifully printed in royal 16mo. price 3s. done up in cloth, with a Frontispiece by W. Kidd, engraved by James Mitchell, and a Vignette by A. Cooper, R.A. engraved by T. C. Edwards, Vol. II. of
GUY MANNERING; which completes this Novel, and forms Vol. IV. of the New Edition of the Waverley Novels. To be continued in Monthly Volumes.
Revised and Corrected, with an Introduction to each Novel, and Notes, Historical and Illustrative.
By the AUTHOR.
Printed for Cadell and Co. Edinburgh; and Simpkin and Marshall, London; and sold by every Bookseller in Great Britain and Ireland.
Of whom may be had,
Waverley, Vols. I. and II.; also, Guy Mannerling, Vol. I. price 5s. each.
Vol. I. of the Antiquary will appear on the 1st October.
Vol. II. on the 1st November.
Vol. I. of Rob Roy on the 1st December.
Vol. II. on the 1st January, 1830.

In a few days, in 1 vol. post 8vo.
THE PICTURE of AUSTRALIA, exhibiting a faithful Representation of the Geographical Position, Surface, and Appearance of the Country; of the Seas around its Shores, of its Climate and Meteorology, of its Native Productions and Native Inhabitants, of the several Colonies in New South Wales, Van Diemen's Land, the Swan River, Melbourne Island, and other Places; of the Agricultural and Commercial Resources of the Country, and the Prospects which it holds out of advantage, whether to the intending Settler, to the Merchant, or to the Country at large.
Printing for Whittaker, Treacher, and Co. Ave Maria Lane.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street, by J. Chappell, 98, Royal Exchange. E. Smith, 40, Marlborough, Ave Maria Lane, Ludgate Hill; J. Black, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cumming, Dublin.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 658.

SATURDAY, AUGUST 29, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Itinéraire de Tiflis à Constantinople. Par le Colonel Rottiers. Bruxelles.

THE East is now the only theatre of great events,—there all the interest of the day is concentrated; and from the unabated thirst for information, and the continued demand for intelligence, we are induced this week to notice a foreign publication of some interest, which partially bears upon the subject. Colonel Rottiers, the author of the agreeable volume before us, is a native of the Pays Bas, lately in the military service of Russia; and in the capacity of *chef de l'état*, major of a division of the army of the Caucasus, became for some years a resident of Tiflis, the capital of the once feeble kingdom, but at present beautiful province, of Georgia. Military men perhaps suffer more acutely from *ennui* and hypochondriasis than any other class of individuals, when, after a period of their lives spent amidst the most spirit-stirring scenes, the energies of the mind, powerfully and constantly excited, and the corporeal frame nerved and strengthened by restless activity, they find themselves, by a sudden revulsion of war to peace, condemned to a sickly quiet—a deadly calm, from which they have not the power to escape. Such was the case with Colonel Rottiers: he sought and obtained his dismissal from this *tedium vite*, and prepared to return to his native country with his lady and four children, by the hazardous and singular route he thus describes:—

“However impatient, still I was resolved, instead of traversing Russia and Germany, to pass by Asia Minor to Constantinople. My track would be through Mochett, Gori, and Cotaïs; I should embark at Poti, and, lengthening the coast by touching at Trebisond, Sinope, and other ports, finally land in the port of Byzantium. In pursuing this route I should furrow the same waves which carried the first frail vessel—I should retrace, upon the shores, the footsteps of the Ten Thousand, the colonies of the Greeks, the palaces of Mithridates, the camps of Pompey, and the fortresses of the Cæsars. Besides these glorious remembrances, which might tend to new discoveries, or to corrections more or less important, I had a nearer object in view—I wished to gather an exact knowledge of the actual situation of these parts, so imperfectly known to Europeans since the Ottoman conquest; to take a correct map of the coast; to mark the principal military and commercial positions; to note the agricultural and manufactured products, the means of transport, the laws and manners of the different people. Such was the difficult task I imposed on myself at quitting Tiflis.”

The early pages of the volume afford a brief sketch of Georgian history, and an enumeration of its ancient dynasty, traced to within three hundred years of our era, and which only came to its close by the abdication of its ninety-seventh monarch, the Czar George, in the year 1799: characterised by weakness and imbecility, this long line of royalty has sunk

into merited oblivion; and if there be a single name worthy of history's rescue from the tomb, it is a woman's, and the last of the line, as the following extract will confirm.

“Mary, daughter of Prince George Taitsianoff, and widow of George XI., the abdicated king, remained at Tiflis after her husband's death in 1800, with her seven children. Whether Russia was regardless of a woman and children so young, or whether it respected the ardent desire of the queen to end her days in her native country, her residence in Georgia had till now been tolerated. Nevertheless, Mary, little satisfied with this indulgence of the government, or fearing for the continuance of the favour, sought to withdraw herself from the power of the Russians; she hoped to secure an asylum in her native country, by a project of escape which she nourished in secret. But General Taitsianoff closely observed her conduct; her slightest movements were watched; and, aware of her spirited and decided character, he did not fail to advise his government to remove the queen from Georgia. While waiting for such orders, Taitsianoff neglected no precaution to secure her person. He had in his interest a noble Georgian, named Kalatousoff, one of the queen's suite, and in possession of her confidence. This man, gained by liberal promises, made no scruple to betray all that passed in the palace, even reporting the most trifling conversations of the princess. The Pchavi and the Touchini, two tribes of Caucasus to the north-east of Tiflis, are the more formidable, as all the lofty qualities of the warrior are consecrated by their laws and customs; they are forbidden, under pain of death, to return to their country if wounded in the back, or even to shave their beards while the death of a relative remains unavenged. These mountaineers, from an early period to the fall of the throne, had composed the guard of the kings of Georgia, and had ever been devoted to the royal family. Solicited by Mary, who meditated flight, or having themselves conceived the plan of receiving her and her children in their mountains, these intrepid servants busily engaged themselves in the necessary preparations. Mary, in full understanding with them, seconded their labours, and appeared only to wait the day fixed for her escape. Unfortunately the design had transpired through the revelations of Kalatousoff, who, as we before said, enjoyed the queen's confidence: it was therefore rendered abortive at the very moment when all was prepared for her flight and refuge in the mountains. Gadilla, one of the Pchavi, a man of courage and gigantic stature, had the charge of conducting this affair: he had already been many times to Tiflis to concert measures with the queen, and now announced to her that his countrymen impatiently expected her. Taitsianoff, acquainted with all, but wishing to convince himself, and curious to know Gadilla, caused him to be arrested and brought before him. The general, according to custom, was alone, with the exception of his interpreter; but had

taken care to hide the traitor Kalatousoff beneath the drapery of a sofa in the saloon. Gadilla, on entering, saluted the general according to the manner of his country: ‘*Kamerjof, Taitsiano*’—Good day, Taitsiano. The following dialogue ensued:—The general: ‘What brings you to Tiflis?’ Gadilla: ‘To purchase salt.’ ‘Do not disguise the truth from me: are there no other reasons which have brought thee to this city?’ ‘No.’ ‘Pchave, thy life depends upon thy truth! know, if you do not discover, I can this instant order your head to be struck off!’ ‘My head struck off! by whom then? perhaps it would be by this Armenian interpreter?’ Afterwards, placing his hand upon his weapon,—‘Have I no longer my dagger? it never quits me.’ Taitsianoff, finding that menaces could not intimidate so intrepid a character, rose from his seat, and approaching him with the idea of gaining him by kindness, placed his hand upon his shoulder, saying, ‘My brave friend, be not angry; no harm shall come to you; speak only the truth.’ But all entreaties were vain; and while Gadilla was persisting in his denials, the general caused Kalatousoff to start forth from beneath the sofa, thinking to daunt the mountaineer by the unexpected appearance of a man whom he had never mistrusted near the queen. Kalatousoff, addressing the Pchave roughly, said to him: ‘Gadilla, cease to refuse your avowal of the motives which have brought you to Tiflis; behold me here to confront you! do you not recollect to have seen me with the queen when you came to announce to her yesterday that all was ready to favour her flight; that the mules were waiting for her at Kouki, to convey her to the mountains?’ The astonished mountaineer threw upon Kalatousoff a look of contempt and anger, and answered, ‘That it was all false: no time was allowed for a longer reply. A detachment of grenadiers rushed into the hall; and having beat him down with the but-ends of their muskets, disarmed him. As he was conducting under a strong escort to the fortress, Kalatousoff ventured to strike him a blow. Gadilla, turning himself round, proudly exclaimed,—‘If I had my dagger, singly I should feel sufficient strength to immolate the whole of you to my vengeance.’ Taitsianoff sought no further confirmation as to the reality of the design which the queen entertained: he was more than ever satisfied that her removal was indispensable to the tranquillity of the country; and, without permitting the least delay, her departure was fixed for the ensuing morning, Sunday, April 12th, 1803. It was arranged, as if to give an air of ceremonial to this event, that Major-General Lazareff should be present in full state, accompanied by an interpreter having the rank of captain, named Sorokin, an Armenian by birth; that at an early hour of the morning, with the military music, and at the head of two companies of infantry, they should repair to the residence of the queen, and enforce her setting out. Accordingly, at break of day, General Lazareff, in due form, pre-

sented himself before her abode, and hastily entered her presence: the queen, already awakened, was seated, after the custom of the country, with her legs crossed, in the recess where, with a simplicity but little allied to royalty, but by usage common to all ranks, they spread in the evening the mattresses on which they repose for the night. Already had two days elapsed since Mary had been secretly apprised that an order had arrived from Russia for her transportation from Georgia; and to the last moment she indulged the fond hope of being able to avoid this cruel fate. Her seven children,—all extremely young, the eldest scarcely nine years of age,—were sleeping peacefully around her. Lazareff, without the least respect, addressed her, through his interpreter, with these words: 'Arise—you must leave this.' The queen calmly replied—'Wherefore should I yet rise—do you not behold my infants plunged in sweet sleep around me? Should I awake them suddenly, their blood would chill.* Who has given you so pressing an order?' Lazareff having replied that the order came from General Tsitsianoff, she exclaimed—'Tsitsiano tsopiani!' (scum of our race). The queen, as if to lean upon the cushion which sustained her head during the night, had placed it on her knees; and beneath it she concealed the poniard (kinjal) of her husband. Lazareff, seeing that she persisted in the design of making him wait till the children awoke, approached to where she was sitting; and perceiving one of her feet to protrude beneath the cushion, he bent forward as if to seize it and force her to rise. As rapid as lightning the queen placed her hand upon the dagger, drew it from the sheath, and plunged it with such force into the side of Lazareff, that the point protruded on the other side: then drawing it out all reeking from the wound, without the least discomposure she threw it on the face of her enemy, exclaiming—'Thus die all who dare to add dishonour to my misfortune.' Lazareff fell dead under the stroke: at his single cry, the interpreter Sorokin drew his sabre, and the poltroon made several cuts at the queen, one of which wounded her deeply in the shoulder. Helena, her mother, who also slept in the saloon, was now awakened by the noise,—and on beholding blood, flew to her daughter and held her in her firm embrace. The house was instantly filled with soldiers, who tore the unhappy Mary from her mother's arms, and kept them separate by continued blows with the but-ends of their muskets: the queen was dragged bleeding from her residence and thrown with her children into the carriage prepared for her departure."

Thus finished this dreadful tragedy. The queen, escorted by a strong force, and accompanied by her children, left Tiflis for a monastery in Russia to which she was banished; and as the sad procession passed along, her tears and distress testified to the Georgians who flocked around how deeply she felt the exile to which she was condemned. Of the other actors in this sad drama, General Tsitsianoff was shortly after assassinated—the interpreter Sorokin was killed in action—and the vile traitor Kolesouoff, as was fitting, died miserable, and detested by all the world.

This romance of real life has occupied so much space, that we are compelled to defer any further extracts; and conclude with observing, that Colonel Rottiers fully demonstrates the impracticability of any approach to

the Turkish capital by Asia Minor, and that General Paskewitch's movements in that quarter have only for their object to prevent the Lesghi and other warlike people from giving their support or assistance to the Turkish army in Europe.

Private Life; or, Varieties of Character and Opinion. By the Author of "Geraldine," &c. &c. 2 vols. 8vo. London, 1829, Cadell; Edinburgh, Blackwood.

WE take shame to ourselves that these admirable volumes should have remained so long unnoticed, and, worse still, with all possible claim to attention. Evidently written by a woman, they are just what we could wish an Englishwoman's writings ever to be;—that high-minded morality, which is the result of good feeling sanctified by religion—that fine perception of the beautiful, which is softened, not subdued, by serious reflection—that excellent common sense, not that calculating selfishness sometimes so misnamed, but clear perception, borne into action by undeviating principle;—such is the character of the work before us; and it is one of whose talent and utility its author may be justly proud. The story is very interesting, and told in the most graceful language; and all that feminine tact which in a touch catches resemblance, is shewn in the portraiture of the characters. But, perhaps, it is in the dialogues that our writer is most peculiarly happy: they are actual animated conversations, only rather more clever and spirited than those in real life,—and evince an originality of thought, an excellence of feeling, that render them as valuable as they are attractive. We cannot do better than offer a specimen for our readers' judgment. When affected languor and elegant indifference is so much the rage as they are at present, we recommend the ensuing scene:—

"'Pray can I do any thing for you at Southampton? I assure you my talents in the commission line are first-rate. I can choose music for you with equal skill. Will you trust me?' 'You can do us a very great service,' replied Constance; 'just call at the library, and scold Mrs. Gifford for not having sent the third volume of Tremaine; she promised it by the postman yesterday; we have waited four whole days for it.' 'With your heart breaking for the heroine, I suppose,' said Percy. 'Oh! it is too cruel,' exclaimed Constance. 'My sympathies are not in general so lively for these charming phantoms; but Georgiana Evelyn is so gracefully winning, so entirely lovely, that I cannot be at all happy while she is dying of decline.' 'Oh! she will not die,' returned Percy; 'I feel an instinctive conviction that she will recover. The author has too good taste, too much feeling, to kill her; he would not do any thing so savage.' 'If you have nothing better to justify your hope than the tender mercy of an author,' said Constance, 'it does not inspire me with the least confidence—it does not afford me the smallest consolation—they are such practised barbarians. Recollect the atrocities they perpetrate, the unprovoked murders. I believe they sometimes set the Fates to work, and cut the thread of life for the sole purpose of making us close their books with the heartache.' Percy laughed, and galloped off, with a promise not to return without Tremaine; while Sir Henry, addressing Constance, said—'Is a *fin joyeuse*, then, quite necessary to your enjoyment of a tale?' 'Not absolutely necessary, but certainly very conducive to my thorough enjoyment of one,' re-

plied Constance; 'and the *fin tragique* indisposes me very much for its second perusal. I have no objection to a fair proportion of cloud and storm, if the sun does but break out at last. Even in a tour of pleasure I can consent to cross a desert or tremble at a volcano; but let my eyes repose on a soft, green, smiling landscape at the end of my journey.—Is not this your opinion, too, my dear mother?' 'Why, as we walk in the garden of fiction chiefly for amusement,' returned Mrs. Grenville, 'I like, in the fashion of the knights of old, after traversing a gloomy forest, and being exposed to the pelting of the pitiless storm, to find myself at length in an enchanted palace, where all is bright and beautiful.' 'I am afraid you will stand convicted of a sad vulgar taste for happiness,' said Sir Henry. 'What would the refined Tremaine have said to you?' 'Tremaine and I should have differed upon many points,' replied Mrs. Grenville. 'I should have questioned the reality of his refinement—I should have been much better friends with Dr. Evelyn than with Tremaine.' 'Surely refined taste and feeling are portrayed in that character!' observed Constance. 'Tremaine was indolent, luxurious, and self-occupied,' replied Mrs. Grenville; 'defects incompatible with true refinement. That is not refinement which interferes with our usefulness or happiness.' 'Pardon me,' said Sir Henry; 'does it not sometimes interfere with both? May not the delicate perceptions and quickened sensibility which belong to refined feelings, render the fulfilment even of acknowledged duty distasteful to us? May there not be a repugnance which would not be experienced by coarser minds and duller feelings?—an intellectual noisety, for instance, which may induce a very inconvenient degree of fastidiousness with respect to our mental pleasures, whether derived from books or from society.' 'Tremaine's was precisely of this character,' said Mrs. Grenville, 'because it was without the corrective influence of Christian principle.' 'I am afraid,' observed Sir Henry, 'that the refinement of which you speak exists but in theory—that it is but a name.' 'It is rare, perhaps; but many a beautiful specimen is to be found,' replied Mrs. Grenville. 'We owe to refinement some rapturous feelings and some delicious hours; but I cannot think,' said Constance in a doubtful tone, 'that, upon the whole, it increases the sum of our happiness. How many things and persons does it render distasteful, not to say insufferable!' 'You are confounding fastidiousness with refinement,' observed Mrs. Grenville. 'Oh! they are near relatives, I am afraid,' exclaimed Sir Henry. 'Yes,' said Mrs. Grenville, smiling; 'but, like the crab and the nonpareil, perfectly distinct, in spite of their affinity.' 'I think,' said Constance, 'that refinement is more talked of than understood; that which really deserves the name appears to me exceedingly rare.' 'Why, amidst the present diffusion of cultivation, and where a taste for the arts is so widely disseminated, a certain degree of refinement must be very general,' observed Mrs. Grenville. 'Yes, that which is the mere offspring and creature of cultivation,' said Sir Henry; 'but is there not a refinement which seems to belong to minds of a certain temperament, independent, in a great degree, of cultivation and circumstances?—a refinement of mind distinct from refinement of manner—existing sometimes without it? And, on the contrary, are there not some people who have a sort of practical refinement—a kind of tact which prevents their violating, in the

smallest degree, the laws of propriety and good taste; and yet who have by no means that character of mind which appears essential to refinement? They have the varnish which every person may acquire by a certain process in well-bred society; but not that beauty and polish of which certain minds alone are susceptible.' 'Yes,' replied Mrs. Grenville; 'there is a refinement which discovers itself by a quick perception of the feelings of others, a delicate observance of those feelings, a ready sympathy, a graceful surrender of our own wishes and preferences—as superior to mere refinement of manner, as a living breathing grace would be, to one that smiled on us only on canvass. But this refinement will be found only in connexion with the highest principle.' 'While that which is the mere offspring and creature of cultivation, as Sir Henry observed, serves to give a monotonous aspect to society,' said Constance; 'constant friction and attrition not only rub off all rough angles and asperities, but every little characteristic streak and spot is obliterated.' 'If you quarrel with the effects of cultivation, at what point would you stop?' inquired Mrs. Grenville. 'You would not, like Lord Monboddo and Rousseau, send us back to the savage state for happiness.' 'No, not quite so far,' answered Constance; 'but I can imagine a state of society extremely delightful, equally removed from barbarism and luxury; from which the rudeness of savage ignorance, and the cold and heartless formalities of modern life, would be alike excluded. Now St. Pierre, in his tale of Paul and Virginia, gives an enchanting picture of such a state.' 'The general effect and colouring of the picture is enchanting,' said Mrs. Grenville. 'Virginia weaving garlands by the side of Paul, beneath the shade of the banana, counting the flight of hours by the shadows of the trees, and of years by their growth, is highly poetical and captivating; but then there are details that dissolve the spell—she washed the linen, cooked the dinner, and could neither read nor write—serious drawbacks in my estimation of felicity.' 'She only did what the royal Nausicaæ and the noble Achilles did before her,' observed Constance, laughing. 'Oh! the dignity of these precedents is unquestionable,' returned Mrs. Grenville; 'their happiness, perhaps, rather less so. Why, indeed, should we imagine it to have been more vivid or more permanent than our own? The senses were awake to enjoyment, the passions keenly alive to excitation, and the intellectual powers comparatively dormant. Now, next to the halcyon delights of devotion, and the exercise of the tender charities of life, the cultivation and expansion of the intellect open the richest source of enjoyment. Of this rich source, how little did they taste!' 'Their intellectual pleasures, though less enlarged,' observed Sir Henry, 'were perhaps more intense. Those of imagination, for instance, are certainly more vivid in that state of society than in any other. In these metaphysical, mathematical, logical days, imagination is fettered and crippled. There is none of the dimness and haze so necessary to the mysterious effect of its enchantments; reason and science have seized the potent wizard; and in their withering grasp the wand is broken, the incantation powerless. In these 'evil times,' we have but a faint notion of the effects of poetry upon our ruder ancestors; the rapture, the ecstasy, the keen emotion, the delicious illusion—at any rate the pleasures of imagination were theirs in all their force and vividness.' 'Yes, but not in their beauty and delicacy,' replied Mrs.

Grenville. 'What we have lost in intensity, we have gained in tenderness; besides, I am not convinced, that, because our enjoyment is more strictly intellectual, it is less complete. If the pages of Homer have ceased to convulse the physical frame, they have not ceased to electrify the mind—if the song of the bard no longer plucks the sword from the scabbard, it still kindles the glow of patriotism.'

The following sketch of cousin Frances is too good and too real to be omitted:—

"Such a treat for you, my dear mother!—A letter from cousin Frances!" said Constance, inspecting the address of one, which she handed to Mrs. Grenville. 'I am sure the very hand-writing looks out of temper. Pray is she as much in good humour with the world as usual?' continued she, as Mrs. Grenville folded up the letter. 'She is in good humour with you and me, at any rate,' replied Mrs. Grenville; 'for she intends paying us a visit next week.' 'Indeed!' said Constance. Now a great deal is sometimes revealed by this little word;—perhaps there is scarcely any one about which it is more necessary to say, 'Écrivez-moi le ton.' There is a joyous, animated *indeed*, bespeaking delighted surprise;—the dull civil *indeed*, indicating joyless acquiescence;—the *indeed* of disappointment, and the *indeed* of indifference. Time will develop the quality of the *indeed* just pronounced. 'Well!—poor Frances!' exclaimed Mrs. Grenville; 'I am sure I shall be extremely glad to see her!' 'It is a proof of your unfeeling, unconquerable benevolence, then, my dear mother. Not to be extremely sorry, is the warmest state of feeling I can bring myself to.' 'I hope we shall make her comfortable,' said Mrs. Grenville, in a doubtful accent, after musing a few minutes. 'When you have acquired the power of working miracles, that hope will be reasonable, and realised, perhaps,' observed Constance;—'but where lives the gifted mortal who could make cousin Frances feel and acknowledge herself happy? She used to bestow herself upon poor dear aunt Ellen for six weeks every summer; and I am sure her visits gave me a very lively idea of purgatory. I believe she would realise what Judge Jenkins said of John Lilburne—that 'if the world was emptied of all but himself, Lilburne would quarrel with John, and John with Lilburne.' She is so ingenious a self-tormentor—so inveterate a grumbler—I am persuaded she has studied grumbling as an art, and piques herself on the attainment. Never surely did any human being so thoroughly understand the theory and practice of discontent. And then she mistakes her uncertain temper and inordinate self-love for the fastidiousness of a refined and delicate mind. It is really too amusing.' 'After all, she has some very good points in her character,' said Mrs. Grenville; 'she is capable of generous exertions and sacrifices, and her understanding is excellent. She has often very kind thoughts and feelings;—I have not forgotten her coming to Dover to meet us on our return from Italy, and all the comfortable arrangements she had made.' 'But you know, my dear mother, people are to be estimated, as Johnson says, by the mass of character—a block of tin may have a grain of silver in it, but still it is *tin*—and a block of silver may have an alloy of tin, but still it is *silver*—really we cannot be expected to admire the block of tin. No, not all the magic of your benevolence can metamorphose cousin Frances into any thing but a very trying personage.'

'We were children together,'
